# INTERNATIONAL ENERGY AGENCY

The International Energy Agency (IEA), an autonomous agency, was established in November 1974. Its primary mandate was – and is – two-fold: to promote energy security amongst its member countries through collective response to physical disruptions in oil supply, and provide authoritative research and analysis on ways to ensure reliable, affordable and clean energy for its 29 member countries and beyond. The IEA carries out a comprehensive programme of energy co-operation among its member countries, each of which is obliged to hold oil stocks equivalent to 90 days of its net imports. The Agency's aims include the following objectives:

- Secure member countries' access to reliable and ample supplies of all forms of energy; in particular, through maintaining effective emergency response capabilities in case of oil supply disruptions.
- Promote sustainable energy policies that spur economic growth and environmental protection in a global context – particularly in terms of reducing greenhouse-gas emissions that contribute to climate change.
- Improve transparency of international markets through collection and analysis of energy data.
- Support global collaboration on energy technology to secure future energy supplies and mitigate their environmental impact, including through improved energy efficiency and development and deployment of low-carbon technologies.
- Find solutions to global energy challenges through engagement and dialogue with non-member countries, industry, international organisations and other stakeholders.

## IEA member countries:

Australia  
Austria  
Belgium  
Canada  
Czech Republic  
Denmark  
Estonia  
Finland  
France  
Germany  
Greece  
Hungary  
Ireland  
Italy  
Japan  
Korea  
Luxembourg  
Netherlands  
New Zealand  
Norway  
Poland  
Portugal  
Slovak Republic  
Spain  
Sweden  
Switzerland  
Turkey  
United Kingdom  
United States

The European Commission  
also participates in  
the work of the IEA.

This publication reflects the views of the International Energy Agency (IEA) Secretariat but does not necessarily reflect those of individual IEA member countries. ## TABLE OF CONTENTS

World energy balances .....	5
Non-OECD Total energy balances .....	8
People's Republic of China energy balances.....	11
Summary tables in energy units.....	14
People's Republic of China energy statistics.....	18
Summary tables in physical units .....	27
Oil demand by main product group .....	30
Country notes and sources.....	31

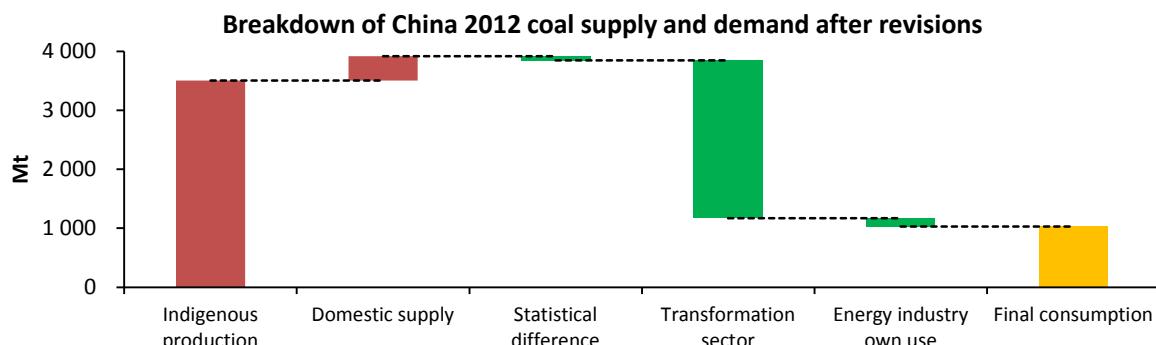

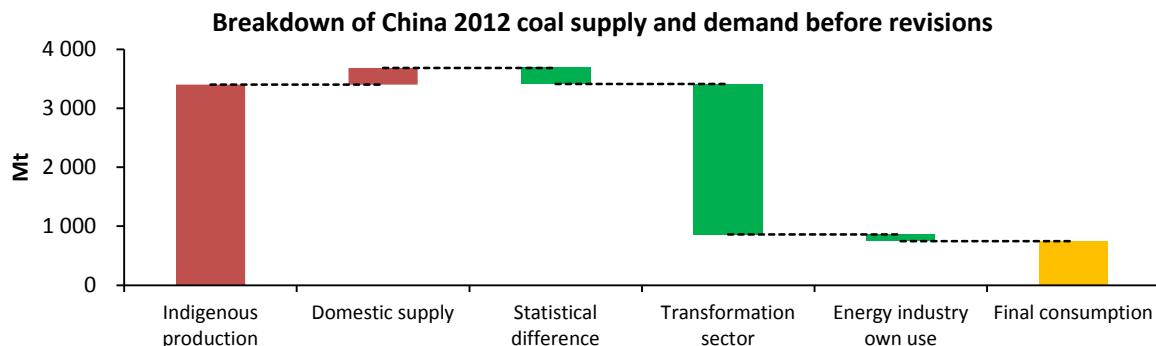

## Special IEA data release with revisions for People's Republic of China

In September 2015, the National Bureau of Statistics of China published China's energy statistics for 2013, as well as revised statistics for the years 2000 to 2012. NBS supplied the IEA with detailed energy balances for 2011 to 2013 and using these the IEA revised its 2011-2013 data based on these newly available figures, published in this document. The revisions show significant changes both on the supply and demand side for a number of energy products, resulting in breaks in time series between 2010 and 2011. For the years 2000-2010, revisions will be published in the next edition of IEA's publications in summer 2016.

