In 21-Candidate Free-For-All For Open Seattle Mayor Seat, McGinn and Durkan Fight For Right To Advance to Run-Off;
Hasegawa, Oliver and Farrell Clustered in Second Tier, All Others With Insignificant Support, 42 Days Till Votes Counted:

With embattled incumbent Seattle Mayor Ed Murray out of the running, former Mayor Mike McGinn and former US Attorney Jenny Durkan emerge from a crowded field as early front runners, according to a SurveyUSA poll commissioned by KING-TV. But: even among those who say they are certain to vote before the August 1 deadline, nearly 4 in 10 are undecided, and the contest remains wide open for any of 3 second-tier candidates to overtake the front-runners.

At this hour, 3 weeks till ballots are mailed and 6 weeks till votes are counted, the contest stands:

* 19% McGinn.
* 14% Durkan.
* 9% Nikkita Oliver, an artist.
* 8% Bob Hasegawa, a state senator.
* 6% Jessyn Farrell, a state representative.
* 3% Cary Moon, a civic activist.
* 1% Gary E. Brose, an entrepreneur.
* 14 other candidates have less than 1% support.

The top 2 finishers on 08/01/17 advance to a run-off in November.

1 in 3 likely voters say Murray should have run for re-election. Approximately that same number, 1 in 3, say they would have voted for Murray if he were on the ballot. Of those whose first choice would have been Murry, 27% vote for McGinn, 11% vote for Durkan, 8% vote for Farrell --- but 37% of Murray supporters don't yet have a 2nd choice.

McGinn's support is young, male, and middle-income. Durkan's support is older, female, and affluent. Both Hasegawa and Oliver over-perform among the city's significant Asian population. Though the contest is non-partisan, Republicans and conservatives line up for McGinn; liberals and Democrats throw in for Oliver. Durkan draws from independents.

2 of 3 Seattle adults say they would be "for" a plan to impose a new tax on those city residents whose incomes are in the top 5 percent. 76% of Seattle adults say the city has "too little" affordable housing; 11% say Seattle has "just the right amount" of affordable housing; 7% say the city has "too much" affordable housing. 48% support a proposal to rezone parts of Seattle to allow multi-family homes in areas that today only permit single-family homes. 29% oppose. Opposition is strongest among senior citizens. Seattle is divided over a proposed tax on soda and other sweetened drinks. 31% say they would support such a tax, regardless of how the money raised is used; another 31% say they would oppose such a tax, regardless of how the money raised is used. 38% say their answer depends on how the money would be used. When told the money from the proposed soda tax would go to fund low-income education, 61% support the tax; 25% oppose. 53% in Seattle say drug abuse is a "major problem" in the city; another 17% say it is a crisis. By 2:1, residents say proposed "safe injection centers" would do more good than harm. 48% say homelessness in Seattle is a "major problem"; another 38% say it is a crisis. When asked what Seattle's next mayor should do first to combat homelessness, 30% say taxes should be raised to fund affordable housing and drug treatment; 24% say the city should establish more sanctioned RV and tent camps; 15% say police should break up any illegal camping and get tough on panhandling; 10% say the city should reduce the services it offers in order to change its reputation for generosity.

About: SurveyUSA interviewed 900 city of Seattle adults 06/06/17 through 06/18/17. Of the adults, 800 were registered to vote. Of the registered voters, SurveyUSA identified 503 who were most likely to vote in the 08/01/17 primary. This research was conducted using blended sample, mixed mode. Respondents reachable on a home telephone (39% of likely voters) were interviewed on their home telephone in the recorded voice of a professional announcer. Respondents not reachable on a home telephone (61% of likely voters) were shown a questionnaire on the display of their smartphone, tablet or other electronic device.

5 The Seattle City Council may impose a new tax on those city residents whose incomes are in the top 5 percent. The tax may be used to reduce other taxes, but also may be used to replace money that in the past has come from the federal government. Would you be for? Or against? A new tax on the city's wealthiest 5 percent?

21 Which ONE of the following should the next Seattle mayor do first, before anything else, to address the homeless issue? Raise taxes to fund more affordable housing and drug treatment? Establish more sanctioned tent and RV camps? Order police to break up any illegal camping and get tough on panhandling? Reduce services because Seattle has reputation for being too generous? Or something else?

Statement of Methodology: SurveyUSA is an independent, non-partisan, apolitical research company that conducts opinion surveys for media, academic institutions, commercial clients, non-profits, governments, agencies, and elected officials. SurveyUSA opinion research is conducted using a methodology optimized for each particular project. In some cases, this means data is collected 100% by telephone; in some cases, 100% online; and in other cases, a blend of the two. For those projects that are conducted "mixed-mode" (or "multi-mode"): Respondents who have a home (landline) telephone are interviewed by phone, sometimes using live interviewers, other times using the recorded voice of a professional announcer. The youngest male is requested on approximately 30% of calls to home phones, the youngest adult is requested on approximately 70% of calls. This method of intra-household selection reduces the potential for age and gender imbalance in the unweighted sample. Re-attempts are made to busy signals, no-answers, and answering machines. For surveys using random-digit-dial (RDD) to call landline phones, sample is purchased from SSI of Shelton CT. For surveys using voter-list (RBS) sample to call landline phones, sample is purchased from Aristotle of Washington DC. Respondents who do not use a home telephone are interviewed on an electronic device, which means, for some projects, that call-center employees hand-dial cell phones and interview respondents verbally on the respondent's cell phone, and means, for other projects, that SurveyUSA displays the questions visually on the respondent's phone, tablet, or other device. Sample for respondents who do not use a home telephone is purchased from SSI, from Aristotle, or from one of several other research companies that provide access to cell respondents. Where meaningful, SurveyUSA indicates the percentage of respondents who use a home phone and the percentage who do not, and crosstabs by this distinction. If sample of adults is drawn from SSI, responses are minimally weighted to U.S. Census targets for gender, age and race. If sample of voters is drawn from Aristotle, responses are minimally weighted to the known demographics of the voter file, which include gender and age but, typically, not race. Target (cell) weighting is used. On questionnaires that ask about political party identification, SurveyUSA may or may not weight to Party ID, depending on client preference. Where necessary, questions and answer choices are rotated to prevent order bias, recency, and latency effects. On some studies, certain populations are over-sampled, so that the number of unweighted respondents exceeds the number of weighted respondents. Each individual SurveyUSA release contains the date(s) on which interviews are conducted and a release date. If interviewing for a particular study is conducted in Spanish, or in any other foreign language, it will be noted on the specific release. If no notation appears, interviews are conducted in English. Where respondents are filtered, such as adults, filtered to registered voters, in turn filtered to likely voters, SurveyUSA describes the filtering on the specific release. On pre-election polls in geographies with early voting, SurveyUSA differentiates between respondents who have already voted and those who are likely to vote but have not yet done so. On research completed prior to 12/31/16, SurveyUSA assigned to each question within the instrument a theoretical margin of sampling error. Effective 01/01/17, SurveyUSA assigns to each question within the instrument a credibility interval, which better reflects the sampling uncertainties associated with gathering some percentage of respondent answers using non-probability sample. Though commonly cited in the presentation of research results, "sampling error" is only one of many types of error that may influence the outcome of an opinion research study. More practical concerns include the way in which questions are worded and ordered, the inability to contact some, the refusal of others to be interviewed, and the difficulty of translating each questionnaire into all possible languages and dialects. Non-sampling errors cannot be quantified. This statement conforms to the principals of disclosure as recommended by the National Council on Public Polls (NCPP). Questions about SurveyUSA research can be addressed to editor@surveyusa.com.
