Subject: SB18-211: Vulnerability Summary for the Week of July 23, 2018

Warning: This email is from an external source.

ystem:

[Vulnerability Summary for the Week of July 23, 2018](#)

, 2018

ystem Bulletin provides a summary of new vulnerabilities that have been recorded by the [National Institute of Standards and Technology \(NIST\) National Vulnerability Database](#) by the [Department of Homeland Security \(DHS\) National Cybersecurity and Communications Integration Center \(NCCIC\)](#) / [United States Computer Emergency Response Team \(US-CERT\)](#). For more information on these vulnerabilities, please visit the [NVD](#), which contains historical vulnerability information.

The vulnerabilities are listed on the [CVE](#) vulnerability naming standard and are organized according to severity, determined by the [Common Vulnerability Scoring System \(CVSS\)](#) standard. The vulnerabilities are categorized into the following scores:

Vulnerabilities will be labeled High severity if they have a CVSS base score of 7.0 - 10.0

Vulnerabilities will be labeled Medium severity if they have a CVSS base score of 4.0 - 6.9

Vulnerabilities will be labeled Low severity if they have a CVSS base score of 0.0 - 3.9

Information provided by organizations and efforts sponsored by US-CERT. This information may include identifying information, values, definitions, and related information. Please note that some of the information in the bulletins is compiled from external, open source reports and is not a direct result of US-CERT analysis.

This Vulnerability Summary Bulletin is created using information from the National Institute of Standards and Technology (NIST) [National Vulnerability Database](#) (NVD). In some cases, we have assigned CVSS scores. Please visit NVD for updated vulnerability entries, which include CVSS scores once they are available.

High Vulnerabilities

Primary - Product	Description	Published	CVSS Score
There were no high vulnerabilities recorded this week.			

Medium Vulnerabilities

Primary - Product	Description	Published	CVSS Score
There were no medium vulnerabilities recorded this week.			

Low Vulnerabilities

Primary - Product	Description	Published	CVSS Score
There were no low vulnerabilities recorded this week.			

Assigned

Primary Product	Description	Published
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Untrusted pointer dereference vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Use-after-free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Use-after-free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Use-after-free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Use-after-free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Double Free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Type Confusion vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Buffer Errors vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Use-after-free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Use-after-free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Use-after-free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Use-after-free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Untrusted pointer dereference vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Use-after-free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Security Bypass vulnerability. Successful exploitation could lead to privilege escalation.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Use-after-free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Use-after-free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Use-after-free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Buffer Errors vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Type Confusion vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Buffer Errors vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Use-after-free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Buffer Errors vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Type Confusion vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Connect versions 9.7.5 and earlier have an Insecure Library Loading vulnerability. Successful exploitation could lead to privilege escalation.	2018-20

	Adobe Connect versions 9.7.5 and earlier have an Authentication Bypass vulnerability. Successful exploitation could lead to session hijacking.	2018-20
r	Adobe Experience Manager versions 6.2 and 6.3 have a Server-Side Request Forgery vulnerability. Successful exploitation could lead to sensitive information disclosure.	2018-20
r	Adobe Experience Manager versions 6.4 and earlier have a Server-Side Request Forgery vulnerability. Successful exploitation could lead to sensitive information disclosure.	2018-20
r	Adobe Experience Manager versions 6.4 and earlier have a Server-Side Request Forgery vulnerability. Successful exploitation could lead to sensitive information disclosure.	2018-20
	Adobe Flash Player 30.0.0.113 and earlier versions have a Type Confusion vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Flash Player 30.0.0.113 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
p	An out-of-bounds heap buffer read flaw was found in the way advancecomp before 2.1-2018/02 handled processing of ZIP files. An attacker could potentially use this flaw to crash the advzip utility by tricking it into processing crafted ZIP files.	2018-27

	An input validation vulnerability was found in Ansible's mysql_user module before 2.2.1.0, which may fail to correctly change a password in certain circumstances. Thus the previous password would still be active when it should have been changed.	2018-26
	A flaw was found in Ansible Tower's interface before 3.1.5 and 3.2.0 with SCM repositories. If a Tower project (SCM repository) definition does not have the 'delete before update' flag set, an attacker with commit access to the upstream playbook source repository could create a Trojan playbook that, when executed by Tower, modifies the checked out SCM repository to add git hooks. These git hooks could, in turn, cause arbitrary command and code execution as the user Tower runs as.	2018-27
	In Apache Kafka 0.9.0.0 to 0.9.0.1, 0.10.0.0 to 0.10.2.1, 0.11.0.0 to 0.11.0.2, and 1.0.0, authenticated Kafka users may perform action reserved for the Broker via a manually created fetch request interfering with data replication, resulting in data loss.	2018-26
	In Apache Kafka 0.10.0.0 to 0.10.2.1 and 0.11.0.0 to 0.11.0.1, authenticated Kafka clients may use impersonation via a manually crafted protocol message with SASL/PLAIN or SASL/SCRAM authentication when using the built-in PLAIN or SCRAM server implementations in Apache Kafka.	2018-26
	In PHP Runtime for Apache OpenWhisk, a Docker action inheriting one of the Docker tags openwhisk/action-php-v7.2:1.0.0 or openwhisk/action-php-v7.1:1.0.1 (or earlier) may allow an attacker to replace the user function inside the container if the user code is vulnerable to code exploitation.	2018-23
	In Docker Skeleton Runtime for Apache OpenWhisk, a Docker action inheriting the Docker tag openwhisk/dockerskeleton:1.3.0 (or earlier) may allow an attacker to replace the user function inside the container if the user code is vulnerable to code exploitation.	2018-23
	The TomEE console (tomee-webapp) has a XSS vulnerability which could allow javascript to be executed if the user is given a malicious URL. This web application is typically used to add TomEE features to a Tomcat installation. The TomEE bundles do not ship with this application included. This issue can be mitigated by removing the application after TomEE is setup (if using the application to install TomEE), using one of the provided pre-configured bundles, or by upgrading to TomEE 7.0.5. This issue is resolve in this commit: b8bbf50c23ce97dd64f3a5d77f78f84e47579863.	2018-23

	ARM mbed TLS before 2.12.0, before 2.7.5, and before 2.1.14 allows local users to achieve partial plaintext recovery (for a CBC based ciphersuite) via a cache-based side-channel attack.	2018-28
	ARM mbed TLS before 2.12.0, before 2.7.5, and before 2.1.14 allows remote attackers to achieve partial plaintext recovery (for a CBC based ciphersuite) via a timing-based side-channel attack. This vulnerability exists because of an incorrect fix (with a wrong SHA-384 calculation) for CVE-2013-0169.	2018-28
	ASUS HG100 devices with firmware before 1.05.12 allow unauthenticated access, leading to remote command execution.	2018-25
	The Webhooks component of Atlassian Jira before version 7.6.7 and from version 7.7.0 before version 7.11.0 allows remote attackers who are able to observe or otherwise intercept webhook events to learn information about changes in issues that should not be sent because they are not contained within the results of a specified JQL query.	2018-24
	An issue was discovered in aubio 0.4.6. A SEGV signal can occur in aubio_source_avcodec_readframe in io/source_avcodec.c, as demonstrated by aubiomfcc.	2018-23
	An issue was discovered in aubio 0.4.6. A SEGV signal can occur in aubio_pitch_set_unit in pitch/pitch.c, as demonstrated by aubionotes.	2018-23
	An issue was discovered in aubio 0.4.6. A buffer over-read can occur in new_aubio_pitchyinfft in pitch/pitchyinfft.c, as demonstrated by aubionotes.	2018-23
	AVEVA InTouch 2014 R2 SP1 and prior, InTouch 2017, InTouch 2017 Update 1, and InTouch 2017 Update 2 allow an unauthenticated user to send a specially crafted packet that could overflow the buffer on a locale not using a dot floating point separator. Exploitation could allow remote code execution under the privileges of the InTouch View process.	2018-24
	index.php?r=admini/admin/create in BageCMS V3.1.3 allows CSRF to add a background administrator account.	2018-24
	An issue has been discovered in Bento4 1.5.1-624. A SEGV can occur in AP4_Processor::ProcessFragments in Core/Ap4Processor.cpp.	2018-24

	An issue was discovered in Bento4 1.5.1-624. There is a heap-based buffer over-read in AP4_Mpeg2TsVideoSampleStream::WriteSample in Core/Ap4Mpeg2Ts.cpp after a call from Mp42Hls.cpp, a related issue to CVE-2018-13846.	2018-23
	An issue has been discovered in Bento4 1.5.1-624. AP4_MemoryByteStream::WritePartial in Core/Ap4ByteStream.cpp has a buffer over-read.	2018-24
	An issue was discovered in Bento4 1.5.1-624. There is an unspecified "heap-buffer-overflow" crash in the AP4_HvccAtom class in Core/Ap4HvccAtom.cpp.	2018-23
	An issue has been discovered in Bento4 1.5.1-624. A NULL pointer dereference can occur in AP4_DataBuffer::SetData in Core/Ap4DataBuffer.cpp.	2018-24
	An issue has been discovered in Bento4 1.5.1-624. AP4_Mp4AudioDsiParser::ReadBits in Codecs/Ap4Mp4AudioInfo.cpp has a heap-based buffer over-read.	2018-24
	There exists one NULL pointer dereference vulnerability in AP4_JsonInspector::AddField in Ap4Atom.cpp in Bento4 1.5.1-624, which can allow attackers to cause a denial-of-service via a crafted mp4 file. This vulnerability can be triggered by the executable mp4dump.	2018-23
	An issue has been discovered in Bento4 1.5.1-624. AP4_AvccAtom::Create in Core/Ap4AvccAtom.cpp has a heap-based buffer over-read.	2018-24
	An issue has been discovered in Bento4 1.5.1-624. AP4_BytesToUInt16BE in Core/Ap4Utils.h has a heap-based buffer over-read after a call from the AP4_Stz2Atom class.	2018-24
	There exists one invalid memory read bug in AP4_SampleDescription::GetFormat() in Ap4SampleDescription.h in Bento4 1.5.1-624, which can allow attackers to cause a denial-of-service via a crafted mp4 file. This vulnerability can be triggered by the executable mp42ts.	2018-23
	There exists one invalid memory read bug in AP4_SampleDescription::GetType() in Ap4SampleDescription.h in Bento4 1.5.1-624, which can allow attackers to cause a denial-of-service via a crafted mp4 file. This vulnerability can be triggered by the executable mp42ts.	2018-23
	An issue has been discovered in Bento4 1.5.1-624. A SEGV can occur in AP4_Mpeg2TsAudioSampleStream::WriteSample in Core/Ap4Mpeg2Ts.cpp, a different vulnerability than CVE-2018-14532.	2018-24

	Brynamics "Online Trade - Online trading and cryptocurrency investment system" allows remote attackers to obtain sensitive information via a direct request for /dashboard/addplan, /dashboard/paywithcard/charge, /dashboard/withdrawal, or /privacy&terms, as demonstrated by reading database username, database password, database_name, and IP address fields, related to CVE-2018-12908.	2018-23
	huft_build in archival/libarchive/decompress_gunzip.c in BusyBox before 1.27.2 misuses a pointer, causing segfaults and an application crash during an unzip operation on a specially crafted ZIP file.	2018-26
devices	CalAmp LMU 3030 series OBD-II CDMA and GSM devices has an SMS (text message) interface that can be deployed where no password is configured for this interface by the integrator / reseller. This interface must be password protected, otherwise, the attacker only needs to know the phone number of the device (via an IMSI Catcher, for example) to send administrative commands to the device. These commands can be used to provide ongoing, real-time access to the device and can configure parameters such as IP addresses, firewall rules, and passwords.	2018-24
	In Ceph, a format string flaw was found in the way libradosstriper parses input from user. A user could crash an application or service using the libradosstriper library.	2018-27
	Directory traversal vulnerability in ChamaNet MemoCGI v2.1800 to v2.2200 allows remote attackers to read arbitrary files via unspecified vectors.	2018-26
	Chamilo LMS version 11.x contains an Unserialization vulnerability in the "hash" GET parameter for the api endpoint located at /webservices/api/v2.php that can result in Unauthenticated remote code execution. This attack appear to be exploitable via a simple GET request to the api endpoint. This vulnerability appears to have been fixed in After commit 0de84700648f098c1fbf6b807dee28ec640efe62.	2018-23
uaa	Cloud Foundry UAA, versions 4.19 prior to 4.19.2 and 4.12 prior to 4.12.4 and 4.10 prior to 4.10.2 and 4.7 prior to 4.7.6 and 4.5 prior to 4.5.7, incorrectly authorizes requests to admin endpoints by accepting a valid refresh token in lieu of an access token. Refresh tokens by design have a longer expiration time than access tokens, allowing the possessor of a refresh token to authenticate longer than expected. This affects the administrative endpoints of the UAA. i.e. /Users, /Groups, etc. However, if the user has been deleted or had groups removed, or the client was deleted, the refresh token will no longer be valid.	2018-24
	adm-zip npm library before 0.4.9 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in a Zip archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.	2018-25

	curl before 7.53.0 has an incorrect TLS Certificate Status Request extension feature that asks for a fresh proof of the server's certificate's validity in the code that checks for a test success or failure. It ends up always thinking there's valid proof, even when there is none or if the server doesn't support the TLS extension in question. This could lead to users not detecting when a server's certificate goes invalid or otherwise be misled that the server is in a better shape than it is in reality. This flaw also exists in the command line tool (--cert-status).	2018-27
	SQL injection vulnerability in the Notifications application in the Cybozu Garoon 3.5.0 to 4.6.2 allows remote authenticated attackers to execute arbitrary SQL commands via unspecified vectors.	2018-26
products	Dahua IP camera products using firmware versions prior to V2.400.0000.14.R.20170713 include a version of the Sonia web interface that may be vulnerable to a stack buffer overflow. Dahua IP camera products include an application known as Sonia (/usr/bin/sonia) that provides the web interface and other services for controlling the IP camera remotely. Versions of Sonia included in firmware versions prior to DH_IPC-Consumer-Zi-Themis_Eng_P_V2.408.0000.11.R.20170621 do not validate input data length for the 'password' field of the web interface. A remote, unauthenticated attacker may submit a crafted POST request to the IP camera's Sonia web interface that may lead to out-of-bounds memory operations and loss of availability or remote code execution. The issue was originally identified by the researcher in firmware version DH_IPC-HX1X2X-Themis_EngSpnFrn_N_V2.400.0000.30.R.20160803.	2018-24
	The DBPOWER U818A WIFI quadcopter drone provides FTP access over its own local access point, and allows full file permissions to the anonymous user. The DBPower U818A WIFI quadcopter drone runs an FTP server that by default allows anonymous access without a password, and provides full filesystem read/write permissions to the anonymous user. A remote user within range of the open access point on the drone may utilize the anonymous user of the FTP server to read arbitrary files, such as images and video recorded by the device, or to replace system files such as /etc/shadow to gain further access to the device. Furthermore, the DBPOWER U818A WIFI quadcopter drone uses BusyBox 1.20.2, which was released in 2012, and may be vulnerable to other known BusyBox vulnerabilities.	2018-24
	It was found that subscription-manager's DBus interface before 1.19.4 let unprivileged user access the com.redhat.RHSM1.Facts.GetFacts and com.redhat.RHSM1.Config.Set methods. An unprivileged local attacker could use these methods to gain access to private information, or launch a privilege escalation attack.	2018-27

_for_android	The DHC Online Shop App for Android version 3.2.0 and earlier does not verify X.509 certificates from SSL servers, which allows man-in-the-middle attackers to spoof servers and obtain sensitive information via a crafted certificate.	2018-26
	The dotCMS administration panel, versions 3.7.1 and earlier, are vulnerable to cross-site request forgery. The dotCMS administrator panel contains a cross-site request forgery (CSRF) vulnerability. An attacker can perform actions with the same permissions as a victim user, provided the victim has an active session and is induced to trigger the malicious request. An unauthenticated remote attacker may perform actions with the dotCMS administrator panel with the same permissions of a victim user or execute arbitrary system commands with the permissions of the user running the dotCMS application.	2018-24
	The dotCMS administration panel, versions 3.7.1 and earlier, "Push Publishing" feature in Enterprise Pro is vulnerable to arbitrary file upload. When "Bundle" tar.gz archives uploaded to the Push Publishing feature are decompressed, there are no checks on the types of files which the bundle contains. This vulnerability combined with the path traversal vulnerability (CVE-2017-3188) can lead to remote command execution with the permissions of the user running the dotCMS application. An unauthenticated remote attacker may perform actions with the dotCMS administrator panel with the same permissions of a victim user or execute arbitrary system commands with the permissions of the user running the dotCMS application.	2018-24
	The dotCMS administration panel, versions 3.7.1 and earlier, "Push Publishing" feature in Enterprise Pro is vulnerable to path traversal. When "Bundle" tar.gz archives uploaded to the Push Publishing feature are decompressed, the filenames of its contents are not properly checked, allowing for writing files to arbitrary directories on the file system. These archives may be uploaded directly via the administrator panel, or using the CSRF vulnerability (CVE-2017-3187). An unauthenticated remote attacker may perform actions with the dotCMS administrator panel with the same permissions of a victim user or execute arbitrary system commands with the permissions of the user running the dotCMS application.	2018-24
zip.semvered	DotNetZip.Semvered before 1.11.0 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in a Zip archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.	2018-25
	It was found in EAP 7 before 7.0.9 that properties based files of the management and the application realm configuration that contain user to role mapping are world readable allowing access to users and roles information to all the users logged in to the system.	2018-26

i.lon	Echelon SmartServer 1 all versions, SmartServer 2 all versions prior to release 4.11.007, i.LON 100 all versions, and i.LON 600 all versions. An attacker can use the SOAP API to retrieve and change sensitive configuration items such as the usernames and passwords for the Web and FTP servers. This vulnerability does not affect the i.LON 600 product.	2018-24
i.lon	Echelon SmartServer 1 all versions, SmartServer 2 all versions prior to release 4.11.007, i.LON 100 all versions, and i.LON 600 all versions. The devices allow unencrypted Web connections by default, and devices can receive configuration and firmware updates by unsecure FTP.	2018-24
i.lon	Echelon SmartServer 1 all versions, SmartServer 2 all versions prior to release 4.11.007, i.LON 100 all versions, and i.LON 600 all versions. The devices store passwords in plaintext, which may allow an attacker with access to the configuration file to log into the SmartServer web user interface.	2018-24
i.lon	Echelon SmartServer 1 all versions, SmartServer 2 all versions prior to release 4.11.007, i.LON 100 all versions, and i.LON 600 all versions. An attacker can bypass the required authentication specified in the security configuration file by including extra characters in the directory name when specifying the directory to be accessed. This vulnerability does not affect the i.LON 600 product.	2018-24
	On F5 BIG-IP DNS 13.1.0-13.1.0.7, 12.1.3-12.1.3.5, DNS Express / DNS Zones accept NOTIFY messages on the management interface from source IP addresses not listed in the 'Allow NOTIFY From' configuration parameter when the db variable "dnsexpress.notifyport" is set to any value other than the default of "0".	2018-25
	A remote attacker may be able to disrupt services on F5 BIG-IP 13.0.0-13.1.0.5, 12.1.0-12.1.3.5, 11.6.0-11.6.3.1, or 11.2.1-11.5.6 if the TMM virtual server is configured with a HTML or a Rewrite profile. TMM may restart while processing some specially prepared HTML content from the back end.	2018-25
	A remote attacker via undisclosed measures, may be able to exploit an F5 BIG-IP APM 13.0.0-13.1.0.7 or 12.1.0-12.1.3.5 virtual server configured with an APM per-request policy object and cause a memory leak in the APM module.	2018-25
	Under certain conditions, on F5 BIG-IP ASM 13.0.0-13.1.0.7, 12.1.0-12.1.3.5, 11.6.0-11.6.3.1, 11.5.1-11.5.6, or 11.2.1, when processing CSRF protections, the BIG-IP ASM bd process may restart and produce a core file.	2018-25

	Through undisclosed methods, on F5 BIG-IP 13.0.0-13.1.0.7, 12.1.0-12.1.3.5, 11.6.0-11.6.3.1, or 11.2.1-11.5.6, adjacent network attackers can cause a denial of service for VCMP guest and host systems. Attack must be sourced from adjacent network (layer 2).	2018-25
	When F5 BIG-IP ASM 13.0.0-13.1.0.1, 12.1.0-12.1.3.5, 11.6.0-11.6.3.1, or 11.5.1-11.5.6 is processing HTTP requests, an unusually large number of parameters can cause excessive CPU usage in the BIG-IP ASM bd process.	2018-25
	F5 BIG-IP 13.0.0-13.0.1, 12.1.0-12.1.3.6, or 11.2.1-11.6.3.2 HTTPS health monitors do not validate the identity of the monitored server.	2018-25
	F5 BIG-IP 13.0.0-13.1.0.5, 12.1.0-12.1.3.5, or 11.6.0-11.6.3.1 virtual servers with HTTP/2 profiles enabled are vulnerable to "HPACK Bomb".	2018-25
	FFmpeg before commit bab0716c7f4793ec42e05a5aa7e80d82a0dd4e75 contains an out of array access vulnerability in MXF format demuxer that can result in DoS. This attack appear to be exploitable via specially crafted MXF file which has to be provided as input. This vulnerability appears to have been fixed in bab0716c7f4793ec42e05a5aa7e80d82a0dd4e75 and later.	2018-23
	FFmpeg before commit 5aba5b89d0b1d73164d3b81764828bb8b20ff32a contains an out of array read vulnerability in ASF_F format demuxer that can result in heap memory reading. This attack appear to be exploitable via specially crafted ASF file that has to provided as input. This vulnerability appears to have been fixed in 5aba5b89d0b1d73164d3b81764828bb8b20ff32a and later.	2018-23
	FFmpeg before commit 9807d3976be0e92e4ece3b4b1701be894cd7c2e1 contains a CWE-835: Infinite loop vulnerability in pva format demuxer that can result in a Vulnerability that allows attackers to consume excessive amount of resources like CPU and RAM. This attack appear to be exploitable via specially crafted PVA file has to be provided as input. This vulnerability appears to have been fixed in 9807d3976be0e92e4ece3b4b1701be894cd7c2e1 and later.	2018-23
	FFmpeg before commit 2b46ebdbff1d8dec7a3d8ea280a612b91a582869 contains a Buffer Overflow vulnerability in asf_o format demuxer that can result in heap-buffer-overflow that may result in remote code execution. This attack appears to be exploitable via specially crafted ASF file that has to be provided as input to FFmpeg. This vulnerability appears to have been fixed in 2b46ebdbff1d8dec7a3d8ea280a612b91a582869 and later.	2018-23
	FFmpeg before commit a7e032a277452366771951e29fd0bf2bd5c029f0 contains a use-after-free vulnerability in the realmedia demuxer that can result in vulnerability allows attacker to read heap memory. This attack appear to be exploitable via specially crafted RM file has to be provided as input. This vulnerability appears to have been fixed in a7e032a277452366771951e29fd0bf2bd5c029f0 and later.	2018-23

	FFmpeg before commit cced03dd667a5df6df8fd40d8de0bff477ee02e8 contains multiple out of array access vulnerabilities in the mms protocol that can result in attackers accessing out of bound data. This attack appear to be exploitable via network connectivity. This vulnerability appears to have been fixed in cced03dd667a5df6df8fd40d8de0bff477ee02e8 and later.	2018-23
	foreman before version 1.16.0 is vulnerable to a stored XSS in organizations/locations assignment to hosts. Exploiting this requires a user to actively assign hosts to an organization that contains html in its name which is visible to the user prior to taking action.	2018-26
	In fuse before versions 2.9.8 and 3.x before 3.2.5, fusermount is vulnerable to a restriction bypass when SELinux is active. This allows non-root users to mount a FUSE file system with the 'allow_other' mount option regardless of whether 'user_allow_other' is set in the fuse configuration. An attacker may use this flaw to mount a FUSE file system, accessible by other users, and trick them into accessing files on that file system, possibly causing Denial of Service or other unspecified effects.	2018-24
	A flaw was discovered in gdm 3.24.1 where gdm greeter was no longer setting the ran_once boolean during autologin. If autologin was enabled for a victim, an attacker could simply select 'login as another user' to unlock their screen.	2018-26
enterprise_edition	An issue was discovered in GitLab Community and Enterprise Edition before 10.8.7, 11.0.x before 11.0.5, and 11.1.x before 11.1.2. XSS can occur in the branch name during a Web IDE file commit.	2018-26
enterprise_edition	An issue was discovered in GitLab Community and Enterprise Edition 11.1.x before 11.1.2. A Denial of Service can occur because Markdown rendering times are slow.	2018-26
enterprise_edition	An issue was discovered in GitLab Community and Enterprise Edition before 10.8.7, 11.0.x before 11.0.5, and 11.1.x before 11.1.2. Information Disclosure can occur because the Prometheus metrics feature discloses private project pathnames.	2018-26
enterprise_edition	An issue was discovered in GitLab Community and Enterprise Edition before 10.8.7, 11.0.x before 11.0.5, and 11.1.x before 11.1.2. CSRF can occur in the Test feature of the System Hooks component.	2018-26
enterprise_edition	An issue was discovered in GitLab Community and Enterprise Edition before 10.8.7, 11.0.x before 11.0.5, and 11.1.x before 11.1.2. XSS can occur via a Milestone name during a promotion.	2018-26

enterprise_edition	An issue was discovered in GitLab Community and Enterprise Edition before 10.8.7, 11.0.x before 11.0.5, and 11.1.x before 11.1.2. XSS can occur in the tooltip of the job inside the CI/CD pipeline.	2018-26
	Untrusted search path vulnerability in the installer of Glarysoft Glary Utilities (Glary Utilities 5.99 and earlier and Glary Utilities Pro 5.99 and earlier) allows an attacker to gain privileges via a Trojan horse DLL in an unspecified directory.	2018-26
	Glezcms Gleez Cms version 1.3.0 contains a Cross Site Scripting (XSS) vulnerability in Profile page that can result in Inject arbitrary web script or HTML via the profile page editor. This attack appear to be exploitable via The victim must navigate to the attacker's profile page.	2018-23
	camel/providers/imapx/camel-imapx-server.c in the IMAPx component in GNOME evolution-data-server before 3.21.2 proceeds with cleartext data containing a password if the client wishes to use STARTTLS but the server will not use STARTTLS, which makes it easier for remote attackers to obtain sensitive information by sniffing the network. The server code was intended to report an error and not proceed, but the code was written incorrectly.	2018-20
	dwg_decode_eeed in decode.c in GNU LibreDWG 0.5.1048 leads to a double free (in dwg_free_eeed in free.c) because it does not properly manage the obj->eeed value after a free occurs.	2018-23
	Cross-site scripting vulnerability in Mailman 2.1.26 and earlier allows remote authenticated attackers to inject arbitrary web script or HTML via unspecified vectors.	2018-26
	mholt/archiver golang package before e4ef56d48eb029648b0e895bb0b6a393ef0829c3 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in an archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.	2018-25
	GolemCMS through 2008-12-24, if the install/ directory remains active after an installation, allows remote attackers to execute arbitrary PHP code by inserting this code into the "Database Information" "Table prefix" form field, or obtain sensitive information via a direct request for install/install.sql.	2018-24

	The add function in www/Lib/Lib/Action/Admin/TplAction.class.php in Gxlcms v1.1.4 allows remote attackers to read arbitrary files via a crafted index.php?s=Admin-Tpl-ADD-id request, related to Lib/Common/Admin/function.php.	2018-28
	An issue was discovered in H2 1.4.197. Insecure handling of permissions in the backup function allows attackers to read sensitive files (outside of their permissions) via a symlink to a fake database file.	2018-24
or_standard_edition	IBM Sterling B2B Integrator Standard Edition (IBM Sterling File Gateway 2.2.0 through 2.2.6) uses weaker than expected cryptographic algorithms that could allow a local attacker to decrypt highly sensitive information. IBM X-Force ID: 132032.	2018-20
or_standard_edition	IBM Sterling B2B Integrator Standard Edition 5.2.0 through 5.2.6 is vulnerable to cross-site scripting. This vulnerability allows users to embed arbitrary JavaScript code in the Web UI thus altering the intended functionality potentially leading to credentials disclosure within a trusted session. IBM X-Force ID: 141551.	2018-23
or_standard_edition	IBM Sterling B2B Integrator Standard Edition (IBM Sterling File Gateway 2.2.0 through 2.2.6) caches usernames and passwords in browsers that could be used by a local attacker to obtain sensitive information. IBM X-Force ID: 130812.	2018-20
	IBM Sterling File Gateway 2.2.0 through 2.2.6 could allow a remote authenticated attacker to obtain sensitive information displayed in the URL that could lead to further attacks against the system. IBM X-Force ID: 140688.	2018-20
	IBM WebSphere MQ 7.5, 8.0, and 9.0 could allow a remotely authenticated attacker to to send invalid or malformed headers that could cause messages to no longer be transmitted via the affected channel. IBM X-Force ID: 141339.	2018-23
	An SSRF vulnerability was discovered in idreamsoft iCMS V7.0.9 that allows attackers to read sensitive files, access an intranet, or possibly have unspecified other impact.	2018-23

k	The ReadMATImageV4 function in coders/mat.c in ImageMagick 7.0.8-7 uses an uninitialized variable, leading to memory corruption.	2018-23
	A vulnerability was found in ipa before 4.4. IdM's ca-del, ca-disable, and ca-enable commands did not properly check the user's permissions while modifying CAs in Dogtag. An authenticated, unauthorized attacker could use this flaw to delete, disable, or enable CAs causing various denial of service problems with certificate issuance, OCSP signing, and deletion of secret keys.	2018-27
tion	It was discovered that the XmlUtils class in jbpmmigration 6.5 performed expansion of external parameter entities while parsing XML files. A remote attacker could use this flaw to read files accessible to the user running the application server and, potentially, perform other more advanced XML eXternal Entity (XXE) attacks.	2018-26
	A cross-site scripting vulnerability exists in Jenkins 2.132 and earlier, 2.121.1 and earlier in the Stapler web framework's org/kohsuke/stapler/Stapler.java that allows attackers with the ability to control the existence of some URLs in Jenkins to define JavaScript that would be executed in another user's browser when that other user views HTTP 404 error pages while Stapler debug mode is enabled.	2018-23
	It was found that the use of Pipeline: Classpath Step Jenkins plugin enables a bypass of the Script Security sandbox for users with SCM commit access, as well as users with e.g. Job/Configure permission in Jenkins.	2018-27
	It was found that there were no permission checks performed in the Distributed Fork plugin before and including 1.5.0 for Jenkins that provides the dist-fork CLI command beyond the basic check for Overall/Read permission, allowing anyone with that permission to run arbitrary shell commands on all connected nodes.	2018-27
	A exposure of sensitive information vulnerability exists in Jenkins 2.132 and earlier, 2.121.1 and earlier in Plugin.java that allows attackers to determine the date and time when a plugin HPI/JPI file was last extracted, which typically is the date of the most recent installation/upgrade.	2018-23
	It was found that jenkins-ssh-slaves-plugin before version 1.15 did not perform host key verification, thereby enabling Man-in-the-Middle attacks.	2018-27

	A Improper authorization vulnerability exists in Jenkins 2.132 and earlier, 2.121.1 and earlier in Queue.java that allows attackers with Overall/Read permission to cancel queued builds.	2018-23
	A arbitrary file read vulnerability exists in Jenkins 2.132 and earlier, 2.121.1 and earlier in the Stapler web framework's org/kohsuke/stapler/Stapler.java that allows attackers to send crafted HTTP requests returning the contents of any file on the Jenkins master file system that the Jenkins master has access to.	2018-23
	jenkins-mailer-plugin before version 1.20 is vulnerable to an information disclosure while using the feature to send emails to a dynamically created list of users based on the changelogs. This could in some cases result in emails being sent to people who have no user account in Jenkins, and in rare cases even people who were not involved in whatever project was being built, due to some mapping based on the local-part of email addresses.	2018-27
	It was found that the Active Directory Plugin for Jenkins up to and including version 2.2 did not verify certificates of the Active Directory server, thereby enabling Man-in-the-Middle attacks.	2018-27
	A unauthorized modification of configuration vulnerability exists in Jenkins 2.132 and earlier, 2.121.1 and earlier in User.java that allows attackers to provide crafted login credentials that cause Jenkins to move the config.xml file from the Jenkins home directory. If Jenkins is started without this file present, it will revert to the legacy defaults of granting administrator access to anonymous users.	2018-23
	A cross-site scripting vulnerability exists in Jenkins 2.132 and earlier, 2.121.1 and earlier in BuildTimelineWidget.java, BuildTimelineWidget/control.jelly that allows attackers with Job/Configure permission to define JavaScript that would be executed in another user's browser when that other user performs some UI actions.	2018-23
	A Improper authorization vulnerability exists in Jenkins 2.132 and earlier, 2.121.1 and earlier in SlaveComputer.java that allows attackers with Overall/Read permission to initiate agent launches, and abort in-progress agent launches.	2018-23
	joyplus-cms 1.6.0 has XSS via the manager/collect/collect_vod_zhuiju.php keyword parameter.	2018-22
	manager/admin_ajax.php in joyplus-cms 1.6.0 has SQL Injection, as demonstrated by crafted POST data beginning with an "m_id=1 AND SLEEP(5)" substring.	2018-22
g	A flaw was found in katello-debug before 3.4.0 where certain scripts and log files used insecure temporary files. A local user could exploit this flaw to conduct a symbolic-link attack, allowing them to overwrite the contents of arbitrary files.	2018-27

	<p>It was found that while parsing the SAML messages the StaxParserUtil class of keycloak before 2.5.1 replaces special strings for obtaining attribute values with system property. This could allow an attacker to determine values of system properties at the attacked system by formatting the SAML request ID field to be the chosen system property which could be obtained in the "InResponseTo" field in the response.</p>	2018-26
	<p>keycloak before version 4.0.0.final is vulnerable to a infinite loop in session replacement. A Keycloak cluster with multiple nodes could mishandle an expired session replacement and lead to an infinite loop. A malicious authenticated user could use this flaw to achieve Denial of Service on the server.</p>	2018-23
	<p>It was found that when Keycloak before 2.5.5 receives a Logout request with a Extensions in the middle of the request, the SAMLsloRequestParser.parse() method ends in a infinite loop. An attacker could use this flaw to conduct denial of service attacks.</p>	2018-27
	<p>An authentication bypass flaw was found in the way krb5's certauth interface before 1.16.1 handled the validation of client certificates. A remote attacker able to communicate with the KDC could potentially use this flaw to impersonate arbitrary principals under rare and erroneous circumstances.</p>	2018-26
	<p>The IMM2 First Failure Data Capture function collects management module logs and diagnostic information when a hardware error is detected. This information is made available for download through an SFTP server hosted on the IMM2 management network interface. In versions earlier than 4.90 for Lenovo System x and earlier than 6.80 for IBM System x, the credentials to access the SFTP server are hard-coded and described in the IMM2 documentation, allowing an attacker</p>	2018-26

	with management network access to obtain the collected FFDC data. After applying the update, the IMM2 will create random SFTP credentials for use with OneCLI.	
	libcrypt before version 1.7.8 is vulnerable to a cache side-channel attack resulting into a complete break of RSA-1024 while using the left-to-right method for computing the sliding-window expansion. The same attack is believed to work on RSA-2048 with moderately more computation. This side-channel requires that attacker can run arbitrary software on the hardware where the private RSA key is used.	2018-26
	It was discovered that libICE before 1.0.9-8 used a weak entropy to generate keys. A local attacker could potentially use this flaw for session hijacking using the information available from the process list.	2018-27
	A missing patch for a stack-based buffer overflow in findTable() was found in Red Hat version of liblouis before 2.5.4. An attacker could cause a denial of service condition or potentially even arbitrary code execution.	2018-27
	An issue was discovered in mspack/chmd.c in libmspack before 0.7alpha. There is an off-by-one error in the TOLOWER() macro for CHM decompression.	2018-28
	An issue was discovered in kwajd_read_headers in mspack/kwajd.c in libmspack before 0.7alpha. Bad KWAJ file header extensions could cause a one or two byte overwrite.	2018-28

	An issue was discovered in mspack/chmd.c in libmspack before 0.7alpha. There is an off-by-one error in the CHM PMGI/PMGL chunk number validity checks, which could lead to denial of service (uninitialized data dereference and application crash).	2018-28
	An issue was discovered in mspack/chmd.c in libmspack before 0.7alpha. It does not reject blank CHM filenames.	2018-28
	An issue has been found in libwav through 2017-04-20. It is a SEGV in the function wav_write in libwav.c.	2018-23
	It was discovered that libXdmcp before 1.1.2 including used weak entropy to generate session keys. On a multi-user system using xdmcp, a local attacker could potentially use information available from the process list to brute force the key, allowing them to hijack other users' sessions.	2018-27
s	LICA miniCMTS E8K(u/i/...) devices allow remote attackers to obtain sensitive information via a direct POST request for the inc/user.ini file, leading to discovery of a password hash.	2018-25
	An issue was discovered in the Linux kernel through 4.17.10. There is a buffer overflow in truncate_inline_inode() in fs/f2fs/inline.c when umounting an f2fs image, because a length value may be negative.	2018-27
	An issue was discovered in the Linux kernel through 4.17.10. There is an out-of-bounds access in __remove_dirty_segment() in fs/f2fs/segment.c when mounting an f2fs image.	2018-27
	A flaw was found in Linux kernel's KVM virtualization subsystem. The VMX code does not restore the GDT.LIMIT to the previous host value, but instead sets it to 64KB. With a corrupted GDT limit a host's userspace code has an ability to	2018-26

	<p>place malicious entries in the GDT, particularly to the per-cpu variables. An attacker can use this to escalate their privileges.</p>	
	<p>Linux kernel is vulnerable to a stack-out-of-bounds write in the ext4 filesystem code when mounting and writing to a crafted ext4 image in <code>ext4_update_inline_data()</code>. An attacker could use this to cause a system crash and a denial of service.</p>	<p>2018-25</p>
	<p>An issue was discovered in the Linux kernel through 4.17.10. There is a NULL pointer dereference and panic in <code>hfsplus_lookup()</code> in <code>fs/hfsplus/dir.c</code> when opening a file (that is purportedly a hard link) in an hfs+ filesystem that has malformed catalog data, and is mounted read-only without a metadata directory.</p>	<p>2018-27</p>
	<p>It was found that the Linux kernel's Datagram Congestion Control Protocol (DCCP) implementation before 2.6.22.17 used the IPv4-only <code>inet_sk_rebuild_header()</code> function for both IPv4 and IPv6 DCCP connections, which could result in memory corruptions. A remote attacker could use this flaw to crash the system.</p>	<p>2018-27</p>
	<p>An issue was discovered in the Linux kernel through 4.17.10. There is out-of-bounds access in <code>write_extent_buffer()</code> when mounting and operating a crafted btrfs image, because of a lack of verification that each block group has a corresponding chunk at mount time, within <code>btrfs_read_block_groups</code> in <code>fs/btrfs/extent-tree.c</code>.</p>	<p>2018-27</p>
	<p>A flaw was found in the Linux kernel's handling of clearing SELinux attributes on <code>/proc/pid/attr</code> files before 4.9.10. An empty (null) write to this file can crash the system by causing the system to attempt to access unmapped kernel memory.</p>	<p>2018-27</p>

	<p>An issue was discovered in the Linux kernel through 4.17.11, as used in Xen through 4.11.x. The <code>xen_failsafe_callback</code> entry point in <code>arch/x86/entry/entry_64.S</code> does not properly maintain RBX, which allows local users to cause a denial of service (uninitialized memory usage and system crash). Within Xen, 64-bit x86 PV Linux guest OS users can trigger a guest OS crash or possibly gain privileges.</p>	2018-28
	<p>A kernel data leak due to an out-of-bound read was found in the Linux kernel in <code>inet_diag_msg_sctp{,l}addr_fill()</code> and <code>sctp_get_sctp_info()</code> functions present since version 4.7-rc1 through version 4.13. A data leak happens when these functions fill in <code>sockaddr</code> data structures used to export socket's diagnostic information. As a result, up to 100 bytes of the slab data could be leaked to a userspace.</p>	2018-26
	<p>A flaw was found in the Linux kernel's ext4 filesystem. A local user can cause an out-of-bounds write and a denial of service or unspecified other impact is possible by mounting and operating a crafted ext4 filesystem image.</p>	2018-26
	<p>An issue was discovered in the Linux kernel through 4.17.10. There is an invalid pointer dereference in <code>io_ctl_map_page()</code> when mounting and operating a crafted btrfs image, because of a lack of block group item validation in <code>check_leaf_item</code> in <code>fs/btrfs/tree-checker.c</code>.</p>	2018-27
	<p>An issue was discovered in the Linux kernel through 4.17.10. There is an invalid pointer dereference in <code>__del_reloc_root()</code> in <code>fs/btrfs/relocation.c</code> when mounting a crafted btrfs image, related to removing <code>reloc rb_trees</code> when <code>reloc control</code> has not been initialized.</p>	2018-27
	<p>An issue was discovered in the Linux kernel through 4.17.10. There is an invalid pointer dereference in <code>btrfs_root_node()</code> when mounting a crafted btrfs image, because of a lack of chunk block group mapping validation in <code>btrfs_read_block_groups</code> in <code>fs/btrfs/extent-tree.c</code>, and a lack of empty-tree checks in <code>check_leaf</code> in <code>fs/btrfs/tree-checker.c</code>.</p>	2018-27

	A flaw was found in the Linux kernel's ext4 filesystem. A local user can cause an out-of-bound access in <code>ext4_get_group_info</code> function, a denial of service, and a system crash by mounting and operating on a crafted ext4 filesystem image.	2018-26
	A flaw was found in the Linux kernel's ext4 filesystem. A local user can cause a use-after-free in <code>ext4_xattr_set_entry</code> function and a denial of service or unspecified other impact may occur by renaming a file in a crafted ext4 filesystem image.	2018-26
	A flaw was found in Linux kernel in the ext4 filesystem code. A use-after-free is possible in <code>ext4_ext_remove_space()</code> function when mounting and operating a crafted ext4 image.	2018-26
	A flaw was found in the Linux kernel's ext4 filesystem. A local user can cause an out-of-bound write in in <code>fs/jbd2/transaction.c</code> code, a denial of service, and a system crash by unmounting a crafted ext4 filesystem image.	2018-27
	An issue was discovered in the Linux kernel through 4.17.10. There is a use-after-free in <code>try_merge_free_space()</code> when mounting a crafted btrfs image, because of a lack of chunk type flag checks in <code>btrfs_check_chunk_valid</code> in <code>fs/btrfs/volumes.c</code> .	2018-27

	The timer_create syscall implementation in kernel/time/posix-timers.c in the Linux kernel before 4.14.8 doesn't properly validate the sigevent->sigev_notify field, which leads to out-of-bounds access in the show_timer function (called when /proc/\$PID/timers is read). This allows userspace applications to read arbitrary kernel memory (on a kernel built with CONFIG_POSIX_TIMERS and CONFIG_CHECKPOINT_RESTORE).	2018-26
	An issue was discovered in the Linux kernel through 4.17.10. There is a NULL pointer dereference in fsencrypt_do_page_crypto() in fs/crypto/crypto.c when operating on a file in a corrupted f2fs image.	2018-27
	A race condition was found in util-linux before 2.32.1 in the way su handled the management of child processes. A local authenticated attacker could use this flaw to kill other processes with root privileges under specific conditions.	2018-27
y_software	Untrusted search path vulnerability in LOGICOOL CONNECTION UTILITY SOFTWARE versions before 2.30.9 allows an attacker to gain privileges via a Trojan horse DLL in an unspecified directory.	2018-26
	Untrusted search path vulnerability in LOGICOOL Game Software versions before 8.87.116 allows an attacker to gain privileges via a Trojan horse DLL in an unspecified directory.	2018-26
	MathJax version prior to version 2.7.4 contains a Cross Site Scripting (XSS) vulnerability in the \unicode{} macro that can result in Potentially untrusted Javascript running within a web browser. This attack appear to be exploitable via The victim must view a page where untrusted content is processed using Mathjax. This vulnerability appears to have been fixed in 2.7.4 and later.	2018-23
on	Exploiting Incorrectly Configured Access Control Security Levels vulnerability in McAfee Data Loss Prevention (DLP) for Windows versions prior to 10.0.505 and 11.0.405 allows local users to bypass DLP policy via editing of local policy files when offline.	2018-23
	Authentication Bypass vulnerability in TPM autoboot in McAfee Drive Encryption (MDE) 7.1.0 and above allows physically proximate attackers to bypass local security protection via specific set of circumstances.	2018-27
	Configuration/Environment manipulation vulnerability in the administrative interface in McAfee Web Gateway (MWG) MWG 7.8.1.x allows authenticated administrator users to execute arbitrary commands via unspecified vectors.	2018-23

	Directory Traversal vulnerability in the administrative user interface in McAfee Web Gateway (MWG) MWG 7.8.1.x allows authenticated administrator users to gain elevated privileges via unspecified vectors.	2018-23
	mitmweb in mitmproxy v4.0.3 allows DNS Rebinding attacks, related to tools/web/app.py.	2018-22
	In Moxa NPort 5210, 5230, and 5232 versions 2.9 build 17030709 and prior, the amount of resources requested by a malicious actor are not restricted, allowing for a denial-of-service condition.	2018-24
boot_aes-cbc_encryption	Das U-Boot is a device bootloader that can read its configuration from an AES encrypted file. For devices utilizing this environment encryption mode, U-Boot's use of a zero initialization vector may allow attacks against the underlying cryptographic implementation and allow an attacker to decrypt the data. Das U-Boot's AES-CBC encryption feature uses a zero (0) initialization vector. This allows an attacker to perform dictionary attacks on encrypted data produced by Das U-Boot to learn information about the encrypted data.	2018-24
boot_aes-cbc_encryption	Das U-Boot is a device bootloader that can read its configuration from an AES encrypted file. Devices that make use of Das U-Boot's AES-CBC encryption feature using environment encryption (i.e., setting the configuration parameter CONFIG_ENV_AES=y) read environment variables from disk as the encrypted disk image is processed. An attacker with physical access to the device can manipulate the encrypted environment data to include a crafted two-byte sequence which triggers an error in environment variable parsing. This error condition is improperly handled by Das U-Boot, resulting in an immediate process termination with a debugging message.	2018-24
_products	Applications developed using the Portrait Display SDK, versions 2.30 through 2.34, default to insecure configurations which allow arbitrary code execution. A number of applications developed using the Portrait Displays SDK do not use secure permissions when running. These applications run the component pdiservice.exe with NT AUTHORITY/SYSTEM permissions. This component is also read/writable by all Authenticated Users. This allows local authenticated attackers to run arbitrary code with SYSTEM privileges. The following applications have been identified by Portrait Displays as affected: Fujitsu DisplayView Click: Version 6.0 and 6.01. The issue was fixed in Version 6.3. Fujitsu DisplayView Click Suite: Version 5. The issue is addressed by patch in Version 5.9. HP Display Assistant: Version 2.1. The issue was fixed in Version 2.11. HP My Display: Version 2.0. The issue was fixed in Version 2.1. Philips Smart Control Premium: Versions 2.23, 2.25. The issue was fixed in Version 2.26.	2018-24

shortest_path_first_protocol	Open Shortest Path First (OSPF) protocol implementations may improperly determine Link State Advertisement (LSA) recency for LSAs with MaxSequenceNumber. According to RFC 2328 section 13.1, for two instances of the same LSA, recency is determined by first comparing sequence numbers, then checksums, and finally MaxAge. In a case where the sequence numbers are the same, the LSA with the larger checksum is considered more recent, and will not be flushed from the Link State Database (LSDB). Since the RFC does not explicitly state that the values of links carried by a LSA must be the same when prematurely aging a self-originating LSA with MaxSequenceNumber, it is possible in vulnerable OSPF implementations for an attacker to craft a LSA with MaxSequenceNumber and invalid links that will result in a larger checksum and thus a 'newer' LSA that will not be flushed from the LSDB. Propagation of the crafted LSA can result in the erasure or alteration of the routing tables of routers within the routing domain, creating a denial of service condition or the re-routing of traffic on the network. CVE-2017-3224 has been reserved for Quagga and downstream implementations (SUSE, openSUSE, and Red Hat packages).	2018-24
interface	Navarino Infinity web interface up to version 2.2 exposes an unauthenticated script that is prone to blind sql injection. If successfully exploited the user can get info from the underlying postgresql database that could lead into to total compromise of the product. The said script is available with no authentication.	2018-24
interface	Some Navarino Infinity functions, up to version 2.2, placed in the URL can bypass any authentication mechanism leading to an information leak.	2018-24
interface	Navarino Infinity is prone to session fixation attacks. The server accepts the session ID as a GET parameter which can lead to bypassing the two factor authentication in some installations. This could lead to phishing attacks that can bypass the two factor authentication that is present in some installations.	2018-24
csdj_series_products	NEC Platforms Calsos CSDX and CSDJ series products (CSDX 1.37210411 and earlier, CSDX(P) 4.37210411 and earlier, CSDX(D) 3.37210411 and earlier, CSDX(S) 2.37210411 and earlier, CSDJ-B 01.03.00 and earlier, CSDJ-H 01.03.00 and earlier, CSDJ-D 01.03.00 and earlier, CSDJ-A 03.00.00) allows remote authenticated attackers to bypass access restriction to conduct arbitrary operations with administrative privilege via unspecified vectors.	2018-26
csdj_series_products	Cross-site scripting vulnerability in NEC Platforms Calsos CSDX and CSDJ series products (CSDX 1.37210411 and earlier, CSDX(P) 4.37210411 and earlier, CSDX(D) 3.37210411 and earlier, CSDX(S) 2.37210411 and earlier, CSDJ-B	2018-26