The revised energy balances released by the NBS integrate findings from a national economic census for all years since 2000. The revised balance data solve several detailed issues, most importantly the unallocated coal demand that appeared in the recent years of the Chinese energy balance (shown as the statistical difference), has been primarily allocated to final consumption in the industrial sector. The impact of these changes is shown below for 2012.

This release contains key headline data impacted by the revisions for 2011-2013. Updates to all tables will be published in summer 2016. Cells that have been revised are shown in *italics*.

This publication is complementary to the 2015 editions of “*Energy Statistics of non-OECD countries*” and “*Energy Balances of non-OECD countries*”. As such, any notes and disclaimers present in those publications also apply to this special release.

**Breakdown of China 2012 coal supply and demand (Mt)**

	Indigenous production	Domestic supply	Statistical difference	Transformation sector	Energy industry own use	Final consumption	Of which: Industry
Before	3 401	3 686	-272	2 554	112	748	548
After	3 506	3 917	-68	2 680	139	1 031	757

1. Coal is aggregated with peat and oil shale, where applicable. The 2014 estimates do not include peat.

2. Production refers to refinery output.

3. Does not include electricity output from pumped storage plants.

4. A negative number shows net exports.

5. 2014 estimates only include primary coal products.

6. Includes non-energy use for industry/transformation processes/energy industry.

7. Includes non-energy use in transport.

8. Includes residential, commerce/public services, agriculture/forestry and other non-specified. Also includes non-energy use for these sectors.

2. Crude oil includes other hydrocarbons such as emulsified oils, synthetic crude oil, mineral oils extracted from bituminous minerals, etc.

3. Motor gasoline and gas/diesel oil excluding biofuels: do not include the liquid biofuel blended in these products. See liquid biofuels.

4. Aviation fuels includes aviation gasoline, gasoline-type jet fuel and kerosene-type jet fuel.

2. Crude oil includes other hydrocarbons such as emulsified oils, synthetic crude oil, mineral oils extracted from bituminous minerals, etc.

3. Motor gasoline and gas/diesel oil excluding biofuels: do not include the liquid biofuel blended in these products. See liquid biofuels.

4. Aviation fuels includes aviation gasoline, gasoline-type jet fuel and kerosene-type jet fuel.

1. Also includes small quantities of coal from other sources.

2. Excludes synthetic fuels and biofuels production.

3. Liquid biofuels are converted from kt to TJ using the corresponding net calorific values.

4. Excludes electricity production from waste.

5. Includes electricity from hydro pumped storage.

6. Includes electricity from hydro, geothermal, solar, wind, tide, wave, biofuels and the renewable fraction of municipal waste.

7. Excludes electricity from hydro pumped storage.

8. A negative number shows net exports.

9. Domestic supply less losses.

10. Includes non-energy use for industry/transformation/energy.

11. Includes non-energy-use in transport.

# COUNTRY NOTES AND SOURCES

In the references below, both the statistical year (2013) for which data are being published in this edition, as well as publication dates of the many documents which have been consulted during the development of this publication are mentioned. As a general rule, where specific documents or personal communications have been used, the date that is referenced is the date of publication of the document or the date of the communication, whereas, where data received through the completion of questionnaires are mentioned, the date that is referenced is the statistical year for which data are being published in this edition, namely 2013.

Data may not include all informal and/or illegal trade, production or consumption of energy products, although the IEA secretariat makes efforts to estimate these where reliable information is available.

## People's Republic of China

### Revisions of China's 2011, 2012 and 2013 energy data

In September 2015, the National Bureau of Statistics of China published China's energy statistics for 2013, as well as revised statistics for the years 2000 to 2012. NBS supplied the IEA with detailed energy balances for 2011 to 2013 and using these the IEA revised its 2011-2013 data based on these newly available figures. The revisions show significant changes both on the supply and demand side for a number of energy products, resulting in breaks in time series between 2010 and 2011. For the years 2000-2010, revisions will be published in the next edition of this publication.

Calorific values were also revised for bituminous coal in this edition. Net calorific values (NCV) for coal inputs to power generation as well as to main activity heat plants were modified from 2011 to 2013 by applying assumptions used by China on the average thermal efficiency of coal-fired power stations in these years. NCVs were also modified for bituminous coal production from 2011 to 2013. These NCVs were calculated as the implied calorific values used by China in converting its commodity balance to energy units.

## Key information

20 years of statistics and historic data on oil, natural gas, coal, electricity renewables, energy-related CO<sub>2</sub> emissions and more – for over 140 countries.

## Interactive features

To explore the shifts in a country's energy balance – from production through to transformation – over up to 40 years, showing important changes in supply mix or share of consumption.

## Easy access

Available through iPhone, iPad and Android applications.
