

This Washington Post-ABC News poll was conducted by telephone June 20-23, 2016, among a random national sample of 1,001 adults, including landline and cell phone respondents. Results have a margin of sampling error of plus or minus 3.5 percentage points. Sampling, data collection and tabulation by Abt-SRBI of New York.

\*= less than 0.5 percent

(Full methodological details and sampling error margins for subgroups appended at the end.)

1. I'd like you to rate the chances that you will vote in the presidential election in November: Are you absolutely certain to vote, will you probably vote, are the chances 50-50, or less than that?

		Certain to vote	Probably vote	Chances 50/50	Less than that	Don't think will vote (vol.)	Already voted (vol.)	No op.

#### METHODOLOGICAL DETAILS

This poll was jointly sponsored and funded by The Washington Post and ABC News. The poll is a random sample of the continental United States, not including Alaska and Hawaii, with interviews in English and Spanish.

This questionnaire was administered with the exact questions in the exact order as appears in this document. Demographics and religious identity questions are not shown. If a question was asked of a reduced base of the sample, a parenthetical preceding the question identifies the group asked. Phrases surrounded by parentheticals within questions indicate clauses that were randomly rotated for respondents. Results preceded by "RV" indicate results among registered voters.

A dual frame landline and cellular phone telephone sample was generated using Random Digit Dialing procedures. Interviewers called landlines cellular phone numbers, first requesting to speak with the youngest adult male or female at home. The final sample included 350 interviews completed on landlines and 651 interviews completed via cellular phones, including 384 interviews with adults in cell phone-only households.

This survey uses statistical weighting procedures to account for deviations in the survey sample from known population characteristics, which helps correct for differential survey participation and random variation in samples. The overall adult sample is weighted to correct for differential probabilities of selection among individuals who are landline-only, cell phone-only or dual users. Results are also weighted match the demographic makeup of the population by sex, region, age, education and race/ethnicity according to the latest Current Population Survey March Social and Economic Supplement by age, race/ethnicity, sex and education.

All error margins have been adjusted to account for the survey's design effect, which is 1.36 for this survey. The design effect is a factor representing the survey's deviation from a simple random sample, and takes into account decreases in precision due to sample design and weighting procedures. Surveys that do not incorporate a design effect overstate their precision.

<u>Group</u>	<u>Unweighted sample size</u>	<u>Error margin</u>
All adults	1,001	+/- 3.5 points
Registered voters	836	4.0
Registered Leaned Dems	385	6.0
Registered Leaned Reps	371	6.0