	01.03.00 and earlier, CSDJ-H 01.03.00 and earlier, CSDJ-D 01.03.00 and earlier, CSDJ-A 03.00.00) allows remote attackers to inject arbitrary web script or HTML via unspecified vectors.	
	A vulnerability is in the 'BSW_cxttongr.htm' page of the Netgear DGN2200, version DGN2200-V1.0.0.50_7.0.50, and DGND3700, version DGND3700-V1.0.0.17_1.0.17, which can allow a remote attacker to access this page without any authentication. When processed, it exposes the admin password in clear text before it gets redirected to absw_vfysucc.cgia. An attacker can use this password to gain administrator access to the targeted router's web interface.	2018-24
	There are few web pages associated with the genie app on the Netgear WNDR4500 running firmware version V1.0.1.40_1.0.6877. Genie app adds some capabilities over the Web GUI and can be accessed even when you are away from home. A remote attacker can access genie_ping.htm or genie_ping2.htm or genie_ping3.htm page without authentication. Once accessed, the page will be redirected to the aCongratulations2.htma page, which reveals some sensitive information such as 2.4GHz & 5GHz Wireless Network Name (SSID) and Network Key (Password) in clear text.	2018-24
	An out-of-bounds write vulnerability was found in netpbm before 10.61. A maliciously crafted file could cause the application to crash or possibly allow code execution.	2018-27
	An out-of-bounds read vulnerability was found in netpbm before 10.61. The expandCodeOntoStack() function has an insufficient code value check, so that a maliciously crafted file could cause the application to crash or possibly allows code execution.	2018-27
	A null pointer dereference vulnerability was found in netpbm before 10.61. A maliciously crafted SVG file could cause the application to crash.	2018-27
	A memory allocation vulnerability was found in netpbm before 10.61. A maliciously crafted SVG file could cause the application to crash.	2018-27
	An out-of-bounds write vulnerability was found in netpbm before 10.61. A maliciously crafted file could cause the application to crash or possibly allow code execution.	2018-27
	Network Manager VPNC plugin (aka networkmanager-vpnc) before version 1.2.6 is vulnerable to a privilege escalation attack. A new line character can be used to inject a Password helper parameter into the configuration data passed to VPNC, allowing an attacker to execute arbitrary commands as root.	2018-26

ness_basic	A file upload vulnerability in application/shop/controller/member.php in Niushop B2B2C Multi-business basic version V1.11 allows any remote member to upload a .php file to the web server via a profile avatar field, by using an image Content-Type (e.g., image/jpeg) with a modified filename and file content. This results in arbitrary code execution by requesting that .php file.	2018-23
	October CMS version prior to build 437 contains a Cross Site Scripting (XSS) vulnerability in the Media module and create folder functionality that can result in an Authenticated user with media module permission creating arbitrary folder name with XSS content. This attack appear to be exploitable via an Authenticated user with media module permission who can create arbitrary folder name (XSS). This vulnerability appears to have been fixed in build 437.	2018-23
	October CMS version prior to Build 437 contains a Local File Inclusion vulnerability in modules/system/traits/ViewMaker.php#244 (makeFileContents function) that can result in Sensitive information disclosure and remote code execution. This attack appear to be exploitable remotely if the /backend path is accessible. This vulnerability appears to have been fixed in Build 437.	2018-23
	Cross-site scripting (XSS) vulnerability in the Groups Page in Open-Audit Community 2.2.6 allows remote attackers to inject arbitrary web script or HTML via the group name.	2018-25
1 -- onos	Open Networking Foundation (ONF) ONOS version 1.13.2 and earlier version contains a Directory Traversal vulnerability in core/common/src/main/java/org/onosproject/common/app/ApplicationArchive.java line 35 that can result in arbitrary file deletion (overwrite). This attack appear to be exploitable via a specially crafted zip file should be uploaded.	2018-23
	A flaw was found in all Openshift Enterprise versions using the openshift elasticsearch plugin. An attacker with knowledge of the given name used to authenticate and access Elasticsearch can later access it without the token, bypassing authentication. This attack also requires that the Elasticsearch be configured with an external route, and the data accessed is limited to the indices.	2018-27
	ovirt-engine before version 4.1.7.6 with log level set to DEBUG includes passwords in the log file without masking. Only administrators can change the log level and only administrators can access the logs. This presents a risk when debug-level logs are shared with vendors or other parties to troubleshoot issues.	2018-27

	<p>PEAR HTML_QuickForm version 3.2.14 contains an eval injection (CWE-95) vulnerability in HTML_QuickForm's getSubmitValue method, HTML_QuickForm's validate method, HTML_QuickForm_hierselect's _setOptions method, HTML_QuickForm_element's _findValue method, HTML_QuickForm_element's _prepareValue method. that can result in Possible information disclosure, possible impact on data integrity and execution of arbitrary code. This attack appear to be exploitable via A specially crafted query string could be utilised, e.g. http://www.example.com/admin/add_practice_type_id[1]=fubar%27)%20OR%20die(%27OOK!%27);%20//&mode=live. This vulnerability appears to have been fixed in 3.2.15.</p>	2018-23
	<p>An out-of-bounds write flaw was found in the way Pidgin before 2.12.0 processed XML content. A malicious remote server could potentially use this flaw to crash Pidgin or execute arbitrary code in the context of the pidgin process.</p>	2018-27
	<p>Pivotal Apps Manager included in Pivotal Application Service, versions 2.2.x prior to 2.2.1 and 2.1.x prior to 2.1.8 and 2.0.x prior to 2.0.17 and 1.12.x prior to 1.12.26, does not escape all user-provided content when sending invitation emails. A malicious authenticated user can inject content into an invite to another user, exploiting the trust implied by the source of the email.</p>	2018-24
hiver	<p>plexus-archiver before 3.6.0 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in an archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.</p>	2018-25
	<p>Poppler through 0.62 contains a Buffer Overflow vulnerability due to an incorrect memory access that is not mapped in its memory space, as demonstrated by pdfunite. This can result in memory corruption and denial of service. This may be exploitable when a victim opens a specially crafted PDF file.</p>	2018-25
	<p>Privilege escalation flaws were found in the Red Hat initialization scripts of PostgreSQL. An attacker with access to the postgres user account could use these flaws to obtain root access on the server machine.</p>	2018-27

	An issue has been found in the parsing of authoritative answers in PowerDNS Recursor before 4.0.8, leading to a NULL pointer dereference when parsing a specially crafted answer containing a CNAME of a different class than IN. An unauthenticated remote attacker could cause a denial of service.	2018-27
	Pydio version 8.2.0 and earlier contains a Cross Site Scripting (XSS) vulnerability in ./core/vendor/meenie/javascript-packer/example-inline.php line 48; ./core/vendor/dapphp/securimage/examples/test.mysql.static.php lines: 114,118 that can result in an unauthenticated remote attacker manipulating the web client via XSS code injection. This attack appear to be exploitable via the victim opening a specially crafted URL. This vulnerability appears to have been fixed in version 8.2.1.	2018-23
	Pydio version 8.2.1 and prior contains an Unvalidated user input leading to Remote Code Execution (RCE) vulnerability in plugins/action.antivirus/AntivirusScanner.php: Line 124, scanNow(\$nodeObject) that can result in An attacker gaining admin access and can then execute arbitrary commands on the underlying OS. This attack appear to be exploitable via The attacker edits the Antivirus Command in the antivirus plugin, and executes the payload by uploading any file within Pydio.	2018-23
	Pydio version 8.2.0 and earlier contains a Server-Side Request Forgery (SSRF) vulnerability in plugins/action.updater/UpgradeManager.php Line: 154, getUpgradePath(\$url) that can result in an authenticated admin users requesting arbitrary URL's, pivoting requests through the server. This attack appears to be exploitable via the attacker gaining access to an administrative account, enters a URL into Upgrade Engine, and reloads the page or presses "Check Now". This vulnerability appears to have been fixed in 8.2.1.	2018-23
	An out-of-bounds memory access issue was found in Quick Emulator (QEMU) before 1.7.2 in the VNC display driver. This flaw could occur while refreshing the VNC display surface area in the 'vnc_refresh_server_surface'. A user inside a guest could use this flaw to crash the QEMU process.	2018-27

	<p>A heap buffer overflow flaw was found in QEMU's Cirrus CLGD 54xx VGA emulator's VNC display driver support before 2.9; the issue could occur when a VNC client attempted to update its display after a VGA operation is performed by a guest. A privileged user/process inside a guest could use this flaw to crash the QEMU process or, potentially, execute arbitrary code on the host with privileges of the QEMU process.</p>	2018-27
	<p>Quick emulator (QEMU) before 2.8 built with the Cirrus CLGD 54xx VGA Emulator support is vulnerable to an out-of-bounds access issue. The issue could occur while copying VGA data in cirrus_bitblt_cputovideo. A privileged user inside guest could use this flaw to crash the QEMU process OR potentially execute arbitrary code on host with privileges of the QEMU process.</p>	2018-27

	<p>The Network Block Device (NBD) server in Quick Emulator (QEMU) before 2.11 is vulnerable to a denial of service issue. It could occur if a client sent large option requests, making the server waste CPU time on reading up to 4GB per request. A client could use this flaw to keep the NBD server from serving other requests, resulting in DoS.</p>	2018-27
	<p>A stack buffer overflow flaw was found in the Quick Emulator (QEMU) before 2.9 built with the Network Block Device (NBD) client support. The flaw could occur while processing server's response to a 'NBD_OPT_LIST' request. A malicious NBD server could use this issue to crash a remote NBD client resulting in DoS or potentially execute arbitrary code on client host with privileges of the QEMU process.</p>	2018-27
	<p>A stack-based buffer overflow vulnerability was found in NBD server implementation in qemu before 2.11 allowing a client to request an export name of size up to 4096 bytes, which in fact should be limited to 256 bytes, causing an out-of-bounds stack write in the qemu process. If NBD server requires TLS, the attacker cannot trigger the buffer overflow without first successfully negotiating TLS.</p>	2018-27
	<p>An assertion-failure flaw was found in Qemu before 2.10.1, in the Network Block Device (NBD) server's initial connection negotiation, where the I/O coroutine was undefined. This could crash the qemu-nbd server if a client sent</p>	2018-26

	unexpected data during connection negotiation. A remote user or process could use this flaw to crash the qemu-nbd server resulting in denial of service.	
	QuaZIP before 0.7.6 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in a Zip archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.	2018-25
cts	Quick Heal Total Security 64 bit 17.00 (QHTS64.exe), (QHTSFT64.exe) - Version 10.0.1.38; Quick Heal Total Security 32 bit 17.00 (QHTS32.exe), (QHTSFT32.exe) - Version 10.0.1.38; Quick Heal Internet Security 64 bit 17.00 (QHIS64.exe), (QHISFT64.exe) - Version 10.0.0.37; Quick Heal Internet Security 32 bit 17.00 (QHIS32.exe), (QHISFT32.exe) - Version 10.0.0.37; Quick Heal AntiVirus Pro 64 bit 17.00 (QHAV64.exe), (QHAVFT64.exe) - Version 10.0.0.37; and Quick Heal AntiVirus Pro 32 bit 17.00 (QHAV32.exe), (QHAVFT32.exe) - Version 10.0.0.37 allow DLL Hijacking because of Insecure Library Loading.	2018-25
	An input validation error was found in Red Hat Certificate System's handling of client provided certificates before 8.1.20-1. If the certreq field is not present in a certificate an assertion error is triggered causing a denial of service.	2018-26
	A number of unused delete routes are present in CloudForms before 5.7.2.1 which can be accessed via GET requests instead of just POST requests. This could allow an attacker to bypass the protect_from_forgery XSRF protection causing the routes to be used. This attack would require additional cross-site scripting or similar attacks in order to execute.	2018-27
	A flaw was found in CloudForms before 5.9.0.22 in the self-service UI snapshot feature where the name field is not properly sanitized for HTML and JavaScript input. An attacker could use this flaw to execute a stored XSS attack on an	2018-27

	application administrator using CloudForms. Please note that CSP (Content Security Policy) prevents exploitation of this XSS however not all browsers support CSP.	
	The dialog for creating cloud volumes (cinder provider) in CloudForms does not filter cloud tenants by user. An attacker with the ability to create storage volumes could use this to create storage volumes for any other tenant.	2018-27
	It was found that CloudForms does not verify that the server hostname matches the domain name in the certificate when using a custom CA and communicating with Red Hat Virtualization (RHEV) and OpenShift. This would allow an attacker to spoof RHEV or OpenShift systems and potentially harvest sensitive information from CloudForms.	2018-27
	A logic error in valid_role() in CloudForms role validation before 5.7.1.3 could allow a tenant administrator to create groups with a higher privilege level than the tenant administrator should have. This would allow an attacker with tenant administration access to elevate privileges.	2018-27
gement_engine	CloudForms Management Engine (cfme) is vulnerable to an improper security setting in the dRuby component of CloudForms. An attacker with access to an unprivileged local shell could use this flaw to execute commands as a high privileged user.	2018-24
gement_engine	CloudForms Management Engine (cfme) before 5.7.3 and 5.8.x before 5.8.1 lacks RBAC controls on certain methods in the rails application portion of CloudForms. An attacker with access could use a variety of methods within the rails application portion of CloudForms to escalate privileges.	2018-26
gement_engine	In CloudForms Management Engine (cfme) before 5.7.3 and 5.8.x before 5.8.1, it was found that privilege check is missing when invoking arbitrary methods via filtering on VMs that MiqExpression will execute that is triggerable by API users. An attacker could use this to execute actions they should not be allowed to (e.g. destroying VMs).	2018-26

	A regression was found in the Red Hat Enterprise Linux 6.9 version of httpd 2.2.15-60, causing comments in the "Allow" and "Deny" configuration lines to be parsed incorrectly. A web administrator could unintentionally allow any client to access a restricted HTTP resource.	2018-26
	It was found that sssd's sysdb_search_user_by_upn_res() function before 1.16.0 did not sanitize requests when querying its local cache and was vulnerable to injection. In a centralized login environment, if a password hash was locally cached for a given user, an authenticated attacker could use this flaw to retrieve it.	2018-27
	It was discovered that rpm-ostree and rpm-ostree-client before 2017.3 fail to properly check GPG signatures on packages when doing layering. Packages with unsigned or badly signed content could fail to be rejected as expected. This issue is partially mitigated on RHEL Atomic Host, where certificate pinning is used by default.	2018-27
server	It was found that a mock CMC authentication plugin with a hardcoded secret was accidentally enabled by default in the pki-core package before 10.6.4. An attacker could potentially use this flaw to bypass the regular authentication process and trick the CA server into issuing certificates.	2018-26
_data_virtualization_and_services	It was discovered that the Dashbuilder login page as used in Red Hat JBoss BPM Suite before 6.4.2 and Red Hat JBoss Data Virtualization & Services before 6.4.3 could be opened in an IFRAME, which made it possible to intercept and manipulate requests. An attacker could use this flaw to trick a user into performing arbitrary actions in the Console (clickjacking).	2018-27
rpm_suite	JBoss BRMS 6 and BPM Suite 6 before 6.4.3 are vulnerable to a stored XSS via several lists in Business Central. The flaw is due to lack of sanitation of user input when creating new lists. Remote, authenticated attackers that have privileges to create lists can store scripts in them, which are not properly sanitized before showing to other users, including admins.	2018-27

bpm_suite	<p>JBoss BRMS 6 and BPM Suite 6 before 6.4.3 are vulnerable to a reflected XSS via artifact upload. A malformed XML file, if uploaded, causes an error message to appear that includes part of the bad XML code verbatim without filtering out scripts. Successful exploitation would allow execution of script code within the context of the affected user.</p>	2018-27
	<p>It was found that the JAXP implementation used in JBoss EAP 7.0 for SAX and DOM parsing is vulnerable to certain XXE flaws. An attacker could use this flaw to cause DoS, SSRF, or information disclosure if they are able to provide XML content for parsing.</p>	2018-27
application	<p>It was found that the log file viewer in Red Hat JBoss Enterprise Application 6 and 7 allows arbitrary file read to authenticated user via path traversal.</p>	2018-27
	<p>It was discovered that the hawtio servlet 1.4 uses a single HttpClient instance to proxy requests with a persistent cookie store (cookies are stored locally and are not passed between the client and the end URL) which means all clients using that proxy are sharing the same cookies.</p>	2018-26
m	<p>A design flaw issue was found in the Red Hat OpenStack Platform director use of TripleO to enable libvirt based live-migration. Libvirt is deployed by default (by director) listening on 0.0.0.0 (all interfaces) with no-authentication or encryption. Anyone able to make a TCP connection to any compute host IP address, including 127.0.0.1, other loopback interface addresses, or in some cases possibly addresses that have been exposed beyond the management interface, could</p>	2018-26

	use this to open a virsh session to the libvirtd instance and gain control of virtual machine instances or possibly take over the host.	
	Red Hat Satellite before 6.5 is vulnerable to a XSS in discovery rule when you are entering filter and you use autocomplete functionality.	2018-26
	A cross-site scripting (XSS) flaw was found in how an organization name is displayed in Satellite 5, before 5.8. A user able to change an organization's name could exploit this flaw to perform XSS attacks against other Satellite users.	2018-26
	It was found that spacewalk-channel can be used by a non-admin user or disabled users to perform administrative tasks due to an incorrect authorization check in backend/server/rhnChannel.py.	2018-27
	It was discovered that Undertow before 1.4.17, 1.3.31 and 2.0.0 processes http request headers with unusual whitespaces which can cause possible http request smuggling.	2018-27
	It was found in Undertow before 1.3.28 that with non-clean TCP close, the Websocket server gets into infinite loop on every IO thread, effectively causing DoS.	2018-27

	<p>It was discovered in Undertow that the code that parsed the HTTP request line permitted invalid characters. This could be exploited, in conjunction with a proxy that also permitted the invalid characters but with a different interpretation, to inject data into the HTTP response. By manipulating the HTTP response the attacker could poison a web-cache, perform an XSS attack, or obtain sensitive information from requests other than their own.</p>	2018-27
	<p>When updating a password in the rhvm database the ovirt-aaa-jdbc-tool tools before 1.1.3 fail to correctly check for the current password if it is expired. This would allow access to an attacker with access to change the password on accounts with expired passwords, gaining access to those accounts.</p>	2018-27
	<p>A race-condition flaw was discovered in openstack-neutron before 7.2.0-12.1, 8.x before 8.3.0-11.1, 9.x before 9.3.1-2.1, and 10.x before 10.0.2-1.1, where, following a minor overcloud update, neutron security groups were disabled. Specifically, the following were reset to 0: net.bridge.bridge-nf-call-ip6tables and net.bridge.bridge-nf-call-iptables. The race was only triggered by an update, at which point an attacker could access exposed tenant VMs and network resources.</p>	2018-26

ation	An access-control flaw was found in the OpenStack Orchestration (heat) service before 8.0.0, 6.1.0 and 7.0.2 where a service log directory was improperly made world readable. A malicious system user could exploit this flaw to access sensitive information.	2018-27
w	An accessibility flaw was found in the OpenStack Workflow (mistral) service where a service log directory was improperly made world readable. A malicious system user could exploit this flaw to access sensitive information.	2018-27
	RSA Archer, versions prior to 6.4.0.1, contain a stored cross-site scripting vulnerability. A remote authenticated malicious Archer user could potentially exploit this vulnerability to store malicious HTML or JavaScript code in a trusted application data store. When application users access the corrupted data store through their browsers, the malicious code gets executed by the web browser in the context of the vulnerable web application.	2018-24
	RSA Archer, versions prior to 6.4.0.1, contain an authorization bypass vulnerability in the REST API. A remote authenticated malicious Archer user could potentially exploit this vulnerability to elevate their privileges.	2018-24
	Sage XRT Treasury, version 3, fails to properly restrict database access to authorized users, which may enable any authenticated user to gain full access to privileged database functions. Sage XRT Treasury is a business finance management application. Database user access privileges are determined by the USER_CODE field associated with the querying user. By modifying the USER_CODE value to match that of a privileged user, a low-privileged, authenticated user may gain privileged access to the SQL database. A remote, authenticated user can submit specially crafted SQL queries to gain privileged access to the application database.	2018-24
	A flaw was found in the way samba client before samba 4.4.16, samba 4.5.14 and samba 4.6.8 used encryption with the max protocol set as SMB3. The connection could lose the requirement for signing and encrypting to any DFS redirects, allowing an attacker to read or alter the contents of the connection via a man-in-the-middle attack.	2018-27

	<p>An information leak flaw was found in the way SMB1 protocol was implemented by Samba before 4.4.16, 4.5.x before 4.5.14, and 4.6.x before 4.6.8. A malicious client could use this flaw to dump server memory contents to a file on the samba share or to a shared printer, though the exact area of server memory cannot be controlled by the attacker.</p>	2018-26
	<p>It was found that samba before 4.4.16, 4.5.x before 4.5.14, and 4.6.x before 4.6.8 did not enforce "SMB signing" when certain configuration options were enabled. A remote attacker could launch a man-in-the-middle attack and retrieve information in plain-text.</p>	2018-26

	SeaCMS 6.61 has two XSS issues in the admin_config.php file via certain form fields.	2018-23
	SEL AcSELeRator Architect version 2.2.24.0 and prior can be exploited when the AcSELeRator Architect FTP client connects to a malicious FTP server, which may cause denial of service via 100% CPU utilization. Restart of the application is required.	2018-24
	SEL AcSELeRator Architect version 2.2.24.0 and prior allows unsanitized input to be passed to the XML parser, which may allow disclosure and retrieval of arbitrary data, arbitrary code execution (in certain situations on specific platforms), and denial of service attacks.	2018-24
	SEL Compass version 3.0.5.1 and prior allows all users full access to the SEL Compass directory, which may allow modification or overwriting of files within the Compass installation folder, resulting in escalation of privilege and/or malicious code execution.	2018-24
ress	SharpCompress before 0.21.0 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in a Zip archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.	2018-25
	sharplibzip before 1.0 RC1 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in a Zip archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.	2018-25
	A vulnerability has been identified in Firmware variant IEC 61850 for EN100 Ethernet module (All versions < V4.33), Firmware variant PROFINET IO for EN100 Ethernet module (All versions), Firmware variant Modbus TCP for EN100 Ethernet module (All versions), Firmware variant DNP3 TCP for EN100 Ethernet module (All versions), Firmware variant IEC104 for EN100 Ethernet module (All versions). Specially crafted packets to port 102/tcp could cause a denial-of-service condition in the EN100 communication module if oscillographs are running. A manual restart is required to recover the EN100 module functionality. Successful exploitation requires an attacker with network access to send multiple packets to the EN100 module. As a precondition the IEC 61850-MMS communication needs to be activated on the affected EN100 modules. No user interaction or privileges are required to exploit the security vulnerability. The vulnerability could allow causing a Denial-of-Service condition of the network functionality of the device, compromising	2018-23

	<p>the availability of the system. At the time of advisory publication no public exploitation of this security vulnerability was known.</p>	
	<p>A vulnerability has been identified in Firmware variant IEC 61850 for EN100 Ethernet module (All versions < V4.33), Firmware variant PROFINET IO for EN100 Ethernet module (All versions), Firmware variant Modbus TCP for EN100 Ethernet module (All versions), Firmware variant DNP3 TCP for EN100 Ethernet module (All versions), Firmware variant IEC104 for EN100 Ethernet module (All versions), SIPROTEC 5 relays with CPU variants CP300 and CP100 and the respective Ethernet communication modules (All versions < V7.80), SIPROTEC 5 relays with CPU variants CP200 and the respective Ethernet communication modules (All versions). Specially crafted packets to port 102/tcp could cause a denial-of-service condition in the affected products. A manual restart is required to recover the EN100 module functionality of SIPROTEC 4 and SIPROTEC Compact relays. Successful exploitation requires an attacker with network access to send multiple packets to the affected products or modules. As a precondition the IEC 61850-MMS communication needs to be activated on the affected products or modules. No user interaction or privileges are required to exploit the vulnerability. The vulnerability could allow causing a Denial-of-Service condition of the network functionality of the device, compromising the availability of the system. At the time of advisory publication no public exploitation of this security vulnerability was known.</p>	<p>2018-23</p>
	<p>There was an argument injection vulnerability in Sourcetree for macOS via filenames in Mercurial repositories. An attacker with permission to commit to a Mercurial repository linked in Sourcetree for macOS is able to exploit this issue to gain code execution on the system. Versions of Sourcetree for macOS from 1.0b2 before 2.7.6 are affected by this vulnerability.</p>	<p>2018-24</p>
	<p>There was an argument injection vulnerability in Sourcetree for Windows via filenames in Mercurial repositories. An attacker with permission to commit to a Mercurial repository linked in Sourcetree for Windows is able to exploit this issue to gain code execution on the system. Versions of Sourcetree for Windows before version 2.6.9 are affected by this vulnerability.</p>	<p>2018-24</p>
	<p>A vulnerability was discovered in SPICE before 0.13.90 in the server's protocol handling. An authenticated attacker could send crafted messages to the SPICE server causing a heap overflow leading to a crash or possible code execution.</p>	<p>2018-27</p>
	<p>A vulnerability was discovered in SPICE before 0.13.90 in the server's protocol handling. An attacker able to connect to the SPICE server could send crafted messages which would cause the process to crash.</p>	<p>2018-27</p>

	An issue was discovered in Suricata before 3.1.2. If an ICMPv4 error packet is received as the first packet on a flow in the to_client direction, it confuses the rule grouping lookup logic. The toclient inspection will then continue with the wrong rule group. This can lead to missed detection.	2018-23
	Suricata before 4.0.5 stops TCP stream inspection upon a TCP RST from a server. This allows detection bypass because Windows TCP clients proceed with normal processing of TCP data that arrives shortly after an RST (i.e., they act as if the RST had not yet been received).	2018-23
ent	The Inventory Plugin for Symantec Management Agent prior to 7.6 POST HF7, 8.0 POST HF6, or 8.1 RU7 may be susceptible to a privilege escalation vulnerability, which is a type of issue that allows a user to gain elevated access to resources that are normally protected at lower access levels.	2018-25
	Tenda AC7 through V15.03.06.44_CN, AC9 through V15.03.05.19(6318)_CN, and AC10 through V15.03.06.23_CN devices have a Stack-based Buffer Overflow via a long limitSpeed or limitSpeedup parameter to an unspecified /goform URI.	2018-21
cs	Thomson Reuters UltraTax CS 2017 on Windows, in a client/server configuration, transfers customer records and bank account numbers in cleartext over SMBv2, which allows attackers to (1) obtain sensitive information by sniffing the network or (2) conduct man-in-the-middle (MITM) attacks via unspecified vectors. The customer record transferred in cleartext contains: Client ID, Full Name, Spouse's Full Name, Social Security Number, Spouse's Social Security Number, Occupation, Spouse's Occupation, Daytime Phone, Home Phone, Tax Preparer, Federal and State Taxes to File, Bank Name, Bank Account Number, and possibly other sensitive information.	2018-26
cs	Thomson Reuters UltraTax CS 2017 on Windows has a password protection option; however, the level of protection might be inconsistent with some customers' expectations because the data is directly accessible in cleartext. Specifically, it stores customer data in unique directories (%install_path%\WinCSI\UT17\DATA\client_ID\file_name.XX17) that can be bypassed without authentication by examining the strings of the .XX17 file. The strings stored in the .XX17 file contain each customer's: Full Name, Spouse's Name, Social Security Number, Date of Birth, Occupation, Home Address, Daytime	2018-26

	Phone Number, Home Phone Number, Spouse's Address, Spouse's Daytime Phone Number, Spouse's Social Security Number, Spouse's Home Phone Number, Spouse's Occupation, Spouse's Date of Birth, and Spouse's Filing Status.	
sdk	On the iOS platform, the ThreatMetrix SDK versions prior to 3.2 fail to validate SSL certificates provided by HTTPS connections, which may allow an attacker to perform a man-in-the-middle (MITM) attack. ThreatMetrix is a security library for mobile applications, which aims to provide fraud prevention and device identity capabilities. The ThreatMetrix SDK versions prior to 3.2 do not validate SSL certificates on the iOS platform. An affected application will communicate with https://h-sdk.online-metrix.net , regardless of whether the connection is secure or not. An attacker on the same network as or upstream from the iOS device may be able to view or modify ThreatMetrix network traffic that should have been protected by HTTPS.	2018-24
	An issue was discovered in libthulac.so in THULAC through 2018-02-25. A heap-based buffer over-read can occur in NGramFeature::find_bases in include/cb_ngram_feature.h.	2018-23
	An issue was discovered in libthulac.so in THULAC through 2018-02-25. A SEGV can occur in NGramFeature::find_bases in include/cb_ngram_feature.h.	2018-23
	An issue was discovered in libthulac.so in THULAC through 2018-02-25. "operator delete" is used with "operator new[]" in the TaggingLearner class in include/cb_tagging_learner.h, possibly leading to memory corruption.	2018-23
	An issue was discovered in libthulac.so in THULAC through 2018-02-25. A NULL pointer dereference can occur in the BasicModel class in include/cb_model.h.	2018-23
	Multiple TIBCO Products are prone to multiple unspecified cross-site scripting vulnerabilities because it fails to properly sanitize user-supplied input. An attacker may leverage these issues to execute arbitrary script code in the browser of an unsuspecting user in the context of the affected site. This can allow the attacker to steal cookie-based authentication credentials and to launch other attacks. The products and versions that are affected include the following: TIBCO Silver Fabric Enabler for Spotfire Web Player 2.1.2 and earlier TIBCO Spotfire Analyst 7.5.0 TIBCO Spotfire Analyst 7.6.0 TIBCO Spotfire Analyst 7.7.0 TIBCO Spotfire Analytics Platform for AWS Marketplace 7.0.2 and earlier TIBCO Spotfire Automation Services 6.5.3 and earlier TIBCO Spotfire Automation Services 7.0.0, and 7.0.1 TIBCO Spotfire Connectors 7.6.0 TIBCO Spotfire Deployment Kit 6.5.3 and earlier TIBCO Spotfire Deployment Kit 7.0.0, and 7.0.1 TIBCO Spotfire Deployment Kit 7.5.0 TIBCO Spotfire Deployment Kit 7.6.0 TIBCO Spotfire Deployment Kit 7.7.0 TIBCO Spotfire Desktop 6.5.2 and earlier TIBCO Spotfire Desktop 7.0.0, and 7.0.1 TIBCO Spotfire Desktop 7.5.0 TIBCO Spotfire Desktop 7.6.0 TIBCO Spotfire Desktop 7.7.0 TIBCO Spotfire Desktop Developer Edition 7.7.0 TIBCO Spotfire Desktop Language Packs 7.0.1 and earlier TIBCO Spotfire Desktop Language Packs 7.5.0 TIBCO Spotfire Desktop Language Packs 7.6.0 TIBCO Spotfire Desktop Language Packs 7.7.0 TIBCO Spotfire Professional 6.5.3 and earlier TIBCO	2018-24

	Spotfire Professional 7.0.0 and 7.0.1 TIBCO Spotfire Web Player 6.5.3 and earlier TIBCO Spotfire Web Player 7.0.0 and 7.0.1	
	Multiple TIBCO Products are prone to multiple unspecified SQL-injection vulnerabilities because it fails to properly sanitize user-supplied input before using it in an SQL query. Exploiting these issues could allow an attacker to compromise the application, access or modify data, or exploit latent vulnerabilities in the underlying database. The following products and versions are affected: TIBCO Spotfire Analyst 7.7.0 TIBCO Spotfire Connectors 7.6.0 TIBCO Spotfire Deployment Kit 7.7.0 TIBCO Spotfire Desktop 7.6.0 TIBCO Spotfire Desktop 7.7.0 TIBCO Spotfire Desktop Developer Edition 7.7.0 TIBCO Spotfire Desktop Language Packs 7.6.0 TIBCO Spotfire Desktop Language Packs 7.7.0 The following components are affected: TIBCO Spotfire Client TIBCO Spotfire Web Player Client	2018-24
digital_signage	A Local File Inclusion (LFI) vulnerability exists in the Web Interface API of TightRope Media Carousel Digital Signage before 7.3.5. The RenderingFetch API allows for the downloading of arbitrary files through the use of directory traversal sequences, aka CSL-1683.	2018-23
tion_and_fusion	VMware ESXi (6.7 before ESXi670-201806401-BG, 6.5 before ESXi650-201806401-BG, 6.0 before ESXi600-201806401-BG and 5.5 before ESXi550-201806401-BG), Workstation (14.x before 14.1.2), and Fusion (10.x before 10.1.2) contain a denial-of-service vulnerability due to NULL pointer dereference issue in RPC handler. Successful exploitation of this issue may allow attackers with normal user privileges to crash their VMs.	2018-25
ents	VMware Horizon View Agents (7.x.x before 7.5.1) contain a local information disclosure vulnerability due to insecure logging of credentials in the vmmsi.log file when an account other than the currently logged on user is specified during installation (including silent installations). Successful exploitation of this issue may allow low privileged users access to the credentials specified during the Horizon View Agent installation.	2018-25
	wancms 1.0 through 5.0 allows remote attackers to cause a denial of service (resource consumption) via a checkcode (aka verification code) URI in which the values of font_size, width, and height are large numbers.	2018-25
th	The Battle for Wesnoth Project version 1.7.0 through 1.14.3 contains a Code Injection vulnerability in the Lua scripting engine that can result in code execution outside the sandbox. This attack appear to be exploitable via Loading specially-crafted saved games, networked games, replays, and player content.	2018-23
	WildFly Core before version 6.0.0.Alpha3 does not properly validate file paths in .war archives, allowing for the extraction of crafted .war archives to overwrite arbitrary files. This is an instance of the 'Zip Slip' vulnerability.	2018-27

	Wizkunde SAMLBase may incorrectly utilize the results of XML DOM traversal and canonicalization APIs in such a way that an attacker may be able to manipulate the SAML data without invalidating the cryptographic signature, allowing the attack to potentially bypass authentication to SAML service providers.	2018-24
	The Mondula Multi Step Form plugin through 1.2.5 for WordPress allows XSS via the fw_data [id][1], fw_data [id][2], fw_data [id][3], fw_data [id][4], or email field of the contact form, exploitable with an fw_send_email action to wp-admin/admin-ajax.php.	2018-25
	A SQL injection was discovered in WUZHI CMS 4.1.0 that allows remote attackers to inject a malicious SQL statement via the index.php?m=promote&f=index&v=search keywords parameter.	2018-23
	An XSS vulnerability was discovered in WUZHI CMS 4.1.0. There is persistent XSS that allows remote attackers to inject arbitrary web script or HTML via the form[content] parameter to the index.php?m=feedback&f=index&v=contact URI.	2018-23
	An XSS vulnerability was discovered in WUZHI CMS 4.1.0. There is persistent XSS that allows remote attackers to inject arbitrary web script or HTML via the form[nickname] parameter to the index.php?m=core&f=set&v=sendmail URI. When the administrator accesses the "system settings - mail server" screen, the XSS payload is triggered.	2018-23
	It was found that xorg-x11-server before 1.19.0 including uses memcmp() to check the received MIT cookie against a series of valid cookies. If the cookie is correct, it is allowed to attach to the Xorg session. Since most memcmp() implementations return after an invalid byte is seen, this causes a time difference between a valid and invalid byte, which could allow an efficient brute force attack.	2018-27
pany	Feedback.asp in Xiao5uCompany 1.7 has XSS because the XSS protection mechanism in Safe.asp is insufficient (for example, it considers SCRIPT and IMG elements, but does not consider VIDEO elements).	2018-23
	system/edit_book.php in XYCMS 1.7 has stored XSS via a crafted add_do.php request, related to add_book.php.	2018-28

	xyhai.php?s=/Auth/addUser in XYHCMS 3.5 allows CSRF to add a background administrator account.	2018-24
	zt-zip before 1.13 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in a Zip archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.	2018-25
	zip4j before 1.3.3 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in a Zip archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.	2018-25
	unzipper npm library before 0.8.13 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in a Zip archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.	2018-25
	SQL injection vulnerability in all versions prior to V4.01.01 of the ZTE ZXCDN-SNS product allows remote attackers to execute arbitrary SQL commands via the aoData parameter, resulting in the disclosure of database information.	2018-25
	All versions prior to V5.09.02.02T4 of the ZTE ZXIPTV-EPG product use the Java RMI service in which the servers use the Apache Commons Collections (ACC) library that may result in Java deserialization vulnerabilities. An unauthenticated remote attacker can exploit the vulnerabilities by sending a crafted RMI request to execute arbitrary code on the target host.	2018-25
	SQL injection vulnerability in all versions prior to V2.01.05.09 of the ZTE ZXIPTV-UCM product allows remote attackers to execute arbitrary SQL commands via the opertype parameter, resulting in the disclosure of database information.	2018-25
	All versions prior to ZSRV2 V3.00.40 of the ZTE ZXR10 1800-2S products allow remote authenticated users to bypass the original password authentication protection to change other user's password.	2018-25

Subject: SB18-211: Vulnerability Summary for the Week of July 23, 2018

Warning: This email is from an external source.

ystem:

[Vulnerability Summary for the Week of July 23, 2018](#)

, 2018

ystem Bulletin provides a summary of new vulnerabilities that have been recorded by the [National Institute of Standards and Technology \(NIST\) National Vulnerability Database](#) by the [Department of Homeland Security \(DHS\) National Cybersecurity and Communications Integration Center \(NCCIC\)](#) / [United States Computer Emergency Response Team \(US-CERT\)](#). For more information on these vulnerabilities, please visit the [NVD](#), which contains historical vulnerability information.

The vulnerabilities are listed on the [CVE](#) vulnerability naming standard and are organized according to severity, determined by the [Common Vulnerability Scoring System \(CVSS\)](#) standard. The vulnerabilities are categorized into the following scores:

Vulnerabilities will be labeled High severity if they have a CVSS base score of 7.0 - 10.0

Vulnerabilities will be labeled Medium severity if they have a CVSS base score of 4.0 - 6.9

Vulnerabilities will be labeled Low severity if they have a CVSS base score of 0.0 - 3.9

Information provided by organizations and efforts sponsored by US-CERT. This information may include identifying information, values, definitions, and related information. Please note that some of the information in the bulletins is compiled from external, open source reports and is not a direct result of US-CERT analysis.

This Vulnerability Summary Bulletin is created using information from the National Institute of Standards and Technology (NIST) [National Vulnerability Database](#) (NVD). In some cases, we have assigned CVSS scores. Please visit NVD for updated vulnerability entries, which include CVSS scores once they are available.

High Vulnerabilities

Primary - Product	Description	Published	CVSS Score
There were no high vulnerabilities recorded this week.			

Medium Vulnerabilities

Primary - Product	Description	Published	CVSS Score
There were no medium vulnerabilities recorded this week.			

Low Vulnerabilities

Primary - Product	Description	Published	CVSS Score
There were no low vulnerabilities recorded this week.			

Assigned

Primary Product	Description	Published
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Untrusted pointer dereference vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Use-after-free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Use-after-free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Use-after-free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Use-after-free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Double Free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Type Confusion vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Buffer Errors vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Use-after-free vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Buffer Errors vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20

	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Heap Overflow vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have a Type Confusion vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds write vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Acrobat and Reader 2018.011.20040 and earlier, 2017.011.30080 and earlier, and 2015.006.30418 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
	Adobe Connect versions 9.7.5 and earlier have an Insecure Library Loading vulnerability. Successful exploitation could lead to privilege escalation.	2018-20

	Adobe Connect versions 9.7.5 and earlier have an Authentication Bypass vulnerability. Successful exploitation could lead to session hijacking.	2018-20
r	Adobe Experience Manager versions 6.2 and 6.3 have a Server-Side Request Forgery vulnerability. Successful exploitation could lead to sensitive information disclosure.	2018-20
r	Adobe Experience Manager versions 6.4 and earlier have a Server-Side Request Forgery vulnerability. Successful exploitation could lead to sensitive information disclosure.	2018-20
r	Adobe Experience Manager versions 6.4 and earlier have a Server-Side Request Forgery vulnerability. Successful exploitation could lead to sensitive information disclosure.	2018-20
	Adobe Flash Player 30.0.0.113 and earlier versions have a Type Confusion vulnerability. Successful exploitation could lead to arbitrary code execution in the context of the current user.	2018-20
	Adobe Flash Player 30.0.0.113 and earlier versions have an Out-of-bounds read vulnerability. Successful exploitation could lead to information disclosure.	2018-20
p	An out-of-bounds heap buffer read flaw was found in the way advancecomp before 2.1-2018/02 handled processing of ZIP files. An attacker could potentially use this flaw to crash the advzip utility by tricking it into processing crafted ZIP files.	2018-27

	An input validation vulnerability was found in Ansible's mysql_user module before 2.2.1.0, which may fail to correctly change a password in certain circumstances. Thus the previous password would still be active when it should have been changed.	2018-26
	A flaw was found in Ansible Tower's interface before 3.1.5 and 3.2.0 with SCM repositories. If a Tower project (SCM repository) definition does not have the 'delete before update' flag set, an attacker with commit access to the upstream playbook source repository could create a Trojan playbook that, when executed by Tower, modifies the checked out SCM repository to add git hooks. These git hooks could, in turn, cause arbitrary command and code execution as the user Tower runs as.	2018-27
	In Apache Kafka 0.9.0.0 to 0.9.0.1, 0.10.0.0 to 0.10.2.1, 0.11.0.0 to 0.11.0.2, and 1.0.0, authenticated Kafka users may perform action reserved for the Broker via a manually created fetch request interfering with data replication, resulting in data loss.	2018-26
	In Apache Kafka 0.10.0.0 to 0.10.2.1 and 0.11.0.0 to 0.11.0.1, authenticated Kafka clients may use impersonation via a manually crafted protocol message with SASL/PLAIN or SASL/SCRAM authentication when using the built-in PLAIN or SCRAM server implementations in Apache Kafka.	2018-26
	In PHP Runtime for Apache OpenWhisk, a Docker action inheriting one of the Docker tags openwhisk/action-php-v7.2:1.0.0 or openwhisk/action-php-v7.1:1.0.1 (or earlier) may allow an attacker to replace the user function inside the container if the user code is vulnerable to code exploitation.	2018-23
	In Docker Skeleton Runtime for Apache OpenWhisk, a Docker action inheriting the Docker tag openwhisk/dockerskeleton:1.3.0 (or earlier) may allow an attacker to replace the user function inside the container if the user code is vulnerable to code exploitation.	2018-23
	The TomEE console (tomee-webapp) has a XSS vulnerability which could allow javascript to be executed if the user is given a malicious URL. This web application is typically used to add TomEE features to a Tomcat installation. The TomEE bundles do not ship with this application included. This issue can be mitigated by removing the application after TomEE is setup (if using the application to install TomEE), using one of the provided pre-configured bundles, or by upgrading to TomEE 7.0.5. This issue is resolve in this commit: b8bbf50c23ce97dd64f3a5d77f78f84e47579863.	2018-23

	ARM mbed TLS before 2.12.0, before 2.7.5, and before 2.1.14 allows local users to achieve partial plaintext recovery (for a CBC based ciphersuite) via a cache-based side-channel attack.	2018-28
	ARM mbed TLS before 2.12.0, before 2.7.5, and before 2.1.14 allows remote attackers to achieve partial plaintext recovery (for a CBC based ciphersuite) via a timing-based side-channel attack. This vulnerability exists because of an incorrect fix (with a wrong SHA-384 calculation) for CVE-2013-0169.	2018-28
	ASUS HG100 devices with firmware before 1.05.12 allow unauthenticated access, leading to remote command execution.	2018-25
	The Webhooks component of Atlassian Jira before version 7.6.7 and from version 7.7.0 before version 7.11.0 allows remote attackers who are able to observe or otherwise intercept webhook events to learn information about changes in issues that should not be sent because they are not contained within the results of a specified JQL query.	2018-24
	An issue was discovered in aubio 0.4.6. A SEGV signal can occur in aubio_source_avcodec_readframe in io/source_avcodec.c, as demonstrated by aubiomfcc.	2018-23
	An issue was discovered in aubio 0.4.6. A SEGV signal can occur in aubio_pitch_set_unit in pitch/pitch.c, as demonstrated by aubionotes.	2018-23
	An issue was discovered in aubio 0.4.6. A buffer over-read can occur in new_aubio_pitchyinfft in pitch/pitchyinfft.c, as demonstrated by aubionotes.	2018-23
	AVEVA InTouch 2014 R2 SP1 and prior, InTouch 2017, InTouch 2017 Update 1, and InTouch 2017 Update 2 allow an unauthenticated user to send a specially crafted packet that could overflow the buffer on a locale not using a dot floating point separator. Exploitation could allow remote code execution under the privileges of the InTouch View process.	2018-24
	index.php?r=admini/admin/create in BageCMS V3.1.3 allows CSRF to add a background administrator account.	2018-24
	An issue has been discovered in Bento4 1.5.1-624. A SEGV can occur in AP4_Processor::ProcessFragments in Core/Ap4Processor.cpp.	2018-24

	An issue was discovered in Bento4 1.5.1-624. There is a heap-based buffer over-read in AP4_Mpeg2TsVideoSampleStream::WriteSample in Core/Ap4Mpeg2Ts.cpp after a call from Mp42Hls.cpp, a related issue to CVE-2018-13846.	2018-23
	An issue has been discovered in Bento4 1.5.1-624. AP4_MemoryByteStream::WritePartial in Core/Ap4ByteStream.cpp has a buffer over-read.	2018-24
	An issue was discovered in Bento4 1.5.1-624. There is an unspecified "heap-buffer-overflow" crash in the AP4_HvccAtom class in Core/Ap4HvccAtom.cpp.	2018-23
	An issue has been discovered in Bento4 1.5.1-624. A NULL pointer dereference can occur in AP4_DataBuffer::SetData in Core/Ap4DataBuffer.cpp.	2018-24
	An issue has been discovered in Bento4 1.5.1-624. AP4_Mp4AudioDsiParser::ReadBits in Codecs/Ap4Mp4AudioInfo.cpp has a heap-based buffer over-read.	2018-24
	There exists one NULL pointer dereference vulnerability in AP4_JsonInspector::AddField in Ap4Atom.cpp in Bento4 1.5.1-624, which can allow attackers to cause a denial-of-service via a crafted mp4 file. This vulnerability can be triggered by the executable mp4dump.	2018-23
	An issue has been discovered in Bento4 1.5.1-624. AP4_AvccAtom::Create in Core/Ap4AvccAtom.cpp has a heap-based buffer over-read.	2018-24
	An issue has been discovered in Bento4 1.5.1-624. AP4_BytesToUInt16BE in Core/Ap4Utils.h has a heap-based buffer over-read after a call from the AP4_Stz2Atom class.	2018-24
	There exists one invalid memory read bug in AP4_SampleDescription::GetFormat() in Ap4SampleDescription.h in Bento4 1.5.1-624, which can allow attackers to cause a denial-of-service via a crafted mp4 file. This vulnerability can be triggered by the executable mp42ts.	2018-23
	There exists one invalid memory read bug in AP4_SampleDescription::GetType() in Ap4SampleDescription.h in Bento4 1.5.1-624, which can allow attackers to cause a denial-of-service via a crafted mp4 file. This vulnerability can be triggered by the executable mp42ts.	2018-23
	An issue has been discovered in Bento4 1.5.1-624. A SEGV can occur in AP4_Mpeg2TsAudioSampleStream::WriteSample in Core/Ap4Mpeg2Ts.cpp, a different vulnerability than CVE-2018-14532.	2018-24

	Brynamics "Online Trade - Online trading and cryptocurrency investment system" allows remote attackers to obtain sensitive information via a direct request for /dashboard/addplan, /dashboard/paywithcard/charge, /dashboard/withdrawal, or /privacy&terms, as demonstrated by reading database username, database password, database_name, and IP address fields, related to CVE-2018-12908.	2018-23
	huft_build in archival/libarchive/decompress_gunzip.c in BusyBox before 1.27.2 misuses a pointer, causing segfaults and an application crash during an unzip operation on a specially crafted ZIP file.	2018-26
devices	CalAmp LMU 3030 series OBD-II CDMA and GSM devices has an SMS (text message) interface that can be deployed where no password is configured for this interface by the integrator / reseller. This interface must be password protected, otherwise, the attacker only needs to know the phone number of the device (via an IMSI Catcher, for example) to send administrative commands to the device. These commands can be used to provide ongoing, real-time access to the device and can configure parameters such as IP addresses, firewall rules, and passwords.	2018-24
	In Ceph, a format string flaw was found in the way libradosstriper parses input from user. A user could crash an application or service using the libradosstriper library.	2018-27
	Directory traversal vulnerability in ChamaNet MemoCGI v2.1800 to v2.2200 allows remote attackers to read arbitrary files via unspecified vectors.	2018-26
	Chamilo LMS version 11.x contains an Unserialization vulnerability in the "hash" GET parameter for the api endpoint located at /webservices/api/v2.php that can result in Unauthenticated remote code execution. This attack appear to be exploitable via a simple GET request to the api endpoint. This vulnerability appears to have been fixed in After commit 0de84700648f098c1fbf6b807dee28ec640efe62.	2018-23
uaa	Cloud Foundry UAA, versions 4.19 prior to 4.19.2 and 4.12 prior to 4.12.4 and 4.10 prior to 4.10.2 and 4.7 prior to 4.7.6 and 4.5 prior to 4.5.7, incorrectly authorizes requests to admin endpoints by accepting a valid refresh token in lieu of an access token. Refresh tokens by design have a longer expiration time than access tokens, allowing the possessor of a refresh token to authenticate longer than expected. This affects the administrative endpoints of the UAA. i.e. /Users, /Groups, etc. However, if the user has been deleted or had groups removed, or the client was deleted, the refresh token will no longer be valid.	2018-24
	adm-zip npm library before 0.4.9 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in a Zip archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.	2018-25

	<p>curl before 7.53.0 has an incorrect TLS Certificate Status Request extension feature that asks for a fresh proof of the server's certificate's validity in the code that checks for a test success or failure. It ends up always thinking there's valid proof, even when there is none or if the server doesn't support the TLS extension in question. This could lead to users not detecting when a server's certificate goes invalid or otherwise be misled that the server is in a better shape than it is in reality. This flaw also exists in the command line tool (--cert-status).</p>	2018-27
	<p>SQL injection vulnerability in the Notifications application in the Cybozu Garoon 3.5.0 to 4.6.2 allows remote authenticated attackers to execute arbitrary SQL commands via unspecified vectors.</p>	2018-26
products	<p>Dahua IP camera products using firmware versions prior to V2.400.0000.14.R.20170713 include a version of the Sonia web interface that may be vulnerable to a stack buffer overflow. Dahua IP camera products include an application known as Sonia (/usr/bin/sonia) that provides the web interface and other services for controlling the IP camera remotely. Versions of Sonia included in firmware versions prior to DH_IPC-Consumer-Zi-Themis_Eng_P_V2.408.0000.11.R.20170621 do not validate input data length for the 'password' field of the web interface. A remote, unauthenticated attacker may submit a crafted POST request to the IP camera's Sonia web interface that may lead to out-of-bounds memory operations and loss of availability or remote code execution. The issue was originally identified by the researcher in firmware version DH_IPC-HX1X2X-Themis_EngSpnFrn_N_V2.400.0000.30.R.20160803.</p>	2018-24
	<p>The DBPOWER U818A WIFI quadcopter drone provides FTP access over its own local access point, and allows full file permissions to the anonymous user. The DBPower U818A WIFI quadcopter drone runs an FTP server that by default allows anonymous access without a password, and provides full filesystem read/write permissions to the anonymous user. A remote user within range of the open access point on the drone may utilize the anonymous user of the FTP server to read arbitrary files, such as images and video recorded by the device, or to replace system files such as /etc/shadow to gain further access to the device. Furthermore, the DBPOWER U818A WIFI quadcopter drone uses BusyBox 1.20.2, which was released in 2012, and may be vulnerable to other known BusyBox vulnerabilities.</p>	2018-24
	<p>It was found that subscription-manager's DBus interface before 1.19.4 let unprivileged user access the com.redhat.RHSM1.Facts.GetFacts and com.redhat.RHSM1.Config.Set methods. An unprivileged local attacker could use these methods to gain access to private information, or launch a privilege escalation attack.</p>	2018-27

_for_android	The DHC Online Shop App for Android version 3.2.0 and earlier does not verify X.509 certificates from SSL servers, which allows man-in-the-middle attackers to spoof servers and obtain sensitive information via a crafted certificate.	2018-26
	The dotCMS administration panel, versions 3.7.1 and earlier, are vulnerable to cross-site request forgery. The dotCMS administrator panel contains a cross-site request forgery (CSRF) vulnerability. An attacker can perform actions with the same permissions as a victim user, provided the victim has an active session and is induced to trigger the malicious request. An unauthenticated remote attacker may perform actions with the dotCMS administrator panel with the same permissions of a victim user or execute arbitrary system commands with the permissions of the user running the dotCMS application.	2018-24
	The dotCMS administration panel, versions 3.7.1 and earlier, "Push Publishing" feature in Enterprise Pro is vulnerable to arbitrary file upload. When "Bundle" tar.gz archives uploaded to the Push Publishing feature are decompressed, there are no checks on the types of files which the bundle contains. This vulnerability combined with the path traversal vulnerability (CVE-2017-3188) can lead to remote command execution with the permissions of the user running the dotCMS application. An unauthenticated remote attacker may perform actions with the dotCMS administrator panel with the same permissions of a victim user or execute arbitrary system commands with the permissions of the user running the dotCMS application.	2018-24
	The dotCMS administration panel, versions 3.7.1 and earlier, "Push Publishing" feature in Enterprise Pro is vulnerable to path traversal. When "Bundle" tar.gz archives uploaded to the Push Publishing feature are decompressed, the filenames of its contents are not properly checked, allowing for writing files to arbitrary directories on the file system. These archives may be uploaded directly via the administrator panel, or using the CSRF vulnerability (CVE-2017-3187). An unauthenticated remote attacker may perform actions with the dotCMS administrator panel with the same permissions of a victim user or execute arbitrary system commands with the permissions of the user running the dotCMS application.	2018-24
zip.semvered	DotNetZip.Semvered before 1.11.0 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in a Zip archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.	2018-25
	It was found in EAP 7 before 7.0.9 that properties based files of the management and the application realm configuration that contain user to role mapping are world readable allowing access to users and roles information to all the users logged in to the system.	2018-26

i.lon	Echelon SmartServer 1 all versions, SmartServer 2 all versions prior to release 4.11.007, i.LON 100 all versions, and i.LON 600 all versions. An attacker can use the SOAP API to retrieve and change sensitive configuration items such as the usernames and passwords for the Web and FTP servers. This vulnerability does not affect the i.LON 600 product.	2018-24
i.lon	Echelon SmartServer 1 all versions, SmartServer 2 all versions prior to release 4.11.007, i.LON 100 all versions, and i.LON 600 all versions. The devices allow unencrypted Web connections by default, and devices can receive configuration and firmware updates by unsecure FTP.	2018-24
i.lon	Echelon SmartServer 1 all versions, SmartServer 2 all versions prior to release 4.11.007, i.LON 100 all versions, and i.LON 600 all versions. The devices store passwords in plaintext, which may allow an attacker with access to the configuration file to log into the SmartServer web user interface.	2018-24
i.lon	Echelon SmartServer 1 all versions, SmartServer 2 all versions prior to release 4.11.007, i.LON 100 all versions, and i.LON 600 all versions. An attacker can bypass the required authentication specified in the security configuration file by including extra characters in the directory name when specifying the directory to be accessed. This vulnerability does not affect the i.LON 600 product.	2018-24
	On F5 BIG-IP DNS 13.1.0-13.1.0.7, 12.1.3-12.1.3.5, DNS Express / DNS Zones accept NOTIFY messages on the management interface from source IP addresses not listed in the 'Allow NOTIFY From' configuration parameter when the db variable "dnsexpress.notifyport" is set to any value other than the default of "0".	2018-25
	A remote attacker may be able to disrupt services on F5 BIG-IP 13.0.0-13.1.0.5, 12.1.0-12.1.3.5, 11.6.0-11.6.3.1, or 11.2.1-11.5.6 if the TMM virtual server is configured with a HTML or a Rewrite profile. TMM may restart while processing some specially prepared HTML content from the back end.	2018-25
	A remote attacker via undisclosed measures, may be able to exploit an F5 BIG-IP APM 13.0.0-13.1.0.7 or 12.1.0-12.1.3.5 virtual server configured with an APM per-request policy object and cause a memory leak in the APM module.	2018-25
	Under certain conditions, on F5 BIG-IP ASM 13.0.0-13.1.0.7, 12.1.0-12.1.3.5, 11.6.0-11.6.3.1, 11.5.1-11.5.6, or 11.2.1, when processing CSRF protections, the BIG-IP ASM bd process may restart and produce a core file.	2018-25

	Through undisclosed methods, on F5 BIG-IP 13.0.0-13.1.0.7, 12.1.0-12.1.3.5, 11.6.0-11.6.3.1, or 11.2.1-11.5.6, adjacent network attackers can cause a denial of service for VCMP guest and host systems. Attack must be sourced from adjacent network (layer 2).	2018-25
	When F5 BIG-IP ASM 13.0.0-13.1.0.1, 12.1.0-12.1.3.5, 11.6.0-11.6.3.1, or 11.5.1-11.5.6 is processing HTTP requests, an unusually large number of parameters can cause excessive CPU usage in the BIG-IP ASM bd process.	2018-25
	F5 BIG-IP 13.0.0-13.0.1, 12.1.0-12.1.3.6, or 11.2.1-11.6.3.2 HTTPS health monitors do not validate the identity of the monitored server.	2018-25
	F5 BIG-IP 13.0.0-13.1.0.5, 12.1.0-12.1.3.5, or 11.6.0-11.6.3.1 virtual servers with HTTP/2 profiles enabled are vulnerable to "HPACK Bomb".	2018-25
	FFmpeg before commit bab0716c7f4793ec42e05a5aa7e80d82a0dd4e75 contains an out of array access vulnerability in MXF format demuxer that can result in DoS. This attack appear to be exploitable via specially crafted MXF file which has to be provided as input. This vulnerability appears to have been fixed in bab0716c7f4793ec42e05a5aa7e80d82a0dd4e75 and later.	2018-23
	FFmpeg before commit 5aba5b89d0b1d73164d3b81764828bb8b20ff32a contains an out of array read vulnerability in ASF_F format demuxer that can result in heap memory reading. This attack appear to be exploitable via specially crafted ASF file that has to provided as input. This vulnerability appears to have been fixed in 5aba5b89d0b1d73164d3b81764828bb8b20ff32a and later.	2018-23
	FFmpeg before commit 9807d3976be0e92e4ece3b4b1701be894cd7c2e1 contains a CWE-835: Infinite loop vulnerability in pva format demuxer that can result in a Vulnerability that allows attackers to consume excessive amount of resources like CPU and RAM. This attack appear to be exploitable via specially crafted PVA file has to be provided as input. This vulnerability appears to have been fixed in 9807d3976be0e92e4ece3b4b1701be894cd7c2e1 and later.	2018-23
	FFmpeg before commit 2b46ebdbff1d8dec7a3d8ea280a612b91a582869 contains a Buffer Overflow vulnerability in asf_o format demuxer that can result in heap-buffer-overflow that may result in remote code execution. This attack appears to be exploitable via specially crafted ASF file that has to be provided as input to FFmpeg. This vulnerability appears to have been fixed in 2b46ebdbff1d8dec7a3d8ea280a612b91a582869 and later.	2018-23
	FFmpeg before commit a7e032a277452366771951e29fd0bf2bd5c029f0 contains a use-after-free vulnerability in the realmedia demuxer that can result in vulnerability allows attacker to read heap memory. This attack appear to be exploitable via specially crafted RM file has to be provided as input. This vulnerability appears to have been fixed in a7e032a277452366771951e29fd0bf2bd5c029f0 and later.	2018-23

	FFmpeg before commit cced03dd667a5df6df8fd40d8de0bff477ee02e8 contains multiple out of array access vulnerabilities in the mms protocol that can result in attackers accessing out of bound data. This attack appear to be exploitable via network connectivity. This vulnerability appears to have been fixed in cced03dd667a5df6df8fd40d8de0bff477ee02e8 and later.	2018-23
	foreman before version 1.16.0 is vulnerable to a stored XSS in organizations/locations assignment to hosts. Exploiting this requires a user to actively assign hosts to an organization that contains html in its name which is visible to the user prior to taking action.	2018-26
	In fuse before versions 2.9.8 and 3.x before 3.2.5, fusermount is vulnerable to a restriction bypass when SELinux is active. This allows non-root users to mount a FUSE file system with the 'allow_other' mount option regardless of whether 'user_allow_other' is set in the fuse configuration. An attacker may use this flaw to mount a FUSE file system, accessible by other users, and trick them into accessing files on that file system, possibly causing Denial of Service or other unspecified effects.	2018-24
	A flaw was discovered in gdm 3.24.1 where gdm greeter was no longer setting the ran_once boolean during autologin. If autologin was enabled for a victim, an attacker could simply select 'login as another user' to unlock their screen.	2018-26
enterprise_edition	An issue was discovered in GitLab Community and Enterprise Edition before 10.8.7, 11.0.x before 11.0.5, and 11.1.x before 11.1.2. XSS can occur in the branch name during a Web IDE file commit.	2018-26
enterprise_edition	An issue was discovered in GitLab Community and Enterprise Edition 11.1.x before 11.1.2. A Denial of Service can occur because Markdown rendering times are slow.	2018-26
enterprise_edition	An issue was discovered in GitLab Community and Enterprise Edition before 10.8.7, 11.0.x before 11.0.5, and 11.1.x before 11.1.2. Information Disclosure can occur because the Prometheus metrics feature discloses private project pathnames.	2018-26
enterprise_edition	An issue was discovered in GitLab Community and Enterprise Edition before 10.8.7, 11.0.x before 11.0.5, and 11.1.x before 11.1.2. CSRF can occur in the Test feature of the System Hooks component.	2018-26
enterprise_edition	An issue was discovered in GitLab Community and Enterprise Edition before 10.8.7, 11.0.x before 11.0.5, and 11.1.x before 11.1.2. XSS can occur via a Milestone name during a promotion.	2018-26

enterprise_edition	An issue was discovered in GitLab Community and Enterprise Edition before 10.8.7, 11.0.x before 11.0.5, and 11.1.x before 11.1.2. XSS can occur in the tooltip of the job inside the CI/CD pipeline.	2018-26
	Untrusted search path vulnerability in the installer of Glarysoft Glary Utilities (Glary Utilities 5.99 and earlier and Glary Utilities Pro 5.99 and earlier) allows an attacker to gain privileges via a Trojan horse DLL in an unspecified directory.	2018-26
	Gleezcms Gleez Cms version 1.3.0 contains a Cross Site Scripting (XSS) vulnerability in Profile page that can result in Inject arbitrary web script or HTML via the profile page editor. This attack appear to be exploitable via The victim must navigate to the attacker's profile page.	2018-23
	camel/providers/imapx/camel-imapx-server.c in the IMAPx component in GNOME evolution-data-server before 3.21.2 proceeds with cleartext data containing a password if the client wishes to use STARTTLS but the server will not use STARTTLS, which makes it easier for remote attackers to obtain sensitive information by sniffing the network. The server code was intended to report an error and not proceed, but the code was written incorrectly.	2018-20
	dwg_decode_eeed in decode.c in GNU LibreDWG 0.5.1048 leads to a double free (in dwg_free_eeed in free.c) because it does not properly manage the obj->eeed value after a free occurs.	2018-23
	Cross-site scripting vulnerability in Mailman 2.1.26 and earlier allows remote authenticated attackers to inject arbitrary web script or HTML via unspecified vectors.	2018-26
	mholt/archiver golang package before e4ef56d48eb029648b0e895bb0b6a393ef0829c3 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in an archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.	2018-25
	GolemCMS through 2008-12-24, if the install/ directory remains active after an installation, allows remote attackers to execute arbitrary PHP code by inserting this code into the "Database Information" "Table prefix" form field, or obtain sensitive information via a direct request for install/install.sql.	2018-24

	The add function in <code>www/Lib/Lib/Action/Admin/TplAction.class.php</code> in Gxlcms v1.1.4 allows remote attackers to read arbitrary files via a crafted <code>index.php?s=Admin-Tpl-ADD-id</code> request, related to <code>Lib/Common/Admin/function.php</code> .	2018-28
	An issue was discovered in H2 1.4.197. Insecure handling of permissions in the backup function allows attackers to read sensitive files (outside of their permissions) via a symlink to a fake database file.	2018-24
or_standard_edition	IBM Sterling B2B Integrator Standard Edition (IBM Sterling File Gateway 2.2.0 through 2.2.6) uses weaker than expected cryptographic algorithms that could allow a local attacker to decrypt highly sensitive information. IBM X-Force ID: 132032.	2018-20
or_standard_edition	IBM Sterling B2B Integrator Standard Edition 5.2.0 through 5.2.6 is vulnerable to cross-site scripting. This vulnerability allows users to embed arbitrary JavaScript code in the Web UI thus altering the intended functionality potentially leading to credentials disclosure within a trusted session. IBM X-Force ID: 141551.	2018-23
or_standard_edition	IBM Sterling B2B Integrator Standard Edition (IBM Sterling File Gateway 2.2.0 through 2.2.6) caches usernames and passwords in browsers that could be used by a local attacker to obtain sensitive information. IBM X-Force ID: 130812.	2018-20
	IBM Sterling File Gateway 2.2.0 through 2.2.6 could allow a remote authenticated attacker to obtain sensitive information displayed in the URL that could lead to further attacks against the system. IBM X-Force ID: 140688.	2018-20
	IBM WebSphere MQ 7.5, 8.0, and 9.0 could allow a remotely authenticated attacker to to send invalid or malformed headers that could cause messages to no longer be transmitted via the affected channel. IBM X-Force ID: 141339.	2018-23
	An SSRF vulnerability was discovered in idreamsoft iCMS V7.0.9 that allows attackers to read sensitive files, access an intranet, or possibly have unspecified other impact.	2018-23

k	The ReadMATImageV4 function in coders/mat.c in ImageMagick 7.0.8-7 uses an uninitialized variable, leading to memory corruption.	2018-23
	A vulnerability was found in ipa before 4.4. IdM's ca-del, ca-disable, and ca-enable commands did not properly check the user's permissions while modifying CAs in Dogtag. An authenticated, unauthorized attacker could use this flaw to delete, disable, or enable CAs causing various denial of service problems with certificate issuance, OCSP signing, and deletion of secret keys.	2018-27
tion	It was discovered that the XmlUtils class in jbpmmigration 6.5 performed expansion of external parameter entities while parsing XML files. A remote attacker could use this flaw to read files accessible to the user running the application server and, potentially, perform other more advanced XML eXternal Entity (XXE) attacks.	2018-26
	A cross-site scripting vulnerability exists in Jenkins 2.132 and earlier, 2.121.1 and earlier in the Stapler web framework's org/kohsuke/stapler/Stapler.java that allows attackers with the ability to control the existence of some URLs in Jenkins to define JavaScript that would be executed in another user's browser when that other user views HTTP 404 error pages while Stapler debug mode is enabled.	2018-23
	It was found that the use of Pipeline: Classpath Step Jenkins plugin enables a bypass of the Script Security sandbox for users with SCM commit access, as well as users with e.g. Job/Configure permission in Jenkins.	2018-27
	It was found that there were no permission checks performed in the Distributed Fork plugin before and including 1.5.0 for Jenkins that provides the dist-fork CLI command beyond the basic check for Overall/Read permission, allowing anyone with that permission to run arbitrary shell commands on all connected nodes.	2018-27
	A exposure of sensitive information vulnerability exists in Jenkins 2.132 and earlier, 2.121.1 and earlier in Plugin.java that allows attackers to determine the date and time when a plugin HPI/JPI file was last extracted, which typically is the date of the most recent installation/upgrade.	2018-23
	It was found that jenkins-ssh-slaves-plugin before version 1.15 did not perform host key verification, thereby enabling Man-in-the-Middle attacks.	2018-27

	A Improper authorization vulnerability exists in Jenkins 2.132 and earlier, 2.121.1 and earlier in Queue.java that allows attackers with Overall/Read permission to cancel queued builds.	2018-23
	A arbitrary file read vulnerability exists in Jenkins 2.132 and earlier, 2.121.1 and earlier in the Stapler web framework's org/kohsuke/stapler/Stapler.java that allows attackers to send crafted HTTP requests returning the contents of any file on the Jenkins master file system that the Jenkins master has access to.	2018-23
	jenkins-mailer-plugin before version 1.20 is vulnerable to an information disclosure while using the feature to send emails to a dynamically created list of users based on the changelogs. This could in some cases result in emails being sent to people who have no user account in Jenkins, and in rare cases even people who were not involved in whatever project was being built, due to some mapping based on the local-part of email addresses.	2018-27
	It was found that the Active Directory Plugin for Jenkins up to and including version 2.2 did not verify certificates of the Active Directory server, thereby enabling Man-in-the-Middle attacks.	2018-27
	A unauthorized modification of configuration vulnerability exists in Jenkins 2.132 and earlier, 2.121.1 and earlier in User.java that allows attackers to provide crafted login credentials that cause Jenkins to move the config.xml file from the Jenkins home directory. If Jenkins is started without this file present, it will revert to the legacy defaults of granting administrator access to anonymous users.	2018-23
	A cross-site scripting vulnerability exists in Jenkins 2.132 and earlier, 2.121.1 and earlier in BuildTimelineWidget.java, BuildTimelineWidget/control.jelly that allows attackers with Job/Configure permission to define JavaScript that would be executed in another user's browser when that other user performs some UI actions.	2018-23
	A Improper authorization vulnerability exists in Jenkins 2.132 and earlier, 2.121.1 and earlier in SlaveComputer.java that allows attackers with Overall/Read permission to initiate agent launches, and abort in-progress agent launches.	2018-23
	joyplus-cms 1.6.0 has XSS via the manager/collect/collect_vod_zhuiju.php keyword parameter.	2018-22
	manager/admin_ajax.php in joyplus-cms 1.6.0 has SQL Injection, as demonstrated by crafted POST data beginning with an "m_id=1 AND SLEEP(5)" substring.	2018-22
g	A flaw was found in katello-debug before 3.4.0 where certain scripts and log files used insecure temporary files. A local user could exploit this flaw to conduct a symbolic-link attack, allowing them to overwrite the contents of arbitrary files.	2018-27

	<p>It was found that while parsing the SAML messages the StaxParserUtil class of keycloak before 2.5.1 replaces special strings for obtaining attribute values with system property. This could allow an attacker to determine values of system properties at the attacked system by formatting the SAML request ID field to be the chosen system property which could be obtained in the "InResponseTo" field in the response.</p>	2018-26
	<p>keycloak before version 4.0.0.final is vulnerable to a infinite loop in session replacement. A Keycloak cluster with multiple nodes could mishandle an expired session replacement and lead to an infinite loop. A malicious authenticated user could use this flaw to achieve Denial of Service on the server.</p>	2018-23
	<p>It was found that when Keycloak before 2.5.5 receives a Logout request with a Extensions in the middle of the request, the SAMLsloRequestParser.parse() method ends in a infinite loop. An attacker could use this flaw to conduct denial of service attacks.</p>	2018-27
	<p>An authentication bypass flaw was found in the way krb5's certauth interface before 1.16.1 handled the validation of client certificates. A remote attacker able to communicate with the KDC could potentially use this flaw to impersonate arbitrary principals under rare and erroneous circumstances.</p>	2018-26
	<p>The IMM2 First Failure Data Capture function collects management module logs and diagnostic information when a hardware error is detected. This information is made available for download through an SFTP server hosted on the IMM2 management network interface. In versions earlier than 4.90 for Lenovo System x and earlier than 6.80 for IBM System x, the credentials to access the SFTP server are hard-coded and described in the IMM2 documentation, allowing an attacker</p>	2018-26

	with management network access to obtain the collected FFDC data. After applying the update, the IMM2 will create random SFTP credentials for use with OneCLI.	
	libcrypt before version 1.7.8 is vulnerable to a cache side-channel attack resulting into a complete break of RSA-1024 while using the left-to-right method for computing the sliding-window expansion. The same attack is believed to work on RSA-2048 with moderately more computation. This side-channel requires that attacker can run arbitrary software on the hardware where the private RSA key is used.	2018-26
	It was discovered that libICE before 1.0.9-8 used a weak entropy to generate keys. A local attacker could potentially use this flaw for session hijacking using the information available from the process list.	2018-27
	A missing patch for a stack-based buffer overflow in findTable() was found in Red Hat version of liblouis before 2.5.4. An attacker could cause a denial of service condition or potentially even arbitrary code execution.	2018-27
	An issue was discovered in mspack/chmd.c in libmspack before 0.7alpha. There is an off-by-one error in the TOLOWER() macro for CHM decompression.	2018-28
	An issue was discovered in kwajd_read_headers in mspack/kwajd.c in libmspack before 0.7alpha. Bad KWAJ file header extensions could cause a one or two byte overwrite.	2018-28

	An issue was discovered in mspack/chmd.c in libmspack before 0.7alpha. There is an off-by-one error in the CHM PMGI/PMGL chunk number validity checks, which could lead to denial of service (uninitialized data dereference and application crash).	2018-28
	An issue was discovered in mspack/chmd.c in libmspack before 0.7alpha. It does not reject blank CHM filenames.	2018-28
	An issue has been found in libwav through 2017-04-20. It is a SEGV in the function wav_write in libwav.c.	2018-23
	It was discovered that libXdmcp before 1.1.2 including used weak entropy to generate session keys. On a multi-user system using xdmcp, a local attacker could potentially use information available from the process list to brute force the key, allowing them to hijack other users' sessions.	2018-27
s	LICA miniCMTS E8K(u/i/...) devices allow remote attackers to obtain sensitive information via a direct POST request for the inc/user.ini file, leading to discovery of a password hash.	2018-25
	An issue was discovered in the Linux kernel through 4.17.10. There is a buffer overflow in truncate_inline_inode() in fs/f2fs/inline.c when umounting an f2fs image, because a length value may be negative.	2018-27
	An issue was discovered in the Linux kernel through 4.17.10. There is an out-of-bounds access in __remove_dirty_segment() in fs/f2fs/segment.c when mounting an f2fs image.	2018-27
	A flaw was found in Linux kernel's KVM virtualization subsystem. The VMX code does not restore the GDT.LIMIT to the previous host value, but instead sets it to 64KB. With a corrupted GDT limit a host's userspace code has an ability to	2018-26

	<p>place malicious entries in the GDT, particularly to the per-cpu variables. An attacker can use this to escalate their privileges.</p>	
	<p>Linux kernel is vulnerable to a stack-out-of-bounds write in the ext4 filesystem code when mounting and writing to a crafted ext4 image in <code>ext4_update_inline_data()</code>. An attacker could use this to cause a system crash and a denial of service.</p>	<p>2018-25</p>
	<p>An issue was discovered in the Linux kernel through 4.17.10. There is a NULL pointer dereference and panic in <code>hfsplus_lookup()</code> in <code>fs/hfsplus/dir.c</code> when opening a file (that is purportedly a hard link) in an hfs+ filesystem that has malformed catalog data, and is mounted read-only without a metadata directory.</p>	<p>2018-27</p>
	<p>It was found that the Linux kernel's Datagram Congestion Control Protocol (DCCP) implementation before 2.6.22.17 used the IPv4-only <code>inet_sk_rebuild_header()</code> function for both IPv4 and IPv6 DCCP connections, which could result in memory corruptions. A remote attacker could use this flaw to crash the system.</p>	<p>2018-27</p>
	<p>An issue was discovered in the Linux kernel through 4.17.10. There is out-of-bounds access in <code>write_extent_buffer()</code> when mounting and operating a crafted btrfs image, because of a lack of verification that each block group has a corresponding chunk at mount time, within <code>btrfs_read_block_groups</code> in <code>fs/btrfs/extent-tree.c</code>.</p>	<p>2018-27</p>
	<p>A flaw was found in the Linux kernel's handling of clearing SELinux attributes on <code>/proc/pid/attr</code> files before 4.9.10. An empty (null) write to this file can crash the system by causing the system to attempt to access unmapped kernel memory.</p>	<p>2018-27</p>

	<p>An issue was discovered in the Linux kernel through 4.17.11, as used in Xen through 4.11.x. The <code>xen_failsafe_callback</code> entry point in <code>arch/x86/entry/entry_64.S</code> does not properly maintain RBX, which allows local users to cause a denial of service (uninitialized memory usage and system crash). Within Xen, 64-bit x86 PV Linux guest OS users can trigger a guest OS crash or possibly gain privileges.</p>	2018-28
	<p>A kernel data leak due to an out-of-bound read was found in the Linux kernel in <code>inet_diag_msg_sctp{,l}addr_fill()</code> and <code>sctp_get_sctp_info()</code> functions present since version 4.7-rc1 through version 4.13. A data leak happens when these functions fill in <code>sockaddr</code> data structures used to export socket's diagnostic information. As a result, up to 100 bytes of the slab data could be leaked to a userspace.</p>	2018-26
	<p>A flaw was found in the Linux kernel's ext4 filesystem. A local user can cause an out-of-bounds write and a denial of service or unspecified other impact is possible by mounting and operating a crafted ext4 filesystem image.</p>	2018-26
	<p>An issue was discovered in the Linux kernel through 4.17.10. There is an invalid pointer dereference in <code>io_ctl_map_page()</code> when mounting and operating a crafted btrfs image, because of a lack of block group item validation in <code>check_leaf_item</code> in <code>fs/btrfs/tree-checker.c</code>.</p>	2018-27
	<p>An issue was discovered in the Linux kernel through 4.17.10. There is an invalid pointer dereference in <code>__del_reloc_root()</code> in <code>fs/btrfs/relocation.c</code> when mounting a crafted btrfs image, related to removing <code>reloc rb_trees</code> when <code>reloc control</code> has not been initialized.</p>	2018-27
	<p>An issue was discovered in the Linux kernel through 4.17.10. There is an invalid pointer dereference in <code>btrfs_root_node()</code> when mounting a crafted btrfs image, because of a lack of chunk block group mapping validation in <code>btrfs_read_block_groups</code> in <code>fs/btrfs/extent-tree.c</code>, and a lack of empty-tree checks in <code>check_leaf</code> in <code>fs/btrfs/tree-checker.c</code>.</p>	2018-27

	A flaw was found in the Linux kernel's ext4 filesystem. A local user can cause an out-of-bound access in <code>ext4_get_group_info</code> function, a denial of service, and a system crash by mounting and operating on a crafted ext4 filesystem image.	2018-26
	A flaw was found in the Linux kernel's ext4 filesystem. A local user can cause a use-after-free in <code>ext4_xattr_set_entry</code> function and a denial of service or unspecified other impact may occur by renaming a file in a crafted ext4 filesystem image.	2018-26
	A flaw was found in Linux kernel in the ext4 filesystem code. A use-after-free is possible in <code>ext4_ext_remove_space()</code> function when mounting and operating a crafted ext4 image.	2018-26
	A flaw was found in the Linux kernel's ext4 filesystem. A local user can cause an out-of-bound write in in <code>fs/jbd2/transaction.c</code> code, a denial of service, and a system crash by unmounting a crafted ext4 filesystem image.	2018-27
	An issue was discovered in the Linux kernel through 4.17.10. There is a use-after-free in <code>try_merge_free_space()</code> when mounting a crafted btrfs image, because of a lack of chunk type flag checks in <code>btrfs_check_chunk_valid</code> in <code>fs/btrfs/volumes.c</code> .	2018-27

	The timer_create syscall implementation in kernel/time/posix-timers.c in the Linux kernel before 4.14.8 doesn't properly validate the sigevent->sigev_notify field, which leads to out-of-bounds access in the show_timer function (called when /proc/\$PID/timers is read). This allows userspace applications to read arbitrary kernel memory (on a kernel built with CONFIG_POSIX_TIMERS and CONFIG_CHECKPOINT_RESTORE).	2018-26
	An issue was discovered in the Linux kernel through 4.17.10. There is a NULL pointer dereference in fscrypt_do_page_crypto() in fs/crypto/crypto.c when operating on a file in a corrupted f2fs image.	2018-27
	A race condition was found in util-linux before 2.32.1 in the way su handled the management of child processes. A local authenticated attacker could use this flaw to kill other processes with root privileges under specific conditions.	2018-27
y_software	Untrusted search path vulnerability in LOGICOOL CONNECTION UTILITY SOFTWARE versions before 2.30.9 allows an attacker to gain privileges via a Trojan horse DLL in an unspecified directory.	2018-26
	Untrusted search path vulnerability in LOGICOOL Game Software versions before 8.87.116 allows an attacker to gain privileges via a Trojan horse DLL in an unspecified directory.	2018-26
	MathJax version prior to version 2.7.4 contains a Cross Site Scripting (XSS) vulnerability in the \unicode{} macro that can result in Potentially untrusted Javascript running within a web browser. This attack appear to be exploitable via The victim must view a page where untrusted content is processed using Mathjax. This vulnerability appears to have been fixed in 2.7.4 and later.	2018-23
on	Exploiting Incorrectly Configured Access Control Security Levels vulnerability in McAfee Data Loss Prevention (DLP) for Windows versions prior to 10.0.505 and 11.0.405 allows local users to bypass DLP policy via editing of local policy files when offline.	2018-23
	Authentication Bypass vulnerability in TPM autoboot in McAfee Drive Encryption (MDE) 7.1.0 and above allows physically proximate attackers to bypass local security protection via specific set of circumstances.	2018-27
	Configuration/Environment manipulation vulnerability in the administrative interface in McAfee Web Gateway (MWG) MWG 7.8.1.x allows authenticated administrator users to execute arbitrary commands via unspecified vectors.	2018-23

	Directory Traversal vulnerability in the administrative user interface in McAfee Web Gateway (MWG) MWG 7.8.1.x allows authenticated administrator users to gain elevated privileges via unspecified vectors.	2018-23
	mitmweb in mitmproxy v4.0.3 allows DNS Rebinding attacks, related to tools/web/app.py.	2018-22
	In Moxa NPort 5210, 5230, and 5232 versions 2.9 build 17030709 and prior, the amount of resources requested by a malicious actor are not restricted, allowing for a denial-of-service condition.	2018-24
boot_aes-cbc_encryption	Das U-Boot is a device bootloader that can read its configuration from an AES encrypted file. For devices utilizing this environment encryption mode, U-Boot's use of a zero initialization vector may allow attacks against the underlying cryptographic implementation and allow an attacker to decrypt the data. Das U-Boot's AES-CBC encryption feature uses a zero (0) initialization vector. This allows an attacker to perform dictionary attacks on encrypted data produced by Das U-Boot to learn information about the encrypted data.	2018-24
boot_aes-cbc_encryption	Das U-Boot is a device bootloader that can read its configuration from an AES encrypted file. Devices that make use of Das U-Boot's AES-CBC encryption feature using environment encryption (i.e., setting the configuration parameter CONFIG_ENV_AES=y) read environment variables from disk as the encrypted disk image is processed. An attacker with physical access to the device can manipulate the encrypted environment data to include a crafted two-byte sequence which triggers an error in environment variable parsing. This error condition is improperly handled by Das U-Boot, resulting in an immediate process termination with a debugging message.	2018-24
_products	Applications developed using the Portrait Display SDK, versions 2.30 through 2.34, default to insecure configurations which allow arbitrary code execution. A number of applications developed using the Portrait Displays SDK do not use secure permissions when running. These applications run the component pdiservice.exe with NT AUTHORITY/SYSTEM permissions. This component is also read/writable by all Authenticated Users. This allows local authenticated attackers to run arbitrary code with SYSTEM privileges. The following applications have been identified by Portrait Displays as affected: Fujitsu DisplayView Click: Version 6.0 and 6.01. The issue was fixed in Version 6.3. Fujitsu DisplayView Click Suite: Version 5. The issue is addressed by patch in Version 5.9. HP Display Assistant: Version 2.1. The issue was fixed in Version 2.11. HP My Display: Version 2.0. The issue was fixed in Version 2.1. Philips Smart Control Premium: Versions 2.23, 2.25. The issue was fixed in Version 2.26.	2018-24

shortest_path_first_protocol	Open Shortest Path First (OSPF) protocol implementations may improperly determine Link State Advertisement (LSA) recency for LSAs with MaxSequenceNumber. According to RFC 2328 section 13.1, for two instances of the same LSA, recency is determined by first comparing sequence numbers, then checksums, and finally MaxAge. In a case where the sequence numbers are the same, the LSA with the larger checksum is considered more recent, and will not be flushed from the Link State Database (LSDB). Since the RFC does not explicitly state that the values of links carried by a LSA must be the same when prematurely aging a self-originating LSA with MaxSequenceNumber, it is possible in vulnerable OSPF implementations for an attacker to craft a LSA with MaxSequenceNumber and invalid links that will result in a larger checksum and thus a 'newer' LSA that will not be flushed from the LSDB. Propagation of the crafted LSA can result in the erasure or alteration of the routing tables of routers within the routing domain, creating a denial of service condition or the re-routing of traffic on the network. CVE-2017-3224 has been reserved for Quagga and downstream implementations (SUSE, openSUSE, and Red Hat packages).	2018-24
interface	Navarino Infinity web interface up to version 2.2 exposes an unauthenticated script that is prone to blind sql injection. If successfully exploited the user can get info from the underlying postgresql database that could lead into to total compromise of the product. The said script is available with no authentication.	2018-24
interface	Some Navarino Infinity functions, up to version 2.2, placed in the URL can bypass any authentication mechanism leading to an information leak.	2018-24
interface	Navarino Infinity is prone to session fixation attacks. The server accepts the session ID as a GET parameter which can lead to bypassing the two factor authentication in some installations. This could lead to phishing attacks that can bypass the two factor authentication that is present in some installations.	2018-24
csdj_series_products	NEC Platforms Calsos CSDX and CSDJ series products (CSDX 1.37210411 and earlier, CSDX(P) 4.37210411 and earlier, CSDX(D) 3.37210411 and earlier, CSDX(S) 2.37210411 and earlier, CSDJ-B 01.03.00 and earlier, CSDJ-H 01.03.00 and earlier, CSDJ-D 01.03.00 and earlier, CSDJ-A 03.00.00) allows remote authenticated attackers to bypass access restriction to conduct arbitrary operations with administrative privilege via unspecified vectors.	2018-26
csdj_series_products	Cross-site scripting vulnerability in NEC Platforms Calsos CSDX and CSDJ series products (CSDX 1.37210411 and earlier, CSDX(P) 4.37210411 and earlier, CSDX(D) 3.37210411 and earlier, CSDX(S) 2.37210411 and earlier, CSDJ-B	2018-26

	01.03.00 and earlier, CSDJ-H 01.03.00 and earlier, CSDJ-D 01.03.00 and earlier, CSDJ-A 03.00.00) allows remote attackers to inject arbitrary web script or HTML via unspecified vectors.	
	A vulnerability is in the 'BSW_cxttongr.htm' page of the Netgear DGN2200, version DGN2200-V1.0.0.50_7.0.50, and DGND3700, version DGND3700-V1.0.0.17_1.0.17, which can allow a remote attacker to access this page without any authentication. When processed, it exposes the admin password in clear text before it gets redirected to absw_vfysucc.cgia. An attacker can use this password to gain administrator access to the targeted router's web interface.	2018-24
	There are few web pages associated with the genie app on the Netgear WNDR4500 running firmware version V1.0.1.40_1.0.6877. Genie app adds some capabilities over the Web GUI and can be accessed even when you are away from home. A remote attacker can access genie_ping.htm or genie_ping2.htm or genie_ping3.htm page without authentication. Once accessed, the page will be redirected to the aCongratulations2.htma page, which reveals some sensitive information such as 2.4GHz & 5GHz Wireless Network Name (SSID) and Network Key (Password) in clear text.	2018-24
	An out-of-bounds write vulnerability was found in netpbm before 10.61. A maliciously crafted file could cause the application to crash or possibly allow code execution.	2018-27
	An out-of-bounds read vulnerability was found in netpbm before 10.61. The expandCodeOntoStack() function has an insufficient code value check, so that a maliciously crafted file could cause the application to crash or possibly allows code execution.	2018-27
	A null pointer dereference vulnerability was found in netpbm before 10.61. A maliciously crafted SVG file could cause the application to crash.	2018-27
	A memory allocation vulnerability was found in netpbm before 10.61. A maliciously crafted SVG file could cause the application to crash.	2018-27
	An out-of-bounds write vulnerability was found in netpbm before 10.61. A maliciously crafted file could cause the application to crash or possibly allow code execution.	2018-27
	Network Manager VPNC plugin (aka networkmanager-vpnc) before version 1.2.6 is vulnerable to a privilege escalation attack. A new line character can be used to inject a Password helper parameter into the configuration data passed to VPNC, allowing an attacker to execute arbitrary commands as root.	2018-26

ness_basic	A file upload vulnerability in application/shop/controller/member.php in Niushop B2B2C Multi-business basic version V1.11 allows any remote member to upload a .php file to the web server via a profile avatar field, by using an image Content-Type (e.g., image/jpeg) with a modified filename and file content. This results in arbitrary code execution by requesting that .php file.	2018-23
	October CMS version prior to build 437 contains a Cross Site Scripting (XSS) vulnerability in the Media module and create folder functionality that can result in an Authenticated user with media module permission creating arbitrary folder name with XSS content. This attack appear to be exploitable via an Authenticated user with media module permission who can create arbitrary folder name (XSS). This vulnerability appears to have been fixed in build 437.	2018-23
	October CMS version prior to Build 437 contains a Local File Inclusion vulnerability in modules/system/traits/ViewMaker.php#244 (makeFileContents function) that can result in Sensitive information disclosure and remote code execution. This attack appear to be exploitable remotely if the /backend path is accessible. This vulnerability appears to have been fixed in Build 437.	2018-23
	Cross-site scripting (XSS) vulnerability in the Groups Page in Open-Audit Community 2.2.6 allows remote attackers to inject arbitrary web script or HTML via the group name.	2018-25
1 -- onos	Open Networking Foundation (ONF) ONOS version 1.13.2 and earlier version contains a Directory Traversal vulnerability in core/common/src/main/java/org/onosproject/common/app/ApplicationArchive.java line 35 that can result in arbitrary file deletion (overwrite). This attack appear to be exploitable via a specially crafted zip file should be uploaded.	2018-23
	A flaw was found in all Openshift Enterprise versions using the openshift elasticsearch plugin. An attacker with knowledge of the given name used to authenticate and access Elasticsearch can later access it without the token, bypassing authentication. This attack also requires that the Elasticsearch be configured with an external route, and the data accessed is limited to the indices.	2018-27
	ovirt-engine before version 4.1.7.6 with log level set to DEBUG includes passwords in the log file without masking. Only administrators can change the log level and only administrators can access the logs. This presents a risk when debug-level logs are shared with vendors or other parties to troubleshoot issues.	2018-27

	<p>PEAR HTML_QuickForm version 3.2.14 contains an eval injection (CWE-95) vulnerability in HTML_QuickForm's getSubmitValue method, HTML_QuickForm's validate method, HTML_QuickForm_hierselect's _setOptions method, HTML_QuickForm_element's _findValue method, HTML_QuickForm_element's _prepareValue method. that can result in Possible information disclosure, possible impact on data integrity and execution of arbitrary code. This attack appear to be exploitable via A specially crafted query string could be utilised, e.g. http://www.example.com/admin/add_practice_type_id[1]=fubar%27)%20OR%20die(%27OOK!%27);%20//&mode=live. This vulnerability appears to have been fixed in 3.2.15.</p>	2018-23
	<p>An out-of-bounds write flaw was found in the way Pidgin before 2.12.0 processed XML content. A malicious remote server could potentially use this flaw to crash Pidgin or execute arbitrary code in the context of the pidgin process.</p>	2018-27
	<p>Pivotal Apps Manager included in Pivotal Application Service, versions 2.2.x prior to 2.2.1 and 2.1.x prior to 2.1.8 and 2.0.x prior to 2.0.17 and 1.12.x prior to 1.12.26, does not escape all user-provided content when sending invitation emails. A malicious authenticated user can inject content into an invite to another user, exploiting the trust implied by the source of the email.</p>	2018-24
hiver	<p>plexus-archiver before 3.6.0 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in an archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.</p>	2018-25
	<p>Poppler through 0.62 contains a Buffer Overflow vulnerability due to an incorrect memory access that is not mapped in its memory space, as demonstrated by pdfunite. This can result in memory corruption and denial of service. This may be exploitable when a victim opens a specially crafted PDF file.</p>	2018-25
	<p>Privilege escalation flaws were found in the Red Hat initialization scripts of PostgreSQL. An attacker with access to the postgres user account could use these flaws to obtain root access on the server machine.</p>	2018-27

	An issue has been found in the parsing of authoritative answers in PowerDNS Recursor before 4.0.8, leading to a NULL pointer dereference when parsing a specially crafted answer containing a CNAME of a different class than IN. An unauthenticated remote attacker could cause a denial of service.	2018-27
	Pydio version 8.2.0 and earlier contains a Cross Site Scripting (XSS) vulnerability in ./core/vendor/meenie/javascript-packer/example-inline.php line 48; ./core/vendor/dapphp/securimage/examples/test.mysql.static.php lines: 114,118 that can result in an unauthenticated remote attacker manipulating the web client via XSS code injection. This attack appear to be exploitable via the victim opening a specially crafted URL. This vulnerability appears to have been fixed in version 8.2.1.	2018-23
	Pydio version 8.2.1 and prior contains an Unvalidated user input leading to Remote Code Execution (RCE) vulnerability in plugins/action.antivirus/AntivirusScanner.php: Line 124, scanNow(\$nodeObject) that can result in An attacker gaining admin access and can then execute arbitrary commands on the underlying OS. This attack appear to be exploitable via The attacker edits the Antivirus Command in the antivirus plugin, and executes the payload by uploading any file within Pydio.	2018-23
	Pydio version 8.2.0 and earlier contains a Server-Side Request Forgery (SSRF) vulnerability in plugins/action.updater/UpgradeManager.php Line: 154, getUpgradePath(\$url) that can result in an authenticated admin users requesting arbitrary URL's, pivoting requests through the server. This attack appears to be exploitable via the attacker gaining access to an administrative account, enters a URL into Upgrade Engine, and reloads the page or presses "Check Now". This vulnerability appears to have been fixed in 8.2.1.	2018-23
	An out-of-bounds memory access issue was found in Quick Emulator (QEMU) before 1.7.2 in the VNC display driver. This flaw could occur while refreshing the VNC display surface area in the 'vnc_refresh_server_surface'. A user inside a guest could use this flaw to crash the QEMU process.	2018-27

	<p>A heap buffer overflow flaw was found in QEMU's Cirrus CLGD 54xx VGA emulator's VNC display driver support before 2.9; the issue could occur when a VNC client attempted to update its display after a VGA operation is performed by a guest. A privileged user/process inside a guest could use this flaw to crash the QEMU process or, potentially, execute arbitrary code on the host with privileges of the QEMU process.</p>	2018-27
	<p>Quick emulator (QEMU) before 2.8 built with the Cirrus CLGD 54xx VGA Emulator support is vulnerable to an out-of-bounds access issue. The issue could occur while copying VGA data in cirrus_bitblt_cputovideo. A privileged user inside guest could use this flaw to crash the QEMU process OR potentially execute arbitrary code on host with privileges of the QEMU process.</p>	2018-27

	<p>The Network Block Device (NBD) server in Quick Emulator (QEMU) before 2.11 is vulnerable to a denial of service issue. It could occur if a client sent large option requests, making the server waste CPU time on reading up to 4GB per request. A client could use this flaw to keep the NBD server from serving other requests, resulting in DoS.</p>	2018-27
	<p>A stack buffer overflow flaw was found in the Quick Emulator (QEMU) before 2.9 built with the Network Block Device (NBD) client support. The flaw could occur while processing server's response to a 'NBD_OPT_LIST' request. A malicious NBD server could use this issue to crash a remote NBD client resulting in DoS or potentially execute arbitrary code on client host with privileges of the QEMU process.</p>	2018-27
	<p>A stack-based buffer overflow vulnerability was found in NBD server implementation in qemu before 2.11 allowing a client to request an export name of size up to 4096 bytes, which in fact should be limited to 256 bytes, causing an out-of-bounds stack write in the qemu process. If NBD server requires TLS, the attacker cannot trigger the buffer overflow without first successfully negotiating TLS.</p>	2018-27
	<p>An assertion-failure flaw was found in Qemu before 2.10.1, in the Network Block Device (NBD) server's initial connection negotiation, where the I/O coroutine was undefined. This could crash the qemu-nbd server if a client sent</p>	2018-26

	unexpected data during connection negotiation. A remote user or process could use this flaw to crash the qemu-nbd server resulting in denial of service.	
	QuaZIP before 0.7.6 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in a Zip archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.	2018-25
cts	Quick Heal Total Security 64 bit 17.00 (QHTS64.exe), (QHTSFT64.exe) - Version 10.0.1.38; Quick Heal Total Security 32 bit 17.00 (QHTS32.exe), (QHTSFT32.exe) - Version 10.0.1.38; Quick Heal Internet Security 64 bit 17.00 (QHIS64.exe), (QHISFT64.exe) - Version 10.0.0.37; Quick Heal Internet Security 32 bit 17.00 (QHIS32.exe), (QHISFT32.exe) - Version 10.0.0.37; Quick Heal AntiVirus Pro 64 bit 17.00 (QHAV64.exe), (QHAVFT64.exe) - Version 10.0.0.37; and Quick Heal AntiVirus Pro 32 bit 17.00 (QHAV32.exe), (QHAVFT32.exe) - Version 10.0.0.37 allow DLL Hijacking because of Insecure Library Loading.	2018-25
	An input validation error was found in Red Hat Certificate System's handling of client provided certificates before 8.1.20-1. If the certreq field is not present in a certificate an assertion error is triggered causing a denial of service.	2018-26
	A number of unused delete routes are present in CloudForms before 5.7.2.1 which can be accessed via GET requests instead of just POST requests. This could allow an attacker to bypass the protect_from_forgery XSRF protection causing the routes to be used. This attack would require additional cross-site scripting or similar attacks in order to execute.	2018-27
	A flaw was found in CloudForms before 5.9.0.22 in the self-service UI snapshot feature where the name field is not properly sanitized for HTML and JavaScript input. An attacker could use this flaw to execute a stored XSS attack on an	2018-27

	application administrator using CloudForms. Please note that CSP (Content Security Policy) prevents exploitation of this XSS however not all browsers support CSP.	
	The dialog for creating cloud volumes (cinder provider) in CloudForms does not filter cloud tenants by user. An attacker with the ability to create storage volumes could use this to create storage volumes for any other tenant.	2018-27
	It was found that CloudForms does not verify that the server hostname matches the domain name in the certificate when using a custom CA and communicating with Red Hat Virtualization (RHEV) and OpenShift. This would allow an attacker to spoof RHEV or OpenShift systems and potentially harvest sensitive information from CloudForms.	2018-27
	A logic error in valid_role() in CloudForms role validation before 5.7.1.3 could allow a tenant administrator to create groups with a higher privilege level than the tenant administrator should have. This would allow an attacker with tenant administration access to elevate privileges.	2018-27
gement_engine	CloudForms Management Engine (cfme) is vulnerable to an improper security setting in the dRuby component of CloudForms. An attacker with access to an unprivileged local shell could use this flaw to execute commands as a high privileged user.	2018-24
gement_engine	CloudForms Management Engine (cfme) before 5.7.3 and 5.8.x before 5.8.1 lacks RBAC controls on certain methods in the rails application portion of CloudForms. An attacker with access could use a variety of methods within the rails application portion of CloudForms to escalate privileges.	2018-26
gement_engine	In CloudForms Management Engine (cfme) before 5.7.3 and 5.8.x before 5.8.1, it was found that privilege check is missing when invoking arbitrary methods via filtering on VMs that MiqExpression will execute that is triggerable by API users. An attacker could use this to execute actions they should not be allowed to (e.g. destroying VMs).	2018-26

	A regression was found in the Red Hat Enterprise Linux 6.9 version of httpd 2.2.15-60, causing comments in the "Allow" and "Deny" configuration lines to be parsed incorrectly. A web administrator could unintentionally allow any client to access a restricted HTTP resource.	2018-26
	It was found that sssd's sysdb_search_user_by_upn_res() function before 1.16.0 did not sanitize requests when querying its local cache and was vulnerable to injection. In a centralized login environment, if a password hash was locally cached for a given user, an authenticated attacker could use this flaw to retrieve it.	2018-27
	It was discovered that rpm-ostree and rpm-ostree-client before 2017.3 fail to properly check GPG signatures on packages when doing layering. Packages with unsigned or badly signed content could fail to be rejected as expected. This issue is partially mitigated on RHEL Atomic Host, where certificate pinning is used by default.	2018-27
server	It was found that a mock CMC authentication plugin with a hardcoded secret was accidentally enabled by default in the pki-core package before 10.6.4. An attacker could potentially use this flaw to bypass the regular authentication process and trick the CA server into issuing certificates.	2018-26
_data_virtualization_and_services	It was discovered that the Dashbuilder login page as used in Red Hat JBoss BPM Suite before 6.4.2 and Red Hat JBoss Data Virtualization & Services before 6.4.3 could be opened in an IFRAME, which made it possible to intercept and manipulate requests. An attacker could use this flaw to trick a user into performing arbitrary actions in the Console (clickjacking).	2018-27
bpm_suite	JBoss BRMS 6 and BPM Suite 6 before 6.4.3 are vulnerable to a stored XSS via several lists in Business Central. The flaw is due to lack of sanitation of user input when creating new lists. Remote, authenticated attackers that have privileges to create lists can store scripts in them, which are not properly sanitized before showing to other users, including admins.	2018-27

bpm_suite	<p>JBoss BRMS 6 and BPM Suite 6 before 6.4.3 are vulnerable to a reflected XSS via artifact upload. A malformed XML file, if uploaded, causes an error message to appear that includes part of the bad XML code verbatim without filtering out scripts. Successful exploitation would allow execution of script code within the context of the affected user.</p>	2018-27
	<p>It was found that the JAXP implementation used in JBoss EAP 7.0 for SAX and DOM parsing is vulnerable to certain XXE flaws. An attacker could use this flaw to cause DoS, SSRF, or information disclosure if they are able to provide XML content for parsing.</p>	2018-27
application	<p>It was found that the log file viewer in Red Hat JBoss Enterprise Application 6 and 7 allows arbitrary file read to authenticated user via path traversal.</p>	2018-27
	<p>It was discovered that the hawtio servlet 1.4 uses a single HttpClient instance to proxy requests with a persistent cookie store (cookies are stored locally and are not passed between the client and the end URL) which means all clients using that proxy are sharing the same cookies.</p>	2018-26
m	<p>A design flaw issue was found in the Red Hat OpenStack Platform director use of TripleO to enable libvirt based live-migration. Libvirt is deployed by default (by director) listening on 0.0.0.0 (all interfaces) with no-authentication or encryption. Anyone able to make a TCP connection to any compute host IP address, including 127.0.0.1, other loopback interface addresses, or in some cases possibly addresses that have been exposed beyond the management interface, could</p>	2018-26

	use this to open a virsh session to the libvirtd instance and gain control of virtual machine instances or possibly take over the host.	
	Red Hat Satellite before 6.5 is vulnerable to a XSS in discovery rule when you are entering filter and you use autocomplete functionality.	2018-26
	A cross-site scripting (XSS) flaw was found in how an organization name is displayed in Satellite 5, before 5.8. A user able to change an organization's name could exploit this flaw to perform XSS attacks against other Satellite users.	2018-26
	It was found that spacewalk-channel can be used by a non-admin user or disabled users to perform administrative tasks due to an incorrect authorization check in backend/server/rhnChannel.py.	2018-27
	It was discovered that Undertow before 1.4.17, 1.3.31 and 2.0.0 processes http request headers with unusual whitespaces which can cause possible http request smuggling.	2018-27
	It was found in Undertow before 1.3.28 that with non-clean TCP close, the Websocket server gets into infinite loop on every IO thread, effectively causing DoS.	2018-27

	<p>It was discovered in Undertow that the code that parsed the HTTP request line permitted invalid characters. This could be exploited, in conjunction with a proxy that also permitted the invalid characters but with a different interpretation, to inject data into the HTTP response. By manipulating the HTTP response the attacker could poison a web-cache, perform an XSS attack, or obtain sensitive information from requests other than their own.</p>	2018-27
	<p>When updating a password in the rhvm database the ovirt-aaa-jdbc-tool tools before 1.1.3 fail to correctly check for the current password if it is expired. This would allow access to an attacker with access to change the password on accounts with expired passwords, gaining access to those accounts.</p>	2018-27
	<p>A race-condition flaw was discovered in openstack-neutron before 7.2.0-12.1, 8.x before 8.3.0-11.1, 9.x before 9.3.1-2.1, and 10.x before 10.0.2-1.1, where, following a minor overcloud update, neutron security groups were disabled. Specifically, the following were reset to 0: net.bridge.bridge-nf-call-ip6tables and net.bridge.bridge-nf-call-iptables. The race was only triggered by an update, at which point an attacker could access exposed tenant VMs and network resources.</p>	2018-26

ation	An access-control flaw was found in the OpenStack Orchestration (heat) service before 8.0.0, 6.1.0 and 7.0.2 where a service log directory was improperly made world readable. A malicious system user could exploit this flaw to access sensitive information.	2018-27
w	An accessibility flaw was found in the OpenStack Workflow (mistral) service where a service log directory was improperly made world readable. A malicious system user could exploit this flaw to access sensitive information.	2018-27
	RSA Archer, versions prior to 6.4.0.1, contain a stored cross-site scripting vulnerability. A remote authenticated malicious Archer user could potentially exploit this vulnerability to store malicious HTML or JavaScript code in a trusted application data store. When application users access the corrupted data store through their browsers, the malicious code gets executed by the web browser in the context of the vulnerable web application.	2018-24
	RSA Archer, versions prior to 6.4.0.1, contain an authorization bypass vulnerability in the REST API. A remote authenticated malicious Archer user could potentially exploit this vulnerability to elevate their privileges.	2018-24
	Sage XRT Treasury, version 3, fails to properly restrict database access to authorized users, which may enable any authenticated user to gain full access to privileged database functions. Sage XRT Treasury is a business finance management application. Database user access privileges are determined by the USER_CODE field associated with the querying user. By modifying the USER_CODE value to match that of a privileged user, a low-privileged, authenticated user may gain privileged access to the SQL database. A remote, authenticated user can submit specially crafted SQL queries to gain privileged access to the application database.	2018-24
	A flaw was found in the way samba client before samba 4.4.16, samba 4.5.14 and samba 4.6.8 used encryption with the max protocol set as SMB3. The connection could lose the requirement for signing and encrypting to any DFS redirects, allowing an attacker to read or alter the contents of the connection via a man-in-the-middle attack.	2018-27

	<p>An information leak flaw was found in the way SMB1 protocol was implemented by Samba before 4.4.16, 4.5.x before 4.5.14, and 4.6.x before 4.6.8. A malicious client could use this flaw to dump server memory contents to a file on the samba share or to a shared printer, though the exact area of server memory cannot be controlled by the attacker.</p>	2018-26
	<p>It was found that samba before 4.4.16, 4.5.x before 4.5.14, and 4.6.x before 4.6.8 did not enforce "SMB signing" when certain configuration options were enabled. A remote attacker could launch a man-in-the-middle attack and retrieve information in plain-text.</p>	2018-26

	SeaCMS 6.61 has two XSS issues in the admin_config.php file via certain form fields.	2018-23
	SEL AcSELErator Architect version 2.2.24.0 and prior can be exploited when the AcSELErator Architect FTP client connects to a malicious FTP server, which may cause denial of service via 100% CPU utilization. Restart of the application is required.	2018-24
	SEL AcSELErator Architect version 2.2.24.0 and prior allows unsanitized input to be passed to the XML parser, which may allow disclosure and retrieval of arbitrary data, arbitrary code execution (in certain situations on specific platforms), and denial of service attacks.	2018-24
	SEL Compass version 3.0.5.1 and prior allows all users full access to the SEL Compass directory, which may allow modification or overwriting of files within the Compass installation folder, resulting in escalation of privilege and/or malicious code execution.	2018-24
ress	SharpCompress before 0.21.0 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in a Zip archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.	2018-25
	sharplibzip before 1.0 RC1 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in a Zip archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.	2018-25
	A vulnerability has been identified in Firmware variant IEC 61850 for EN100 Ethernet module (All versions < V4.33), Firmware variant PROFINET IO for EN100 Ethernet module (All versions), Firmware variant Modbus TCP for EN100 Ethernet module (All versions), Firmware variant DNP3 TCP for EN100 Ethernet module (All versions), Firmware variant IEC104 for EN100 Ethernet module (All versions). Specially crafted packets to port 102/tcp could cause a denial-of-service condition in the EN100 communication module if oscillographs are running. A manual restart is required to recover the EN100 module functionality. Successful exploitation requires an attacker with network access to send multiple packets to the EN100 module. As a precondition the IEC 61850-MMS communication needs to be activated on the affected EN100 modules. No user interaction or privileges are required to exploit the security vulnerability. The vulnerability could allow causing a Denial-of-Service condition of the network functionality of the device, compromising	2018-23

	the availability of the system. At the time of advisory publication no public exploitation of this security vulnerability was known.	
	A vulnerability has been identified in Firmware variant IEC 61850 for EN100 Ethernet module (All versions < V4.33), Firmware variant PROFINET IO for EN100 Ethernet module (All versions), Firmware variant Modbus TCP for EN100 Ethernet module (All versions), Firmware variant DNP3 TCP for EN100 Ethernet module (All versions), Firmware variant IEC104 for EN100 Ethernet module (All versions), SIPROTEC 5 relays with CPU variants CP300 and CP100 and the respective Ethernet communication modules (All versions < V7.80), SIPROTEC 5 relays with CPU variants CP200 and the respective Ethernet communication modules (All versions). Specially crafted packets to port 102/tcp could cause a denial-of-service condition in the affected products. A manual restart is required to recover the EN100 module functionality of SIPROTEC 4 and SIPROTEC Compact relays. Successful exploitation requires an attacker with network access to send multiple packets to the affected products or modules. As a precondition the IEC 61850-MMS communication needs to be activated on the affected products or modules. No user interaction or privileges are required to exploit the vulnerability. The vulnerability could allow causing a Denial-of-Service condition of the network functionality of the device, compromising the availability of the system. At the time of advisory publication no public exploitation of this security vulnerability was known.	2018-23
	There was an argument injection vulnerability in Sourcetree for macOS via filenames in Mercurial repositories. An attacker with permission to commit to a Mercurial repository linked in Sourcetree for macOS is able to exploit this issue to gain code execution on the system. Versions of Sourcetree for macOS from 1.0b2 before 2.7.6 are affected by this vulnerability.	2018-24
	There was an argument injection vulnerability in Sourcetree for Windows via filenames in Mercurial repositories. An attacker with permission to commit to a Mercurial repository linked in Sourcetree for Windows is able to exploit this issue to gain code execution on the system. Versions of Sourcetree for Windows before version 2.6.9 are affected by this vulnerability.	2018-24
	A vulnerability was discovered in SPICE before 0.13.90 in the server's protocol handling. An authenticated attacker could send crafted messages to the SPICE server causing a heap overflow leading to a crash or possible code execution.	2018-27
	A vulnerability was discovered in SPICE before 0.13.90 in the server's protocol handling. An attacker able to connect to the SPICE server could send crafted messages which would cause the process to crash.	2018-27

	An issue was discovered in Suricata before 3.1.2. If an ICMPv4 error packet is received as the first packet on a flow in the to_client direction, it confuses the rule grouping lookup logic. The toclient inspection will then continue with the wrong rule group. This can lead to missed detection.	2018-23
	Suricata before 4.0.5 stops TCP stream inspection upon a TCP RST from a server. This allows detection bypass because Windows TCP clients proceed with normal processing of TCP data that arrives shortly after an RST (i.e., they act as if the RST had not yet been received).	2018-23
ent	The Inventory Plugin for Symantec Management Agent prior to 7.6 POST HF7, 8.0 POST HF6, or 8.1 RU7 may be susceptible to a privilege escalation vulnerability, which is a type of issue that allows a user to gain elevated access to resources that are normally protected at lower access levels.	2018-25
	Tenda AC7 through V15.03.06.44_CN, AC9 through V15.03.05.19(6318)_CN, and AC10 through V15.03.06.23_CN devices have a Stack-based Buffer Overflow via a long limitSpeed or limitSpeedup parameter to an unspecified /goform URI.	2018-21
cs	Thomson Reuters UltraTax CS 2017 on Windows, in a client/server configuration, transfers customer records and bank account numbers in cleartext over SMBv2, which allows attackers to (1) obtain sensitive information by sniffing the network or (2) conduct man-in-the-middle (MITM) attacks via unspecified vectors. The customer record transferred in cleartext contains: Client ID, Full Name, Spouse's Full Name, Social Security Number, Spouse's Social Security Number, Occupation, Spouse's Occupation, Daytime Phone, Home Phone, Tax Preparer, Federal and State Taxes to File, Bank Name, Bank Account Number, and possibly other sensitive information.	2018-26
cs	Thomson Reuters UltraTax CS 2017 on Windows has a password protection option; however, the level of protection might be inconsistent with some customers' expectations because the data is directly accessible in cleartext. Specifically, it stores customer data in unique directories (%install_path%\WinCSI\UT17\DATA\client_ID\file_name.XX17) that can be bypassed without authentication by examining the strings of the .XX17 file. The strings stored in the .XX17 file contain each customer's: Full Name, Spouse's Name, Social Security Number, Date of Birth, Occupation, Home Address, Daytime	2018-26

	Phone Number, Home Phone Number, Spouse's Address, Spouse's Daytime Phone Number, Spouse's Social Security Number, Spouse's Home Phone Number, Spouse's Occupation, Spouse's Date of Birth, and Spouse's Filing Status.	
sdk	On the iOS platform, the ThreatMetrix SDK versions prior to 3.2 fail to validate SSL certificates provided by HTTPS connections, which may allow an attacker to perform a man-in-the-middle (MITM) attack. ThreatMetrix is a security library for mobile applications, which aims to provide fraud prevention and device identity capabilities. The ThreatMetrix SDK versions prior to 3.2 do not validate SSL certificates on the iOS platform. An affected application will communicate with https://h-sdk.online-metrix.net , regardless of whether the connection is secure or not. An attacker on the same network as or upstream from the iOS device may be able to view or modify ThreatMetrix network traffic that should have been protected by HTTPS.	2018-24
	An issue was discovered in libthulac.so in THULAC through 2018-02-25. A heap-based buffer over-read can occur in NGramFeature::find_bases in include/cb_ngram_feature.h.	2018-23
	An issue was discovered in libthulac.so in THULAC through 2018-02-25. A SEGV can occur in NGramFeature::find_bases in include/cb_ngram_feature.h.	2018-23
	An issue was discovered in libthulac.so in THULAC through 2018-02-25. "operator delete" is used with "operator new[]" in the TaggingLearner class in include/cb_tagging_learner.h, possibly leading to memory corruption.	2018-23
	An issue was discovered in libthulac.so in THULAC through 2018-02-25. A NULL pointer dereference can occur in the BasicModel class in include/cb_model.h.	2018-23
	Multiple TIBCO Products are prone to multiple unspecified cross-site scripting vulnerabilities because it fails to properly sanitize user-supplied input. An attacker may leverage these issues to execute arbitrary script code in the browser of an unsuspecting user in the context of the affected site. This can allow the attacker to steal cookie-based authentication credentials and to launch other attacks. The products and versions that are affected include the following: TIBCO Silver Fabric Enabler for Spotfire Web Player 2.1.2 and earlier TIBCO Spotfire Analyst 7.5.0 TIBCO Spotfire Analyst 7.6.0 TIBCO Spotfire Analyst 7.7.0 TIBCO Spotfire Analytics Platform for AWS Marketplace 7.0.2 and earlier TIBCO Spotfire Automation Services 6.5.3 and earlier TIBCO Spotfire Automation Services 7.0.0, and 7.0.1 TIBCO Spotfire Connectors 7.6.0 TIBCO Spotfire Deployment Kit 6.5.3 and earlier TIBCO Spotfire Deployment Kit 7.0.0, and 7.0.1 TIBCO Spotfire Deployment Kit 7.5.0 TIBCO Spotfire Deployment Kit 7.6.0 TIBCO Spotfire Deployment Kit 7.7.0 TIBCO Spotfire Desktop 6.5.2 and earlier TIBCO Spotfire Desktop 7.0.0, and 7.0.1 TIBCO Spotfire Desktop 7.5.0 TIBCO Spotfire Desktop 7.6.0 TIBCO Spotfire Desktop 7.7.0 TIBCO Spotfire Desktop Developer Edition 7.7.0 TIBCO Spotfire Desktop Language Packs 7.0.1 and earlier TIBCO Spotfire Desktop Language Packs 7.5.0 TIBCO Spotfire Desktop Language Packs 7.6.0 TIBCO Spotfire Desktop Language Packs 7.7.0 TIBCO Spotfire Professional 6.5.3 and earlier TIBCO	2018-24

	Spotfire Professional 7.0.0 and 7.0.1 TIBCO Spotfire Web Player 6.5.3 and earlier TIBCO Spotfire Web Player 7.0.0 and 7.0.1	
	Multiple TIBCO Products are prone to multiple unspecified SQL-injection vulnerabilities because it fails to properly sanitize user-supplied input before using it in an SQL query. Exploiting these issues could allow an attacker to compromise the application, access or modify data, or exploit latent vulnerabilities in the underlying database. The following products and versions are affected: TIBCO Spotfire Analyst 7.7.0 TIBCO Spotfire Connectors 7.6.0 TIBCO Spotfire Deployment Kit 7.7.0 TIBCO Spotfire Desktop 7.6.0 TIBCO Spotfire Desktop 7.7.0 TIBCO Spotfire Desktop Developer Edition 7.7.0 TIBCO Spotfire Desktop Language Packs 7.6.0 TIBCO Spotfire Desktop Language Packs 7.7.0 The following components are affected: TIBCO Spotfire Client TIBCO Spotfire Web Player Client	2018-24
digital_signage	A Local File Inclusion (LFI) vulnerability exists in the Web Interface API of TightRope Media Carousel Digital Signage before 7.3.5. The RenderingFetch API allows for the downloading of arbitrary files through the use of directory traversal sequences, aka CSL-1683.	2018-23
tion_and_fusion	VMware ESXi (6.7 before ESXi670-201806401-BG, 6.5 before ESXi650-201806401-BG, 6.0 before ESXi600-201806401-BG and 5.5 before ESXi550-201806401-BG), Workstation (14.x before 14.1.2), and Fusion (10.x before 10.1.2) contain a denial-of-service vulnerability due to NULL pointer dereference issue in RPC handler. Successful exploitation of this issue may allow attackers with normal user privileges to crash their VMs.	2018-25
ents	VMware Horizon View Agents (7.x.x before 7.5.1) contain a local information disclosure vulnerability due to insecure logging of credentials in the vmmsi.log file when an account other than the currently logged on user is specified during installation (including silent installations). Successful exploitation of this issue may allow low privileged users access to the credentials specified during the Horizon View Agent installation.	2018-25
	wancms 1.0 through 5.0 allows remote attackers to cause a denial of service (resource consumption) via a checkcode (aka verification code) URI in which the values of font_size, width, and height are large numbers.	2018-25
th	The Battle for Wesnoth Project version 1.7.0 through 1.14.3 contains a Code Injection vulnerability in the Lua scripting engine that can result in code execution outside the sandbox. This attack appear to be exploitable via Loading specially-crafted saved games, networked games, replays, and player content.	2018-23
	WildFly Core before version 6.0.0.Alpha3 does not properly validate file paths in .war archives, allowing for the extraction of crafted .war archives to overwrite arbitrary files. This is an instance of the 'Zip Slip' vulnerability.	2018-27

	Wizkunde SAMLBase may incorrectly utilize the results of XML DOM traversal and canonicalization APIs in such a way that an attacker may be able to manipulate the SAML data without invalidating the cryptographic signature, allowing the attack to potentially bypass authentication to SAML service providers.	2018-24
	The Mondula Multi Step Form plugin through 1.2.5 for WordPress allows XSS via the fw_data [id][1], fw_data [id][2], fw_data [id][3], fw_data [id][4], or email field of the contact form, exploitable with an fw_send_email action to wp-admin/admin-ajax.php.	2018-25
	A SQL injection was discovered in WUZHI CMS 4.1.0 that allows remote attackers to inject a malicious SQL statement via the index.php?m=promote&f=index&v=search keywords parameter.	2018-23
	An XSS vulnerability was discovered in WUZHI CMS 4.1.0. There is persistent XSS that allows remote attackers to inject arbitrary web script or HTML via the form[content] parameter to the index.php?m=feedback&f=index&v=contact URI.	2018-23
	An XSS vulnerability was discovered in WUZHI CMS 4.1.0. There is persistent XSS that allows remote attackers to inject arbitrary web script or HTML via the form[nickname] parameter to the index.php?m=core&f=set&v=sendmail URI. When the administrator accesses the "system settings - mail server" screen, the XSS payload is triggered.	2018-23
	It was found that xorg-x11-server before 1.19.0 including uses memcmp() to check the received MIT cookie against a series of valid cookies. If the cookie is correct, it is allowed to attach to the Xorg session. Since most memcmp() implementations return after an invalid byte is seen, this causes a time difference between a valid and invalid byte, which could allow an efficient brute force attack.	2018-27
pany	Feedback.asp in Xiao5uCompany 1.7 has XSS because the XSS protection mechanism in Safe.asp is insufficient (for example, it considers SCRIPT and IMG elements, but does not consider VIDEO elements).	2018-23
	system/edit_book.php in XYCMS 1.7 has stored XSS via a crafted add_do.php request, related to add_book.php.	2018-28

	xyhai.php?s=/Auth/addUser in XYHCMS 3.5 allows CSRF to add a background administrator account.	2018-24
	zt-zip before 1.13 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in a Zip archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.	2018-25
	zip4j before 1.3.3 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in a Zip archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.	2018-25
	unzipper npm library before 0.8.13 is vulnerable to directory traversal, allowing attackers to write to arbitrary files via a ../ (dot dot slash) in a Zip archive entry that is mishandled during extraction. This vulnerability is also known as 'Zip-Slip'.	2018-25
	SQL injection vulnerability in all versions prior to V4.01.01 of the ZTE ZXCDN-SNS product allows remote attackers to execute arbitrary SQL commands via the aoData parameter, resulting in the disclosure of database information.	2018-25
	All versions prior to V5.09.02.02T4 of the ZTE ZXIPTV-EPG product use the Java RMI service in which the servers use the Apache Commons Collections (ACC) library that may result in Java deserialization vulnerabilities. An unauthenticated remote attacker can exploit the vulnerabilities by sending a crafted RMI request to execute arbitrary code on the target host.	2018-25
	SQL injection vulnerability in all versions prior to V2.01.05.09 of the ZTE ZXIPTV-UCM product allows remote attackers to execute arbitrary SQL commands via the opertype parameter, resulting in the disclosure of database information.	2018-25
	All versions prior to ZSRV2 V3.00.40 of the ZTE ZXR10 1800-2S products allow remote authenticated users to bypass the original password authentication protection to change other user's password.	2018-25

Subject: [External Email] From The LEIU Executive Board

Weekly Edition - Wednesday July 11, 2018

The LEIU Source is a weekly news publication brought to you by the LEIU Executive Board.

Each Wednesday, we share with you a few of the articles or intelligence-based publications that have come across our desk. If you have a publication or an article that you feel needs to be shared, please send these to IntelligenceAnalysis@mac.com for review. If you feel others at

your department would benefit from receiving this publication, please forward this email. At the bottom of this publication is a link where you can add your email to the distribution list.

The 30th Semiannual LEIU National Gambling Intelligence Sharing Group (NGISG) meeting will be held September 25th & 26th, 2018, in Hershey, Pennsylvania at the Pennsylvania State Police Academy. The NGISG meetings have proven to be a great opportunity to discuss gaming-related issues, share criminal intelligence information and network with others involved with gaming enforcement and intelligence. In addition, we have some great speakers and training we're working on for the meeting. The training and agenda are tentative, subject to change.

Registration: To register for this event, please email Kimberly Trobe at ktrobe@pa.gov and cc: Kylie Dickneite at Kylie.Dickneite@mgc.dps.mo.gov, with your name, agency, and telephone number. There is NO registration fee. We hope you can join us!

Hotel: A hotel block has been negotiated and reserved for NGISG at the Days Inn, 350 W. Chocolate Avenue, Hershey, PA 17033, to assist in making travel accommodations. You can make reservations by contacting Linda Lovenstein with Days Inn directly at (717) 534-2162. You will need to specify room block NGISG Conference.

Airport: For those of you flying in for the conference, the most convenient airport will be the Harrisburg International Airport, 1 Terminal Dr, Middletown, PA 17057.

Meeting Coordinators:

Should police use computers to predict crimes and criminals?

[HARTFORD, Conn. \(AP\) — Years of secrecy by America's police departments about their use of computer programs predicting where crimes will occur, and who will commit them, are under fire in legal cases nationwide.](#)

The largest departments — New York, Chicago and Los Angeles — are all being sued for not releasing information about their “predictive policing” programs, which use algorithms to crunch data and create lists of people and neighborhoods for officers to target. Some smaller departments also have been brought to court and before public records agencies.

How law enforcement is using genealogy testing services to solve cold cases

[Recent news headlines highlight the creative and effective ways law enforcement agencies are using commercial direct to consumer \(DTC\) genealogy tests to close decades-old cold cases.](#)

By using DTC genealogy testing services, police have been able to identify suspects linked to the murders of Christy Mirack, Tanya Van Culenborg and Jay Cook, and the many victims of the Golden State Killer. This investigation technique opens the door to potentially solving many more cold cases, but law enforcement must be sure they remain within legal boundaries.

Surge in Illegal California Pot Shops Undercuts Legal Market

LOS ANGELES (AP) — A slight marijuana smell wafted out as a steady stream of customers walked into a warehouse, its doors and windows covered by bars. Suddenly, police swooped in.

"Sheriff's department! Search warrant!" a Los Angeles County deputy shouted as the team thundered through the front door and began hauling out people in handcuffs.

The Compton 20 Cap Collective just south of Los Angeles that was raided earlier this spring is one of hundreds of illegal marijuana stores operating in LA County, where marijuana is legal for anyone 21 and over and retailers must be licensed to sell to them.

Year-long central Alberta investigation into organized crime leads to \$250K worth of drugs and cash

[A year-long investigation into organized crime in central Alberta has resulted in the seizure of \\$250,000 in drugs and cash, as well as five firearms.](#)

On June 21, The Alberta Law Enforcement Response Teams (ALERT) arrested two suspects and laid 57 charges as part of Project Rails.

Police Foundation to Launch Center for Mass Violence Response Studies

[WASHINGTON--\(BUSINESS WIRE\)--Jul 9, 2018--To further its mission to advance public safety through innovation and science, the Police Foundation — a national, non-partisan, non-profit research organization — is establishing the . The mission of the Center is to prepare public safety, government, school, and business and community leaders to think critically about mass violence events, so as to develop and implement comprehensive prevention, response and recovery strategies.](#)

Controversial AI that 'detects political beliefs, sexuality and IQ' based on facial features could be used by CCTV cameras to spot dangerous people BEFORE they commit a crime

[Facial recognition AI could help police to spot 'potentially dangerous' criminals before they've even broken the law, according to one expert.](#)

Dr Michal Kosinski - who last year invented a controversial AI he claimed could detect your sexuality - said such face-reading technology may one day help

CCTV cameras monitor public spaces for people predisposed to violent behaviour.

While the concept raises privacy issues, it has the potential to save lives, the Stanford University academic claims.

Apps Aren't Listening to You, But They Are Recording Your Screen

[Convinced that apps on your phone are secretly eavesdropping on your conversations and to target you with advertisements?](#)

As Gizmodo reported, researchers from Northeastern University conducted a yearlong study to find out if this conspiracy theory is true.

Cops Have Been Losing Tech Race, but That's Changing

[A 16-year-old landed in jail last week for allegedly gunning down a man in cold blood on a road in Stockton, California.](#)

[During the same time, Terry Emerson found himself behind bars after Stockton police found three illegal handguns in his car during a traffic stop.](#)

These events, while unfortunate, would not be out of the ordinary for an area that has historically struggled with crime. Of particular interest, however, is how these men were tracked: using a police surveillance drone.

Stopping terrorism requires interagency communication

WASHINGTON: The Austin serial bombing in March of 2018 killed two innocents in addition to the bomber. Another five civilians and a police officer were injured. The Boston Marathon Bombing on April 15, 2013 killed three, injuring another 260 people. Sixteen of which lost their legs.

The youngest amputee was a seven-year-old girl. The youngest fatality was an eight-year-old boy.

Law enforcement may be able to work around iOS 11.4.1 Lightning port restrictions ... using a dongle

[iOS 11.4.1 \(and iOS 12\) include new line of defence against a type of security hack aimed at brute-forcing access to iPhones and iPads. The Grayshift boxes](#)

[plug into the Lightning port and remove prolonged delays between PIN code attempts, allowing law enforcement \(or criminals\) to brute-force an unlock.](#)

The new USB Restricted Mode in iOS 11.4.1 simply prevents any USB accessories from connecting if the phone has not been unlocked in the last hour. As it typically takes more than an hour to get a warrant for police to be allowed to use a Grayshift box, this is quite a significant roadblock.

However, ElcomSoft note that the behaviour can be worked around in some cases ...

England: Prisoners to get phones in cells in bid to curb violence

[Thousands of prisoners will be able to make calls from their cells, as part of government plans to reduce violence and crime in prisons in England and Wales.](#)

The move is part of a £30m package of measures to be announced later today by Justice Secretary David Gauke.

The scheme, already in place at 20 prisons, is to be extended to a further 20 over the next two years.

Las Vegas police investigating LVCVA airline gift card scandal

[Las Vegas police are conducting a criminal investigation into the handling of \\$90,000 worth of Southwest Airlines gift cards secretly purchased by the Las Vegas Convention and Visitors Authority, the Review-Journal has learned.](#)

Detectives with the police department's criminal intelligence section showed up on June 28 at the office of Ed Finger, the convention authority's chief financial officer, and left with records related to an audit that found the agency misused the airline cards, informed sources said.

A new intelligence ecosystem to fight terrorism and organised crime

While organised crime and terrorist (OCT) groups are often at the forefront of technological innovation for planning, executing and concealing their criminal activities, law enforcement agencies (LEAs) lag behind when tackling criminal activities. Within this “cat and mouse” scenario, the use of new information and communication technologies by OCT groups, or criminals is a key challenge for policy-makers and LEAs due to the complexity of the phenomenon, the quantity of factors and actors involved, and the great set of criminal technological activities used to finance and support criminal and terrorist actions.

“Technological development is the great game changer of our present and future. Anticipation is the way forward for LEAs to change the situation from lagging behind innovation in criminal behaviour to being ahead of the curve,” says Raquel Pastor, senior consultant at Ingeniería de Sistemas para la Defensa de España (ISDEFE) and co-ordinator of the COPKIT project.

The Linguist Who Helps Police Catch Child Predators

[At a digital-forensics conference in 2011, British police asked Tim Grant if he could help undercover agents pose as young girls online.](#) Grant, the director of Aston University's Center for Forensic Linguistics, had just given a talk on how to identify the author of online messages by parsing their language. An officer in a regional organized-crime unit came up to him, he says, and told him there was a case the police wanted help with.

Surely we can find, and stop, high-tech spies

[It's rumored that the U.S. intelligence community has commissioned The Eagles to rewrite some of their famous lyrics to serve as a deterrent to Russia](#)

[and China. The hope is that this new song will stop the apparently unabated espionage activities occurring in the National Capital Region, known as the NCR. It's called "You Can't Hide Your Spyin' Eyes."](#)

Concerns about enhanced technical espionage have circulated for a long time. A very provocative technology, currently being used by law enforcement and our military, is a cell-site simulator. Known as an IMSI-catcher, or commercially as a Stingray, it's a box about the size of an oversized pair of sneakers.

'Bitcoin Maven' sentenced to a year in prison for money laundering

[Bitcoin and other cryptocurrencies have for years been a preferred payment method on the so-called dark web — anything-goes corners of the internet where you can find drugs and other illegal products and services.](#)

But once a drug dealer accepts cryptocurrency, how do they turn that money into real currency? The case of Theresa Tetley is instructive.

The Marina del Rey woman exchanged millions of dollars in cash for bitcoin, including for a suspected online drug dealer. She was sentenced Monday to a year in federal prison after pleading guilty to money laundering.

New EU Anti-Money Laundering Rules Come Under Fire

[New anti-money laundering rules instituted by the European Union on Monday are already coming under criticism for being insufficient, Reuters reported.](#)

The rules, which are listed in the fifth review of the EU anti-money laundering directive, are the result of talks aimed at increasing controls on company owners and digital payments using virtual currencies.

Police credit technology for helping reduce bloodshed in Chicago this year

[CHICAGO — As a pastor, Curtis Britt Sr. has counseled numerous grieving parents from his West Side congregation who lost children to Chicago's unrelenting gun violence.](#)

Now, with the killing last month of his own 26-year-old son in broad daylight, he truly understands the depth of their pain — and the obstacles to meaningful progress.

“It’s sad that in certain neighborhoods ... the violence is such where it almost seems like you’re in a situation where it’s nothing you can do about it,” said Britt, 51, who delivered both the sermon and eulogy at the funeral of his son and namesake. “A lot of (residents) have gotten to the point where they just feel like this is something that they’re going to have to live with because it’s not going to change.”

**Calif. moving away from gang injunctions
amid criticism, falling crime rates**

[LOS ANGELES — Recent court orders prohibiting police in Los Angeles and elsewhere in California from enforcing gang injunctions are prompting law enforcement leaders to rethink how they employ the tool that for decades was considered a critical weapon in the state’s war on gangs.](#)

The shift away from the injunctions, which can severely restrict a suspected gang member’s movements, relationships and even clothing choice in certain neighborhoods, comes amid growing criticism that they are overly broad and often ensnare people who have a tenuous connection to gang life. At the same time, gang crime has sharply declined since its peak in the 1990s, leading some law enforcement officials to question if the court orders are still needed.

Which 3-letter agency is enforcing US immigration laws at the border?

[\(THE CONVERSATION\) You may have heard the “Abolish ICE” slogan chanted or seen it on signs at rallies against the Trump administration’s immigration policies.](#)

This slogan has become popular after it was reported that children were being separated from their families at the border. As an immigration scholar, I have been writing about immigration law enforcement for over a decade. I find the slogan somewhat counterintuitive because what is happening at the border is primarily under the purview of Customs and Border Patrol, not Immigration and Customs Enforcement.

Here’s a breakdown of which agencies are doing what to enforce immigration laws in the U.S.

New President of Mexico Has Many Internal Problems to Address

In a landslide victory, Mexicans elected the nation's first socialist president since the 1930s. Andrés Manuel López Obrador campaigned on the promise to restore a semblance of normalcy after the rampant corruption of his predecessor, Enrique Peña Nieto, and his conservative Institutional Revolutionary Party (PRI).

Under Peña Nieto, the Mexican economy stagnated, with crime out of control and corruption intertwined with rampant poverty. These nationwide problems convinced Mexicans to elect a socialist in what will be a vain attempt to revive the country.

Fitness app Polar exposed locations of spies and military personnel

A popular fitness app that tracks the activity data on millions of users has inadvertently revealed the locations of personnel working at military bases and intelligence services.

The app, Polar Flow, built by its eponymous company Polar, a Finnish-based fitness tracking giant with offices in New York, allowed anyone to access a user's fitness activities over several years -- simply by modifying the browser's web address.

Mexico is planning its own border police force to stop organized crime and undocumented immigrants from infiltrating the country from Central America

[Mexico's incoming president is planning his own border police force to prevent undocumented immigrants and organized crime coming the country from Central America.](#)

President-elect Andres Manuel Lopez Obrador's future public security minister Alfonso Durazo said the force would stop undocumented immigrants and human traffickers, drugs and guns from flooding into Mexico.

Human trafficking and terror threat on the rise claims Interpol Americas

[Senior police chiefs and other law enforcement officials from across the Americas have gathered in Uruguay's resort town of Punta del Este to address some of the region's most pressing organized crime and terrorism issues.](#)

The three-day Interpol Americas Regional Conference follows the recent Operación Libertad that rescued some 350 potential victims of sexual exploitation and forced labor across the Caribbean, Central, and South America.

“This conference will be dealing with issues of great importance for our citizens,” said Uruguay’s Minister of Foreign Affairs Rodolfo Nin Novoa, during the opening ceremony. “Interpol strengthens the necessary dialogue between countries to ensure effective and efficient information exchange to tackle organized crime.”

How law enforcement is using genealogy testing services to solve cold cases

[Recent news headlines highlight the creative and effective ways law enforcement agencies are using commercial direct to consumer \(DTC\) genealogy tests to close decades-old cold cases.](#)

By using DTC genealogy testing services, police have been able to identify suspects linked to the murders of Christy Mirack, Tanya Van Culenborg and Jay Cook, and the many victims of the Golden State Killer. This investigation technique opens the door to potentially solving many more cold cases, but law enforcement must be sure they remain within legal boundaries.

Surge in Illegal California Pot Shops Undercuts Legal Market

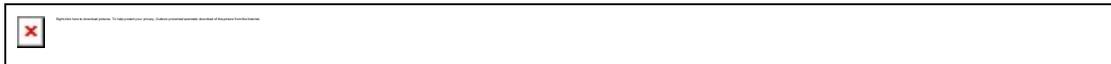

LOS ANGELES (AP) — A slight marijuana smell wafted out as a steady stream of customers walked into a warehouse, its doors and windows covered by bars. Suddenly, police swooped in.

"Sheriff's department! Search warrant!" a Los Angeles County deputy shouted as the team thundered through the front door and began hauling out people in handcuffs.

The Compton 20 Cap Collective just south of Los Angeles that was raided earlier this spring is one of hundreds of illegal marijuana stores operating in LA County, where marijuana is legal for anyone 21 and over and retailers must be licensed to sell to them.

Year-long central Alberta investigation into organized crime leads to \$250K worth of drugs and cash

[A year-long investigation into organized crime in central Alberta has resulted in the seizure of \\$250,000 in drugs and cash, as well as five firearms.](#)

On June 21, The Alberta Law Enforcement Response Teams (ALERT) arrested two suspects and laid 57 charges as part of Project Rails.

Police Foundation to Launch Center for Mass Violence Response Studies

[WASHINGTON--\(BUSINESS WIRE\)--Jul 9, 2018--To further its mission to advance public safety through innovation and science, the Police Foundation — a national, non-partisan, non-profit research organization — is establishing the . The mission of the Center is to prepare public safety, government, school, and business and community leaders to think critically about mass violence events, so as to develop and implement comprehensive prevention, response and recovery strategies.](#)

Controversial AI that 'detects political beliefs, sexuality and IQ' based on facial features could be used by CCTV cameras to spot dangerous people BEFORE they commit a crime

[Facial recognition AI could help police to spot 'potentially dangerous' criminals before they've even broken the law, according to one expert.](#)

Dr Michal Kosinski - who last year invented a controversial AI he claimed could detect your sexuality - said such face-reading technology may one day help

CCTV cameras monitor public spaces for people predisposed to violent behaviour.

While the concept raises privacy issues, it has the potential to save lives, the Stanford University academic claims.

Apps Aren't Listening to You, But They Are Recording Your Screen

[Convinced that apps on your phone are secretly eavesdropping on your conversations and to target you with advertisements?](#)

As Gizmodo reported, researchers from Northeastern University conducted a yearlong study to find out if this conspiracy theory is true.

Cops Have Been Losing Tech Race, but That's Changing

[A 16-year-old landed in jail last week for allegedly gunning down a man in cold blood on a road in Stockton, California.](#)

[During the same time, Terry Emerson found himself behind bars after Stockton police found three illegal handguns in his car during a traffic stop.](#)

These events, while unfortunate, would not be out of the ordinary for an area that has historically struggled with crime. Of particular interest, however, is how these men were tracked: using a police surveillance drone.

Stopping terrorism requires interagency communication

WASHINGTON: The Austin serial bombing in March of 2018 killed two innocents in addition to the bomber. Another five civilians and a police officer were injured. The Boston Marathon Bombing on April 15, 2013 killed three, injuring another 260 people. Sixteen of which lost their legs.

The youngest amputee was a seven-year-old girl. The youngest fatality was an eight-year-old boy.

Law enforcement may be able to work around iOS 11.4.1 Lightning port restrictions ... using a dongle

[iOS 11.4.1 \(and iOS 12\) include new line of defence against a type of security hack aimed at brute-forcing access to iPhones and iPads. The Grayshift boxes](#)

[plug into the Lightning port and remove prolonged delays between PIN code attempts, allowing law enforcement \(or criminals\) to brute-force an unlock.](#)

The new USB Restricted Mode in iOS 11.4.1 simply prevents any USB accessories from connecting if the phone has not been unlocked in the last hour. As it typically takes more than an hour to get a warrant for police to be allowed to use a Grayshift box, this is quite a significant roadblock.

However, ElcomSoft note that the behaviour can be worked around in some cases ...

England: Prisoners to get phones in cells in bid to curb violence

[Thousands of prisoners will be able to make calls from their cells, as part of government plans to reduce violence and crime in prisons in England and Wales.](#)

The move is part of a £30m package of measures to be announced later today by Justice Secretary David Gauke.

The scheme, already in place at 20 prisons, is to be extended to a further 20 over the next two years.

Las Vegas police investigating LVCVA airline gift card scandal

[Las Vegas police are conducting a criminal investigation into the handling of \\$90,000 worth of Southwest Airlines gift cards secretly purchased by the Las Vegas Convention and Visitors Authority, the Review-Journal has learned.](#)

Detectives with the police department's criminal intelligence section showed up on June 28 at the office of Ed Finger, the convention authority's chief financial officer, and left with records related to an audit that found the agency misused the airline cards, informed sources said.

A new intelligence ecosystem to fight terrorism and organised crime

While organised crime and terrorist (OCT) groups are often at the forefront of technological innovation for planning, executing and concealing their criminal activities, law enforcement agencies (LEAs) lag behind when tackling criminal activities. Within this “cat and mouse” scenario, the use of new information and communication technologies by OCT groups, or criminals is a key challenge for policy-makers and LEAs due to the complexity of the phenomenon, the quantity of factors and actors involved, and the great set of criminal technological activities used to finance and support criminal and terrorist actions.

“Technological development is the great game changer of our present and future. Anticipation is the way forward for LEAs to change the situation from lagging behind innovation in criminal behaviour to being ahead of the curve,” says Raquel Pastor, senior consultant at Ingeniería de Sistemas para la Defensa de España (ISDEFE) and co-ordinator of the COPKIT project.

The Linguist Who Helps Police Catch Child Predators

[At a digital-forensics conference in 2011, British police asked Tim Grant if he could help undercover agents pose as young girls online.](#) Grant, the director of Aston University's Center for Forensic Linguistics, had just given a talk on how to identify the author of online messages by parsing their language. An officer in a regional organized-crime unit came up to him, he says, and told him there was a case the police wanted help with.

Surely we can find, and stop, high-tech spies

[It's rumored that the U.S. intelligence community has commissioned The Eagles to rewrite some of their famous lyrics to serve as a deterrent to Russia](#)

[and China. The hope is that this new song will stop the apparently unabated espionage activities occurring in the National Capital Region, known as the NCR. It's called "You Can't Hide Your Spyin' Eyes."](#)

Concerns about enhanced technical espionage have circulated for a long time. A very provocative technology, currently being used by law enforcement and our military, is a cell-site simulator. Known as an IMSI-catcher, or commercially as a Stingray, it's a box about the size of an oversized pair of sneakers.

'Bitcoin Maven' sentenced to a year in prison for money laundering

[Bitcoin and other cryptocurrencies have for years been a preferred payment method on the so-called dark web — anything-goes corners of the internet where you can find drugs and other illegal products and services.](#)

But once a drug dealer accepts cryptocurrency, how do they turn that money into real currency? The case of Theresa Tetley is instructive.

The Marina del Rey woman exchanged millions of dollars in cash for bitcoin, including for a suspected online drug dealer. She was sentenced Monday to a year in federal prison after pleading guilty to money laundering.

New EU Anti-Money Laundering Rules Come Under Fire

[New anti-money laundering rules instituted by the European Union on Monday are already coming under criticism for being insufficient, Reuters reported.](#)

The rules, which are listed in the fifth review of the EU anti-money laundering directive, are the result of talks aimed at increasing controls on company owners and digital payments using virtual currencies.

Police credit technology for helping reduce bloodshed in Chicago this year

[CHICAGO — As a pastor, Curtis Britt Sr. has counseled numerous grieving parents from his West Side congregation who lost children to Chicago's unrelenting gun violence.](#)

Now, with the killing last month of his own 26-year-old son in broad daylight, he truly understands the depth of their pain — and the obstacles to meaningful progress.

“It’s sad that in certain neighborhoods ... the violence is such where it almost seems like you’re in a situation where it’s nothing you can do about it,” said Britt, 51, who delivered both the sermon and eulogy at the funeral of his son and namesake. “A lot of (residents) have gotten to the point where they just feel like this is something that they’re going to have to live with because it’s not going to change.”

**Calif. moving away from gang injunctions
amid criticism, falling crime rates**

[LOS ANGELES — Recent court orders prohibiting police in Los Angeles and elsewhere in California from enforcing gang injunctions are prompting law enforcement leaders to rethink how they employ the tool that for decades was considered a critical weapon in the state’s war on gangs.](#)

The shift away from the injunctions, which can severely restrict a suspected gang member’s movements, relationships and even clothing choice in certain neighborhoods, comes amid growing criticism that they are overly broad and often ensnare people who have a tenuous connection to gang life. At the same time, gang crime has sharply declined since its peak in the 1990s, leading some law enforcement officials to question if the court orders are still needed.

Which 3-letter agency is enforcing US immigration laws at the border?

[\(THE CONVERSATION\) You may have heard the “Abolish ICE” slogan chanted or seen it on signs at rallies against the Trump administration’s immigration policies.](#)

This slogan has become popular after it was reported that children were being separated from their families at the border. As an immigration scholar, I have been writing about immigration law enforcement for over a decade. I find the slogan somewhat counterintuitive because what is happening at the border is primarily under the purview of Customs and Border Patrol, not Immigration and Customs Enforcement.

Here’s a breakdown of which agencies are doing what to enforce immigration laws in the U.S.

New President of Mexico Has Many Internal Problems to Address

[In a landslide victory, Mexicans elected the nation's first socialist president since the 1930s. Andrés Manuel López Obrador campaigned on the promise to restore a semblance of normalcy after the rampant corruption of his predecessor, Enrique Peña Nieto, and his conservative Institutional Revolutionary Party \(PRI\).](#)

Under Peña Nieto, the Mexican economy stagnated, with crime out of control and corruption intertwined with rampant poverty. These nationwide problems convinced Mexicans to elect a socialist in what will be a vain attempt to revive the country.

Fitness app Polar exposed locations of spies and military personnel

[A popular fitness app that tracks the activity data on millions of users has inadvertently revealed the locations of personnel working at military bases and intelligence services.](#)

The app, Polar Flow, built by its eponymous company Polar, a Finnish-based fitness tracking giant with offices in New York, allowed anyone to access a user's fitness activities over several years -- simply by modifying the browser's web address.

Mexico is planning its own border police force to stop organized crime and undocumented immigrants from infiltrating the country from Central America

[Mexico's incoming president is planning his own border police force to prevent undocumented immigrants and organized crime coming the country from Central America.](#)

President-elect Andres Manuel Lopez Obrador's future public security minister Alfonso Durazo said the force would stop undocumented immigrants and human traffickers, drugs and guns from flooding into Mexico.

Human trafficking and terror threat on the rise claims Interpol Americas

[Senior police chiefs and other law enforcement officials from across the Americas have gathered in Uruguay's resort town of Punta del Este to address some of the region's most pressing organized crime and terrorism issues.](#)

The three-day Interpol Americas Regional Conference follows the recent Operación Libertad that rescued some 350 potential victims of sexual exploitation and forced labor across the Caribbean, Central, and South America.

“This conference will be dealing with issues of great importance for our citizens,” said Uruguay’s Minister of Foreign Affairs Rodolfo Nin Novoa, during the opening ceremony. “Interpol strengthens the necessary dialogue between countries to ensure effective and efficient information exchange to tackle organized crime.”

Weekly Edition - Wednesday July 11, 2018

The LEIU Source is a weekly news publication brought to you by the LEIU Executive Board.

Each Wednesday, we share with you a few of the articles or intelligence-based publications that have come across our desk. If you have a publication or an article that you feel needs to be shared, please send these to IntelligenceAnalysis@mac.com for review. If you feel others at

your department would benefit from receiving this publication, please forward this email. At the bottom of this publication is a link where you can add your email to the distribution list.

The 30th Semiannual LEIU National Gambling Intelligence Sharing Group (NGISG) meeting will be held September 25th & 26th, 2018, in Hershey, Pennsylvania at the Pennsylvania State Police Academy. The NGISG meetings have proven to be a great opportunity to discuss gaming-related issues, share criminal intelligence information and network with others involved with gaming enforcement and intelligence. In addition, we have some great speakers and training we're working on for the meeting. The training and agenda are tentative, subject to change.

Registration: To register for this event, please email Kimberly Trobe at ktrobe@pa.gov and cc: Kylie Dickneite at Kylie.Dickneite@mgc.dps.mo.gov, with your name, agency, and telephone number. There is NO registration fee. We hope you can join us!

Hotel: A hotel block has been negotiated and reserved for NGISG at the Days Inn, 350 W. Chocolate Avenue, Hershey, PA 17033, to assist in making travel accommodations. You can make reservations by contacting Linda Lovenstein with Days Inn directly at (717) 534-2162. You will need to specify room block NGISG Conference.

Airport: For those of you flying in for the conference, the most convenient airport will be the Harrisburg International Airport, 1 Terminal Dr, Middletown, PA 17057.

Meeting Coordinators:

Kimberly A. Trobe
Management Technician
Pennsylvania State Police
Bureau of Gaming Enforcement
717-346-0245
ktrobe@pa.gov

Kylie Dickneite
Gaming Enforcement Manager, CICA
Missouri Gaming Commission

Should police use computers to predict crimes and criminals?

[HARTFORD, Conn. \(AP\) — Years of secrecy by America's police departments about their use of computer programs predicting where crimes will occur, and who will commit them, are under fire in legal cases nationwide.](#)

The largest departments — New York, Chicago and Los Angeles — are all being sued for not releasing information about their “predictive policing” programs, which use algorithms to crunch data and create lists of people and neighborhoods for officers to target. Some smaller departments also have been brought to court and before public records agencies.

Subject: Brit tourist left shocked after his fish is stolen by shark

 This British tourist was left shocked after the fish he was attempting to wrangle in was intercepted by a grey reef shark. Jason Hillyard, Mark Slaughter and Sally Cobban were on holiday in the Bay of Islands, New Zealand, when the incident occurred on April 3. While searching for Kingfish, a school of sharks makes an appearance near the tourist's boat. One of the predators, clearly not respectful of fishing claims, attacks Slaughter's fish and thrashes around in the water. After eating half the fish, the shark swims away from the boat, only to return to finish the rest of the stolen catch. Hillaryard writes: "[The sharks] were straight in to pinch our catch. "They just tore these kingfish apart like butter."

Posted To: emails meeting criteria
Subject: Watch an orca knock stingray out cold with its tail—for 'play'

June 21, 2018 – A pod of orcas, or killer whales, circles a stingray in the Sea of Cortez, Mexico. Such a close encounter with orcas in Baja California is rare. Diver and filmmaker Jorge Cervera Hauser, and this stingray, are in for a surprise. An orca uses a powerful tail swat to stun the stingray. Sometimes orcas swat for “play,” and sometimes they eat the stunned or dead animal. Although orcas do eat stingrays, Hauser believes these orcas were “showing off.” They slapped and circled it for more than an hour, before letting it sink to the seafloor, uneaten. Even though he too could have been tail-slapped, Hauser says, “it was the most amazing underwater experience I've had in my life.”

POLICING & POLICY

Rhode Island Governor Signs Law Banning Bump Stocks.

[The Hill](#)  (6/1, Greenwood) reports that Rhode Island Gov. Gina Raimondo (D) signed into law on Friday two bills banning bump stocks and permitting law enforcement to temporarily seize guns from people who pose a threat to themselves or others. The legislation makes Rhode Island the “latest state to implement what advocates say are common-sense measures to curb gun violence.”

Tennessee Authorities Capture Man Suspected Of Killing Sheriff's Deputy.

The [AP](#)  (6/1, Mattise, Sainz) reports the Tennessee Bureau of Investigation announced that “after two days on the run from a massive manhunt,” Steven Joshua Wiggins, “a suspect in the slaying of a deputy was arrested Friday by a single state

trooper with no use of force.” The AP adds “the state will seek the death penalty against Wiggins and a woman arrested the previous day on charges of first-degree premeditated murder.”

NYTimes A1: Lawmakers Target “Drill” Rap Groups Amid Surging London Crime.

A front-page [New York Times](#) (6/1, A1, Yeginsu, Codrea-Rado, Subscription Publication) analysis says that in London, “a chorus of law enforcement officials, legislators and violence experts are laying part of the blame” for the violent crime surge “on drill, a bleak, nihilistic style of rap music that is thriving in British cities, especially among young people in London’s social housing projects.” Drill groups once had to wait “months for a record company to release their music,” but they are now “quickly writing songs that directly threaten specific people or groups and disseminating them on YouTube,” and rival drill groups are “respond[ing] likewise or on social media platforms” in an “escalating contest of bravado that sometimes crosses over to the real world.” At the same time, “the focus on drill music has led to a debate over the extent to which the music is a reflection of desperate conditions rather than a creator of them, and about the line between public safety and censorship.”

Fewer Immigrants Reporting Domestic Abuse Over Fears Of Deportation.

The [New York Times](#) (6/3, Engelbrecht, Subscription Publication) reports, “Though Houston’s immigrant population is one of the fastest-growing in the country, the city last year saw a 16 percent drop in domestic violence reports from the Hispanic community – a decline that the police blame on a tough new immigration enforcement law in Texas and the increasingly hostile political climate across the country surrounding the issue of illegal immigration.” Houston police “recorded 6,273 domestic violence reports from Hispanics in 2017, compared with 7,460 the year before.” The Times says police departments in “several cities with large Hispanic populations, including Los Angeles, Denver and San Diego, also experienced a decline in reports of domestic violence and sexual assault in their Hispanic communities.” Houston Police Chief Art Acevedo said, “Undocumented immigrants and even lawful immigrants are afraid to report crime. ... They’re seeing the headlines from across the country, where immigration agents are showing up at courthouses, trying to deport people.”

Canada Considering Regulations On Imitation Guns.

[CBC \(CAN\)](#) (6/3) reports the Canadian government is “looking into whether it should regulate imitation firearms following three Toronto incidents which saw police shoot and kill men brandishing relatively harmless guns.” Justice Minister Jody Wilson-Raybould “confirmed in a letter last month...the department is reviewing proposals to tighten controls on look-alike weapons that police often have no choice but to treat as genuine.” Among the possible solutions raised “was mandatory package labelling for imitation guns, which would warn the purchaser of the dangers of police action.”

Indiana Adopts Text-To-911.

The [AP](#) (6/3) reports, “Emergency response officials say residents in all 92 Indiana counties can now send text-to-911 messages during emergencies if they’re unable to speak to dispatchers.” Indiana started adopting the technology four years

ago, and Statewide 911 Board executive director Ed Reuter “says Indiana is the only state where 911 operators can initiate texts after receiving a disconnected or dropped 911 call.” The AP adds that the state dispatch center receives an average of between 500 to 600 text-to-911 calls every day.

COMMUNITY

Expansion Of FBI Data Center To Bring 500 New Jobs To Idaho.

The [AP](#) (6/1) reports from Pocatello, ID that “officials expect the construction and related expansion work for the FBI data center in Pocatello will create about 500 direct jobs and 160 indirect jobs.” The FBI “says several milestones for the \$100 million data center have been reached since construction began in October,” and that “construction is on schedule and the data center is expected to be completed next year.”

Think prosecuting a human trafficking case requires victim testimony? On Wednesday, June 13, 2018, from 2:00 to 3:00 PM ET, the [International Association of Chiefs of Police](#) (IACP) and the [Bureau of Justice Assistance](#) (BJA) will host a webinar for law enforcement investigators and prosecutors to explore prosecuting human trafficking cases without relying on a victim. [Register today.](#)

CRIME & DRUGS

New Jersey Police Warn Parents About THC-Laced E-Cigs That Lack Odor Of Marijuana.

[CBS News](#) (6/1, Leavy) reported on its website that the “tell-tale odor of marijuana might not be enough to help parents catch teens getting high” as cartridges for vape pens and e-cigs containing THC often come in fruity smells. Gloucester Township Police Department in New Jersey “urged parents to familiarize themselves with the issue and talk to their kids about it,” and also called upon school officials to become increasingly vigilant.

Opioids Responsible For 20 Percent Of US Young Adult Deaths, Study Suggests.

The [Daily Caller](#) (6/2, Birr) reports a study published on Friday in the journal JAMA Network Open suggests that opioids are responsible for 20 percent of deaths among young adults between the ages of 24 and 35. Lead author Dr. Tara Gomes said

in a statement that the “devastating impact that early loss of life from opioids is having across the United States” is growing, and warns that “the absence of a multidisciplinary approach to this issue that combines access to treatment, harm reduction and education” will continue to affect “the U.S. for generations.”

Massachusetts Police Departments Help Opioid Addicts Get Treatment.

In a 2,700-word article, [Politico Magazine](#) (6/2, Trickey) reports on how several police departments in eastern Massachusetts are fighting the opioid epidemic by offering treatment to addicts. The program started in 2015 in Gloucester, where police “announced that anyone who showed up at the police station and asked for help overcoming an opiate addiction would get it, without fear of arrest.” In its first year, the program took in 376 people and had a 95 percent rate of direct referrals for treatment. Since then, it “has evolved into a national program called Police-Assisted Addiction and Recovery Initiative,” helping 12,000 people get into drug treatment across 390 police departments.

NATIONAL SECURITY

US Homeland Security Found Cellphone Surveillance Devices Near White House.

The [Washington Post](#) (6/1, Timberg) reported that a US Department of Homeland Security study “found signs that surveillance devices for intercepting cellphone calls and texts were operating near the White House and other sensitive locations in the Washington area last year.” DHS “discovered evidence of the surveillance devices, called IMSI catchers, as part of federal testing last year, according to a letter from DHS to Sen. Ron Wyden (D-Ore.) on May 22.” According to the Post, “The discovery bolsters years of independent research suggesting that foreign intelligence agencies use sophisticated interception technology to spy on officials working within the hub of federal power in the nation’s capital.” The Post said “experts in surveillance technology say that IMSI catchers – sometimes known by one popular brand name, StingRay – are a standard part of the tool kit for many foreign intelligence services.”

V3 Stingray

You've Made Requests, We've Listened!

You Asked for a smaller footprint. We present to you the smallest footprint Kydex holster you'll find with full protection.

Why Choose the V3 Stingray?

- Incredibly Small Footprint
- Incredibly Comfortable
- Change Cant From 0 - 15 Degrees
- Change from Right Hand to Left hand
- Covered Mag Release
- Full Sweat Shield
- Top Notch Fit & Feel
- Adjustable Retention

The V3 Stingray has everything you could possibly want in a concealment holster.

Use Coupon Code "tiny" for \$5 off!

Explore the V3 Stingray

POLICING & POLICY

Security Preparations For Boston Marathon Announced.

The [AP](#)  (4/3) reports law enforcement officials “are taking no risks when it comes to” the upcoming Boston Marathon. Protection will include “about 5,000 uniformed and undercover police officers, surveillance drones, bomb- and chemical-sniffing dogs and heavy trucks blocking streets.” However, Harold Shaw, special agent in charge of the FBI’s Boston office, said, “At this point in time, I can tell you neither the FBI, other U.S. government agencies or our state and local law enforcement partners are aware of any specific, active or credible threats directed at this year’s marathon.” Still, “police urged the public to remain vigilant and contact law enforcement if they notice anything suspicious, no matter how trivial it may seem.” The [Springfield \(MA\) Republican](#)  (4/3) reports Shaw said, “We should be able to harness the lessons learned on a global scale.” He added, “We are working around the clock to ensure that this year’s race is a safe and successful one.”

The [Boston Globe](#) (4/3) reports Boston Police Superintendent William Ridge, “commander of the city’s uniformed officers, said Boston will in the coming days start visible preparations leading to multiple road closures, including Boylston Street and the finish line.” Ridge also “said police will be on the roof tops of building and ‘blocker trucks’ will be deployed along intersections as a bulwark against terrorists in vehicles.” Transit Police Chief Kenneth Green “said there is no credible threat against the MBTA,” but added that “we cannot become complacent.”

US Federal, State, Local Authorities Combine To Stop School Threats.

The [AP](#) (4/3) reports from Detroit that “a number of law enforcement agencies in southeastern Michigan plan to work together to find, arrest and prosecute anyone threatening violence to students and area schools.” According to the AP, “officials with the U.S. Attorney’s office in Detroit, state police, Detroit police, area sheriff’s departments and others announced their collaboration during a Tuesday news conference.” The US Attorney’s office “also said it plans to visit schools to speak with students and parents about the consequences of making threats.” US Attorney Matthew Schneider “told reporters that school threats are ‘an epidemic that the law enforcement community is facing together.’”

Microsoft: US Supreme Court Should Dismiss Digital Privacy Case.

The [Washington Post](#) (4/3, Barnes) reports that Microsoft “agreed with the federal government Tuesday” that the US Supreme Court should dismiss as moot the case argued in February concerning whether US tech firms must comply with a court order to produce emails even if they are stored abroad. The article provides background on the case, which was affected when Congress rewrote part of the Stored Communications Act to deal with electronic communication, and says Microsoft “said in a document filed with the court Tuesday that it had always advocated for Congress, rather than the courts, to deal with ambiguity in the law.” The [Seattle Times](#) (4/3, Lerman) reports that “both the Redmond tech giant and the Department of Justice agree that a recent act passed by Congress makes the court case, which concerns cross-border digital privacy, a moot point.” The Justice Department “filed a motion late last week asking for the case to be dismissed,” and “in a reply Tuesday, Microsoft said it would not oppose the motion.”

[Reuters](#) (4/3, Hurley) reports that “the justices heard arguments in the high-profile case on Feb. 27, but President Donald Trump on March 22 signed legislation that makes clear that U.S. judges can issue warrants for such data while giving companies a way to object if the request conflicts with foreign law.” In a filing with the Supreme Court, Microsoft “said it would not oppose the Justice Department’s bid to dismiss the case, filed last Friday, because the matter was now moot. ‘Microsoft agrees with the government that there is no longer a live case or controversy between the parties with respect to the question presented,’ the company’s lawyers said in the filing.”

Metro Phoenix Launches Text-To-911.

The [Arizona Republic](#) (4/2) reports, “People who need emergency services in the metro Phoenix area have a new way to ask for help: via text message.” The Maricopa Association of Governments “launched text-to-911 capabilities Monday” after

“spending \$150,000 on software updates and dispatcher training.” The system “does have limits: For now, metro Phoenix dispatch centers don’t offer translation services for texts sent in languages other than English.” The system “also can’t determine where a text is coming from unless the texter provides a location.” For those reasons, and “because dispatchers can more quickly ask questions on voice calls, public-safety officials still encourage anyone safely able to call 911 to do so.”

California Lawmakers Propose Change In Police Lethal Force Standard.

[CNN](#) (4/3, Sanchez) reports California lawmakers “proposed a dramatic change Tuesday in the standard under which police officers can use deadly force.” Legislators “announced a bill replacing the current ‘reasonable force’ rule with a stricter ‘necessary force’ standard.” The legislation “would authorize officers to use deadly force ‘only when it is necessary to prevent imminent and serious bodily injury or death – that is, if, given the totality of the circumstances, there was no reasonable alternative to using deadly force, including warnings, verbal persuasion, or other nonlethal methods of resolution or de-escalation,’” according to the measures co-author Democratic Assemblywoman Shirley Weber.

CRIME & DRUGS

New US Law Enforcement Team Targets Online Opioid Sales.

The [AP](#) (4/3) reports on “a new team of federal agents, computer experts and analysts tasked with fighting the kind of online opioid trafficking that law enforcement officials say can be more persistent and vexing than more traditional trafficking by cartels.” Authorities’ investigation of online dealers have been “frustrat[ed]” by “the anonymity in which they work.” Still, the team has had its first arrests. Additionally, the new “team has forged a new level of cooperation that its members say is critical in increasingly sophisticated darknet cases that combine tech savvy with old-fashioned drug dealing.” Emily Odom, chief of the FBI’s Hi-Tech Organized Crime Unit, said, “They share their secrets, they share their tradecraft.” She added, “They’re working together, so we have to do a better job working together as well.”

Law Enforcement Turns Attention To Spain’s South To Stop Drug Smuggling.

The [AP](#) (4/3, Parra) reports law enforcement has turned their attention to areas in the south of Spain that have become a “key European entry point for Moroccan cannabis resin” for crime gangs. The AP says “three dozen” criminal clans are “believed to be working in Campo de Gibraltar.” The AP adds that, on a “clear day, the contours of the coast of Morocco, the world’s top producer of hashish, are visible across a busy shipping waterway at the mouth of the Mediterranean, just 30 kilometers (less than 19 miles) away.” The criminal clans, a “new generation of bolder gangsters,” are “challenging underfunded law enforcement agencies, as local families watch their teenagers lured into a life of easy money.” Criminals that “in the past dropped their few hundred kilograms of cargo in the sea as soon as they came across a customs surveillance boat are now ready to defend their bigger, bulkier shipments.”

Thai Police Seize \$54 Million In Meth.

The [AP](#) (4/3) reports Thailand police “announced Tuesday that they confiscated an estimated \$54 million worth of methamphetamine in one of their biggest-ever drug seizures and arrested 11 people in recent days as illegal drug cases surge in the country.” Police in the northern province of Chiang Rai “discovered 9.4 million methamphetamine pills and 788 kilograms (1,737 pounds) of crystal methamphetamine in a pickup truck, apparently abandoned by its driver.”

US Charges Three In Largest Meth Bust In Ohio History.

The [AP](#) reports from Cleveland that “federal authorities say three men have been charged in what might be Ohio’s largest-ever seizure of methamphetamine.” Federal prosecutors said on Tuesday that “more than 140 pounds of crystal and liquid methamphetamine were found March 24 by investigators at a warehouse in northern Summit County, about 28 miles south of Cleveland.” Prosecutors said “a 36-year-old Cleveland man and two Mexican nationals, ages 24 and 26, have been charged with conspiracy to distribute methamphetamine.” US Attorney Justin Herdman “says the busts show Mexican drug organizations are a ‘very real’ threat to the region.”

London Murder Rate Overtakes New York.

[Reuters](#) reports, “London police investigated more murders than their New York counterparts did over the last two months, statistics show, as the British capital’s mayor vowed to fight a ‘violent scourge’ on the streets.” British politicians and police are “increasingly expressing concern about London’s rising murder rate, which is driven by a surge in knife crime.” London has experienced 47 murders this year, and “31 have been committed with knives.” London Metropolitan Police Chief Cressida Dick “said gangs were using online platforms to glamorize violence, adding that disputes between young people could escalate within minutes on social media.”

“Tools offered were very beneficial and will force me to address issues as a supervisor.”

The IACP’s First-Line Leadership training provides leadership and management skills to recently promoted and aspiring leaders and equips participants with knowledge to advance in their supervisory role. The next session will be held April 25-27, 2018, in Vail, Colorado.

TECHNOLOGY

Some Call For Creation Of US Cyber Department.

[Federal Computer Week](#)   (4/3, Johnson) reports, “As some nations unify their cybersecurity operations, there are calls for a similar effort to create a single agency for civilian cyber authorities in the U.S.” Some members of Congress and other policymakers have “increasingly called for a ‘whole of government’ response to cybersecurity threats, including foreign election meddling and critical infrastructure protection, and a formal, unified cyber doctrine to govern U.S. policy.” FCW says that the “NSA, Department of Homeland Security, Department of Defense and the Federal Bureau of Investigation occupy leading positions in the hierarchy, overseeing major policy areas like electronic warfare, cybercrime, defense of federal networks and critical infrastructure.” FCW adds that the NPPD “has emerged as a hub for many – but not all – federal civilian cybersecurity initiatives.”

Baltimore Ransomware Attack Illustrates Vulnerability Of US Emergency Response Networks. [NBC News](#)   (4/3, Schuppe) reports that the Baltimore ransomware attack “served as another reminder that America’s emergency-response networks remain dangerously vulnerable to criminals bent on crippling the country’s critical infrastructure.” NBC says, “There have been 184 cyberattacks on public safety agencies and local governments in the past 24 months.”

Artificial Intelligence May Enhance Police Surveillance.

The [Wall Street Journal](#)   (4/3, Mahtani, Elinson) reports several technology companies have partnered with police departments across the US to develop the means to use artificial intelligence in conjunction with body cameras and video surveillance that would work to identify faces in real time. The Journal says the new software uses algorithms to alert an officer if a suspect has been found.

NATIONAL SECURITY

US Homeland Security Confirms Presence Of Apparent StingRays In Washington.

The [AP](#)   (4/3, Bajak) reports that for “the first time,” the federal government has acknowledged “the existence in Washington of what appear to be rogue devices that foreign spies and criminals could be using to track individual cellphones and intercept calls and messages.” [ABC News](#)   (4/3, Khan) reports that the US Department of Homeland Security “did not say how or where any devices might have been used, admitting only that ‘anomalous activity’ observed ‘appears to be

consistent' with the cellphone-site simulators and that it's 'not aware of any current DHS technical ability to detect' them." The [Washington Post](#) (4/3, Zapotosky) reports that the technology, "commonly known as a StingRay, has been deployed for years by federal and local law enforcement to pinpoint suspects' locations, though its unauthorized use in the Washington area raises fears that foreign adversaries might also be taking advantage of it to spy on U.S. citizens."

Attachments: 2018 C7 Schedule 2-20-18.pdf

Hello!

I just wanted to let you know about our Summer Special that we are running for our 2-day Corvette Owners School! If you attend a course between June 18th and September 15th you will get two nights' accommodations, dinner for two and an SD card to use in the PDR system! I have attached our current schedule for you to review. The cost of the 2-day Corvette Owners School in a Stingray is \$2500.00 or \$3695.00 in a Z06 or Grand Sport!

Corvette Owners School SUMMER SPECIAL!

All Corvette Owners Schools booked
for June 18th - September 15th will receive:

\$350 value!

2 night stay

1 dinner for 2

16GB SD card for your
Performance Data Recorder

Valid only for COOS purchases. Client must be booked
for June 18th - September 15th, 2018.

Call 800-391-6891 Today!

I look forward to speaking to you! Please feel free to contact me anytime!!

Thank you,

Darci Bolen

Subject: Re: Stingray Reference Materials Request

You are going to have a very hard time finding this as those who are knowledgeable and/or have access are required to sign a NDA. Your best bet is to contact the manufacturer directly and make a formal request.

Cheers,
Joshua

Hello!

I hope all is well! We have released a new 3-day level 1 date. August 10-12, 2018! We still have seats available in our July 5-7, 2018 as well. The cost of the 3-day level 1 in a Stingray is \$3895.00 or \$5695.00 in a Z06 or Grand Sport.

Please feel free to contact me with any questions or if either of these dates will work with your schedule.

Thank you,

Darci Bolen

Streamlining the Extraction of Drugs Process with Centrifugal Evaporation

A method for the extraction of drugs of abuse from urine samples pertaining to drug facilitated sexual assault cases has been developed, involving the use of solid phase extraction techniques prior to screening analysis. Under conventional testing methods, evaporation is achieved using a nitrogen blow down system. This white paper examines the benefits of using a centrifugal evaporation system for drugs of abuse urine sample testing. These benefits include increased sensitivity, reduced cross contamination, and a reduction of time needed to complete the evaporation process.

WV Supreme Court: Former Police Lab Director's Free Speech Not Violated

The West Virginia Supreme Court last week affirmed a 2016 ruling that the former director of the West Virginia State Police forensic laboratory was not acting as a private citizen when she talked to legislators about issues at the lab in 2014.

CRIMINAL INTELLIGENCE

Law Enforcement Shuts Down Counterfeit Credit Card Scheme.

The [Miami Herald](#) (11/27, Neal) reports, "A fake credit card factory in a Hialeah condominium capable of cranking out 1,000 pieces of fraudulent plastic per day operated as the foundation of a nationwide scam, according to federal prosecutors." Jaime Fernandez Del Pino, of Miami, "ran the counterfeit factory, according to the criminal complaint." After co-conspirators around the country "stole credit card numbers via websites or skimming devices at gas stations, federal prosecutors say, the stolen numbers would be fed to South Florida, where the fake credit cards would be made." The criminal complaint alleges Del Pino and Arjona Gomez "put the cards in play by giving them to various drones to use in the Miami area or around the nation." The joint investigation by the Secret Service and the Organized Crime Section of the Miami-Dade Police Economic Crimes Bureau "reached its climax earlier this month, around Nov. 13" when "15 search warrants were executed in Hialeah, Orlando, West Palm Beach and Colorado Springs." During the search of a location in Hialeah, law enforcement found a room "dedicated to the manufacture of counterfeit credit cards" that "contained thousands of counterfeit credit cards, over 50,000 blank credit card plastics, several credit card printers, a magnetic

strip encoder, modified gasoline pump skimmer devices, computers, and electronic media storage devices such as USB flash drives.”

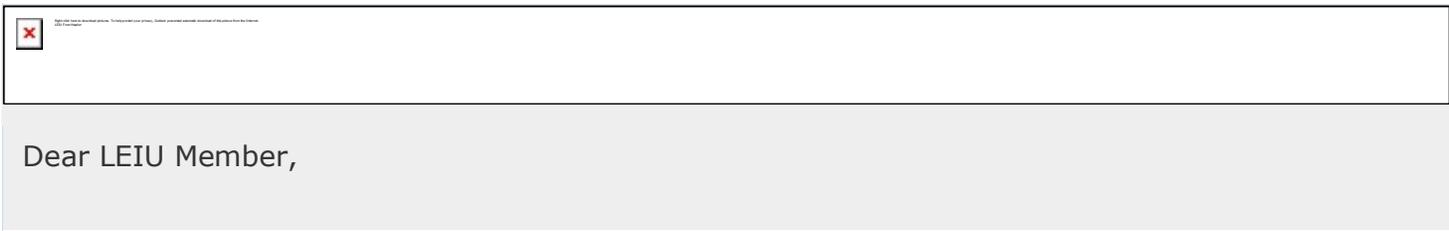

US Charges Three Chinese Nationals In Hacking Targeting Corporations.

The [AP](#) (11/27) reports that a US Federal indictment unsealed Monday in Pittsburgh accused three Chinese national of “operating a cybersecurity firm that used phishing scams and malware to steal data from international corporations.” The indictment “says the trio’s targets included Siemens AG, Moody’s Analytics in New York and Trimble Inc. in Sunnyvale, California.” The [Pittsburgh Post-Gazette](#) (11/27, Ove) reports that an investigation “by a team of agents led by the Pittsburgh FBI revealed that starting in 2011, the Chinese conspirators and others exploited vulnerabilities in computer systems or used malware to hack into corporate computers.”

[CNN](#) (11/27, Perez) reports that the three are “presumed to live in China and are either employed or associated with Guangzhou Bo Yu Information Technology Co., known as Boyusec, court documents say. US intelligence and private cybersecurity experts say Boyusec works as a contractor for the Chinese ministry of state security, that nation’s version of the National Security Agency.” However, the Administration “is stopping short of publicly confronting the Chinese government about its role in the breach.” [Reuters](#) (11/27, Keppler, Freifeld, Walcott) reports that Soo C. Song, the acting US Attorney for Western Pennsylvania, “said arrest warrants had been issued for the three men, but the case was not being prosecuted as state-sponsored hacking.” However, Reuters adds that the DOJ’s National Security Division “participated in the case, according to the indictment.”

Officer Credits Training For Being Able to Stop Ohio State Attacker.

The [AP](#) (11/27) reports Ohio State Officer Alan Horujko “credits his training for allowing him to quickly stop the man responsible for a car-and-knife attack at Ohio State University a year ago, according to a video released Monday.” Horujko said his training “kept my whole world from collapsing in on me” during the 14-minute video released by the University. Horujko “said he’d trained for a knife attack just a month earlier.”

With the recent events in Charlottesville, Virginia, it is important to review policies, procedures, and training efforts regarding the protections of citizens' First Amendment rights. To assist with your planning and response efforts the Criminal Intelligence Coordinating Council (CICC--the LEIU General Chairman is your representative on this Council) has developed several resources, including an awareness video, that provide guidance and recommendations for law enforcement agencies in understanding their roles and responsibilities related to First Amendment-protected events. These resources include:

- *Recommendations for First Amendment-Protected Events for State and Local Law Enforcement Agencies:* This guidance document is available at <https://it.ojp.gov/GIST/35/Recommendations-for-First-Amendment-Protected-Events-for-State-and-Local-Law-Enforcement-Agencies>.
- *The Role of State and Local Law Enforcement at First Amendment Events Reference Card:* This pocket-sized reference card for line officers is available at <https://it.ojp.gov/GIST/36/The-Role-of-State-and-Local-Law-Enforcement-at-First-Amendment-Events-Reference-Card>.
- *First Amendment Online Training:* Additional information on the training and links to both versions—the longer 9-minute and a shorter 4-minute line officer training—are available at https://www.ncirc.gov/Training_First_Amendment.aspx.

Please review these resources, and if you have any questions about the products, please contact CICC support staff at cicc@iir.com.

Thank you.

Bob Morehouse, Executive Director

LEGAL ISSUES

US Supreme Court To Hear Arguments In Cellphone Location Data Case.

[USA Today](#) (11/27, Wolf) reports the US Supreme Court will hear arguments on Wednesday over law enforcement's use of cellphone location data. Lower courts have "upheld the search of cell tower records under the theory that people who give information to third parties have no expectation of privacy." ACLU attorney Nathan Freed Wessler is quoted as saying, "This is the most important Fourth Amendment case we've seen in a generation." The case arose out of convictions for multiple armed robberies in Michigan and Ohio, where law enforcement used cellphone records to locate the suspect. USA Today says that in 2016, police "made some 125,000 requests for cellphone location data from Verizon and AT&T alone, often involving several suspects over periods of months." USA Today explains that the case is not focused on the contents of the suspect's phone, but on his whereabouts.

US Supreme Court Upholds State Bans On Assault Weapons, Open-Carry.

The [Washington Times](#) (11/27, Swoyer) reports that the US Supreme Court "declined to take up two Second Amendment cases on Monday, which challenged laws banning assault weapons and open-carry in Maryland and Florida." The court denied review for both cases without comment, keeping lower court rulings in place. In the Florida challenge, the state Supreme Court "upheld Florida's ban on open carry finding the Second Amendment doesn't guarantee a right to open carry." In the Maryland challenge, the 4th Circuit Court of Appeals "said the state's ban on semi-automatic rifles and large-capacity magazines was legal." Maryland Attorney General Brian Frosh "said the Supreme Court's decision not to review his state's 'common-sense law' confirms all states have the right to protect their citizens from 'weapons of war.'"

Under Trump, 29 Police Departments Join ICE Program.

[Reuters](#) (11/27, Rosenberg, Levinson) reports that dozens of police departments across the country "have been granted new powers, or are seeking them, to check the immigration status of people they arrest, aiding President Donald Trump's broad crackdown on people living in the country illegally." Since Trump took office in January, 29 departments have joined "a special program under which they are deputized to perform some tasks of immigration agents, doubling its size in 10 months," according to the Immigration and Customs Enforcement (ICE) agency. Documents obtained through a Freedom

of Information Act request show that the Administration “has also had contact with scores of additional jurisdictions about the program, and 38 of those told Reuters in interviews they have submitted applications for the program or are potentially interested in joining.”

TECHNOLOGY

Michigan Police To Test For Drug-Impaired Drivers As Part Of Pilot Program.

The [AP](#) (11/27) reports Michigan State Police officers are “conducting roadside saliva tests on suspected drug-impaired motorists as part of a program.” State Police Special First Lt. Jim Flegel “told the South Bend Tribune that the program uses a portable saliva-testing device that can tell officers if there are certain drugs in a driver’s system, such as marijuana or opiates.” The program will test the accuracy of the “Alere DDS2 device, which is meant to assess the presence of drugs in about five minutes.”

CRIMINAL INTELLIGENCE

Sessions Orders Review Of Federal Background Check System After Sutherland Springs Shooting.

[The Hill](#) (11/22, Byrnes) reported that in a memorandum to the FBI and ATF, US Attorney General Jeff Sessions on Wednesday ordered a review of the National Instant Criminal Background Check System (NICS) following the Sutherland Springs shooting and “directed officials to identify any agencies that are not ‘fully and accurately’ reporting” to the system. Sessions wrote, “The recent tragedy in Sutherland, Springs, Texas has revealed that the U.S. Air Force and other military branches may not be fully reporting relevant information to NICS.” The [New York Times](#) (11/22, Cochrane, Subscription Publication) reported Sessions also wrote that it was “alarming” that there were discrepancies in the records of the Defense Department and other federal agencies.

[USA Today](#) (11/22, Johnson, Toppo) reports that last year, “the FBI official overseeing NICS was forced to transfer personnel from construction projects and units that oversee the gathering of crime statistics to keep up with the surge of requests for background checks. The office processed a record 27.5 million background checks in 2016.” USA Today adds, “At the ATF’s National Tracing Center,

shipping containers and cardboard boxes brimming with unexamined paper purchase records have languished in hallways and in the center's parking lot in recent years, awaiting transfer to an electronic system."

According to [NBC News](#) (11/25), "As federal lawmakers seek to improve record reporting to the federal background check system...Pennsylvania offers a potential roadmap: The state has spent the last six years aggressively overhauling records reporting, hunting down reporting gaps...and modernizing the technology they use to keep guns out of the wrong hands." NBC says "police have upgraded the Pennsylvania Instant Check System's (PICS) technology and system processes and hunted down gaps in record reporting."

Over 200,000 Would-Be Gun Buyers Submitted Background Check Requests Friday. [USA Today](#) (11/25, Johnson) reports the FBI "was flooded Friday with more than 200,000 background check requests for gun purchases, setting a new single day record, the bureau reported Saturday." The "203,086 requests on Black Friday" are a new "single-day high," up from "185,713 last year and 185,345 in 2015. The two previous records also were recorded on Black Friday."

TSA Notifies Law Enforcement Of Terror Threats To Rail Lines.

[ABC News](#) (11/26) reports, "With terrorist groups renewing calls for would-be attackers to target American rail lines, at least one local law enforcement agency in the U.S. is using drones to help guard against such a threat." Southeastern Pennsylvania Transit Authority police chief Thomas Nestel "initiated the drone program after an article in the latest issue of al Qaeda's English-language publication gave step-by-step instructions for fashioning a 'homemade derail tool' and claimed that railroads are among America's 'easiest targets.'" The al Qaeda article "prompted the federal Transportation Security Administration to send a security notice to law enforcement across the nation, ABC News has learned."

Tampa Police Department Using Horse Patrols Amid Fears Of Serial Killer.

The [AP](#) (11/25) reports the Tampa Police Department is "using horse patrols in a neighborhood that's been plagued by homicides in recent weeks." Law enforcement in the Tampa area have been "searching for the person – or people – responsible for shooting and killing four in the Seminole Heights neighborhood since October 9," and the department "has received some 1,100 tips." The AP says the police began using horse patrols last Friday and planned to use them throughout the weekend.

Chicago Police, Community Leaders Suggest Social Media Use Contributing To Violent Crimes.

The [Wall Street Journal](#) (11/24, Mahtani, Subscription Publication) reports that community leaders and law enforcement officers in Chicago say social media use has contributed to violent crimes there by causing disputes to escalate. While no official data is being kept, police say that anecdotally they have seen an increase in conflicts that began on social media and then became violent crimes in real life. However, online social media exchanges have proved useful for prosecutors, as they provide additional evidence, such as Facebook photos, that can be used in court. Meanwhile, the Journal says its own count discovered at least 100 cases across the US where violent crimes were streamed on Facebook Live since its launch in 2016.

USMS Warns Of Phone Scam.

The [Williamson \(WV\) Daily News](#) (11/26) reports that the US Marshals Service "is warning the public of an ongoing nationwide phone scam from individuals claiming to be with the Marshal Service." The News adds that "according to the U.S. Marshals Service of the Southern District of West Virginia, scammers are calling individuals claiming to be U.S. Marshals, court officers or other law enforcement officials in an effort to collect prepaid debit or gift cards from victims." The News adds that "during the calls, scammers attempt to collect a fine in lieu of an arrest for failing to report for jury duty or other offenses," and "they tell victims they can avoid the arrest by purchasing the cards and reading the card number over the phone." US Marshal Pete Tobin of the Southern District of Ohio said "victims have lost thousands of dollars to these scammers, who use many tactics to sound credible, including using names of actual law enforcement officials, judges and courthouse addresses."

Hackathon Focuses On Improving Software To Combat Child Exploitation.

The [New York Times](#) (11/24, Mzezewa, Subscription Publication) reports on a hackathon held this month in New York City, where 100 engineers from around the world gathered "to work with Thorn, a nonprofit that uses technology to fight adolescent and child sexual exploitation." The hackathon project involved "how to help authorities identify missing or exploited children that appear in escort ads" by creating a program that could quickly filter through thousands of images. Thorn says its original search tool, Spotlight, which the hackathon volunteers were working to improve, is currently "used by more than 1,200 law enforcement agencies across the country and Canada."

Dear LEIU Member,

With the recent events in Charlottesville, Virginia, it is important to review policies, procedures, and training efforts regarding the protections of citizens' First Amendment rights. To assist with your planning and response efforts the Criminal Intelligence Coordinating Council (CICC--the LEIU General Chairman is your representative on this Council) has developed several resources, including an awareness video, that provide guidance and recommendations for law enforcement agencies in understanding their roles and responsibilities related to First Amendment-protected events. These resources include:

- *Recommendations for First Amendment-Protected Events for State and Local Law Enforcement Agencies:* This guidance document is available at <https://it.ojp.gov/GIST/35/Recommendations-for-First-Amendment-Protected-Events-for-State-and-Local-Law-Enforcement-Agencies>.

LEGAL ISSUES

Time Running Short For Lawmakers To Renew NSA Surveillance Powers.

[The Hill](#) (11/26, Williams) reports that as lawmakers return to Washington, they are facing “a rapidly-shrinking timeline to reform and renew an authority the intelligence community says is critical to identifying and disrupting terrorist plots.” Section 702, which is “part of foreign surveillance measures passed in 2008,” allows the NSA “to collect the texts and emails of foreigners abroad without an individualized warrant – even when the subjects communicate with Americans in the US.” It is “set to expire at the end of the year.” In the House, the Freedom Caucus “has banded together with privacy-minded Democrats to advocate for tighter restrictions on how government investigators can use data gathered under the program.” As the Dec. 31 deadline approaches, “even those tracking the debate closely aren’t sure what reforms, if any, will see the floor in either chamber.”

TECHNOLOGY

Privacy Groups Concerned About Police StingRay Use.

The [AP](#) (11/25) reports, “New York City, Los Angeles, Chicago and Las Vegas are among scores of police departments across the country quietly using a highly secretive technology developed for the military that can track the whereabouts of suspects by using the signals constantly emitted by their cellphones.” Privacy groups are “increasingly raising objections to the suitcase-sized devices known as StingRays or cell site simulators that can sweep up cellphone data from an entire neighborhood by mimicking cell towers.” The groups says part of the problem is the devices “can also collect data from anyone within a small radius of the person being tracked,” and law enforcement “goes to great lengths to conceal usage, in some cases, offering plea deals rather than divulging details on the StingRay.” The AP adds, “At least 72 state and local law enforcement departments in 24 states plus 13 federal agencies use the devices, but further details are hard to come by because the departments that use them must take the unusual step of signing nondisclosure agreements overseen by the FBI.”

**The District of Columbia Court of Appeals
reverses a Defendant's convictions after finding
that law enforcement's use of a cell-site
simulator (i.e., a "stingray"), without first
obtaining a warrant, violated the Defendant's
Constitutional rights**

[Jim Chapman](#), Attorney, Public Agency Training Council

In *Jones v. United States*, ___ A.3d ___, 2017 WL 4211499 (D.C. Sept. 21, 2017), the District of Columbia Court of Appeals was asked to decide whether law enforcement's use of a cell-site simulator (a/k/a a "stingray") without first obtaining a warrant violated Defendant Prince Jones' Constitutional rights. After consideration, the DC Court of Appeals joined a line of other courts in holding that law enforcement must obtain a warrant before using a stingray and that any evidence obtained by the use of the cell-site simulator without the prior issuance of a warrant permitting the intercept must be excluded. The relevant facts are as follows.

A jury found Jones guilty of various offenses arising out of two alleged incidents of sexual assault and robbery at knifepoint. Jones appealed his convictions on the ground that much of the evidence offered against him at trial was the direct or indirect product of a warrantless, unlawful search involving a cell-site simulator or "stingray." Jones presented this Fourth Amendment claim to the trial court in a pretrial motion to suppress, but the trial court denied it under the inevitable-discovery doctrine.

At the suppression hearing, Detective Rachel Pulliam, a member of the Sexual Assault Unit of the Metropolitan Police Department (MPD), testified that she investigated a sexual assault that occurred around 12:30 a.m. on October 9, 2013, and another that occurred around 1:30 a.m. on October 11. The two sexual-assault complainants were women who had advertised escort services on the classified-advertising website Backpage. Detective Pulliam testified that, on each occasion, the perpetrator contacted the complainant by telephone in response to an advertisement and arranged to pay the complainant for sexual services. According to Detective Pulliam, when each complainant arrived at the arranged meeting place, the perpetrator "forced [her] to perform oral sex on [him] at knifepoint" and robbed her of her cellphone and other property. Detective Pulliam testified that on one of the two occasions, the perpetrator also robbed the complainant's cousin who had been waiting in a car outside the meeting location.

Detective Pulliam testified that, in the morning following the second incident, she and her colleagues obtained telephone records for the sexual-assault complainants. The telephone records revealed a possible suspect. Both complainants had received calls from the same number during the relevant time periods. Accordingly, Detective Pulliam sought the assistance of the MPD's Technical Services Unit (TSU) to track the suspect's and the complainants' phones.

Sergeant Todd Perkins, a supervisor in the TSU, testified about his office's efforts to track the phones that morning. He testified that he and his team sought "subscriber information" for the suspect's number from the provider associated with that number but were unsuccessful because the cellphone "was just a generic prepaid" with "no subscriber information whatsoever." The TSU also sought and obtained

information about the locations of the suspect's and complainants' cellphones from the relevant telecommunication providers. According to Sergeant Perkins, the TSU received updated location information from the providers every fifteen minutes. The information came in the form of geographic coordinates-latitude and longitude-with a "degree of uncertainty" specified in meters.

Sergeant Perkins further testified that the real-time location information that they had received that morning had a high degree of uncertainty ("within several hundred meters") indicating that the phones' GPS capabilities were inactive. He explained that "if it [had been] true GPS," his team would have been "getting two meter, three meter, five meter hits." Despite the lack of precision in the location information, Sergeant Perkins and his team were able to tell that one of the complainants' phones and the suspect's phone were traveling in the same general direction as if they were together. The location information suggested that the two phones stopped in the general vicinity of the Minnesota Avenue Metro Station.

Based on this information, Sergeant Perkins and other TSU officers took a truck equipped with a cell-site simulator to the area of the Minnesota Avenue Metro station and used the device to track the suspect. Sergeant Perkins could not remember whether he and his team used the cell-site simulator to track the suspect's phone or the complainant's phone that they believed was traveling with it, but whichever signal they were tracking led them, at around 11:30 a.m., to a parked Saturn. Inside the Saturn were Jones and Jones' girlfriend, Nora Williams. The police arrested Jones and recovered evidence from Jones' person and his car and from Ms. Williams, including a folding knife and the complainants' and the suspect's cellphones. Jones also made an incriminating statement to the police. Williams later testified against Jones at trial.

Sergeant Perkins testified at the suppression hearing about how the cell-site simulator that they used worked based on the information that's "publicly available." He explained that his team engages the cell-site simulator by programming into it a unique identifier associated with the target phone. The simulator then begins listening for the target phone that, as part of its normal operation, is "constantly transmitting to and receiving from a tower." The officers operating the cell-site simulator drive around and as soon as the simulator comes across the target phone's signal, it grabs it, and it holds on to it. Once the cell-site simulator "grabs" the target phone, the simulator begins reporting general location information and signal strength that can be used to locate the target phone's exact location. Sergeant Perkins testified that, once the cell-site simulator "grabs" the target phone, the target phone is prevented from communicating with an actual tower.

Further information about the cell-site simulator was provided at the suppression hearing by Ben Levitan, an expert on "cellular telephone networks and systems" called by the defense. According to Mr. Levitan, cell phones are "dumb devices" that "generally connect themselves to the strongest cell tower signal that they detect." Mr. Levitan explained that a cell-site simulator "acts as a portable cell tower," which, when turned on or brought into an area, may appear to be a stronger signal and cause a phone to break its connection with the cell phone network and re-attach itself to the newly found simulator. Mr. Levitan testified that, when the cellphone "attaches" itself to the cell-site simulator, it "identifies itself by phone number and various codes." Although Mr. Levitan had never used the type of cell-site simulator utilized by law enforcement, he testified that he had used similar devices working within the telecommunications industry and that the devices allow the user to determine the target phone's direction and distance relative to the simulator device. Moreover, because the cell-site simulator is not a true cell tower connected with

the cellular network, any cellphone connected to the cell-site simulator will not be able to communicate with the network. In other words, "your call doesn't go through, period. Nothing happens."

At the conclusion of the suppression hearing, the trial court did not decide whether the use of a cell-site simulator was a search within the meaning of the Fourth Amendment or whether the government was required to obtain a warrant to use the cell-site simulator. Instead, the trial court focused on the issues of standing, exigent circumstances, and inevitable discovery. Ultimately, the trial court agreed with the government's argument that, regardless of whether there had been a Fourth Amendment violation, the inevitable-discovery doctrine rendered the exclusionary rule inapplicable. The trial court found that "even if [the police] were using [Mr. Jones's] phone on the cell site simulator, . . . had they switched over . . . to use the [complainant's] number instead, . . . they would have eventually gotten to the exact same place because the phones were together [a]nd it's the same technology." The trial court agreed with the government's assertion that "there [was] a separate lawful means" by which the government "would have gotten to the exact same place." Accordingly, the trial court denied Jones' motion to suppress and allowed the government to use the evidence at trial that law enforcement had obtained by using the stingray based upon the inevitable discovery doctrine.

On appeal, Jones argued that the government's use of a cell-site simulator violated his Fourth Amendment rights and that the trial court erred in failing to grant his motion to suppress. The District of Columbia Court of Appeals agreed with Jones, and the Court of Appeals became the fourth court in the nation to hold that police must first obtain a warrant before using a cell-site simulator and that failure to do so results in the suppression of any evidence obtained through the use of the stingray.

Specifically, the Court of Appeals held that the use of a cell-site simulator to locate Jones' cell phone invaded his reasonable expectation of privacy, and therefore, it constituted a search for purposes of the Fourth Amendment. Because a warrantless search occurred via the use of the stingray, the evidence obtained against Jones was not admissible. The Court of Appeals also disagreed with the trial court's conclusion that the evidence was admissible under the inevitable discovery doctrine. According to the Court of Appeals, the inevitable discovery doctrine was inapplicable because a lawful search of Jones' cell phone never occurred, thereby making the seizure unlawful and not the result of any lawful, inevitable discovery.

Furthermore, the Court of Appeals held that the evidence that the police obtained by use of the stingray was not subject to the good-faith exception to the exclusionary rule. The Court of Appeals made this determination because the United States Supreme Court has never applied the good-faith exception in any case remotely close to this one and because, even assuming that the police believed that the warrantless use of the cell-site simulator was lawful, the police could not have reasonably relied on that belief given the secrecy surrounding the device and the lack of law on the issue.

Finally, the Court of Appeals concluded that the trial court erred and that the trial court should have found that the incriminating statement that Jones made after the police found him by using the cell-site simulator should have been excluded as being fruit of the poisonous tree. The Court of Appeals reached the same conclusion regarding the evidence that the police obtained from a search of Jones' girlfriend's purse; it should have been excluded as being fruit of the poisonous tree.

In short, a trend has developed in the law whereby courts are holding that law enforcement's use of a cell-site simulator or stingray to find a suspect's location constitutes a search for purposes of the Fourth Amendment. Because the use of the device constitutes a search for purposes of the Fourth Amendment, law enforcement must first obtain a warrant before using the device. Finally, courts-including the Court of Appeals in this case-have concluded that no exception to the warrant requirement exists in these situations. Therefore, courts have excluded any evidence from use at trial that police have discovered by using a stingray without first obtaining a warrant to use a cell-site simulator.

Note: Court holdings can vary significantly between jurisdictions. As such, it is advisable to seek the advice of a local prosecutor or legal adviser regarding questions on specific cases. This article is not intended to constitute legal advice on a specific case.

In *Jones v. United States*, ___ A.3d ___, 2017 WL 4211499 (D.C. Sept. 21, 2017), the District of Columbia Court of Appeals was asked to decide whether law enforcement's use of a cell-site simulator (a/k/a a "stingray") without first obtaining a warrant violated Defendant Prince Jones' Constitutional rights. After consideration, the DC Court of Appeals joined a line of other courts in holding that law enforcement must obtain a warrant before using a stingray and that any evidence obtained by the use of the cell-site simulator without the prior issuance of a warrant permitting the intercept must be excluded. The relevant facts are as follows.

A jury found Jones guilty of various offenses arising out of two alleged incidents of sexual assault and robbery at knifepoint. Jones appealed his convictions on the ground that much of the evidence offered against him at trial was the direct or indirect product of a warrantless, unlawful search involving a cell-site simulator or "stingray." Jones presented this Fourth Amendment claim to the trial court in a pretrial motion to suppress, but the trial court denied it under the inevitable-discovery doctrine.

At the suppression hearing, Detective Rachel Pulliam, a member of the Sexual Assault Unit of the Metropolitan Police Department (MPD), testified that she investigated a sexual assault that occurred around 12:30 a.m. on October 9, 2013, and another that occurred around 1:30 a.m. on October 11. The two sexual-assault complainants were women who had advertised escort services on the classified-advertising website Backpage. Detective Pulliam testified that, on each occasion, the perpetrator contacted the complainant by telephone in response to an advertisement and arranged to pay the complainant for sexual services. According to Detective Pulliam, when each complainant arrived at the arranged meeting place, the perpetrator "forced [her] to perform oral sex on [him] at knifepoint" and robbed her of her cellphone and other property. Detective Pulliam testified that on one of the two occasions, the perpetrator also robbed the complainant's cousin who had been waiting in a car outside the meeting location.

Detective Pulliam testified that, in the morning following the second incident, she and her colleagues obtained telephone records for the sexual-assault complainants. The telephone records revealed a possible suspect. Both complainants had received calls from the same number during the relevant time periods. Accordingly, Detective Pulliam sought the assistance of the MPD's Technical Services Unit (TSU) to track the suspect's and the complainants' phones.

Sergeant Todd Perkins, a supervisor in the TSU, testified about his office's efforts to track the phones that morning. He testified that he and his team sought "subscriber information" for the suspect's number from the provider associated with that number but were unsuccessful because the cellphone "was just a generic prepaid" with "no subscriber information whatsoever." The TSU also sought and obtained

information about the locations of the suspect's and complainants' cellphones from the relevant telecommunication providers. According to Sergeant Perkins, the TSU received updated location information from the providers every fifteen minutes. The information came in the form of geographic coordinates-latitude and longitude-with a "degree of uncertainty" specified in meters.

Sergeant Perkins further testified that the real-time location information that they had received that morning had a high degree of uncertainty ("within several hundred meters") indicating that the phones' GPS capabilities were inactive. He explained that "if it [had been] true GPS," his team would have been "getting two meter, three meter, five meter hits." Despite the lack of precision in the location information, Sergeant Perkins and his team were able to tell that one of the complainants' phones and the suspect's phone were traveling in the same general direction as if they were together. The location information suggested that the two phones stopped in the general vicinity of the Minnesota Avenue Metro Station.

Based on this information, Sergeant Perkins and other TSU officers took a truck equipped with a cell-site simulator to the area of the Minnesota Avenue Metro station and used the device to track the suspect. Sergeant Perkins could not remember whether he and his team used the cell-site simulator to track the suspect's phone or the complainant's phone that they believed was traveling with it, but whichever signal they were tracking led them, at around 11:30 a.m., to a parked Saturn. Inside the Saturn were Jones and Jones' girlfriend, Nora Williams. The police arrested Jones and recovered evidence from Jones' person and his car and from Ms. Williams, including a folding knife and the complainants' and the suspect's cellphones. Jones also made an incriminating statement to the police. Williams later testified against Jones at trial.

Sergeant Perkins testified at the suppression hearing about how the cell-site simulator that they used worked based on the information that's "publicly available." He explained that his team engages the cell-site simulator by programming into it a unique identifier associated with the target phone. The simulator then begins listening for the target phone that, as part of its normal operation, is "constantly transmitting to and receiving from a tower." The officers operating the cell-site simulator drive around and as soon as the simulator comes across the target phone's signal, it grabs it, and it holds on to it. Once the cell-site simulator "grabs" the target phone, the simulator begins reporting general location information and signal strength that can be used to locate the target phone's exact location. Sergeant Perkins testified that, once the cell-site simulator "grabs" the target phone, the target phone is prevented from communicating with an actual tower.

Further information about the cell-site simulator was provided at the suppression hearing by Ben Levitan, an expert on "cellular telephone networks and systems" called by the defense. According to Mr. Levitan, cell phones are "dumb devices" that "generally connect themselves to the strongest cell tower signal that they detect." Mr. Levitan explained that a cell-site simulator "acts as a portable cell tower," which, when turned on or brought into an area, may appear to be a stronger signal and cause a phone to break its connection with the cell phone network and re-attach itself to the newly found simulator. Mr. Levitan testified that, when the cellphone "attaches" itself to the cell-site simulator, it "identifies itself by phone number and various codes." Although Mr. Levitan had never used the type of cell-site simulator utilized by law enforcement, he testified that he had used similar devices working within the telecommunications industry and that the devices allow the user to determine the target phone's direction and distance relative to the simulator device. Moreover, because the cell-site simulator is not a true cell tower connected with

the cellular network, any cellphone connected to the cell-site simulator will not be able to communicate with the network. In other words, "your call doesn't go through, period. Nothing happens."

At the conclusion of the suppression hearing, the trial court did not decide whether the use of a cell-site simulator was a search within the meaning of the Fourth Amendment or whether the government was required to obtain a warrant to use the cell-site simulator. Instead, the trial court focused on the issues of standing, exigent circumstances, and inevitable discovery. Ultimately, the trial court agreed with the government's argument that, regardless of whether there had been a Fourth Amendment violation, the inevitable-discovery doctrine rendered the exclusionary rule inapplicable. The trial court found that "even if [the police] were using [Mr. Jones's] phone on the cell site simulator, . . . had they switched over . . . to use the [complainant's] number instead, . . . they would have eventually gotten to the exact same place because the phones were together [a]nd it's the same technology." The trial court agreed with the government's assertion that "there [was] a separate lawful means" by which the government "would have gotten to the exact same place." Accordingly, the trial court denied Jones' motion to suppress and allowed the government to use the evidence at trial that law enforcement had obtained by using the stingray based upon the inevitable discovery doctrine.

On appeal, Jones argued that the government's use of a cell-site simulator violated his Fourth Amendment rights and that the trial court erred in failing to grant his motion to suppress. The District of Columbia Court of Appeals agreed with Jones, and the Court of Appeals became the fourth court in the nation to hold that police must first obtain a warrant before using a cell-site simulator and that failure to do so results in the suppression of any evidence obtained through the use of the stingray.

Specifically, the Court of Appeals held that the use of a cell-site simulator to locate Jones' cell phone invaded his reasonable expectation of privacy, and therefore, it constituted a search for purposes of the Fourth Amendment. Because a warrantless search occurred via the use of the stingray, the evidence obtained against Jones was not admissible. The Court of Appeals also disagreed with the trial court's conclusion that the evidence was admissible under the inevitable discovery doctrine. According to the Court of Appeals, the inevitable discovery doctrine was inapplicable because a lawful search of Jones' cell phone never occurred, thereby making the seizure unlawful and not the result of any lawful, inevitable discovery.

Furthermore, the Court of Appeals held that the evidence that the police obtained by use of the stingray was not subject to the good-faith exception to the exclusionary rule. Detective Pulliam testified that, on each occasion, the perpetrator contacted the complainant by telephone in response to an advertisement and arranged to pay the complainant for sexual services. According to Detective Pulliam, when each complainant arrived at the arranged meeting place, the perpetrator "forced [her] to perform oral sex on [him] at knifepoint" and robbed her of her cellphone and other property. Detective Pulliam testified that on one of the two occasions, the perpetrator also robbed the complainant's cousin who had been waiting in a car outside the meeting location.

Detective Pulliam testified that, in the morning following the second incident, she and her colleagues obtained telephone records for the sexual-assault complainants. The telephone records revealed a possible suspect. Both complainants had received calls from the same number during the relevant time periods. Accordingly, Detective Pulliam sought the assistance of the MPD's Technical Services Unit (TSU) to track the suspect's and the complainants' phones.

Sergeant Todd Perkins, a supervisor in the TSU, testified about his office's efforts to track the phones that morning. He testified that he and his team sought "subscriber information" for the suspect's number from the provider associated with that number but were unsuccessful because the cellphone "was just a generic prepaid" with "no subscriber information whatsoever." The TSU also sought and obtained

information about the locations of the suspect's and complainants' cellphones from the relevant telecommunication providers. According to Sergeant Perkins, the TSU received updated location information from the providers every fifteen minutes. The information came in the form of geographic coordinates-latitude and longitude-with a "degree of uncertainty" specified in meters.

Sergeant Perkins further testified that the real-time location information that they had received that morning had a high degree of uncertainty ("within several hundred meters") indicating that the phones' GPS capabilities were inactive. He explained that "if it [had been] true GPS," his team would have been "getting two meter, three meter, five meter hits." Despite the lack of precision in the location information, Sergeant Perkins and his team were able to tell that one of the complainants' phones and the suspect's phone were traveling in the same general direction as if they were together. The location information suggested that the two phones stopped in the general vicinity of the Minnesota Avenue Metro Station.

Based on this information, Sergeant Perkins and other TSU officers took a truck equipped with a cell-site simulator to the area of the Minnesota Avenue Metro station and used the device to track the suspect. Sergeant Perkins could not remember whether he and his team used the cell-site simulator to track the suspect's phone or the complainant's phone that they believed was traveling with it, but whichever signal they were tracking led them, at around 11:30 a.m., to a parked Saturn. Inside the Saturn were Jones and Jones' girlfriend, Nora Williams. The police arrested Jones and recovered evidence from Jones' person and his car and from Ms. Williams, including a folding knife and the complainants' and the suspect's cellphones. Jones also made an incriminating statement to the police. Williams later testified against Jones at trial.

Sergeant Perkins testified at the suppression hearing about how the cell-site simulator that they used worked based on the information that's "publicly available." He explained that his team engages the cell-site simulator by programming into it a unique identifier associated with the target phone. The simulator then begins listening for the target phone that, as part of its normal operation, is "constantly transmitting to and receiving from a tower." The officers operating the cell-site simulator drive around and as soon as the simulator comes across the target phone's signal, it grabs it, and it holds on to it. Once the cell-site simulator "grabs" the target phone, the simulator begins reporting general location information and signal strength that can be used to locate the target phone's exact location. Sergeant Perkins testified that, once the cell-site simulator "grabs" the target phone, the target phone is prevented from communicating with an actual tower.

Further information about the cell-site simulator was provided at the suppression hearing by Ben Levitan, an expert on "cellular telephone networks and systems" called by the defense. According to Mr. Levitan, cell phones are "dumb devices" that "generally connect themselves to the strongest cell tower signal that they detect." Mr. Levitan explained that a cell-site simulator "acts as a portable cell tower," which, when turned on or brought into an area, may appear to be a stronger signal and cause a phone to break its connection with the cell phone network and re-attach itself to the newly found simulator. Mr. Levitan testified that, when the cellphone "attaches" itself to the cell-site simulator, it "identifies itself by phone number and various codes." Although Mr. Levitan had never used the type of cell-site simulator utilized by law enforcement, he testified that he had used similar devices working within the telecommunications industry and that the devices allow the user to determine the target phone's direction and distance relative to the simulator device. Moreover, because the cell-site simulator is not a true cell tower connected with

the cellular network, any cellphone connected to the cell-site simulator will not be able to communicate with the network. In other words, "your call doesn't go through, period. Nothing happens."

At the conclusion of the suppression hearing, the trial court did not decide whether the use of a cell-site simulator was a search within the meaning of the Fourth Amendment or whether the government was required to obtain a warrant to use the cell-site simulator. Instead, the trial court focused on the issues of standing, exigent circumstances, and inevitable discovery. Ultimately, the trial court agreed with the government's argument that, regardless of whether there had been a Fourth Amendment violation, the inevitable-discovery doctrine rendered the exclusionary rule inapplicable. The trial court found that "even if [the police] were using [Mr. Jones's] phone on the cell site simulator, . . . had they switched over . . . to use the [complainant's] number instead, . . . they would have eventually gotten to the exact same place because the phones were together [a]nd it's the same technology." The trial court agreed with the government's assertion that "there [was] a separate lawful means" by which the government "would have gotten to the exact same place." Accordingly, the trial court denied Jones' motion to suppress and allowed the government to use the evidence at trial that law enforcement had obtained by using the stingray based upon the inevitable discovery doctrine.

On appeal, Jones argued that the government's use of a cell-site simulator violated his Fourth Amendment rights and that the trial court erred in failing to grant his motion to suppress. The District of Columbia Court of Appeals agreed with Jones, and the Court of Appeals became the fourth court in the nation to hold that police must first obtain a warrant before using a cell-site simulator and that failure to do so results in the suppression of any evidence obtained through the use of the stingray.

Specifically, the Court of Appeals held that the use of a cell-site simulator to locate Jones' cell phone invaded his reasonable expectation of privacy, and therefore, it constituted a search for purposes of the Fourth Amendment. Because a warrantless search occurred via the use of the stingray, the evidence obtained against Jones was not admissible. The Court of Appeals also disagreed with the trial court's conclusion that the evidence was admissible under the inevitable discovery doctrine. According to the Court of Appeals, the inevitable discovery doctrine was inapplicable because a lawful search of Jones' cell phone never occurred, thereby making the seizure unlawful and not the result of any lawful, inevitable discovery.

Furthermore, the Court of Appeals held that the evidence that the police obtained by use of the stingray was not subject to the good-faith exception to the exclusionary rule. The Court of Appeals made this determination because the United States Supreme Court has never applied the good-faith exception in any case remotely close to this one and because, even assuming that the police believed that the warrantless use of the cell-site simulator was lawful, the police could not have reasonably relied on that belief given the secrecy surrounding the device and the lack of law on the issue.

Finally, the Court of Appeals concluded that the trial court erred and that the trial court should have found that the incriminating statement that Jones made after the police found him by using the cell-site simulator should have been excluded as being fruit of the poisonous tree. The Court of Appeals reached the same conclusion regarding the evidence that the police obtained from a search of Jones' girlfriend's purse; it should have been excluded as being fruit of the poisonous tree.

In short, a trend has developed in the law whereby courts are holding that law enforcement's use of a cell-site simulator or stingray to find a suspect's location constitutes a search for purposes of the Fourth Amendment. Because the use of the device constitutes a search for purposes of the Fourth Amendment, law enforcement must first obtain a warrant before using the device. Finally, courts-including the Court of Appeals in this case-have concluded that no exception to the warrant requirement exists in these situations. Therefore, courts have excluded any evidence from use at trial that police have discovered by using a stingray without first obtaining a warrant to use a cell-site simulator.

Note: Court holdings can vary significantly between jurisdictions. As such, it is advisable to seek the advice of a local prosecutor or legal adviser regarding questions on specific cases. This article is not intended to constitute legal advice on a specific case.

In *Jones v. United States*, ___ A.3d ___, 2017 WL 4211499 (D.C. Sept. 21, 2017), the District of Columbia Court of Appeals was asked to decide whether law enforcement's use of a cell-site simulator (a/k/a a "stingray") without first obtaining a warrant violated Defendant Prince Jones' Constitutional rights. After consideration, the DC Court of Appeals joined a line of other courts in holding that law enforcement must obtain a warrant before using a stingray and that any evidence obtained by the use of the cell-site simulator without the prior issuance of a warrant permitting the intercept must be excluded. The relevant facts are as follows.

A jury found Jones guilty of various offenses arising out of two alleged incidents of sexual assault and robbery at knifepoint. Jones appealed his convictions on the ground that much of the evidence offered against him at trial was the direct or indirect product of a warrantless, unlawful search involving a cell-site simulator or "stingray." Jones presented this Fourth Amendment claim to the trial court in a pretrial motion to suppress, but the trial court denied it under the inevitable-discovery doctrine.

At the suppression hearing, Detective Rachel Pulliam, a member of the Sexual Assault Unit of the Metropolitan Police Department (MPD), testified that she investigated a sexual assault that occurred around 12:30 a.m. on October 9, 2013, and another that occurred around 1:30 a.m. on October 11. The two sexual-assault complainants were women who had advertised escort services on the classified-advertising website Backpage. Detective Pulliam testified that, on each occasion, the perpetrator contacted the complainant by telephone in response to an advertisement and arranged to pay the complainant for sexual services. According to Detective Pulliam, when each complainant arrived at the arranged meeting place, the perpetrator "forced [her] to perform oral sex on [him] at knifepoint" and robbed her of her cellphone and other property. Detective Pulliam testified that on one of the two occasions, the perpetrator also robbed the complainant's cousin who had been waiting in a car outside the meeting location.

Detective Pulliam testified that, in the morning following the second incident, she and her colleagues obtained telephone records for the sexual-assault complainants. The telephone records revealed a possible suspect. Both complainants had received calls from the same number during the relevant time periods. Accordingly, Detective Pulliam sought the assistance of the MPD's Technical Services Unit (TSU) to track the suspect's and the complainants' phones.

Sergeant Todd Perkins, a supervisor in the TSU, testified about his office's efforts to track the phones that morning. He testified that he and his team sought "subscriber information" for the suspect's number from the provider associated with that number but were unsuccessful because the cellphone "was just a generic prepaid" with "no subscriber information whatsoever." The TSU also sought and obtained

information about the locations of the suspect's and complainants' cellphones from the relevant telecommunication providers. According to Sergeant Perkins, the TSU received updated location information from the providers every fifteen minutes. The information came in the form of geographic coordinates-latitude and longitude-with a "degree of uncertainty" specified in meters.

Sergeant Perkins further testified that the real-time location information that they had received that morning had a high degree of uncertainty ("within several hundred meters") indicating that the phones' GPS capabilities were inactive. He explained that "if it [had been] true GPS," his team would have been "getting two meter, three meter, five meter hits." Despite the lack of precision in the location information, Sergeant Perkins and his team were able to tell that one of the complainants' phones and the suspect's phone were traveling in the same general direction as if they were together. The location information suggested that the two phones stopped in the general vicinity of the Minnesota Avenue Metro Station.

Based on this information, Sergeant Perkins and other TSU officers took a truck equipped with a cell-site simulator to the area of the Minnesota Avenue Metro station and used the device to track the suspect. Sergeant Perkins could not remember whether he and his team used the cell-site simulator to track the suspect's phone or the complainant's phone that they believed was traveling with it, but whichever signal they were tracking led them, at around 11:30 a.m., to a parked Saturn. Inside the Saturn were Jones and Jones' girlfriend, Nora Williams. The police arrested Jones and recovered evidence from Jones' person and his car and from Ms. Williams, including a folding knife and the complainants' and the suspect's cellphones. Jones also made an incriminating statement to the police. Williams later testified against Jones at trial.

Sergeant Perkins testified at the suppression hearing about how the cell-site simulator that they used worked based on the information that's "publicly available." He explained that his team engages the cell-site simulator by programming into it a unique identifier associated with the target phone. The simulator then begins listening for the target phone that, as part of its normal operation, is "constantly transmitting to and receiving from a tower." The officers operating the cell-site simulator drive around and as soon as the simulator comes across the target phone's signal, it grabs it, and it holds on to it. Once the cell-site simulator "grabs" the target phone, the simulator begins reporting general location information and signal strength that can be used to locate the target phone's exact location. Sergeant Perkins testified that, once the cell-site simulator "grabs" the target phone, the target phone is prevented from communicating with an actual tower.

Further information about the cell-site simulator was provided at the suppression hearing by Ben Levitan, an expert on "cellular telephone networks and systems" called by the defense. According to Mr. Levitan, cell phones are "dumb devices" that "generally connect themselves to the strongest cell tower signal that they detect." Mr. Levitan explained that a cell-site simulator "acts as a portable cell tower," which, when turned on or brought into an area, may appear to be a stronger signal and cause a phone to break its connection with the cell phone network and re-attach itself to the newly found simulator. Mr. Levitan testified that, when the cellphone "attaches" itself to the cell-site simulator, it "identifies itself by phone number and various codes." Although Mr. Levitan had never used the type of cell-site simulator utilized by law enforcement, he testified that he had used similar devices working within the telecommunications industry and that the devices allow the user to determine the target phone's direction and distance relative to the simulator device. Moreover, because the cell-site simulator is not a true cell tower connected with

the cellular network, any cellphone connected to the cell-site simulator will not be able to communicate with the network. In other words, "your call doesn't go through, period. Nothing happens."

At the conclusion of the suppression hearing, the trial court did not decide whether the use of a cell-site simulator was a search within the meaning of the Fourth Amendment or whether the government was required to obtain a warrant to use the cell-site simulator. Instead, the trial court focused on the issues of standing, exigent circumstances, and inevitable discovery. In *Jones v. United States*, ___ A.3d ___, 2017 WL 4211499 (D.C. Sept. 21, 2017), the District of Columbia Court of Appeals was asked to decide whether law enforcement's use of a cell-site simulator (a/k/a a "stingray") without first obtaining a warrant violated Defendant Prince Jones' Constitutional rights. After consideration, the DC Court of Appeals joined a line of other courts in holding that law enforcement must obtain a warrant before using a stingray and that any evidence obtained by the use of the cell-site simulator without the prior issuance of a warrant permitting the intercept must be excluded. The relevant facts are as follows.

A jury found Jones guilty of various offenses arising out of two alleged incidents of sexual assault and robbery at knifepoint. Jones appealed his convictions on the ground that much of the evidence offered against him at trial was the direct or indirect product of a warrantless, unlawful search involving a cell-site simulator or "stingray." Jones presented this Fourth Amendment claim to the trial court in a pretrial motion to suppress, but the trial court denied it under the inevitable-discovery doctrine.

At the suppression hearing, Detective Rachel Pulliam, a member of the Sexual Assault Unit of the Metropolitan Police Department (MPD), testified that she investigated a sexual assault that occurred around 12:30 a.m. on October 9, 2013, and another that occurred around 1:30 a.m. on October 11. The two sexual-assault complainants were women who had advertised escort services on the classified-advertising website Backpage. Detective Pulliam testified that, on each occasion, the perpetrator contacted the complainant by telephone in response to an advertisement and arranged to pay the complainant for sexual services. According to Detective Pulliam, when each complainant arrived at the arranged meeting place, the perpetrator "forced [her] to perform oral sex on [him] at knifepoint" and robbed her of her cellphone and other property. Detective Pulliam testified that on one of the two occasions, the perpetrator also robbed the complainant's cousin who had been waiting in a car outside the meeting location.

Detective Pulliam testified that, in the morning following the second incident, she and her colleagues obtained telephone records for the sexual-assault complainants. The telephone records revealed a possible suspect. Both complainants had received calls from the same number during the relevant time periods. Accordingly, Detective Pulliam sought the assistance of the MPD's Technical Services Unit (TSU) to track the suspect's and the complainants' phones.

Sergeant Todd Perkins, a supervisor in the TSU, testified about his office's efforts to track the phones that morning. He testified that he and his team sought "subscriber information" for the suspect's number from the provider associated with that number but were unsuccessful because the cellphone "was just a generic prepaid" with "no subscriber information whatsoever." The TSU also sought and obtained

information about the locations of the suspect's and complainants' cellphones from the relevant telecommunication providers. According to Sergeant Perkins, the TSU received updated location information from the providers every fifteen minutes. The information came in the form of geographic coordinates-latitude and longitude-with a "degree of uncertainty" specified in meters.

Sergeant Perkins further testified that the real-time location information that they had received that morning had a high degree of uncertainty ("within several hundred meters") indicating that the phones' GPS capabilities were inactive. He explained that "if it [had been] true GPS," his team would have been "getting two meter, three meter, five meter hits." Despite the lack of precision in the location information, Sergeant Perkins and his team were able to tell that one of the complainants' phones and the suspect's phone were traveling in the same general direction as if they were together. The location information suggested that the two phones stopped in the general vicinity of the Minnesota Avenue Metro Station.

Based on this information, Sergeant Perkins and other TSU officers took a truck equipped with a cell-site simulator to the area of the Minnesota Avenue Metro station and used the device to track the suspect. Sergeant Perkins could not remember whether he and his team used the cell-site simulator to track the suspect's phone or the complainant's phone that they believed was traveling with it, but whichever signal they were tracking led them, at around 11:30 a.m., to a parked Saturn. Inside the Saturn were Jones and Jones' girlfriend, Nora Williams. The police arrested Jones and recovered evidence from Jones' person and his car and from Ms. Williams, including a folding knife and the complainants' and the suspect's cellphones. Jones also made an incriminating statement to the police. Williams later testified against Jones at trial.

Sergeant Perkins testified at the suppression hearing about how the cell-site simulator that they used worked based on the information that's "publicly available." He explained that his team engages the cell-site simulator by programming into it a unique identifier associated with the target phone. The simulator then begins listening for the target phone that, as part of its normal operation, is "constantly transmitting to and receiving from a tower." The officers operating the cell-site simulator drive around and as soon as the simulator comes across the target phone's signal, it grabs it, and it holds on to it. Once the cell-site simulator "grabs" the target phone, the simulator begins reporting general location information and signal strength that can be used to locate the target phone's exact location. Sergeant Perkins testified that, once the cell-site simulator "grabs" the target phone, the target phone is prevented from communicating with an actual tower.

Further information about the cell-site simulator was provided at the suppression hearing by Ben Levitan, an expert on "cellular telephone networks and systems" called by the defense. According to Mr. Levitan, cell phones are "dumb devices" that "generally connect themselves to the strongest cell tower signal that they detect." Mr. Levitan explained that a cell-site simulator "acts as a portable cell tower," which, when turned on or brought into an area, may appear to be a stronger signal and cause a phone to break its connection with the cell phone network and re-attach itself to the newly found simulator. Mr. Levitan testified that, when the cellphone "attaches" itself to the cell-site simulator, it "identifies itself by phone number and various codes." Although Mr. Levitan had never used the type of cell-site simulator utilized by law enforcement, he testified that he had used similar devices working within the telecommunications industry and that the devices allow the user to determine the target phone's direction and distance relative to the simulator device. Moreover, because the cell-site simulator is not a true cell tower connected with

the cellular network, any cellphone connected to the cell-site simulator will not be able to communicate with the network. In other words, "your call doesn't go through, period. Nothing happens."

At the conclusion of the suppression hearing, the trial court did not decide whether the use of a cell-site simulator was a search within the meaning of the Fourth Amendment or whether the government was required to obtain a warrant to use the cell-site simulator. Instead, the trial court focused on the issues of standing, exigent circumstances, and inevitable discovery. Ultimately, the trial court agreed with the government's argument that, regardless of whether there had been a Fourth Amendment violation, the inevitable-discovery doctrine rendered the exclusionary rule inapplicable. The trial court found that "even if [the police] were using [Mr. Jones's] phone on the cell site simulator, . . . had they switched over . . . to use the [complainant's] number instead, . . . they would have eventually gotten to the exact same place because the phones were together [a]nd it's the same technology." The trial court agreed with the government's assertion that "there [was] a separate lawful means" by which the government "would have gotten to the exact same place." Accordingly, the trial court denied Jones' motion to suppress and allowed the government to use the evidence at trial that law enforcement had obtained by using the stingray based upon the inevitable discovery doctrine.

On appeal, Jones argued that the government's use of a cell-site simulator violated his Fourth Amendment rights and that the trial court erred in failing to grant his motion to suppress. The District of Columbia Court of Appeals agreed with Jones, and the Court of Appeals became the fourth court in the nation to hold that police must first obtain a warrant before using a cell-site simulator and that failure to do so results in the suppression of any evidence obtained through the use of the stingray.

Specifically, the Court of Appeals held that the use of a cell-site simulator to locate Jones' cell phone invaded his reasonable expectation of privacy, and therefore, it constituted a search for purposes of the Fourth Amendment. Because a warrantless search occurred via the use of the stingray, the evidence obtained against Jones was not admissible. The Court of Appeals also disagreed with the trial court's conclusion that the evidence was admissible under the inevitable discovery doctrine. According to the Court of Appeals, the inevitable discovery doctrine was inapplicable because a lawful search of Jones' cell phone never occurred, thereby making the seizure unlawful and not the result of any lawful, inevitable discovery.

Furthermore, the Court of Appeals held that the evidence that the police obtained by use of the stingray was not subject to the good-faith exception to the exclusionary rule. The Court of Appeals made this determination because the United States Supreme Court has never applied the good-faith exception in any case remotely close to this one and because, even assuming that the police believed that the warrantless use of the cell-site simulator was lawful, the police could not have reasonably relied on that belief given the secrecy surrounding the device and the lack of law on the issue.

Finally, the Court of Appeals concluded that the trial court erred and that the trial court should have found that the incriminating statement that Jones made after the police found him by using the cell-site simulator should have been excluded as being fruit of the poisonous tree. The Court of Appeals reached the same conclusion regarding the evidence that the police obtained from a search of Jones' girlfriend's purse; it should have been excluded as being fruit of the poisonous tree.

In short, a trend has developed in the law whereby courts are holding that law enforcement's use of a cell-site simulator or stingray to find a suspect's location constitutes a search for purposes of the Fourth Amendment. Because the use of the device constitutes a search for purposes of the Fourth Amendment, law enforcement must first obtain a warrant before using the device. Finally, courts-including the Court of Appeals in this case-have concluded that no exception to the warrant requirement exists in these situations. Therefore, courts have excluded any evidence from use at trial that police have discovered by using a stingray without first obtaining a warrant to use a cell-site simulator.

Note: *Court holdings can vary significantly between jurisdictions. As such, it is advisable to seek the advice of a local prosecutor or legal adviser regarding questions on specific cases. This article is not intended to constitute legal advice on a specific case.*

POLICING & POLICY

Florida County Joins FBI Pilot Program Recording Use-of-Force.

The [Tampa Bay \(FL\) Times](#)   (8/25, Varn) reported the Pinellas County, Florida Sheriff's Office is participating in a six-month pilot program for the FBI's National Use-of-Force data collection program. The county, along with 63 around the US, will record incidents classified within "three categories: any time officers shoot at someone, any time use of force results in serious bodily injury, or any time it results in death." The Times adds that the FBI's National Use-of-Force data collection program "will help law enforcement and the public better understand geographic and demographic trends in use-of-force incidents, said Sheriff Bob Gualtieri, who worked on the task force that created the program."

US President Trump Plans To Lift Ban On Transfer Of Military Equipment To Local Police.

[USA Today](#) (8/27, Johnson) reports that the US President Donald Trump plans “to lift a controversial ban on the transfer of some surplus military equipment to police departments.” USA Today cites documents outlining the plan that would “roll back an Obama administration executive order that blocked armored vehicles, large-caliber weapons, ammunition and other heavy equipment from being re-purposed from foreign battlefields to America’s streets.” Attorney General Sessions “may outline the program changes” Monday in an address to the annual meeting of the Fraternal Order of Police. The [AP](#) (8/27) cites documents indicating that Trump “plans to sign an executive order” undoing the Obama-era ban. The AP says national police organizations have been pushing Trump “to hold his promise to once again make the equipment available to local and state police departments, saying it is needed to ensure officers aren’t put in danger when responding to active shooter calls and terrorist attacks.”

Justice Department Fires Back At Chicago Over Sanctuary Cities Lawsuit.

The [Chicago Tribune](#) (8/25, Byrne) reports the Justice Department in a Thursday court filing “urged a judge to reject Chicago’s request to stop new rules for the distribution of Edward Byrne Memorial Justice Assistance Grants.” The city filed suit against the DOJ, “arguing it’s unlawful and unconstitutional for Attorney General Jeff Sessions to make the grants contingent on cities sharing information about a person’s immigration status with federal officials enforcing deportation laws.” Federal officials said they are seeking only “modest cooperation” from cities for “the removal of aliens who have committed crimes.”

Texas Hotel Slaying May Prompt Direct-Dial 911.

The [AP](#) (8/26) reports, Under a measure that is nearing final approval in the US Congress, “businesses would be required to include direct-dial 911 on any new telephone system they install.” The legislation stems from a situation where a young girl in Texas was unable to dial 911 for her dying mother because she didn’t know that she had to dial the number “9” for an outside line.

Saskatchewan To Launch New Protection, Response Team.

[CBC \(CAN\)](#) (8/25) reported, “The Saskatchewan deputy minister responsible for corrections and policing says conservation and commercial vehicle enforcement officers seem to be enthusiastic about their expanded powers and responsibilities, announced earlier this week.” The Canadian province “announced it will launch a protection and response team made up of 120 RCMP and municipal police officers, 98 provincial conservation officers and 40 commercial vehicle enforcement officers (CVEOs) with the province’s Ministry of Highways.” The policy changes are “part of the province’s decision to create a rural crime response team, stemming from recommendations made by a committee earlier this year.” The rural response team was created to “improve police response times to emergency calls for service and police visibility in rural areas, and increase road safety and drug enforcement on provincial roads and highways.”

CRIME & DRUGS

Hate Crimes Rise In Major US Cities.

The [Los Angeles Times](#) (8/25, Winton) reported, “The number of hate crimes in Los Angeles and other major cities rose in the first half of 2017 amid more polarized politics and protests, according to new data.” The Los Angeles Police Department “documented a 12.6% increase in hate crimes in the first half of 2017, 161 compared to 143 in the same period last year.” Violent crimes that were motivated by hate “climbed from 24 to 36 for the first six months in Los Angeles.” The Times explained that the LAPD and other agencies in California “have been stepping up hate crime investigations in recent months, setting up task forces and investigating not only crimes but ‘hate speech.’” The Times added, “Of the six largest cities in the nation – New York, L.A., Chicago, Houston, Philadelphia and Phoenix – all except Houston saw their number of hate crimes climb in the first half of 2017.”

US Border Patrol Agents Seize “Massive Load” Of Marijuana Catapulted Over Arizona Border Wall.

The [Washington Times](#) (8/25, Dinan) reports US Border Patrol agents in Douglas, Arizona confiscated nearly 100 pounds of marijuana that was launched over the border wall earlier this week. The agency said the “massive load” of marijuana has a value of \$48,000. Arrests have not yet been made in the case.

IACP Webinar: IACP 2017 and What’s Happening Now

IACP members are invited to join association leadership for an inside look at IACP 2017 on Thursday, August 31, at 3 p.m. ET. Learn about what’s new this year, along with must-attend sessions and activities in Philadelphia, Pennsylvania, October 21-24. This members only webinar will also provide an update on recent IACP news and events.

OFFICER SAFETY & WELLNESS

Law Enforcement Community “Jarred” By Recent Attacks.

The [Orlando \(FL\) Sentinel](#) (8/26) reports, “The police shootings that rocked communities in Kissimmee, Jacksonville and Fayette County, Pa. this month have left those in law enforcement reeling from what they describe as a growing sense of danger in their line of work.” The August 18 shootings that left two officers dead and injured four others “amplified the feeling for some law enforcement that their work involves more danger, public scrutiny and less of the credit.”

TECHNOLOGY

Secret Service Tests New Gunshot Detection System.

The [AP](#) (8/26) reports the US Secret Service is testing a new detection system in Washington, DC on Saturday and Sunday, which will help identify the source and direction of gunshots. The agency said in a statement that the system “provides real time detection and geolocation of gunshots fired within proximity of protected sites.” It is warning DC residents that there will be multiple rounds of live gunfire “from various weapons in three-shot increments.”

Privacy Advocates Call For California Oversight Of StingRay Use.

The [Los Angeles Times](#) (8/27, Ulloa) reports privacy advocates in California are calling for the creation of a state agency to handle oversight of law enforcement use of StingRay devices and compliance with reporting guidelines. The Times explains that California passed a law that took effect in 2016 that “requires cities and counties that operate a stingray to create guidelines for how and when officers use the equipment,” and any agency that wants to purchase a device “must first receive approval at a public hearing.” Privacy advocates and lawyers “have kept up the public pressure in some cities and counties...calling on officials to put ordinances and guidelines in place to bar police from collecting data from those not under investigation.” Under most of the written policies, “officers can use the technology only when it is critical to a case and is approved by higher-ranking officers, or in emergency situations such as natural disasters.” Investigators must obtain search warrants, and “any data not considered official evidence can’t be sought, recorded or stored.” The policies usually also require officers to “delete or destroy all information gathered by the equipment related to an investigation at the end of the period in which they’re authorized to use the technology.” Privacy advocates argue that a state agency is needed for oversight because of a “loophole in the law that allows some law enforcement agencies to avoid reporting their use of the devices.” The loophole allows police departments that partner with another agency that owns a StingRay to avoid issuing guidelines.

NATIONAL SECURITY

London Police Investigating Sword Attack As Act Of Terror.

The [New York Times](#) (8/26, Kirkpatrick) reports, “A man arrested outside Buckingham Palace on Friday night had deliberately driven his blue Toyota Prius at a police van, attempted to pull out a four-foot sword and repeatedly shouted ‘Allahu

akbar,' the London police said in a statement on Saturday that added fresh details about the episode." The Police are now looking into whether the assault was a terrorist attack. The Times explains that when the man approached, "three unarmed officers stepped out of the police van and subdued him with a tear-gas spray, the police statement said." Three officers sustained minor injuries. Cmdr. Dean Haydon, who runs the Metropolitan Police's counterterrorism squad, "paid tribute to the officers involved." Haydon said, "Their vigilance, courage and the swiftness of their response demonstrates how our officers are protecting the public at this time." The [Wall Street Journal](#) (8/26, Douglas) says the incident follows a series of terrorist attacks across Europe this year, including three attacks in Britain alone. The incident also came just one day after Belgian authorities launched a terror investigation into a failed knife attack on soldiers in Brussels, for which ISIS claimed responsibility.

Britain's Weapons Crackdown Correlates With Acid Attack Spike. The [Washington Post](#) (8/26, Adam, Booth) reports the number of acid attacks in Britain has tripled over the last three years, "stoking fears that almost anyone can be the victim – from a moped rider to the city banker or politician." The "alarming surge of acid attacks in Britain" coincides with "a clampdown on weapons and fears of a frightening new crime fad involving teenage motorbike thieves using corrosive substances, in part because they are relatively easy to obtain." The Post notes Britain introduced a "two strikes" rule in 2015 under which "those convicted of carrying a knife for the second time received a mandatory six-month prison sentence." Acid Survivors Trust International executive director Jaf Shah suggested acid may be gang members' new "weapon of choice" because, in light of the two strikes rule, it is a "safe crime to commit because you can't be charged for carrying acid, only charged if police can prove intent."

TSA Reviewing Cargo Screening Procedures Over Terrorism Concerns.

[CNN](#) (8/25, Marsh, Cohen) reports US officials have said the Transportation Security Administration is reviewing screening procedures for cargo flown into the US over security concerns that have emerged in the wake of last month's foiled terror plot in Australia. Australian law enforcement investigators "revealed that a senior ISIS commander shipped partially assembled components of a bomb on a commercial cargo plane from Turkey to Australia." Two men were arrested in connection with a terror plan to assemble the bomb and place it on an Etihad Airlines passenger plane. US officials have raised concerns over what experts call the "IKEA-style" bomb assembly method. TSA said in a written statement that it is working to "raise the baseline on transportation security domestically and internationally and cargo security is a part of that effort."

HEADLINE	07/17 Racist emails reveal Chicago 'safari tours'
SOURCE	http://www.chicagotribune.com/news/local/politics/ct-chicago-water-department-report-met-0718-20170717-story.html
GIST	In a city scarred by a deep and troubling history with guns, a supervisor in the scandal-plagued water department used his city email account to negotiate firearms deals and make light of deadly Fourth of July violence in black neighborhoods by offering "Chicago Safari" tours, a new watchdog report revealed Monday.

The latest development in the ongoing investigation, which the Tribune first disclosed in May, emerged as Inspector General Joseph Ferguson detailed how ousted district water superintendent Paul Hansen emailed with individuals over personal purchases or sales of at least four firearms and five cars.

Those emails about firearms started the investigation over his use of a government account for personal business, which is against city rules. And it quickly spread to other emails sent by Hansen, who is white and the son of a former alderman, to other water department bosses, according to City Hall sources.

In his quarterly report, Ferguson revealed a fresh string of anti-black emails sent to multiple high-ranking water department workers that touted a fake "Chicago Safari" package. It cited the number of shootings during a July Fourth weekend and guaranteed tourists would observe "at least one kill and five crime scenes" and also see "lots of animals in their natural habitat."

Hansen's racially charged emails included messages to fellow workers purported to be in "Ebonics," sometimes called American black English, and a picture describing a swimming pool for a small African-American child who sits in a bucket filled with water while holding a slice of watermelon, the report found.

Ferguson also cited Hansen's "Watermelon Protection" email that featured a picture depicting a Ku Klux Klan scarecrow guarding a field of watermelons, part of a cache of racist, sexist and homophobic emails the Tribune first disclosed online Friday.

The inspector general's quarterly report comes as Mayor Rahm Emanuel finds himself fighting the proliferation of firearms in the city and facing the fallout from another deadly July Fourth weekend in Chicago.

As Emanuel seeks to recapture support from African-American voters still upset over his handling of the 2014 fatal police shooting of Laquan McDonald, the mayor and his aides have stressed that he installed a new commissioner and sought to remake the culture in the long-troubled department.

Still, Ferguson's report raised questions about whether he found all the troubling emails. Ferguson said the mayor's Law Department imposes restrictions that do not allow "unfettered access to city emails," which has hampered the investigation. He said the Law Department requires that his office submit requests for emails using limited search terms and date ranges.

"Given the lack of direct access to emails," Ferguson said that his office "cannot be certain it has identified all relevant documents."

HEADLINE | **07/18 China urges India withdrawal in standoff**

SOURCE	http://abcnews.go.com/International/wireStory/china-urges-india-withdrawal-standoff-stages-drills-48695862?cid=clicksource_76_4_article%20roll_articleroll_hed
GIST	<p>China on Tuesday renewed a call for India to immediately withdraw its troops from disputed territory high in the Himalayan mountains, following a report that Chinese forces recently held live firing drills in the region.</p> <p>Foreign ministry spokesman Lu Kang said Indian forces had to leave the area to avoid an "escalation of the situation."</p> <p>"We have stated many times that we hope the Indian side will get a clear understanding of the situation (and) immediately take measures to withdraw the troops that illegally crossed the border back to the Indian side of the border," Lu said at a regularly scheduled news briefing.</p> <p>Beijing and New Delhi have engaged in more than a month of saber-rattling as officials from both sides talk of a potential clash even bloodier than their 1962 war that left thousands dead.</p> <p>Lu's comments came after Chinese state broadcaster CCTV reported late last week that an army brigade equipped with rocket launchers, heavy machine guns and mortars recently practiced a simulated live-firing assault on an enemy position in Tibet.</p> <p>The drills also involved tracking and targeting enemy aircraft, the report said.</p> <p>The current standoff is in the southernmost part of Tibet in an area also claimed by Indian ally Bhutan, although the report did not say exactly when or where the drills took place.</p>

HEADLINE	07/18 Ukraine separatists proclaim new state
SOURCE	http://abcnews.go.com/International/wireStory/ukrainian-separatists-proclaim-state-48695669?cid=clicksource_76_4_article%20roll_articleroll_hed
GIST	<p>Separatists in eastern Ukraine on Tuesday proclaimed a new state that aspires to include not only the areas they control but also the rest of Ukraine.</p> <p>The surprise announcement in the rebel stronghold of Donetsk casts further doubt on the 2015 cease-fire deal that was supposed to stop fighting in Ukraine's industrial heartland and bring those areas back into Kiev's fold while granting them wide autonomy. It also caught unawares some rebels who said they have no intention of joining the new state.</p> <p>More than 10,000 people have died in fighting after Russia-backed rebels took control of parts of Ukraine's Donetsk and Luhansk regions in April 2014 after Russia annexed Ukraine's Crimean peninsula.</p>

	<p>The rebels originally sought to join Russia but the Kremlin stopped short of annexing the area or publicizing its military support for the rebels.</p> <p>Donetsk separatist leader Alexander Zakharchenko said in comments broadcast on Russian television that rebels in Donetsk, Luhansk as well as representatives of other Ukrainian regions would form a state called Malorossiya.</p> <p>Most of the areas which are currently part of Ukraine were referred to as Malorossiya, or Little Russia, when they were part of the Russian Empire.</p> <p>Zakharchenko said they are drawing up a constitution that would be put up to a popular vote later.</p>

HEADLINE	07/17 Vancouver B.C. drug users group: VANDU
SOURCE	http://www.cbc.ca/news/canada/british-columbia/vancouver-drug-users-group-1.4208467
GIST	<p>A copy of the Canadian Charter of Rights and Freedoms graces a wall around the corner from where a woman lies on the floor as a needle full of heroin is injected into her neck.</p> <p>She rises quickly, sweeps her long brown hair over one shoulder and sits on a chair as a man is handed a needle by another woman also wanting his help at an overdose prevention site located at the office of the Vancouver Area Network of Drug Users (VANDU).</p> <p>Vancouver Coastal Health has operated the site since December, but the peer support group known as VANDU began in 1997 with political activists who wanted drug users to demand health services when sharing of needles in the Downtown Eastside led to skyrocketing hepatitis C rates and the highest HIV prevalence of the AIDS virus in the western world.</p> <p>These days, the painkiller fentanyl has been implicated in hundreds of opioid overdose deaths in the neighbourhood and around British Columbia, the epicentre of an ongoing crisis in Canada.</p> <p>Hugh Lampkin, vice-president of VANDU, stands at the door as the first woman walks out about five minutes after her injection, past an attendant trained in CPR and administration of the overdose-reversing drug naloxone.</p> <p>"Right now the most popular thing is probably heroin, but there's side," Lampkin says, referring to crystal meth, also called jib.</p> <p>"We have a horn, and if somebody goes down they call me," the current drug user says. "With the fentanyl that's around now I try to tell people when I'm training them, 'Just look to see if people are staggering or they're slurring their words.'"</p>

The not-for-profit organization, which is marking its 20th anniversary this month, shares its office on East Hastings Street in the heart of Vancouver's Downtown Eastside with several sub groups.

They include the British Columbia Association of People on Methadone and the Western Aboriginal Harm Reduction Society, which on this day is holding its weekly meeting by remembering people who've died of fentanyl overdoses.

"Let this moment of silence be for them and for many more," says the group's secretary-treasurer Shelda Kastor, as ambulance sirens wail past the building.

Ann Livingston, a founding member of VANDU, says the group's first meeting was at a park 20 years ago.

Livingston says stigmatized drug users were being treated as "less than human" so she used her organizing skills to bring them together, eventually helping to create a group led by the people who best know the issues affecting them.

They soon began reporting desperate users grinding up drywall into a powder and selling it as drugs or repackaging used needles, Livingston says.

"It was a real place for action and that was my job, constantly, to have my mind blown over and over again."

"It's hard to describe how hated drug users are and how disregarded their lives were," she says of the years when 27 per cent of injection drug users in the impoverished neighbourhood became infected, says the Vancouver-based Centre for Excellence in HIV/AIDS.

Victories that involved VANDU members include the distribution of clean needles and the 2003 opening of Insite, North America's first supervised injection site in the heart of the Downtown Eastside.

HEADLINE	07/17 Gov. to drivers: put cellphones down
SOURCE	http://www.thenewstribune.com/news/local/article161874198.html
GIST	<p>From the steps of the Capitol Monday, Gov. Jay Inslee had a warning for all the drivers trying to sneak in one last text.</p> <p>"When you are driving while you are on a cellphone, you are more dangerous to yourself and everyone else on the road than a drunk driver with a .08 blood alcohol (level)," Inslee told the crowd.</p> <p>"We have a simple message today: Put the cellphones down."</p>

State officials are working to get the word out about [Washington's Driving Under the Influence of Electronics Act](#), which goes into effect Sunday and bans the use of handheld devices while driving, even when stopped in traffic.

Fines start at \$136 and can go up to \$234; violations will be reported to insurance companies, meaning violators could see their rates increase.

Other distractions, such as grooming, smoking, eating or reading, could result in a \$99 ticket if you are pulled over for another offense.

The bill the Legislature passed would have delayed implementation of the law until 2019, but Inslee vetoed that part. At Monday's event, he said the change in law is too important to wait.

State troopers are seeing more distracted drivers, said Washington State Patrol Chief John Batiste.

"Last year, troopers contacted nearly 17,000 drivers for driving while using their cellphones and/or texting. We even had one collision caused last year by someone who was playing the game Pokemon GO," he said.

"Every single one of these collisions is, in fact, preventable."

The Washington Traffic Safety Commission reports fatalities in Washington from distracted driving increased 32 percent from 2014 to 2015. The majority of distracted drivers — 71 percent — are using a cellphone while driving.

Under the law, devices can be used if they are hands-free and can be started with a single touch or swipe. Drivers can use handheld devices when they are parked or out of the flow of traffic, or to contact emergency services.

HEADLINE	07/17 Report: US worst healthcare system
SOURCE	http://health.usnews.com/wellness/health-buzz/articles/2017-07-17/report-us-has-the-worst-health-care-system-compared-to-these-countries
GIST	<p>As the U.S. is embroiled in a bitter battle to overhaul its current health care system, a new report finds that the country has the worst health care system among high-income countries.</p> <p>America ranked last for overall performance and last or near last when it came to data points like access to care, administrative efficiency, equity and health care outcomes, according to a new report published Friday by the Commonwealth Fund, a private foundation that strives to improve health care in America.</p>

Paradoxically, the U.S. spends more money on health care compared to other high-income countries, which is notable given its poor performance, the report states.

Though the U.S. ranked lowest in [health care](#) outcomes – and performed badly when it came to population health outcomes involving infant mortality and life expectancy at age 60 – it performed better on certain measures like in-hospital deaths in the month following a heart attack or stroke, according to the report.

The Commonwealth Fund compared the U.S. to Australia, Canada, France, Germany, the Netherlands, New Zealand, Norway, Sweden, Switzerland and the U.K.

"The results suggest the U.S. health care system should look at other countries' approaches if it wants to achieve an affordable high-performing health care system that serves all Americans," the report's abstract states.

Data for the study came from comparative survey research, in addition to comparative data from the Organization for Economic Cooperation and Development, the European Observatory on Health Systems and Policies, and the World Health Organization.

The U.S. [health care](#) system has been under a finely-tuned microscope in recent months as Republicans strive to repeal and replace former President Obama's Affordable Care Act. While the House managed to pass a [controversial health care bill](#) back in May, the Senate is struggling to do the same.

"Current proposals being debated in Congress could undo most of that progress by increasing the number of people without health insurance by more than 20 million over the next decade," [Benjamin Sommers](#) of the Harvard T.H. Chan School of Public Health told [New Scientist](#). "Rather than narrowing the gap with its rivals, the US might fall further behind."

HEADLINE	07/18 Germany: G20 riots cost \$13M damage
SOURCE	http://hosted.ap.org/dynamic/stories/A/APFN_EU_GERMANY_G20_VIOLENCE?SITE=AP&SECTION=HOME&TEMPLATE=DEFAULT&CTIME=2017-07-18-03-42-46
GIST	<p>BERLIN (AP) -- A group representing German insurers says the rioting that accompanied the Group of 20 summit earlier this month could cost insurance companies up to 12 million euros (\$13.8 million).</p> <p>Host city Hamburg saw three nights of violence amid anti-globalization protests as leaders of the world's biggest economic powers met July 7-8.</p>

	<p>The German Insurance Association said in an initial estimate Tuesday that insured damage totaled as much as 12 million euros, with damaged cars accounting for up to a third of that sum. It also includes damage to houses and companies.</p> <p>Chancellor Angela Merkel promised immediately after the summit to work with Hamburg authorities to help people affected by the riots. The federal and city governments have set up a "hardship fund."</p>

HEADLINE	07/18 Turkey jails 6 human rights activists
SOURCE	http://hosted.ap.org/dynamic/stories/E/EU_TURKEY_ACTIVISTS_ARRESTED?SITE=AP&SECTION=HOME&TEMPLATE=DEFAULT&CTIME=2017-07-18-02-59-34
GIST	<p>ISTANBUL (AP) -- A court in Istanbul ordered six human rights activists - including Amnesty International's Turkey director - formally arrested Tuesday pending a trial over accusations that they aided an armed terror group, adding to concerns over rights and freedoms in the country.</p> <p>Four others activists were released from custody pending the outcome of a trial. They have been barred from traveling abroad and have to report regularly to police.</p> <p>The group was detained earlier this month in a police raid at a hotel on Buyukada island where they were attending a training workshop on digital security.</p> <p>They are suspected of "committing crime in the name of a terrorist organization without being a member." Amnesty International described the court decision as a "crushing blow for rights in Turkey."</p> <p>"This is not a legitimate investigation, this is a politically motivated witch-hunt that charts a frightening future for rights in Turkey," said Salil Shetty, Amnesty International's secretary general.</p>

HEADLINE	07/17 Fate of National Monument in Oregon?
SOURCE	http://mynorthwest.com/695183/interior-secretary-ponders-fate-of-natl-monument-in-oregon/
GIST	<p>SALEM, Ore. (AP) — After touring the “unique” Cascade-Siskiyou National Monument in Oregon and speaking to ranchers, loggers and environmentalists, U.S. Interior Secretary Ryan Zinke must next make a recommendation on whether it should be abolished or resized.</p> <p>It’s going to require a lot of study, Zinke indicated, given that the monument was created — and expanded by former President Barack Obama— to protect biodiversity in an area where three mountain ranges converge, creating diverse habitats for species that would normally be living apart.</p>

	<p>Zinke toured the area Saturday and said he wants to find out how the boundaries of the 113,000 acre (45,730 hectare) monument were made. Zinke said he also wants to protect local traditions and “make sure the monument doesn’t have unintended consequences.”</p> <p>President Donald Trump in April ordered a review of two dozen monuments established by former presidents over more than two decades.</p>

HEADLINE	07/17 Seattle requires SPD to collect data
SOURCE	http://mynorthwest.com/694746/seattle-officers-bias-policing-bill-passes/
GIST	<p>The Seattle City Council approved a bill Monday aimed at cracking down on biased policing.</p> <p>The new legislation requires officers to collect data on the people they stop to ensure they’re not targeting persons based on race, sex, or ethnicity. It was passed 8-0 (Councilmember Kshama Sawant was absent).</p> <p>The Seattle Police Department already has a bias-free policing policy in place. It began in 2015 after DOJ investigators raised concerns about discrimination by SPD officers.</p> <p>Council President Bruce Harrell and Councilmember Lorena Gonzalez say the legislation “sends a strong message that the city is committed to ensuring constitutional policing now and in the future.”</p> <p>The police department found itself once again being publicly scrutinized after the fatal shooting of a black pregnant mother of four in June. Charleena Lyles was killed after calling 911 about an alleged burglary — neither of the two officers who responded had a Taser when Lyles allegedly attacked them.</p> <p>Since that shooting, some, including the head of the Seattle Police Guild, said shooting Lyles fell within the department’s use-of-force policy.</p> <p>Jeffery Robinson, a Seattle attorney who also works at ACLU headquarters in New York, told KIRO Radio he doesn’t believe the officers involved will be charged. He partially blames the way Washington state law is written.</p> <p>“As you know, Seattle has the most extreme use-of-force statute in the country. What I can tell you is that the police officers who shot and killed that woman in Seattle, nobody should expect them to be charged with a crime. It absolutely, positively will not happen under the law as it is in Seattle.”</p>

HEADLINE	07/17 Mayor orders SPD wear body-cams
SOURCE	http://mynorthwest.com/695125/murray-orders-seattle-police-body-cams/

GIST

Mayor Ed Murray has ordered Seattle police officers to begin wearing body cameras despite ongoing deliberations with their union.

“We can no longer deprive Seattle of this important tool to provide a detailed record of what happens during critical incidents; a public record that will hold police officers accountable to their own high standards and our community’s important expectations,” Murray said Monday.

Murray signed an executive order Monday that instructs all patrol officers and sergeants to wear body cameras. The roll out will begin with bike cops in the West Precinct who will start wearing them by July 22. All officers in the West Precinct are to be wearing the cameras by Sept. 30. Seattle’s other police precincts will be phased in over the coming months.

The Seattle Police Officers Guild continues to negotiate a contract with the mayor’s office. Body cam policy has been one debated point of that contract. With his executive order, Murray is sidestepping union negotiations.

“Today, as we continue to bargain with the police union about the particulars of the implementation, I am going to take us forward,” he said.

Body cams were previously slated to be phased into the department by the end of 2017. But progress has been stalled by policy conflicts between police, the mayor’s office, and the federal monitor assigned to oversee reforms.

One point, for example, is that **police want to watch body camera footage before they write reports** of an incident. Many best practices for body cams, however, state officers should write a report first, then have access to the footage.

Murray noted the recent fatal shooting of Charleena Lyles by Seattle police officers. He said that cameras would have been helpful following that incident. Seattle police currently use dash cams, which record audio even when the officer is out of view. But that view is limited to the windshield perspective of the patrol car. There is currently no point-of-view cameras for Seattle police.

“There is an accountability tool,” Murray said. “One that is already standard in other big cities like Washington D.C. and Atlanta and local cities like Spokane. One that would be valuable to us during the investigation into this police shooting. There is a way for the public to know what happens during these use-of-force incidents. A way to resolve disputed facts in police shootings – body cameras for police.”

Murray argues that the body cams reduce use-of-force incidents and community complaints, and also provide evidence of misconduct. The executive order furthers that argument by stating that 92 percent of Seattleites want cops to use the body cams. It also states that the Seattle Police Department has already run a successful pilot using the technology.

HEADLINE	07/17 Seattle mayor refuses to step down
SOURCE	http://mynorthwest.com/694893/councilmember-calls-for-seattle-mayor-to-step-down/
GIST	<p>Seattle Mayor Ed Murray will not step down following comments from city council members Monday.</p> <p>“I know that today a member of the council has issued a statement calling on me to resign, and warning of action against me if I do not,” Murray said Monday afternoon. “I continue to believe such a course of action would not be in the city’s best interest. That is why I am not going to resign, and intend to complete the few remaining months of my term as mayor.”</p> <p>That council member was Lorena Gonzalez who said she is “deeply concerned” by an Oregon Child Protective Services investigation that found Mayor Ed Murray allegedly abused a foster son in the 1980s. The investigation also concluded that he should never be a foster parent again.</p> <p>Though the investigation is not proof of criminal guilt, “the gravity of the materials in the finding and the continued attention to these issues will receive, raise questions about the ability of the Mayor, his office, his Department heads, and senior management to remain focused on the critical issues facing our city,” Gonzalez wrote.</p> <p>“As a result, I am asking the Mayor to consider stepping down as Mayor and to work collaboratively with a subcommittee of the City Council to craft an Executive Leadership Transition Strategy.”</p> <p>Gonzalez says if the mayor does not step down, the city council should convene its own committee to determine if a “transition” in leadership is merited.</p> <p>“A collaborative approach is my preferred approach but the leadership of this City, including the Mayor, must proceed in a manner that will balance the ongoing need to effectively govern while acknowledging the grave harm caused by proceeding with a status-quo mentality. This situation is unprecedented in our city’s history. We cannot pretend otherwise.”</p> <p>Murray disagrees with Gonzalez. He said this administration has continued to do good work for the city, such as his body cam executive order and the opening of the Navigation Center for homeless individuals.</p>

HEADLINE	07/17 Merkel rules out Germany refugee cap
SOURCE	http://www.cnn.com/2017/07/17/europe/germany-refugees-merkel/index.html
GIST	(CNN)German Chancellor Angela Merkel has ruled out setting an upper limit on refugees coming to Germany, defying her long-term coalition partner on an issue that threatens to open up a rift between the country's ruling political parties just two months before federal elections.

	<p>"On the issue of an upper limit, my position is clear," Merkel said in an interview broadcast live on Germany's ARD on Sunday. "I won't accept one."</p> <p>Merkel will need the support of the Christian Social Union -- the more conservative sister party to Merkel's Christian Democratic Union -- in order to remain Chancellor after September elections.</p> <p>On Monday, CSU leader Horst Seehofer reiterated his party's pledge to make the limit on refugees a reality.</p> <p>"The cap is and remains a goal of the CSU," Seehofer said, although he refused to make the issue a red line in a coalition deal -- a softening of his previous stance.</p> <p>In an interview in December, Horst Seehofer, head of the CSU, promised a cap of 200,000 refugees per year if his party is in a coalition government after the election.</p>

HEADLINE	07/17 More Venezuelans flee as crisis deepens
-----------------	--

SOURCE	https://www.theguardian.com/world/2017/jul/17/venezuela-migrants-americas-leaving-home
GIST	<p>As Venezuela falls further into a humanitarian disaster of economic collapse and political repression, more of its citizens are fleeing a country which once served as a haven for economic migrants and political refugees from around the world.</p> <p>In the past, many Venezuelans headed to rich countries like US and Spain, but the latest wave of émigrés are increasingly choosing to stay in Latin America – often putting pressure social services that are unprepared to accommodate an increase of migrants.</p> <p>“For the first time, Venezuela is producing rather than receiving migrants,” said Tomás Páez, a Caracas-based sociologist who in 2015 published a study on the Venezuelan diaspora in which he estimated that 7% of Venezuela’s native population of 31 million lived outside the country.</p> <p>It was wealthy and professional Venezuelans who spearheaded the exodus after the late Hugo Chávez began his self-styled socialist “revolution” in 1999 – often citing rampant crime or political discontent as their reason behind leaving.</p> <p>On Chavez’s death in 2013 from cancer, Nicolás Maduro was elected to succeed him as president. Since then, the situation has deteriorated dramatically, with triple-digit inflation, snaking food lines, shortages of medical supplies and vicious repression against the opposition.</p> <p>The worsening conditions have left the social safety nets put in place by Chávez in tatters, and the new migrants include many poorer Venezuelans who once considered themselves Chavistas.</p> <p>Only a fraction of those leaving formally seek asylum but the number of those who do is soaring. Last year, there were 27,000 Venezuelan asylum seekers worldwide. So far in 2017, more than 52,000 have applied for asylum, according to UNHCR, the UN’s refugee agency.</p> <p>For many, the easiest destination to reach is Colombia, just across a porous and largely unprotected border. And Colombia’s government is bracing for more. It recently sent a delegation to Turkey to study that country’s experience with Syrian refugees.</p> <p>Not so long ago, the countries’ fortunes were reversed: Venezuela took in millions of Colombians during the 1970s and 1980s, when Venezuela was riding an oil boom and political stability while Colombia was trapped between narco-terror and a rebel insurgency.</p> <p>Today, Colombia is steadier politically and economically than its neighbour, but officials say it lacks the financial and social resources to be able to respond to large numbers of migrants.</p>

HEADLINE	07/17 State ferries' travel woes
SOURCE	http://komonews.com/news/local/hurry-up-to-wait-state-ferries-give-reasons-for-travel-woes
GIST	<p>SEATTLE -- Hurry to wait. That's part of the summer sailing mantra for ferry passengers, but this last weekend, waits and cancellations got even longer as two more vessels abruptly went out of service.</p> <p>Monday on the 12:20 p.m. ferry from Seattle-to-Bainbridge ride it was smooth sailing, but Sunday was a perfect storm system wide, and it's far from blue skies.</p> <p>There's no sugar coating it.</p> <p>"When you have 22 vessels operating nearly 24 hours a day, things happened, " said Matt Vonruden, Director of Vessel Engineering and Maintenance for the Washington State Ferries, WSF.</p> <p>At one point this weekend, three of those 22 ferries were out of service. Two went down without warning - including on the Bainbridge-Seattle sail.</p> <p>"Summertime is the Superbowl of ferries," said Washington State Ferries Spokesman Ian Sterling. "It's frustrating for us and frustrating for folks trying to get around."</p> <p>WSF says ridership increases by more than 50% in the summer months, and that adds wear and tear on the ferries.</p> <p>Five of the fleet's vessels are at least 50 years old. The average age is 30 years, said Sterling. Like a car, ferries can unexpectedly break down, despite regular and preventative maintenance.</p> <p>"High demand and incidents like this makes it even more difficult," said Vonruden.</p> <p>The Ferry Maintenance Director said unlike many other transit systems nationwide, who have two backup vehicles for every 12 vehicles in their fleet, WSF has only one backup.</p> <p>That is one backup ferry for all 22 vessels.</p> <p>While they'd prefer no unscheduled repairs, Vonruden pointed out cancelled trips make up less than one percent of all of the state's ferry trips each year. But WSF said this summer is making it tough.</p> <p>The state is seeing even more passengers than ever before.</p> <p>Sterling said WSF could be headed for a record-setting year of riders.</p> <p>"Virtually every vessel we have is out working on the water, sometimes 20 hours a day," said Sterling.</p>

	Sterling adds when possible, walking instead of driving on board reduces wait times.

HEADLINE	07/17 Spokane PD needs more officers
SOURCE	http://www.khq.com/story/35906429/spokane-police-department-needs-additional-officers-to-keep-up-with-crime-rate
GIST	<p>SPOKANE, Wash. - Spokane's finest, despite their best efforts, aren't always able to cover all the bases. As the incident with the ax-wielding vandal on July 12th showed, Spokane Police often have their hands full.</p> <p>SPD's Public Information Officer, John O'Brien, said while it isn't uncommon for there to be times of the day when there are no units available to respond to a particular call right when it's reported, the 12th was unusual because police had their hands tied with a lengthy standoff when a man court documents identify as 28-year-old Torin Ford began swinging an ax-shaped piece of steel through several downtown windows.</p> <p>While the incident is rather bizarre, it highlights a problem local police have been facing, with increases in property and other crime stretching their resources.</p> <p>"Our numbers are spreading us a little thin with the number of crimes in Spokane," said O'Brien. "It would sure be good to put some more bodies out there."</p> <p>O'Brien says part of the issue is that, on top of having less funding than they would like, the department has seen a lack of applicants to join the police force. They have been intensifying their recruiting efforts, and O'Brien says that anyone who is interested in joining law enforcement should begin the process to see if it's a good fit for them.</p>

HEADLINE	07/17 Protest PSE gas pipeline construction
SOURCE	http://q13fox.com/2017/07/17/about-100-protest-construction-of-pses-liquid-natural-gas-pipeline-at-port-of-tacoma/
GIST	<p>FIFE, Wash. — About 100 protesters turned out Monday night to demonstrate against construction of the Puget Sound Energy's liquid natural gas pipeline and facility site at the Port of Tacoma, Fife Police Chief Pete Fisher said.</p> <p>That gas comes from fracking, and members of the Puyallup Tribe have gone to court to try and stop the pipeline.</p> <p>The protesters issued the following statement:</p>

	<p>“For two years citizens have been fighting plans to construct a fracked gas pipeline and processing facility at the Port of Tacoma, directly adjacent to Puyallup tribal lands and waters and only six blocks from private homes. Now, even though the Puyallup Tribe and others have legal contests underway in the courts, PSE (Puget Sound Energy) has begun laying pipeline and construction of the facility.</p> <p>“Public awareness of this project has been intentionally limited and dangers of this facility continue to be misrepresented by PSE and the City of Tacoma. However, through continued education and outreach in recent weeks, opposition has grown substantially.”</p> <p>Fisher said the protest has been peaceful and there have been no arrests.</p>

HEADLINE	07/18 Russia: ready to retaliate US sanctions
SOURCE	http://www.nbcnews.com/news/world/russia-says-it-s-ready-retaliate-u-s-election-sanctions-n783951
GIST	<p>MOSCOW — Russia reserves the right to take retaliatory measures against the United States for its "illegal seizure" of Russian diplomatic property, its Foreign Ministry said in a statement on Tuesday after a meeting in Washington ended without a deal.</p> <p>Former President Barack Obama in December ordered the seizure of two Russian diplomatic compounds in New York and Maryland, and expelled 35 Russian diplomats over what he said was their involvement in hacking the 2016 U.S. presidential election campaign, something Russia flatly denies.</p> <p>Russia's Deputy Foreign Minister Sergei Ryabkov and U.S. Undersecretary of State Thomas Shannon met on Monday to discuss the diplomatic row.</p> <p>But the Foreign Ministry said in a statement on Tuesday that a resolution to the problem had not yet been found.</p> <p>"Russia stressed that if Washington does not address this and other concerns, including persistent efforts to hinder the operation of Russia's diplomatic missions, Russia has the right to take retaliatory measures in accordance with the principle of reciprocity," the statement said.</p> <p>U.S. intelligence officials have said that the mansions doubled as surveillance outposts for Russian spies. At the time of the property seizures and expulsions, Russian President Vladimir Putin declined to retaliate against the United States.</p> <p>Russian officials said Tuesday that they also want to resume regular dialogue with the Americans about strategic stability, but insisted that it is up to Washington to take steps forward.</p>

HEADLINE	07/18 Who pays rising cost natural disasters?
SOURCE	https://www.bloomberg.com/news/articles/2017-07-18/who-pays-for-the-rising-cost-of-natural-disasters-quicktake-g-a
GIST	<p>The force of Mother Nature cost mankind <u>\$175 billion</u> in 2016, enough money to rebuild New York’s One World Trade Center <u>44 times</u>. About 8,700 people globally lost their lives or went missing in disasters that included earthquakes in Japan, New Zealand and Ecuador, floods in the U.S. and China, and <u>Hurricane Matthew</u> in the Caribbean. That compares with <u>\$380 billion</u> in 2011 when earthquakes in Japan and New Zealand pushed economic disaster losses to a record. In both years, less than a third of the damage was covered by insurers.</p> <p>1. Why don’t people carry more insurance against disasters? For starters, insurance is less accessible and less affordable for people in poorer nations. Elsewhere, the insurance industry struggles with what’s known as negative selection, which means clients tend to buy coverage only for the risks they are most exposed to. If you own a house on a storm-exposed shore in Florida, you might think more about disaster insurance than if your house is in the countryside. Another factor: Many people expect their government will compensate them for damages in natural disasters. This is <u>one reason</u> why insurance demand is low in earthquake-prone regions in countries such as Italy or Turkey.</p> <p>2. Can insurers offer more appealing coverage? It’s not so easy. Insurers face challenges in balancing the statistical risks of disasters, the potential payouts involved, and consumer demand for policies, which rarely align. Demand itself tends to wax and wane, depending on how much time passes between catastrophic events. One key is diversification: In order to be able to pay claims from the largest disasters (typically windstorms and earthquakes in the U.S., Japan and Europe), an insurer needs to do enough business elsewhere or set aside enough capital to pay for potential claims.</p> <p>3. So who pays the bill after disasters? With insurers <u>covering only about a third</u> of the damages, the <u>protection gap</u> is substantial. Government-created organizations like the <u>California Earthquake Authority</u> and the <u>Texas Windstorm Insurance Association</u> act as insurers of last resort, offering coverage the free market won’t provide. Turkey requires earthquake insurance for urban residential buildings and provides coverage, in conjunction with the World Bank, through the <u>Turkish Catastrophe Insurance Pool</u>. Caribbean nations formed a <u>catastrophe risk pool</u> that <u>paid</u> Haiti \$23 million following Hurricane Matthew (a fraction of the \$1.4 billion in total damages, reflecting the lower use of insurance in poorer countries). Chile, Colombia, Mexico and Peru <u>are discussing</u> a similar pool. One of the financing tools that these pools have are catastrophe bonds.</p> <p>4. What are catastrophe bonds? They’re securities sold by insurers, the reinsurers who back them or government-backed catastrophe pools. Cat bonds help them spread the risk of paying out on disasters. Buyers of the bonds enjoy <u>higher</u></p>

returns when Mother Nature is quiet. Most cat bonds cover against U.S. wind risks, which led to some of the insurance industry's biggest losses in the past. Cat bonds are about 25 years old and have yet to be fully tested by a major loss. It remains to be seen how investors would react if a hurricane or earthquake wiped out a whole series of them.

5. Are natural disasters really on the rise?

Yes, according to reinsurers such as Munich Re and Swiss Re, which help primary insurers shoulder costs from catastrophes. Munich Re counted 772 "natural loss events" last year, up from 248 in 1980. Of course, reinsurers might be biased, since they make their living from helping offer coverage against catastrophes. It's also possible that some disasters recorded today would have gone unnoticed in decades past. Of the more objective sources, the World Health Organization says that the number of disasters has been declining over the last 15 years while the United Nations Office for Disaster Risk Reduction reports a rise to 346 in 2015 from 205 in 1983.

HEADLINE	07/18 Stormy start to 2017 in US
SOURCE	https://www.usatoday.com/story/weather/2017/07/18/u-s-battered-2nd-most-natural-disasters-record-so-far-2017/485167001/
GIST	<p>Dozens of savage hailstorms and tornadoes wreaked havoc across the U.S. so far this year, causing billions of dollars of damage and leading to the second-most disaster-laden season on record.</p> <p>So far in 2017, the U.S. has endured 49 separate weather, climate and flood disasters, according to data from Munich Re, a global reinsurance firm.</p> <p>That's tied with 2009 as the second-highest January-June number on record. Only 2012, with 59 events, had more. Munich Re data goes back to 1980.</p> <p>Ferocious hailstorms that battered Denver (in May) and Dallas (in March) were among the top costliest U.S. disasters, according to Munich Re meteorologist Mark Bove. This isn't necessarily unusual, he said.</p> <p>"In an average year, hail causes more losses than tornadoes."</p> <p>At over \$2.1 billion in damage, the Denver hailstorm was likely the city's costliest on record.</p> <p>The number of events is also more than the 10-year average of 45. According to Munich Re, a disaster is defined as an event that causes at least one death and/or causes \$3 million in damages. The firm also calls them "loss events."</p>

Fortunately, the high number doesn't translate into an unusually high damage cost: As for the overall cost of the USA's disasters this year, Munich Re estimates a total of \$21 billion, of which \$14.2 was insured. "That's fairly close to average for the past decade," Bove said.

Several of the severe weather events hit sparsely populated areas without much exposed value.

"The unusual atmospheric conditions in the USA in the first half of 2017 provided the perfect conditions for powerful supercell thunderstorms, which invariably bring major hailstorms and tornadoes," said Peter Höppe, head of Munich Re's Geo Risks Research.

"The number of tornadoes observed in the first quarter of 2017 was twice as high as the average for the last 10 years," he said.

Through the end of June, tornadoes have killed 34 Americans, which is just under half the typical yearly fatality toll, the Storm Prediction Center said.

The high number of severe thunderstorms in the U.S., especially from January to March, was likely influenced by abnormally warm water in the eastern Pacific Ocean off the northwest coast of South America. This warm Pacific ocean water affects weather patterns in the U.S. and around the world.

The next threat for natural disasters may come from the tropics: Looking to the weeks and months ahead, Bove warns that the U.S. is about to enter the peak of the Atlantic hurricane season. "More than 80% of hurricanes occur after July 31," he said.

HEADLINE	07/17 China filling void US drone restrictions
SOURCE	http://www.newsmax.com/Newsfront/china-selling-drones-instead/2017/07/17/id/802188/
GIST	<p>The United States is getting a double-whammy from China, whose proliferating drone weaponry represents both a commercial and strategic blow, the Wall Street Journal reported.</p> <p>Satellite images from October 2016 have shown Chinese-made replicas of America's Predator and Reaper drones deployed in the Middle East and Africa by several countries, including allies the United States blocked from buying American models.</p> <p>According to the Journal, the Obama administration led efforts to forge a global "drone code" that would curb proliferation and keep the weapons from misuse – but China is now filling the void.</p> <p>China's sales have enabled multiple countries — including some with weak legal systems and scant public oversight of the military — to use unmanned aerial vehicles to spy and kill remotely as the United States has done since 9/11, the Journal reported.</p>

	<p>U.S. export policy that drives partners to buy Chinese "hurts U.S. strategic interests in so many ways," Paul Scharre, a former Pentagon official at the nonpartisan Center for a New American Security, told the Journal.</p> <p>"It damages the U.S. relationship with a close partner. It increases that partner's relationship with a competitor nation, China. It hurts U.S. companies trying to compete."</p> <p>The Trump administration is trying to remove obstacles to American companies' ability to compete, an unnamed official told the Journal. "We are attuned to what China is doing," the official said.</p> <p>China began exporting strike-enabled drones around 2014-2015, heralding a new phase in its arms industry as a global competitor that can influence conflicts and alliances worldwide, the Journal reported.</p> <p>It is now the world's third-biggest arms seller by value, behind the U.S. at No. 1 and Russia, according to the Stockholm International Peace Research Institute.</p> <p>The Pentagon estimates China could produce almost 42,000 aerial drones — sale value more than \$10 billion — in the decade up to 2023.</p>

HEADLINE	07/18 Australians: shooting American nightmare
-----------------	---

SOURCE	http://abcnews.go.com/International/wireStory/australians-stunned-minneapolis-police-shooting-woman-48694515?cid=clicksource_76_4_article%20roll_articleroll_hed
GIST	<p>Half a world from where an Australian woman was shot dead by a Minneapolis police officer, Tuesday's front-page headline in her hometown Sydney newspaper summarized Australia's reaction in blunt terms: "AMERICAN NIGHTMARE."</p> <p>In Justine Damond's native country, news of the meditation teacher's baffling death has dominated the airwaves, newspapers and websites for days, feeding into Australians' long-held fears about America's notorious culture of gun violence.</p> <p>"The country is infested with possibly more guns than people," said Philip Alpers, a gun policy analyst with the University of Sydney who has studied the stark differences in gun laws between the nations. "We see America as a very risky place in terms of gun violence — and so does the rest of the world."</p> <p>While police officers carry guns in Australia, deadly shootings by police are exceedingly rare; there are only a handful reported each year, according to the Australian Institute of Criminology. And though the U.S. doesn't keep a national database of deadly police-involved shootings, even incomplete statistics show there are hundreds every year.</p> <p>America's reluctance to strengthen its gun regulations and its seemingly endless stream of shooting deaths have long been a source of confusion and concern in Australia, which instituted tough gun ownership laws in 1996 following a deadly mass shooting. At the time, then-Prime Minister John Howard — a conservative — warned Australians against following America's lead on gun control, saying: "We have an opportunity in this country not to go down the American path."</p> <p>The Australian government's official travel advice to those heading to the U.S. specifically warns tourists to be on guard for gun crime, and urges Australians living in the U.S. to be familiar with "active shooter" training drills. Australian media coverage of America's frequent mass shootings is often tinged with disbelief — "another day, another shooting in America" is a common refrain on newscasts.</p> <p>The death of Damond, a 40-year-old meditation teacher who was reportedly dressed in her pajamas when she was shot by a police officer late Saturday, has sparked a similarly stunned reaction. The story has led network newscasts and was splashed across newspapers' front pages. Sydney's Daily Telegraph ran an editorial headlined "A senseless and tragic death."</p>

HEADLINE	07/17 Bike shares wheeling back to Seattle
SOURCE	http://www.seattletimes.com/seattle-news/transportation/bike-shares-to-wheel-back-soon-into-seattle-but-will-vary-from-pronto-in-2-big-ways/

GIST

Bike shares are returning to Seattle. Soon. And bigger than before. When, earlier this year, the city folded Pronto, the bike-share system it owned, it took 500 bikes off the streets.

Sometime this week, there should be 1,000 shareable bikes on the streets. And in the coming months, there will likely be even more.

Two big differences between these bikes and Pronto: The new bikes have no stations where bikes must be picked up and returned to. Pick one up wherever you find it and leave it at your destination. And, unlike Pronto, the bikes are privately owned and are receiving no government funding.

Bike shares are booming in the United States. Nationwide, riders took about 320,000 rides on bike-share bikes in 2010, according to the National Association of County Transportation Officials. Last year, that number was 28 million.

But bike shares of the sort launching in Seattle — private, for-profit and stationless — are just starting in the United States.

Six weeks ago, the two companies that plan to spread bikes throughout Seattle weren't operating anywhere else in the United States. Seattle, one of the largest U.S. cities without a traditional bike share, is poised to become a testing ground for this new breed of bike share, as the two companies, and perhaps a half-dozen more, battle for riders.

Both companies say they're ready to launch and are waiting on approval from the Seattle Department of Transportation. SDOT says it expects to approve the companies' applications this week. Once approvals are in, bikes will start showing up on the streets.

Here's what you need to know about the bikes and the bike-share companies that want you to ride them. Two companies are launching in Seattle — Spin and LimeBike. Both are privately owned, based in the Bay Area and funded with millions of dollars of venture-capital money.

LimeBike, in the last several weeks, has started smaller bike shares in South Bend, Indiana, and at the University of North Carolina, Greensboro. Spin did a trial launch in Austin, Texas, earlier this year, but Seattle would be its first permanent city.

Each company will open with 500 bikes (a number mandated by the city), but plans to expand. The city's rules allow them to expand to 1,000 bikes each in early August, 2,000 bikes in September and however many they want in October.

Both companies say they'll start with bikes placed around downtown, Capitol Hill, South Lake Union and other center-city neighborhoods, and will branch out more to other neighborhoods as they're allowed to expand.

At least two other companies — VBikes and Koloni Share — say they have plans to open in Seattle in the coming weeks or months, but are not as far along in the application process.

Both companies work the same way. Download their app on your smartphone and enter your credit-card information. On the app, a map will pop up showing nearby bikes. Find one. The bikes have a lock through their back wheel. You unlock it by scanning a QR code on the bike with your phone’s camera, or typing a numerical code into your phone.

Like magic, the bike unlocks. Ride it where you want to go. When you’re done, put the lock back through the wheel and leave it.

The companies tout the service as ideal for a quick trip across a neighborhood or as a first- and last-mile option for commutes — take a bike from your house to the light rail or from your bus stop to your workplace.

Not much — \$1 for a 30-minute ride and another \$1 for each 30 minutes after that.

Both companies say they can make money by attracting a high volume of riders and by ditching the overhead costs associated with docking stations.

But both companies will likely also look to sell advertising within the app at some point. Picture the app, which knows your location and also — if you use it frequently — your riding habits, recommending a local coffee shop.

Pretty much wherever, but use common sense. You can’t block the street or the sidewalk. Bikes are supposed to be parked in the “landscape/furniture zone” of the sidewalk. That’s the strip of pavement between the street and the traveled part of the sidewalk, where trees, parking meters and bike racks tend to be.

Don’t leave the bikes on grassy areas, at bus stops, in loading zones or on sidewalk corners. SDOT wrote the rules and has authority over streets and sidewalks; it can’t give permission for the bikes to be left in public parks (which aren’t under SDOT jurisdiction) or on college campuses. So those are a gray area, for now.

If it’s a place where you’d lock your own bike, it’s probably a good place to leave a bike-share bike.

HEADLINE	07/17 SPD to start wearing body-cams
SOURCE	http://komonews.com/news/local/spd-officers-to-start-wearing-body-cameras

GIST	<p>SEATTLE -- Seattle Police officers will now be required to wear body cameras, mayor Ed Murray announced Monday in signing an executive order.</p> <p>Starting next week, bike patrol officers in the West Precinct will be outfitted with cameras that record both audio and video. Once those deployments have been made, cameras will then be distributed to the rest of the patrol officers in the West Precinct by Sept. 30.</p> <p>Murray says other precincts will follow on a month-by-month basis.</p> <p>“Body cameras improve behavior and de-escalation on both sides of the camera,” Murray said in a statement announcing the order.</p> <p>“We have taken far too long to fully implement the body camera program due to legislative gridlock—it is past time to move forward. This order will get cameras on officers on the street, so we know what happens during interactions with the public. This level of accountability is good for both officers and the public, and will help build trust in a time where the community, particularly the African American community, is hurting.”</p> <p>Officers' every interaction on the job will be recorded -- from crime scenes, to protests to on the street conversations.</p> <p>The department had said in late December they had hoped to have over 800 officers outfitted by the end of 2017.</p> <p>More than 50 police departments across the state have experimented with body cameras, but only a handful actually use them daily.</p>

HEADLINE	07/17 DHS allows more temporary workers
SOURCE	https://www.upi.com/Top_News/US/2017/07/17/DHS-allows-15000-more-seasonal-foreign-workers-this-year/4341500310928/?utm_source=fp&utm_campaign=ls&utm_medium=1
GIST	<p>July 17 (UPI) -- The U.S. Department of Homeland Security on Monday announced it would allow 15,000 more foreign workers to obtain temporary non-immigrant visas due to a shortage of qualified laborers in the United States.</p> <p>DHS Secretary John Kelly filed the required paperwork with the Federal Register to increase the number of H-2B visas for fiscal year 2017 after meeting with Secretary of Labor Alexander Acosta, who said there weren't enough U.S. workers to satisfy the needs of businesses across the country. Petitioners seeking to hire more visa workers must prove their businesses would sustain "irreparable harm" if they're unable to bring in the foreign workers.</p>

	<p>"Congress gave me the discretionary authority to provide temporary relief to American businesses at risk of significant harm due to a lack of available seasonal workers," Kelly said. "As a demonstration of the administration's commitment to supporting American businesses, DHS is providing this one-time increase to the congressionally set annual cap."</p> <p>H-2B visas allow non-agricultural workers to gain temporary employment in the United States if businesses are unable to find qualified U.S. workers. Foreign workers with H-2B visas are qualified for positions in hospitality, maintenance, retail, warehouses, theme parks, landscaping and security.</p> <p>Congress set the maximum number of H-2B visas to be issued at 66,000 for the fiscal year, which ends Sept. 30. Half of the visas are available during the first half of the year and the remaining available in the second half. The cap was met on March 13 this year.</p>

HEADLINE	07/17 Questions in Minn. police shooting
SOURCE	http://www.reuters.com/article/us-minnesota-police-shooting-idUSKBN1A20EZ
GIST	<p>MINNEAPOLIS (Reuters) - The probe into the fatal shooting of an Australian woman over the weekend by Minneapolis police who she called to report a strange noise behind her home turned on Monday to why the officers' body cameras were not on at the time.</p> <p>Minneapolis Mayor Betsy Hodges and the American Civil Liberties Union called for answers on why responding officers failed to turn on their body cameras when they arrived at the home of Justine Damond in a quiet, upper-middle-class neighborhood shortly before midnight Saturday.</p> <p>Police shot Damond, originally of Sydney, through the door of their patrol car as she approached them in an alley near her home, the Minneapolis Star-Tribune reported, citing three unnamed sources.</p> <p>"I have a lot of questions about why the body cameras weren't on, questions that I hope and anticipate will be answered in the next few days," Hodges told reporters late Sunday.</p> <p>Minneapolis Police Chief Janee Harteau in a statement on Monday called Damond's death tragic.</p> <p>"I've asked for the investigation to be expedited to provide transparency and to answer as many questions as quickly as we can," Harteau said.</p> <p>Hundreds took to the streets of Minneapolis Sunday to protest Damond's shooting in a neighborhood dotted with brick and stucco houses, where violent crimes are relatively rare.</p>

The state Bureau of Criminal Apprehension, which reviews police-involved shootings in Minneapolis, said the dashboard camera in the officers' patrol car did not capture the shooting. The BCA is currently seeking any civilian video of the incident.

The American Civil Liberties Union on Minnesota called for the release of the audio from Damond's 911 call, along with any audio from the officers' dash camera. The group's executive director, Teresa Nelson, said the officers failed to obey department rules by not having their body cameras on.

HEADLINE	07/17 CoinDash’ token sale site hacked
SOURCE	https://www.hackread.com/coindash-token-sale-ico-website-hacked-ethereum-stolen-2/
GIST	<p>CoinDash (ISO), an Israeli cryptocurrency social trading start-up has announced that it has suffered a massive security breach in which the company’s crowdfunding page was hacked during Token Sale event earlier today — As a result, unknown hackers stole Ethereum worth \$7 million.</p> <p>The incident took place when hackers breached the CoinDash’s website and replaced the official Ethereum address to a fraudulent Ethereum address. The users then sent ETH to the fraudulent Ethereum address rather than the CoinDash’s official address.</p> <p>As of now, CoinDash has shut down their website and is currently investigating the issue. The company has also assured their clients and customers that it will issue certified digital tokens (CDTs) to those who had sent ETH to the fraudulent Ethereum address. However, those who had sent transactions after the CoinDash’s site was shut down will not be compensated.</p>

HEADLINE	07/17 Dow Jones leaks personal info
SOURCE	https://www.infosecurity-magazine.com/news/dow-jones-leaks-personal-info/
GIST	<p>Financial giant Dow Jones & Company has inadvertently leaked the sensitive personal and financial details of millions of the company’s customers.</p>

The UpGuard Cyber Risk Team found that a cloud-based file repository owned by the publishing firm had been configured to allow semi-public access to least 2.2 million customers as confirmed by Dow Jones; however, UpGuard conservatively estimates that the number may be as high as four million, per analysis of the size and composition of the repository.

The exposed data includes the names, addresses, account information, email addresses and last four digits of credit card numbers of millions of subscribers to Dow Jones publications like *The Wall Street Journal* and *Barron's*. Also exposed were the details of 1.6 million entries in a suite of databases known as Dow Jones Risk and Compliance, a set of subscription-only corporate intelligence programs used largely by financial institutions for compliance with anti-money laundering regulations.

The discovery was made May 30, and the database was secured June 6—since then, Dow Jones had made little effort to notify affected users other than an article in *the Journal* covering the leak on July 16, more than a month after the remediation.

“The data exposed in this cloud leak could be exploited by malicious actors employing a number of attack vectors already known to have been successful in the past,” said UpGuard researcher Dan O’Sullivan, in a post. “The aversion of Dow Jones and Company to notifying affected customers of this data exposure denies consumers the ability to swiftly act to protect their own personal information.”

HEADLINE	07/17 Lithuania to extradite email fraud suspect
SOURCE	http://www.securityweek.com/lithuania-extradite-100-million-email-fraud-suspect-us
GIST	<p>A Lithuanian man who allegedly swindled \$100 million (87 million euros) from tech giants Google and Facebook must be extradited to the United States, a court ruled on Monday.</p> <p>"The court has ruled in favour of extraditing Lithuanian citizen Evaldas Rimasauskas to the United States for criminal prosecution," Judge Aiva Surviliene said.</p> <p>The 48-year-old was arrested in March in the Baltic state at the request of US authorities, who accuse him of deceiving the two US firms in 2013-2015 by posing as a large Asia-based hardware vendor.</p> <p>Facebook and Google are mentioned in the indictment, Rimasauskas's lawyer confirmed to AFP.</p> <p>In a public statement, US prosecutors said Rimasauskas used "email accounts that were designed to create the false appearance that they were sent by employees and agents" of the Asian manufacturer.</p> <p>He is also accused of forging invoices, contracts and letters to trick the companies into wiring over \$100 million to overseas bank accounts under his control, according to prosecutors.</p>

	The scam was pulled off using deception and no Google systems were hacked, according to the California-based internet giant.

HEADLINE	07/17 Securitas CEO identity stolen; bankrupt
SOURCE	https://www.scmagazine.com/identity-of-securitas-chief-executive-stolen-bankruptcy-filed/article/675343/
GIST	<p>The chief executive of Swedish security firm Securitas AB, Alf Göransson, has been declared bankrupt after having his identity stolen.</p> <p>The company announced on Wednesday in a release that a fraudulent loan application in Göransson's name was made in March.</p> <p>As a result, Göransson was declared bankrupt on 10 July by the Stockholm District Court.</p> <p>The company claims there was no attempt made by the court to contact Göransson before the decision was made to declare him bankrupt.</p> <p>"The decision by the Stockholm District Court is based on a falsified application," the company said. "The incident has been reported to the police and the decision will be appealed to the Court of Appeal immediately today."</p> <p>The bankruptcy officer appointed by Stockholm District Court says he will support the appeal of the bankruptcy decision, which is therefore expected to be removed.</p> <p>Göransson reportedly has not been told the size of the loan, if it has been paid, or the kind of loan application that was filed.</p> <p>Securitas says that Göransson is not a victim of theft for which the group provides protection.</p>

HEADLINE	07/17 WhatsApp subscription phishing scam
SOURCE	https://www.scmagazine.com/whatsapp-phishing-attack-look-to-steal-payment-credentials/article/675560/
GIST	<p>ESET researchers warn users to beware of phishing messages purportedly from WhatsApp warning users they have been using the service for more than a year and that a subscription would be required for further use.</p> <p>An email version of the scam reads: "Our records indicate that your WhatsApp trial service is exceeding the one year [sic] period. At the completion of your trial period your WhatsApp will no longer be able to</p>

send or receive message. To continue using WhatsApp without interruption, we need you to subscribe for any of our subscription periods.”

An added extra bit of flavor that helps make an attack attempt even more convincing is that prior to January 2016, the messaging service charged a fee after a year of service before [announcing](#) it would make the app completely free for everyone, according to a July 14 [blog](#) post.

Researchers have also spotted the scam being sent via unsolicited text messages warning that they need to verify their information and offering a lifetime subscription for about \$1.30.

HEADLINE	07/17 GhostCtrl silently haunts Android users
SOURCE	https://www.scmagazine.com/ghostctrl-malware-silently-haunts-android-users-hijacking-functionality/article/675562/
GIST	<p>Researchers have uncovered a highly versatile Android remote access trojan that hijacks device functionality, steals information and can even perform ransomware attacks.</p> <p>The malicious backdoor, dubbed GhostCtrl, is part of a larger campaign that also involves the Windows-based information-stealing worm RETADUP.A, according to Trend Micro, whose researchers found both malwares. RETADUP was discovered on June 27 after samples were detected and blocked after attempting to infect two Israeli hospitals.</p> <p>"The actors behind the attacks utilized both RETADUP and GhostCtrl. One targeted PCs while the other targeted Android users," said Jon Clay, director of global threat communication at Trend Micro, in an email interview with SC Media. "We're seeing more targeted attack actors utilize multiple malicious tools in their arsenal to ensure they are able to gather information and/or intelligence from their target victims."</p> <p>Trend Micro did not further elaborate on why the two malwares are linked to the same actor, or if GhostCtrl similarly targeted health care institutions in Israel, or otherwise. SC Media has reached out for additional answers.</p> <p>In a Monday blog post detailing the GhostCtrl threat, Trend Micro further reported that GhostCtrl gives attackers significant flexibility and options in terms specifying which malicious actions to perform and what content to steal. For instance, the malware can secretly upload and download files, intercept and send out SMS and MMS messages, run shell commands, call phone numbers, and even record voice and auto and exfiltrate those recordings to a malicious server.</p> <p>Even more unusual for RATS, the spyware can clear or reset specific account passwords, control Bluetooth in order to search and connect other devices, and disconnect active phone calls. The ability to</p>

	reset passwords, as well as lock device screens, allows some versions of GhostCtrl to potentially act as ransomware, forcing users to pay up in order to regain control of their devices.

HEADLINE	07/17 FBI warns on IoT toy security
SOURCE	http://www.darkreading.com/cloud/fbi-issues-warning-on-iot-toy-security/d/d-id/1329373?
GIST	<p>Internet-connected toys carry the potential of violating children's privacy and safety, given the amount of information the toys can collect and store, the Federal Bureau of Investigation warned on Monday.</p> <p>The sensors, microphones, data storage capabilities, cameras, and other multi-media features of IoT toys could potentially gather information on a child regarding their name, school, activity plans and physical location.</p> <p>And if those toys are hacked, the information and data collected could potentially be used by attackers to do a child harm, the FBI warned. The FBI advisory offered advice on selecting an IoT toy, such as only connecting it to a secure and trusted WiFi network, research the toy to ensure it can receive firmware and software updates, and investigate where the information entered into the toy is stored.</p>

HEADLINE	07/17 Britain: porn sites must verify age
SOURCE	http://abcnews.go.com/International/wireStory/britain-make-porn-sites-check-users-18-48680562?cid=clicksource_76_4_article%20roll_articleroll_hed
GIST	<p>The British government says that starting next year pornography websites will have to verify that their users are at least 18.</p> <p>The government says that from April 2018 websites will have to show they are blocking access by minors, possibly by making users supply credit-card details. A regulator will have the power to fine those that fail to comply.</p> <p>The National Society for the Prevention of Cruelty to Children says the move will protect young people from "deeply damaging" imagery.</p> <p>But the Open Rights Group says the rule may let websites build up databases of users' personal information and porn habits. Executive director Jim Killick said Monday that the information "could be vulnerable to Ashley Madison-style hacks." In 2015, hackers stole details of millions of users of the infidelity website.</p>

HEADLINE	07/17 China censors block Winnie the Pooh
SOURCE	http://www.bbc.com/news/blogs-china-blog-40627855
GIST	<p>The blocking of Winnie the Pooh might seem like a bizarre move by the Chinese authorities but it is part of a struggle to restrict clever bloggers from getting around their country's censorship.</p> <p>When is a set of wrist watches not just a set of wrist watches? When is a river crab not just a river crab? Inside the Great Firewall of China of course.</p> <p>Winnie the Pooh has joined a line of crazy, funny internet references to China's top leaders.</p> <p>The Chinese name for and images of the plump, cute cartoon character are being blocked on social media sites here because bloggers have been comparing him to China's president.</p> <p>When Xi Jinping and Japan's Prime Minister Shinzo Abe endured one of the more awkward handshakes in history netizens responded with Winnie the Pooh and Eeyore shaking hands.</p> <p>And then there was the time President Xi popped his head out of the roof of his special Red Flag limousine to inspect the troops - a photo appeared online of a toy Winnie the Pooh popping out of his own little car.</p> <p>It is not only that China's censors will not tolerate ridicule of the country's leader, they do not want this beloved children's character becoming a kind of online euphemism for the Communist Party's general secretary.</p> <p>In other countries such comparisons might be thought of as harmless enough and some might even think that having Winnie as your mascot could even be quite endearing: not in China.</p> <p>Winnie the Pooh has actually fallen foul of the authorities here before. This renewed push against online Pooh is because we are now in the run-up to the Communist Party Congress this autumn.</p> <p>The meeting takes place every five years and, amongst other things, sees the appointment of the new Politburo Standing Committee: the now seven-member group at the top of the Chinese political system.</p> <p>Xi Jinping will also be using the Congress, which marks the beginning of his second term in office, to further solidify his grip on power by promoting allies and sidelining those seen as a threat.</p> <p>It had been thought that China has transformed into a system of two-term governance for the country's supreme leader but this is merely a recent convention rather than a rule.</p> <p>So, because President Xi has made so many enemies within the Party as a result of his widespread anti-corruption crackdown, many have questioned whether he can afford to give up power after the next five-year term.</p>

	<p>In order to stay on he will believe that he needs to ensure there are no cracks in the absolute loyalty he demands.</p> <p>And, in this climate, there is seen to be no room for even the most frivolous challenges to his supreme authority.</p>

HEADLINE	07/17 French registrar Gandi domains hijacked
SOURCE	http://www.securityweek.com/hundreds-domains-hijacked-french-registrar-gandi
GIST	<p>Hundreds of domains were hijacked earlier this month and redirected to an exploit kit landing page as part of an attack targeting the French domain name registrar and hosting services provider Gandi.</p> <p>According to an incident report published by Gandi last week, the hacker attack involved one of its technical partners, which helps the company connect to some of the 200 registries that allow it to manage more than 2.1 million domain names across 730 top level domains (TLDs).</p> <p>The attacker managed to obtain credentials to a web portal of this technical partner. It's unclear how the credentials were stolen, but Gandi suspects that the data may have been intercepted from the HTTP connection to its partner's portal. The company highlighted that its own systems or the infrastructure of its technical partner have not been breached.</p> <p>Once they gained access to the web portal, the attacker modified the name servers for 751 domains in an effort to redirect their visitors to an exploit kit.</p> <p>According to SWITCH, the registry for .ch (Switzerland) and .li (Liechtenstein) domain names, which had 94 of its domains hijacked, victims were redirected to the RIG exploit kit. One of the affected domains belongs to Swiss security firm SCRT, which also had its incoming emails redirected to a foreign mail server.</p> <p>Gandi said it learned about the incident on July 7 from a registrar and immediately started reverting the changes made by the attacker. The company has also reset all login credentials to the platforms used to connect to registries and technical partners.</p>

HEADLINE	07/17 Parents warned over Blue Whale challenge
SOURCE	http://q13fox.com/2017/07/17/parents-urged-to-be-on-alert-over-blue-whale-challenge-aimed-at-kids-online/
GIST	<p>SEATTLE — — It's called the "Blue Whale Challenge" and it allegedly targets teens on social media platforms. At least two families say the game has led to their child's suicide.</p>

As part of this ‘challenge,’ the teens reach out to game administrators, called “curators”, by using specific hashtags. The “curator” is said to give players daily tasks that range from harmless to horrifying –watching scary movies, cutting themselves and taking pictures of themselves in dangerous situations.

After 50 days of dares, the user is allegedly told to kill themselves. At least two families say the game led to their child's suicide; a 16-year-old Georgia girl and a 15-year-old boy from Texas.

“In this age of likes and followers, kids are a lot more vulnerable to following these challenges because they want to be on that social media cutting edge with their friends and fans and followers,” says Kim Estes of Savvy Parents Safe Kids.

Estes says parents must be watching their kids’ social media platforms. And beyond that, dig deeper. Talk to them about these online challenges and the dangers behind them; get their perspective and understand their feelings.

It’s still unclear where this alleged social media challenge originated; various websites say it reportedly started overseas. But Estes says the bottom line is that it’s trending and kids know about it and we need to talk to them about it sooner rather than later.

HEADLINE	07/15 DHS sifts thru data on energy cyber threat
SOURCE	https://www.eenews.net/stories/1060057379
GIST	<p>Department of Homeland Security specialists are in the "early" stages of decoding a sophisticated hacking campaign targeting energy, nuclear power and manufacturing firms this year, according to an official familiar with the case.</p> <p>Mark Bristow, deputy division director for the Hunt and Incident Response Team [HIRT] at DHS's National Cybersecurity and Communications Integration Center, said the agency had not identified any risk to public safety from the cyber incidents, which date back to at least May and were first reported by E&E News last month (Energywire, June 27).</p> <p>Bristow said that there was so far nothing "abnormal or unusual" about the recent malicious activity but added that federal officials treat any such events as "a serious matter."</p> <p>"We take even what might be considered reasonably mundane intrusions into corporate environments of critical infrastructure asset owners very seriously, in the event that this is just the first stage of an intrusion with an intention to cause physical damage or anything like that," Bristow said. "The challenge with [cybersecurity] is that the difference in time between an adversary just gaining access and poking around</p>

and attempting to have an effect or consequence can be very short. So we have to take it seriously from the beginning to ensure that public safety impact won't — or can't — be realized."

The recent hacking campaign relied on "spearphishing" emails to lure employees into clicking on a hijacked resume for a "controls engineer," according to multiple sources and documents. The hackers also booby-trapped webpages likely to be visited by power-sector workers in a "watering hole" attack, among other tactics.

The Washington Post reported Saturday that U.S. government officials have already linked the digital assailants to Russia (*Energywire*, July 10). *The New York Times* first disclosed last week that the Wolf Creek Nuclear Operating Corp. was among the companies affected by the breach.

A spokeswoman for the Kansas-based nuclear power facility declined to comment on security matters but said there has been no impact to safety systems. The Nuclear Regulatory Commission, which monitors safety and cybersecurity at the reactor level of nuclear power plants, said the case "is not related to the cyber assets under our regulations and oversight," indicating the cyberthreat never reached that tightly guarded level.

But were hackers aiming for nuclear operations?

Bristow declined to name targets or speculate on the adversary's ultimate goals. But he offered a general warning about jumping to conclusions so early in any investigation.

"Even if you see something that's targeted at control engineers, it doesn't necessarily mean that they're going after control systems — or it could," he said. "This is the challenge that we have: trying to make sense of a mountain of data and make assessments."

HEADLINE	07/18 Volunteer fighters in forward role vs ISIS
SOURCE	http://abcnews.go.com/International/wireStory/us-british-volunteer-fighters-forward-role-battle-48695771?cid=clicksource_76_4_article%20roll_articleroll_hed
GIST	Hunkered down in sniper positions on the top floor of an abandoned building in the Syrian city of Raqqa, two Americans and a British volunteer face off Islamic State snipers on the other side of the front line. The trio, including two who were battle-hardened by experience in the French Foreign Legion and the war in Iraq, have made the war against IS in Syria their own.

They are among several U.S. and British volunteers in the decisive battle against the Islamic State group for Raqqa, the city in northeastern Syria that the militants declared the capital of their self-proclaimed caliphate in parts of Syria and neighboring Iraq.

The men joined U.S.-allied Syrian militias for different reasons — some motivated by testimonies of survivors of the unimaginable brutality that IS flaunted in areas under its control.

Others joined what they see as a noble quest for justice and a final battle with the "heart of darkness," in a belief that violence can only be met with violence.

Taylor Hudson, a 33-year old from Pasadena, compares the fight for Raqqa to the 1945 Battle of Berlin in World War II that was critical to ending the rule of Adolf Hitler.

"This is the Berlin of our times," said Hudson, who doubles as a platoon medic and a sniper in the battle against the militants. For him, IS extremists "represent everything that is wrong with humanity."

Syria's war, now in its seventh year, has attracted foreign fighters to all sides of the complicated conflict.

Islamic extremists from Europe, Asia and North Africa have boosted the ranks of the Islamic State group, as well as rival radical al-Qaida-linked groups. Shiite Iranian and Lebanese militias have sided with the Syrian government, deepening the sectarian nature of the conflict that has killed over 400,000 people and displaced over 11 million, half of Syria's pre-war population.

On the anti-IS side — though far less in numbers than the thousands of foreigners who swelled the IS ranks — most Western foreign volunteers have been drawn to the U.S.-allied Kurdish militia known as The People's Protection Units, or by their Kurdish initials as the YPG. The U.S. military has developed a close relationship with the YPG and its extension, the Syrian Democratic Forces, in the war against IS.

Some Western volunteers have died in battle — earlier in July the YPG announced that 28-year-old Robert Grodt, of Santa Cruz, California, and 29-year-old Nicholas Alan Warden, of Buffalo, died in the battle for Raqqa.

Since launching the push on Raqqa on June 6, the U.S.-backed forces have conquered a third of the city.

Hudson, who has been fighting in Syria for the past 13 months, said he was moved to tears by stories in the media of Iraqi Yazidi women who were enslaved by IS militants and looked for a way to help. A pharmacy student who learned combat medicine in the field, he said he had treated some 600 wounded ahead of the march onto Raqqa.

The presence of Western anti-IS volunteers in Syria has created something of a conundrum for their governments, which have often questioned them on terrorism charges.

"I am not a terrorist," said Macer Gifford, a 30-year former City broker in London, who came to Syria three years ago to volunteer first with the Kurdish militia. Now he is fighting with an Assyrian militia, also part of the U.S-backed forces battling IS militants.

"I am here defending the people of Syria against terrorists," he added.

Gifford has been questioned by both his British government and by the U.S government. At home, he has written and lectured about the complex situation in Syria, offering a first-hand experience of IS' evolving tactics.

He believes the militants can only be defeated by sheer force.

"The Islamic State (group) is actually an exceptional opponent," Gifford said. "We can't negotiate them away, we can't wish them away. The only way we can defeat them is with force of arms."

For Kevin Howard, a 28-year old former U.S. military contractor from California who fought in Iraq in 2006, the war against the Islamic State group is more personal.

A skilled sniper who prides himself in having killed 12 IS militants so far, Howard said he is doing it for the victims of the Bataclan theatre in France, where the sister of one of his best friends survived. The Nov. 13, 2015 attacks claimed by IS killed 130 people at Paris cafes, the national stadium and the Bataclan, where 90 died.

HEADLINE	07/17 ISIS conspirator pleads guilty to murder
SOURCE	http://www.hickoryrecord.com/news/morganton-isis-conspirator-pleads-guilty-to-st-degree-murder-judge/article_78218f53-9ea8-5c72-a8ce-af299d6d3faa.html
GIST	<p>MORGANTON – A 21-year-old Morganton man, who was sentenced to life in prison less than a month ago for plotting acts of terrorism, pleaded guilty to first-degree murder and was handed a second life sentence in Burke County Superior Court on Monday.</p> <p>Burke County Superior Court Judge Robert C. Ervin sentenced Justin Nojan Sullivan to life in prison without the possibility of parole for the murder of John Bailey Clark, and said the two life sentences will be served consecutively.</p> <p>Sullivan elected to stand and speak after being sentenced and said, “I didn’t mean for things to happen this way.”</p> <p>Clark was slain either late Dec. 17, 2014, or early Dec. 18, 2014, N.C. 25th District Attorney David Learner said, presenting the Burke County Sheriff’s Office documents to the courtroom.</p> <p>The victim, while in bed, was shot three times in the head and buried in his backyard by Sullivan, Learner said. Sullivan, who lived with his parents approximately 0.2 miles from Clark, committed the murder while his parents were out of town.</p> <p>Sullivan stole a rifle from a gun cabinet owned by his father to slay the victim, he said.</p> <p>“In my opinion, this was a killing to prove, I guess to himself, that he could kill someone,” Learner said after Sullivan’s sentencing.</p> <p>Learner commented multiple times in court that Sullivan had never expressed remorse for the crimes he was convicted of Monday.</p> <p>Learner shared details about Sullivan’s ties to the Islamic State terrorist group.</p> <p>Sullivan wanted to start an “Islamic State of North America” that eventually led to him offering to pay an undercover Federal Bureau of Investigation officer money to murder his parents, Learner said.</p>

	<p>Learner referenced documents outlining Sullivan’s plan to attack a night club and target as many as 500-1,000 people.</p> <p>Sullivan also planned to buy an assault weapon at a gun show in Hickory in June 2015, and attempted to buy ammunition to use with that weapon, according to a press release from the district attorney’s office.</p>

HEADLINE	07/17 Egypt: militants kill 5 police in Sinai
SOURCE	http://abcnews.go.com/International/wireStory/militants-kill-police-complex-attack-egypts-sinai-48679899?cid=clicksource_76_4_article%20roll_articleroll_hed
GIST	<p>Egyptian security officials say suspected Islamic militants have attacked police in the northern Sinai Peninsula, killing five of them and wounding another five.</p> <p>They say the militants opened fire on an armored vehicle before setting it ablaze in the city of el-Arish on Monday. When reinforcements arrived, the militants set off a roadside bomb. The officials spoke on condition of anonymity because they were not authorized to brief reporters.</p>

	<p>Egypt has been struggling to combat an insurgency in the northern Sinai that has gathered strength since the military overthrew Islamist President Mohammed Morsi in 2013. Most of the attacks, including an assault on an army post earlier this month that killed 23 soldiers, have been claimed by an Islamic State affiliate.</p>

HEADLINE	07/17 UN reports rise in Afghan war deaths
SOURCE	http://abcnews.go.com/International/wireStory/afghan-official-key-southern-district-retaken-taliban-48675732?cid=clicksource_4380645_5_heads_posts_headlines_hed
GIST	<p>Afghanistan's protracted war killed a record number of civilians during the first six months of this year, according to a U.N. report released Monday, which blamed the majority of the deaths on bombings by insurgents.</p> <p>U.N. High Commissioner for Human Rights Zeid Ra'ad Al Hussein said the "horrifying" figure of 1,662 people killed between January and June of this year "can never fully convey the sheer human suffering of the people of Afghanistan."</p> <p>"Each one of these casualty figures reflects a broken family, unimaginable trauma and suffering and the brutal violation of people's human rights," he added.</p> <p>The report confirmed that a massive truck bomb in the center of Kabul on May 31, which killed at least 90 people, was the deadliest attack since the U.S.-led invasion that toppled the Taliban in 2001. It also noted that more women and children were among the dead this year.</p> <p>Insurgent attacks killed 1,141 civilians, a 12 per cent increase over the same period last year, according to the report, which said such attacks wounded another 2,348 people.</p> <p>The report commended Afghanistan's security forces, saying fewer civilians were caught in the crossfire compared to last year. It said 434 civilians were killed during military operations against insurgents.</p> <p>Gen. Dowlat Waziri, a Defense Ministry spokesman, blamed the high toll on the insurgents' use of human shields. "The army is being very careful during operations to prevent civilian deaths," Waziri told The Associated Press.</p> <p>Taliban spokesman Zabihullah Mujahid rejected the "biased" report, saying it did not take into account civilians killed by Afghan and coalition forces in areas controlled by the Taliban. He did not provide any figures and there was no way to verify his claims.</p>

HEADLINE	07/17 JBLM: soldiers return from Afghanistan
SOURCE	http://komonews.com/news/local/200-soldiers-return-to-jblm-after-9-month-deployment-overseas
GIST	<p>JOINT BASE LEWIS-McCHORD, Wash. -- Two hundred soldiers returned to Joint Base Lewis-McChord Monday after a nine-month deployment to Afghanistan and Iraq.</p> <p>Nine months after they first deployed, the blue curtain went up inside the Wilson Fitness Center and 200 soldiers with the 5th Battalion, 5th Air Defense Artillery Regiment (5-5 ADA) emerged. They were stationed in Iraq and Afghanistan working to keep the skies clear of rockets and mortars.</p> <p>5-5 ADA, which is a part of the 31st ADA Brigade at Ft. Sill, Okla. and attached to the 17th Field Artillery Brigade, was first constituted on June 13, 1861, as Battery H, 5th Regiment of Artillery, according to a JBLM spokesman. Since their creation, they have been reorganized multiple times until Oct. 1, 2005, where they officially became 5-5 ADA and moved from Korea to Ft. Lewis, Washington, he added.</p> <p>This is their third deployment in three years, a JBLM spokesman said.</p>

HEADLINE	07/17 UN: Iraq major challenges post-Mosul
SOURCE	http://abcnews.go.com/International/wireStory/envoy-warns-iraq-faces-major-challenges-mosul-48681733?cid=clicksource_76_4_article%20roll_articleroll_hed
GIST	<p>The U.N. envoy for Iraq warned Monday that the road ahead for the Mideast nation is "extremely challenging" following the liberation of Mosul, stressing that freeing other territory controlled by Islamic State extremists won't be easy.</p> <p>Jan Kubis told the Security Council that supporters of the militant group are also continuing "their vicious terrorist activities against civilians in Iraq and beyond."</p> <p>With the liberation of Mosul declared on July 10 by Iraq's Prime Minister Haider al-Abadi, the country's coalition-backed forces must now reclaim other IS-controlled territory in parts of Ninawa and Anbar governorates, in Hawija in Kirkuk governorate and in pockets elsewhere, he said.</p> <p>At the same time, Iraq must start demining, stabilizing and rebuilding Mosul so people who fled the fighting can return home, Kubis said, and it must eliminate IS cells, criminal gangs and militias operating outside government control.</p> <p>Since military operations began in October to retake Mosul from IS extremists, he said approximately one million people have been displaced.</p>

Addressing the issue of civilian casualties, Kubis said that at al-Abadi's direction, the liberation operation was marked by "an exceptional effort" by Iraqi forces and their international partners to avoid civilian deaths.

In stark contrast, he said, IS "terrorists showed absolute disregard for human lives and civilization" by booby-trapping and destroying houses, infrastructure and religious and cultural monuments and deliberately targeting civilians.

The extremist group used civilians as human shields, locked people in their homes and used rooftop snipers to kill those attempting to flee to safety, Kubis said. "They butchered them by using suicide bombers who included females and brainwashed children," even in camps for the displaced.

Kubis said it is also "crucial" for the government to enforce law and order, the rule of law, justice and accountability as well as implement reforms and good governance practices and promoting development. He said this must also be done in southern Iraq, which was far from the battleground.

HEADLINE	07/16 New tool: cost of collisions in Seattle
SOURCE	http://www.king5.com/news/local/seattle/new-map-shows-costs-of-collisions-in-seattle/457175867
GIST	<p>There's a new tool to help explain the cost of collisions in Seattle. The interactive map shows how many crashes have happened over the past 10 years.</p> <p>“The city does a great job of making all this data available and open and accessible; the problem is it's kind of in this giant spreadsheet-like format that's hard to make sense of,” said Tim Ganter, a web designer and developer who developed the online map.</p> <p>The website allows users to see not only what kind of crashes occurred, but also the costs of injuries, fatalities, and property damage.</p> <p>“I just hadn't realized the cost, even as a professional safety advocate, \$3.2 billion over ten years is a staggering number,” said Gordon Padelford, the incoming executive director of the group Seattle Neighborhood Greenways, which worked with Ganter to develop the map. They discovered some interesting trends.</p> <p>“Capitol Hill has more parked cars hit over the past 10 years compared to other neighborhoods,” Ganter said.</p>

	<p>The map also shows a constellation of damage around the intersection of Denny and Stewart. The crossroads was recently voted Seattle's worst intersection for pedestrians in an informal poll by a pedestrian safety advocate.</p> <p>Ganter hopes his map will help educate the city about a persistent problem on nearly every block.</p>

HEADLINE	07/16 Tacoma Narrows Bridge short on tolls
SOURCE	http://www.thenewstribune.com/news/local/traffic/article161545883.html
GIST	<p>The third bridge built over the Tacoma Narrows turned 10 on Saturday without the fanfare that marked its opening, and a region's eyes remain trained on how it's doing.</p> <p>The answer is mixed.</p> <p>The bridge's structure remains solid — its life has far outstripped that of its famous predecessor, Galloping Gertie — and commuters fill its lanes every weekday.</p> <p>But traffic and toll collections have fallen far short of what state officials projected before 2007.</p> <p>The state Department of Transportation says it remains on track to pay off the bridge's debts by 2032.</p> <p>The head of the committee that makes toll recommendations for the bridge, however, said the paucity of bridge traffic could reverberate one day with toll hikes or pleas to the Legislature for more money.</p> <p>To assess the bridge's financial state, the News Tribune compared a consultant's traffic projection for the state Department of Transportation in 2006 with the reported traffic through this March.</p> <p>It found the bridge will have to see 27 million drivers — nearly two years' worth of traffic — between April and December 2017 to catch up to early expectations.</p> <p>"The traffic hasn't materialized," said Bruce Beckett, chairman of the bridge's Citizen Advisory Committee, which is in charge of making toll rate recommendations.</p> <p>Instead of nearing 17 million vehicles a year as predicted, the bridge has not yet had a 15 million-vehicle year, Beckett noted. As a result, revenue from tolls is well behind what was originally predicted.</p> <p>The bridge was projected to be taking in a little more than \$100 million a year in tolls by now. It isn't close. After the last toll increase, in July 2015, revenues for the next year were about \$78 million. As of March, the bridge was on pace to bring in about \$82 million for the fiscal year that ended June 30.</p>

	<p>The life-of-the-bridge toll collections by the end of March were \$537 million. That’s about \$225 million short of what the 2006 projection said would be in bridge coffers by the end of this year.</p> <p>The causes of this shortfall are debatable.</p>

HEADLINE	07/17 Questions in deaths 8 prominent Russians
SOURCE	http://www.newsmax.com/Newsfront/eight-prominent-russians-dead/2017/07/17/id/802182/
GIST	<p>Eight high-profile Russians have died since President Donald Trump won the election in November and questions remain surrounding the circumstances of their deaths, <u>CNN reported Monday.</u></p> <p>The death of former intelligence official Oleg Erovinin, who CNN reported had close ties to Russian intelligence, has conspiracy theorists speculating that he might have been a source in the inflammatory dossier that said Russian President Vladimir Putin has been “cultivating, supporting and assisting Trump for at least five years.”</p> <p>Vitaly Churkin, 64, and Russia’s ambassador to the United Nations died of a heart attack on February 20, while 67-year-old Alexander Kadakin, the Russian ambassador to India, died in January of an undisclosed illness. Denis Voronenkov, 45, a Russian politician who spoke out against Putin after he fled to Ukraine, was shot dead in March outside a hotel in Kiev, and Andrey Malanin, a 54 year old senior diplomat at the Russian embassy in Greece, reportedly died from natural causes in January.</p>

	<p>Andrey Karlov, 62, and Petr Polshikov, 56, were shot to death on December 20 in separate incidents. Karlov was the Russian ambassador to Turkey and Polshikov was a senior Russian diplomat. Another Russian diplomat, 63-year-old Sergei Krivov, was <u>found unresponsive on Election Day in New York City</u> with blunt force trauma to the head. Consular officials said he had a heart attack.</p>

HEADLINE	07/17 Fabled Northwest Passage melting
SOURCE	http://abcnews.go.com/International/wireStory/global-warming-melts-ice-alters-fabled-northwest-passage-48690113
GIST	<p>More than a century has passed since the first successful transit of the treacherous, ice-bound Northwest Passage by Norwegian explorer Roald Amundsen in 1906.</p> <p>Now The Associated Press is sending a text, video and photo team through the passage, where global warming is melting sea ice and glaciers at an historic rate, altering and opening up the Arctic in a way unprecedented in recorded history.</p> <p>Although the passage presents an attractive shortcut for maritime traffic between the Pacific and Atlantic oceans, only a dozen or two vessels attempt to navigate the poorly charted Canadian Arctic Archipelago during the brief summer window each year. Many are sturdy coast guard icebreakers, adventure cruises and thrill-seekers in small, nimble boats hoping to pick their way through fields of floating ice that can easily strand unprepared mariners.</p> <p>Some also consider the Northwest Passage a future alternative for freighters aiming to save fuel on the route from Asia to Europe, and there have been several test runs over the years. The region has become a magnet for nations wanting to tap into the Arctic's rich oil reserves and other natural resources and for scientists seeking to understand global warming and its impacts on the sea and wildlife.</p> <p>The AP is accompanying an international group of researchers for a weeks-long expedition on MSV Nordica, a 27-year-old Finnish government-owned icebreaker, to view firsthand the changes taking place in one of the planet's most forbidding corners.</p> <p>This is the first post from the voyage, which began July 5 in Vancouver, British Columbia, entered the passage at the Bering Strait nine days later and ends in Greenland toward the end of July.</p>

HEADLINE	07/17 Squatters behind warehouse fire?
SOURCE	http://www.kiro7.com/news/local/squatters-may-be-to-blame-for-fire-at-empty-warehouse/562776781
GIST	SEATTLE, Wash. - Fire officials say squatters may be responsible for causing a huge fire at an empty warehouse in Seattle's Rainier Valley Sunday morning.

	<p>Dozens of firefighters were called to the scene as the empty warehouse at the corner of South Grand and 22nd Avenue went up in flames.</p> <p>The fire was shooting through the roof at one point and thick black columns of smoke could be seen from miles away.</p> <p>Fire officials say they initially had trouble accessing the warehouse because the building was vacant.</p> <p>Investigators are looking into whether vagrants may have been inside at one point, potentially setting the fire.</p> <p>Fire crews say they have been working for years to deal with squatters at the site.</p>

HEADLINE	07/17 Pentagon ignores IG fiscal report
SOURCE	http://www.nbcnews.com/news/us-news/pentagon-ignores-watchdog-calls-33-6-billion-savings-n783511
GIST	<p>The Department of Defense's failure to act on recommendations from its own watchdog may have cost \$33.6 billion, a new report says.</p> <p>The Pentagon's Inspector General's Office released a 458-page report last week that detailed how the Department of Defense responded to 288 Inspector General audits that went back as far as 2006. The report concluded that the Pentagon addressed very few problem areas and may have cost itself and American taxpayers \$33.6 billion in wasteful spending.</p> <p>The costliest example provided in the report listed the Marine Corps purchase of the CH-53K helicopter. The military branch planned to buy 44 more helicopters than it needed in 2013, according to the IG, costing taxpayers an additional \$22.2 billion.</p> <p>Despite the IG's warning against the purchase, the Marine Corps went ahead with the acquisition.</p> <p>The Department of Defense did not respond to requests for comment.</p> <p>Some of that money can still be recovered if the department follows 58 of the IG's suggestions that contain "associated potential monetary benefits," though the report, released Thursday, notes that a number of those opportunities may have passed.</p> <p>"We believe that [the Department of Defense] senior managers should focus attention on the 1,298 open recommendations and ensure that prompt resolution and action is taken," the report said.</p>

The Pentagon “agreed to take corrective action on 1,251” of the recommendations, according to Acting Inspector General Glenn Fine.

As of March 31, when the office concluded its overview, 832 recommendations had been pending for more than a year, 109 had languished for more than three years and two had gathered dust for more than a decade.

The second-highest dollar amount in waste came from the Air Force's purchase of \$8.8 billion worth of MQ-9 Reaper drones. The IG said it was a waste as the Air Force had spent the same amount on the drones in previous years.

Despite the admitted losses, the report also made a few suggestions that could save the Department of Defense money in the future — if the recommendations are followed. Some of that information, particularly reports related to the F-35 program and Cyber Command, was classified and redacted from the public version of the report.

HEADLINE	07/17 Teen charged in Seattle park shooting
SOURCE	http://www.seattlepi.com/local/crime/article/Teen-charged-in-shooting-at-Seattle-s-Gas-Works-11295194.php

GIST	<p>A teen accused in a May shooting at a popular park on Seattle’s Lake Union has been charged with assault.</p> <p>King County prosecutors say Deshawn Wild shot two other young men at Gas Works Park on May 26. Wild, 17, had been at large until earlier in July.</p> <p>Writing the court, Senior Deputy Prosecutor Dana Cashman described Wild as a danger to the public. “He shot two young men who were apparently strangers to him,” said Cashman, noting that witnesses said the shooting wasn’t preceded by an argument.</p> <p>Police were called to the Fremont-neighborhood park shortly after 2 a.m. Officers arrived to find that two people had been shot; detectives identified Wild as a suspect shortly after the shooting.</p> <p>That night, Wild was at the park with three friends when he approached another group that had gathered around a fire pit, a Seattle Police Department detective said in charging papers. Wild asked a member of the other group “What’s up?” before drawing a pistol and opening fire, the detective continued.</p> <p>Police say Wild appeared to have targeted a particular member of the other group, shooting him in the stomach at a range of about 10 feet.</p> <p>“It was apparent that Wild was shooting at the victim and not just into the group of people,” the detective said in court papers.</p> <p>The injured man told police he and his assailant had a brief argument before the shooting. According to charging papers, he said doubted he would be able to identify the man who shot him.</p> <p>Wild and his friends fled the park, according the charging papers. He had not been located by police when charges were filed.</p> <p>Wild’s criminal history includes several gun crimes. He appears to have lost his firearms rights in 2014. Wild was booked into the King County Regional Justice Center on Thursday, and is currently being held at the Kent jail on \$500,000 bail. He has been charged with first-degree assault.</p>

HEADLINE	07/17 Record cocaine production in Colombia
SOURCE	http://www.insightcrime.org/news-analysis/record-cocaine-production-colombia-fuels-new-criminal-generation
GIST	Colombia is now producing more cocaine than ever before, just as a new chapter in the country's criminal history begins and the government tries to implement a peace agreement with Marxist rebels.

The 2016 illicit crop monitoring data for Colombia has just been published by the United Nations Office on Drugs and Crime (UNODC). The report contains a wealth of data on Colombia's drug production, none of it encouraging. The top line is that annual cocaine production rose more than 34 percent to 866 metric tons. The number of hectares under coca cultivation leapt from 96,000 in 2015 to 146,000 in 2016, a 52 percent increase. This means that Colombia is producing more cocaine than it ever has.

The UN data, while often disputed, is the benchmark for those seeking to put some kind of number on Colombia's cocaine trade. In March, the US Office of National Drug Control Policy (ONDCP) unveiled its estimates for Colombia, stating that there were 188,000 hectares of coca crops in 2016. While higher than the UN estimates, the gap between the two institutions has begun to narrow.

This must be of particular concern to the Colombian government and the security forces, as these two departments are home to the most powerful dissident group of the Revolutionary Armed Forces of Colombia (Fuerzas Armadas Revolucionarias de Colombia - FARC): the First Front.

This FARC unit pronounced itself dissident in July last year, even before the government signed the November 2016 peace agreement, which is now being implemented and has seen more than 7,000 guerrillas concentrate in special zones around the country and hand over weapons.

The FARC were the single most important players in the Colombian, and therefore the global cocaine trade. They controlled over 60 percent of the coca crops in the country, charging taxes on production and getting involved in almost every link in the drug chain. Their departure changes the dynamics of the drug trade.

This takes us to the new generation of criminal groups in Colombia that are profiting from the cocaine bonanza. The first thing is to forget about traditional drug cartels along the lines of the Medellín and Cali Cartels. They are long gone as organized crime structures. Forget also the heavily-armed paramilitary army of the United Self Defense Forces of Colombia (Autodefensas Unidas de Colombia – AUC). While the generation of criminal groups born out of the AUC demobilization, the BACRIM (so named after the Spanish for criminal bands, "bandas criminales") has its roots in the AUC, it does not have the same military capacity nor territorial control of its paramilitary predecessors.

Today it is all about networks, and the most powerful one is group under what we call the "Urabeños" franchise, although this group prefers to call itself the Gaitanista Self Defense Forces of Colombia (Autodefensas Gaitanistas de Colombia – AGC). This franchise has reach across Colombia and is responsible for moving the lion's share of cocaine across the Colombian border.

The Urabeños used to work closely with the FARC. The guerrillas would sell them coca base and protect shipments going through their territory. However the departure of the FARC from the criminal scene has changed the drug trafficking landscape, just as the demobilization of the AUC in 2006 did.

	The new chapter in Colombia's criminal history is now unfolding as the cocaine industry adapts to the FARC withdrawal and seeks to fill the vacuum left by the rebel army.

HEADLINE	07/17 DOJ signals increase in asset forfeiture
SOURCE	http://reason.com/blog/2017/07/17/sessions-announces-justice-department-wi
GIST	<p>U.S. Attorney General Jeff Sessions said the Justice Department will issue new directives to increase the federal government's use of civil asset forfeiture, a controversial practice that allows law enforcement to seize property from suspected criminals without charging them with a crime.</p> <p>Speaking at a National District Attorneys Association conference in Minneapolis Monday, Sessions said state and local law enforcement could expect changes from U.S. Attorneys in several areas: increased prosecution of gun crimes, immigration offenses, gang activity, and prescription drug abuse, as well as increased asset seizure by the federal government.</p> <p>"[W]e hope to issue this week a new directive on asset forfeiture—especially for drug traffickers," Sessions said. "With care and professionalism, we plan to develop policies to increase forfeitures. No criminal should be allowed to keep the proceeds of their crime. Adoptive forfeitures are appropriate as is sharing with our partners."</p> <p>The Justice Department did not immediately respond to a request for comment and for more information about the directive.</p> <p>Asset forfeiture became a prized hammer in law enforcement's tool chest in the 1980s, when the government was struggling to combat organized drug cartels. Law enforcement groups say the laws allow them to disrupt drug trafficking operations by targeting their proceeds—cars, cash, and guns.</p> <p>However, the practice has exploded since then, and civil liberties groups and political advocacy organizations, both liberal and conservative, say the perverse profit incentives and lack of due process for property owners lead to far more average citizens having their property seized than cartel bosses.</p>

HEADLINE	07/18 US-Mexico drug tunnels evolving
SOURCE	https://ww2.kqed.org/news/2017/07/18/u-s-mexico-drug-tunnels-evolving-amid-increased-border-security/
GIST	Under the corrugated steel plates that divide the U.S. and Mexico in Otay Mesa, dozens of clandestine cross-border tunnels slash through the soil.

As President Donald Trump looks to build new barriers along the border, criminal organizations in Mexico are improving the tunnels they use to smuggle people and drugs under the border fence — making them smaller and maintaining a high level of sophistication, featuring electricity and railways.

Smuggling tunnels vary in shape and size, but generally fall under one of these three categories, according to U.S. Border Patrol:

- **Rudimentary tunnels**, or “gopher holes,” are cheaply made and stretch short distances, maybe 50 feet. They are used to smuggle humans or small quantities of drugs under the border.
- **Interconnecting tunnels** exploit existing municipal infrastructure, linking up with storm drains and sewer lines. They are used to smuggle humans and drugs under the border.
- **Sophisticated tunnels** can stretch for long distances (the longest ever found was equivalent to the length of eight football fields) and are often equipped with lighting, electricity, ventilation, water pumps, railways and more. They are used to move large volumes of drugs under the border.

In San Diego, tunnels are usually sophisticated, partly because of the highly organized criminal organization operating in Baja California — the Sinaloa Cartel — as well as the characteristics of Otay Mesa, a neighborhood that exists on both sides of the border. In the U.S. and in Mexico, Otay Mesa is crowded with warehouses, providing numerous spaces to hide tunnel entry and exit points.

According to the U.S. Border Patrol, in the past three decades, 29 of the 62 sophisticated tunnels that have been found along the U.S.-Mexico border were in the San Diego sector. Meanwhile, of the 197 total tunnels discovered along the border, 62 were in the San Diego sector. These figures exclude about 100 unfinished tunnels found on the Mexican side of the border.

Drug tunnels began to proliferate in response to increased border security, particularly border fence construction launched in the 1990s, according to U.S. and Mexican researchers.

“The more sophisticated our border infrastructure has become, the more the smugglers have upped their game,” said David Shirk, director of the Trans-Border Institute at the University of San Diego.

Shirk said cartels are going as far as consulting with top engineers in Europe to perfect their tunnel architecture.

“And they have every incentive to do so. If it costs \$1 million to make a tunnel like that, they can make that back on the first run,” he said.

Drug seizures in tunnels are often in the multi-million dollar range, which suggests that cartels are making hundreds of millions of dollars on these tunnels.

Lance Lenoir is captain of Border Patrol’s five-person tunnel entry team, known as the Tunnel Rats. When a tunnel is discovered with an exit in the U.S., the Tunnel Rats get to work.

	<p>“What we do is assess the tunnel, characterize it, go in, pull out evidence, map it, get rid of it,” Lenoir said.</p> <p>By “get rid of it,” Lenoir means they fill the tunnel with cement on the U.S. side of the border — what Border Patrol calls “remediation” of the tunnel. The tunnels often remain open on the Mexican side.</p> <p>Lenoir said the sophisticated tunnels centered around San Diego are becoming narrower and harder to detect — ranging anywhere from 36 inches to less than four feet in diameter.</p> <p>So far, the most reliable method of detection has been what Lenoir called “good old-fashioned police work,” with officials pursuing leads from informants who notice suspicious jackhammer sounds, large piles of dirt, or people coming and going at unusual hours. But U.S. federal agencies are now seeking to improve tunnel detection technologies.</p> <p>“We need to bring the technology piece. Right now, it’s lacking,” Lenoir said. “I mean we’re talking about a niche problem that doesn’t have any parallel to commercial or industry standard.”</p> <p>Existing technology — ranging from ground-penetrating radar to sensors that detect changes in microgravity — gets thrown off by surface clutter and noise, and there is a lot of cross-border traffic in this area. Radio and electromagnetic interference is another problem. Heterogeneous geology along the U.S.-Mexico border — a mix of porous, sandy and rocky — also makes it hard to see what is underground.</p>

HEADLINE	07/17 Drug cartels spark violence in Cancun
SOURCE	http://plenglish.com/index.php?o=rn&id=15681&SEO=drug-cartels-battles-spark-off-violence-and-insecurity-in-cancun
GIST	<p>Mexico, July 17 (Prensa Latina) Cancun, one of Mexico’s main tourist resorts, is currently experiencing unprecedented high-levels of violence and insecurity caused by battles between drug cartels.</p> <p>This situation forced people and tourists to change their habits and avoid from participating in night activities, who are afraid to be involved in violent events.</p> <p>A diagnosis regarding public security and governance, commissioned by Quintana Roo government, points out the presence of criminal gangs, particularly in the municipalities of Benito Juarez, Solidaridad, Othon P. Blanco, Cozumel and Felipe Carrillo Puerto; that is, nearly half of the state.</p> <p>These are cells from the Pacific and Jalisco Nueva Generacion drug cartels operating in Cancun, Chetumal and other municipalities.</p>

	<p>In Quintana Roo, Los Sureños drug cartel is closely related to Los Zetas, and Los Pelones linked with El Golfo Cartel, according to the report.</p> <p>The same diagnosis unveils that there are local criminal groups 'sometimes related to political actors or groups', who are engaged in goods piracy and human trafficking, informal commerce, as well as drug dealing.</p> <p>It also confirms the statements made by the military officers, following the attack on the Attorney General's office last January, relating to the existence of the so-called Cancun drug cartel made up of deserters from other criminal organizations.</p>

HEADLINE	07/17 Car in deadly 'surfing' accident found
SOURCE	http://mynorthwest.com/694718/one-killed-in-possible-car-surfing-accident-on-i-405/
GIST	<p>Investigators have found the car they believe was involved a deadly accident on southbound I-405 in Kirkland Monday morning.</p> <p>Witnesses tell the Washington State Patrol they saw someone fell out of the sunroof. Troopers believe the man who was killed was either car surfing or standing in a sunroof when the car hit a guard rail, causing him to fall from the car. The driver has not been located.</p> <p>A short time after the incident, someone called 911 and said they had information about the accident and wanted to meet investigators. When they showed up the person wasn't there, but investigators did find the car in the area.</p> <p>Troopers aren't sure if the person who called 911 may be the driver or someone else who may have been in the car. They're working with Kirkland Police to track the caller down and find the driver.</p>

HEADLINE	07/17 Court: pot scent not enough for search
SOURCE	http://www.foxnews.com/us/2017/07/17/colorado-appeals-court-rules-scent-marijuana-not-enough-to-search-vehicle.html
GIST	<p>A Colorado appeals court ruled Thursday that the possible presence of marijuana in a vehicle, detected by drug-sniffing dogs, does not give police the authority to search the vehicle.</p> <p>A three-judge panel ruling in the case of a Craig resident agreed that police officers need more cause to search a vehicle without permission, according to the Grand Junction Sentinel.</p>

Return to Top	<p>Judge Daniel Dailey wrote in his ruling that it could be legal marijuana in the certain vehicle.</p> <p>“Because Amendment 64 legalized possession for personal use of one ounce or less of marijuana by persons 21 years of age or older in Colorado, it is no longer accurate to say, at least as a matter of state law, that an alert by a dog which can detect marijuana — but not specific amounts — can reveal only the presence of ‘contraband,’” he wrote.</p> <p>Dailey added the dog sniffing the vehicle could “infringe upon a legitimate expectation of privacy.”</p> <p>The judges ruled in a February 2015 case. Craig police Cpl. Bryan Gonzalez followed a truck driven by Kevin McKnight that was leaving a house authorities had raided two months earlier.</p> <p>Gonzalez said in testimony that he pulled McKnight over for making a turn without signaling and later called for a drug-sniffing dog. The dog sniff revealed a pipe that is mostly associated with meth smoking, according to the paper.</p> <p>McKnight was convicted of possession of drug paraphernalia and possession of a controlled substance. However, the appeals court ruled the drug-sniffing dog could not tell what he was sniffing because marijuana is legal in Colorado. Thus, officers did not have enough probable cause to search the vehicle.</p>

HEADLINE	07/16 Alarm over administrative subpoenas
SOURCE	https://www.bostonglobe.com/metro/2017/07/16/concerns-raised-over-prosecutors-power-seize-phone-internet-records/JKdVWqjFNUSMkaboOoAhZK/story.html
GIST	<p>When prosecutors first pushed for the power to seize telephone and Internet records themselves, bypassing the need for a judge to approve a warrant, they argued the power was necessary to help them quickly track down missing children and sexual predators.</p> <p>But records obtained by the American Civil Liberties Union show prosecutors have used that significant subpoena power hundreds of times a year in routine investigations related to larceny, check fraud, assault, and other common crimes.</p> <p>The explosion in the use of these administrative subpoenas, as they are formally known, has alarmed civil libertarians, who point out that, under the law, the targets do not have to be criminal suspects and are generally unaware that law enforcement is tracking their phone logs and online histories.</p> <p>The law allows prosecutors to issue the subpoenas as long as they have “reasonable grounds to believe” the records “are relevant and material to an ongoing criminal investigation.” Unlike for a warrant issued by a judge, prosecutors do not need to present evidence that there is probable cause to believe a crime has been committed, and no independent arbiter oversees the process.</p>

“It’s a sanctioned fishing expedition tool,” said Kade Crockford, director of the Technology for Liberty Program at the ACLU of Massachusetts. “It shouldn’t be easy for law enforcement to dig around in our communications records, and find out who we’re talking to, and for how long, and be able to strip us of our anonymity online, simply by signing a piece of paper.”

Prosecutors argue the subpoenas are a critical tool to help investigators move quickly. They point out that the subpoenas allow them to obtain call logs, the names of telephone subscribers, and the IP addresses and names associated with social media and e-mail accounts, which can allow them to find a user’s physical location. Prosecutors cannot, under the law, obtain the contents of telephone calls, text messages, or e-mails.

“Administrative subpoenas enable us to build probable cause in the early stages of investigations into serious cases like human trafficking, child pornography, and drug trafficking,” said Chloe Gotsis, a spokeswoman for Attorney General Maura Healey. “Without them, we would not be able to successfully pursue many of our cases.”

Prosecutors were granted the power to issue administrative subpoenas under a 2008 state law called An Act Further Protecting Children. District attorneys and then-attorney general Martha Coakley pushed for the law — which also toughened penalties for child rapists — saying it would help them locate missing children and combat cybercrime.

But the ACLU has long been concerned that there is no independent oversight to prevent the law from being abused. In one case cited by the group, Suffolk District Attorney Daniel F. Conley issued a subpoena in 2011 to find the subscriber information for several Twitter handles and for anyone who used the hashtag #BostonPD after the police removed an Occupy Boston encampment in Dewey Square.

Conley’s office said the records were needed to investigate the hacker group Anonymous, which was stealing data and attempting to intimidate law enforcement officers. But the ACLU argued the subpoena could net any Twitter users who criticized police and used the #BostonPD hashtag. Conley’s office later narrowed the subpoena to two specific Twitter handles, but no indictments ever resulted from the investigation.

To shed more light on the issue, the ACLU recently asked Healey and the state’s 11 district attorneys how many administrative subpoenas they issued between 2014 and 2016, and the types of investigations for which they were needed.

District attorneys Thomas M. Quinn of Bristol County and David E. Sullivan of the Northwestern District did not respond to the request.

Conley, Michael W. Morrissey of Norfolk County, Anthony D. Gulluni of Hampden County, and Jonathan W. Blodgett of Essex County declined to provide data, saying they did not track their use of the subpoenas

or would not release the information because it relates to investigations and is therefore exempt from the public records law. As a result, for six district attorneys, almost nothing is known about how many people were targeted, and for what purpose.

Four other district attorneys disclosed a limited amount of data. But Healey and Middlesex District Attorney Marian T. Ryan turned over a large trove of information that revealed how frequently the subpoenas are used.

Ryan's office said it issued more than 2,400 over the last three years, while Healey's office said it sent more than 1,200 during the period.

Healey's office did not disclose all of the criminal matters involved but said some were related to human trafficking, child sex abuse, larceny, and drugs.

Ryan's office said the subpoenas were used to investigate crimes ranging from annoying calls and destruction of property to stabbing and rape of a child.

District Attorney Michael O'Keefe of the Cape and Islands, who issued 450 subpoenas over the last three years, said his prosecutors used them most frequently to investigate homicides, unattended deaths, and drug crimes. He said investigators cannot always wait for a judge or grand jury to approve a search warrant.

"You might lose some valuable time in the initial stages of the investigation, so the use of the administrative subpoena moves things along fairly quickly," he said.

Senator Cynthia S. Creem, a Newton Democrat, said she is frustrated that prosecutors initially told lawmakers the subpoenas were needed to protect vulnerable children from predators.

"We were promised that it was limited, and that immediacy required it," Creem said. "It seems like they took a tool that was voted for one purpose, and used it for their own purposes, and that's not how it works."

HEADLINE	07/17 Police: 40,000 minks set free from cages
SOURCE	http://www.kiro7.com/news/trending-now/up-to-40000-mink-set-free-when-people-break-into-minnesota-mink-fur-farm-police-say-1/563440323
GIST	Police say intruders freed up to 40,000 minks, highly valued for their fur, from their cages at a farm in Richmond, Minnesota.

	<p>WJON reported that Stearns County Sheriff Don Gudmonson said that someone or a group of people broke into Lang Mink Farm between 10:30 p.m. Sunday and 5:30 a.m. Monday. Gudmonson said parts of the farm's outside fence were taken apart and the animals were released from their cages.</p> <p>The 30,000 to 40,000 minks that were released have a collective value of over \$750,000, the Sheriff's Office told WCCO.</p> <p>The Sheriff's Office said the minks will struggle to survive in the wild because they are all domesticated. They may also threaten natural habitats in the area.</p>

HEADLINE	07/17 Coast Guard: more criminal migrants
SOURCE	http://abcnews.go.com/International/wireStory/coast-guard-arrests-migrants-criminal-records-rises-48688503?cid=clicksource_76_4_article%20roll_articleroll_hed
GIST	<p>The number of apprehensions of migrants with criminal records trying to illegally re-enter the U.S. after being deported has increased in the Caribbean, the U.S. Coast Guard said Monday.</p> <p>The recent uptick has authorities concerned, said Rear Admiral Peter Brown, the newly appointed commander for the Coast Guard's 7th District, which covers the Caribbean and the southeastern U.S.</p> <p>"Smugglers are exploiting the route with whatever will profit them, and in this case, it's these criminal elements," he told The Associated Press while on a brief official trip to Puerto Rico. "These are dangerous and violent criminals who are trying to get back into the United States presumably to resume a criminal career."</p> <p>Many of those migrants are trying to illegally re-enter the United States from the Bahamas via boat, or attempting to enter the U.S. territory of Puerto Rico from nearby islands such as the British Virgin Islands, he said.</p> <p>Jeffrey Quinones, spokesman for U.S. Customs and Border Protection in Puerto Rico and the U.S. Virgin Islands, said that while the number of migrants detained has dropped in recent months, the number of those with a criminal record has increased. He said 24 percent of the 375 migrants detained in waters Puerto Rico since October have been prosecuted, compared with 10 percent of 557 detained two years ago.</p>

HEADLINE	07/17 'Anti-Semitic' imam wanted in Canada
SOURCE	http://www.bbc.com/news/world-us-canada-40634993
GIST	A Palestinian-Jordanian imam accused of giving an anti-Semitic sermon is wanted by Canadian police for hate crimes.

	<p>A Montreal judge issued an arrest warrant for Sheikh Muhammad ibn Musa Al Nasr on Sunday for promoting hate.</p> <p>Jewish organisation B'nai Brith said Mr Al Nasr preached Jews were the "worst of mankind" and should be slaughtered, in a sermon in Montreal in December.</p> <p>Mr Al Nasr's whereabouts are unknown and B'nai Brith is calling for his extradition to Canada.</p> <p>"Today, the Jewish community of Montreal can sleep safer, knowing that there is a price to pay for inciting violence against our community," said Michael Mostyn, chief executive officer of B'nai Brith Canada in a statement.</p> <p>Mr Al Nasr is charged with the willful promotion of hatred under Canada's anti-hate crime laws.</p>

HEADLINE	07/17 Guatemala hands over ex-Mexico gov.
SOURCE	http://abcnews.go.com/International/wireStory/guatemala-hands-mexico-governor-wanted-corruption-case-48681121
GIST	<p>The former governor of the Gulf coast state of Veracruz was extradited from Guatemala to Mexico on Monday to face corruption charges.</p> <p>Former Gov. Javier Duarte was flown to Mexico City after dropping a fight against extradition. Duarte appeared at the Mexico City airport clean-shaven, guarded and unsmiling, a contrast with his appearance in Guatemala, when he wore a full beard and often grinned broadly.</p> <p>Duarte fled to Guatemala after resigning as governor of one of Mexico's most populous states amid mounting allegations of corruption. He faces charges that include organized crime, influence trafficking, embezzlement and abuse of authority.</p> <p>The Mexican Attorney General's Office said Duarte was taken to a Mexico City prison for the first hearings in his case. The seriousness of the charges appears to rule out the possibility of his release on bail.</p> <p>The case is sensitive for Mexico's ruling Institutional Revolutionary Party, which is trying to clean up its image ahead of next year's presidential vote.</p>

HEADLINE	07/17 Ex-Texas cop indicted murder charge
SOURCE	http://abcnews.go.com/US/wireStory/texas-officer-indicted-murder-charge-teens-death-48685636?cid=clicksource_4380645_1_hero_headlines_headlines_hed
GIST	<p>A white former Texas police officer has been indicted on a murder charge in the April shooting death of a black teenager who was leaving a party, prosecutors said Monday.</p> <p>Dallas County District Attorney Faith Johnson announced that a grand jury indicted former Balch Springs police officer Roy Oliver in the death of 15-year-old Jordan Edwards. Oliver was fired in May for violating department policies after police department officials reviewed body camera footage of the incident, which showed Oliver shooting his rifle into a moving vehicle that was traveling away from him and another officer.</p> <p>Edwards, a high school freshman, was leaving the party with his two teenage brothers and two other teens. Police arrived at the scene in Balch Springs, a suburb about 15 miles (24 kilometers) east of downtown Dallas, to investigate an underage drinking complaint when they heard unrelated gunshots and spotted the vehicle leaving.</p> <p>Shots from Oliver's rifle pierced the front passenger window, hitting Edwards in the head as he sat in the front seat.</p> <p>Johnson said Oliver also was indicted on four charges of aggravated assault with a deadly weapon by a public official related to the other four teens who were in the car.</p>

CRIME & DRUGS

Over 400 Medical Professionals Charged In Largest Healthcare Fraud Enforcement Operation In US History.

[USA Today](#)  (7/13, Johnson) reports that Justice Department officials “announced charges Thursday against 412 physicians, nurses, pharmacists and other medical professionals, in what Attorney General Jeff Sessions called the largest health care fraud enforcement operation in US history.” According to Sessions, those charged were responsible for over \$1.3 billion in fraudulent transactions in over 20 states. Of the 412 charged, “at least 120 people were charged for their alleged roles in overprescribing and distributing opioids, making it also the largest-ever opioid-related fraud takedown.”

The [Washington Post](#) (7/13, Horwitz, Merle) reports that Sessions ‘said the operation began with tips from people in the affected communities and from “very sophisticated computer programs that identify outliers.”’

The [New York Times](#) (7/13, Ruiz) reports that almost 50 physicians were charged with having “billed Medicare and Medicaid for drugs that were never purchased; collected money for false rehabilitation treatments and tests; and gave out prescriptions for cash.”

The [Los Angeles Times](#) (7/13, Tanfani) reports that Sessions “said the record number of arrests...are a preview of a more aggressive approach to combating the nation’s spiraling epidemic of drug addiction.”

[Bloomberg News](#) (7/13, Schoenberg, McLaughlin) reports that “arrests were made in cities including Chicago, Detroit, Los Angeles and Miami, as well as in southern Florida, which is home to hundreds of residential drug addiction treatment centers.” The enforcement effort “comes as a fight brews in Congress over how much money to allot for opioid treatment and as Republicans spar over how to repeal or replace the ACA,” with some Republicans wanting “more funding to help states combat the opioid addiction epidemic.”

NYPD Reports Drop In Serious Crimes In First Half Of 2017.

[Newsday \(NY\)](#) (7/12) reports, “With 2017 half over, New York City reported significant drops in all kinds of serious crimes, with a nearly 40 percent reduction in June, according to NYPD records reviewed by Newsday and law enforcement sources.” Homicides are “trending close to 21 percent lower than in 2016, with shootings down by about 17 percent, putting the city on track to set record lows.” Newsday says the “significant drop in killings and shootings is believed by experts to be a result of an aggressive NYPD gang offensive coupled with an explosion in weapons conspiracy cases brought by federal prosecutors that have led to prison sentences averaging about five years.” One police source said the “fear of heavy sentences in federal cases is driving gang members to cooperate with police in weapons conspiracy cases.”

HSI Arrests Philadelphia’s “Narcoboss.”

[Philly \(PA\)](#) (7/13, Wood) reports HSI investigated and arrested Henry Koffie in Philadelphia, known as the “Narcoboss,” for multiple felony drug trafficking offenses. Koffie was described by federal prosecutors as a “nationwide drug dealer,” who used the postal service to ship fentanyl across the country. He is allegedly “responsible for the overdose deaths of two men in Portland, Ore., and has been linked to more overdoses in Florida, Idaho, Michigan, North Dakota, and Oregon.” He used the dark web to advertise and “allegedly ordered bulk quantities of fentanyl 14 times from China and Hong Kong.” HSI Philadelphia special agent in charge Brian Michael is quoted as saying, “He was a top-10 target. ... He was a large importer of fentanyl.” HSI “determined that Narcoboss had filled more than 6,615 orders for fentanyl at \$40 a gram,” and “sold more than seven kilograms of the deadly drug and netted at least \$260,000” over a one-year period.

Crime Around Betting Shops In London Rises.

[BBC News \(UK\)](#)  (7/13) reports, "Assaults and criminal damage in and around betting shops are on the rise in London, new figures show." The number of violent crimes "went up by 24% from 2014 to 2016, according to Metropolitan Police figures."

POLICING & POLICY

Milwaukee Police Target Heroin Dealer's Phones.

The [Milwaukee Journal Sentinel](#)  (7/12) reports Milwaukee Police are trying a new strategy to thwart heroin dealers in the area by getting a "seize and freeze" order. The Journal Sentinel says even as officers "busts and haul suspects to jail, the dealer's key source of cash – the cellphone number where orders roll in – often is quickly back up and running, sometimes in just an hour." Police "say many dealers, knowing they could get arrested, have set up contingency plans to transfer the prized 10-digit number to a new phone, preserving its value and keeping the drugs – and cash – flowing." A "seize and freeze" order allows law enforcement to "freeze the phone number for a period of time, rendering the line unable to send or receive calls or text messages." The theory is that if the number is dead, then "it loses its value and dealers lose the stream of income."

An IACP Women's Leadership Institute session has been added in Washington, DC, August 14-19. Registration for this session will also include a free registration for the Drugs, Alcohol, and Impaired Driving Conference, August 12-14, in National Harbor, MD. [Register now.](#)

OFFICER SAFETY & WELLNESS

Car Crashes, Job-related Illnesses Driving Up 2017 Police Deaths.

[NBC News](#)  (7/13) reports, "The number of police officers and federal agents who died in the line of duty has jumped this year, an increase largely attributable to a spike in car crashes and job-related illnesses, according to a new report." The report, from the National Law Enforcement Officers Memorial Fund, covers "deaths in the first six months of 2017 and compares them to same period last year." The report found that "65 law enforcement officers died in the line of duty through the end of June, up from 50 during that same period last year." The figure "puts mid-year 2017 among the safest periods for police officers in the last four decades." The largest rise in 2017 is attributed to the category of "other," which includes illnesses, such as heart attacks, and single vehicle crashes.

TECHNOLOGY

Australia Proposes New Cybersecurity Law Forcing Tech Companies To Decrypt Messages.

The [AP](#) (7/14) reports, “The Australian government on Friday proposed a new cybersecurity law to force global technology companies such as Facebook and Google to help police by unscrambling encrypted messages sent by suspected extremists and other criminals.” The new law is “modeled on Britain’s Investigatory Powers Act, which was passed by the British Parliament in November and gave intelligence agencies some of the most extensive surveillance powers in the Western world, the government said.” The bill “would allow courts to order tech companies to quickly unlock communications [and] will be introduced to Parliament by November, officials said.” The Australian Federal Police “say the proportion of communication traffic they monitor that was encrypted had grown from 3 percent to more than 55 percent in only a few years.” Police “say 65 percent of organized crime investigations including terrorism and pedophile rings involved some kind of encryption.”

Secret Service Highlights Prevalence Of Credit Card Skimmers.

[WFXT-TV](#) Boston (7/13) reports, “Skimmers that steal your credit card information from places like gas pumps and ATMs are more high-tech now than ever before.” Matt Quinn with the Secret Service “says they’re seeing a surge in credit and debit card skimming from gas stations and ATMs.” Quinn said, “The large organized criminal groups tend to be eastern European and the gas pump skimming lately tends to be Cuban nationals. ... We’re starting to see them using antennas. We believe they can be as far as a mile away.”

ALSO IN THE NEWS

Court To Allow Pacemaker Data In Arson Trial.

[CNET News](#) (7/12, Matyszczyk) reports Ross Compton, of Ohio, is charged with arson and insurance fraud for his house fire. Compton’s lawyer “moved to have the court suppress any evidence obtained in a search he deemed illegal,” including data from the defendant’s pacemaker. Police “obtained the data from Compton’s artificial heart implant and asked a cardiologist to examine whether it offered data consistent with Compton’s telling of events.” Compton had told police that the fire woke him up, and that he jumped out the window, but a cardiologist “concluded that a comparison of his heart rate, his cardiac rhythms and the demands placed on his pacer were inconsistent with that story.” On Tuesday, a judge “decided the pacemaker evidence can be presented at trial.” [Engadget](#) (7/13) reports privacy advocates “worry that the case could put the privacy of...medical records at risk.” Compton’s lawyer “told CNET that allowing someone’s medical information collected by a device to be used as evidence ‘further expands the government’s ability to access some of our most fundamental private information.’”

LAW ENFORCEMENT AT WORK

Dallas Police Recruits Consider The Job A “Calling.”

The [Dallas Morning News](#) (7/13, Tsiaperas) reports on the 36 members of Class 354 of the Dallas Police Academy, who “joined the force at a time when the Dallas Police Department is down about 500 officers.” The class is “one of the largest in recent years, and the interim police chief touted them as an answer to the department’s retention problems.” The recruits “consider policing a calling,” and “say they were drawn to the service.” Maj. Latoya Porter “says officers need to get to know the neighborhoods they patrol to build trust” because that “trust could prevent riots seen in other cities after police shootings.” The Morning News adds that many of the recruits are military veterans, and “nearly half aren’t native Texans.”

POLICING & POLICY

More Police Agencies Joining National Push To Prepare Officers For Contacts With Mentally Ill.

In a story primarily focusing on the Los Angeles Police Union's decision to join a "national push for federal funding and other resources to help officers better prepare for interactions with people who are mentally ill," the [Los Angeles Times](#) (7/13, Mather) reports LaGrange, Georgia, Police Chief and vice president of IACP Louis Dekmar "said the [international] policing group launched its own effort last year, trying to get agencies to pledge to craft policies and train officers to better handle situations involving mentally ill people." Dekmar is quoted as saying, "We've taken what should be a public health issue and we've turned it into a criminal issue...And the sad commentary is, of the 900 and some fatal police shootings a year, about 25% are affected by mental illness." He added that a problem for agencies is the lack of resources to tackle these issues. The Times says a

coalition of more than a dozen police unions will unveil the “Compassionate and Accountable Responses for Everyone” agenda on Thursday in New York. The coalition “hopes that federal involvement will standardize mental health training for officers across the country and help departments create teams pairing police and mental health clinicians that respond to people who are in crisis.”

Senate Holds Hearing On Wray’s Appointment To Lead FBI.

FBI Director nominee Christopher Wray’s appearance before the Senate Judiciary Committee on Wednesday received notably positive coverage from nearly all the media outlets that covered his testimony. The vast majority of analyses suggest that Wray successfully established his intention to remain independent of the White House. In a representative piece, Matt Ford of [The Atlantic](#) (7/10, Ford) writes: “Wray spent most of his confirmation hearing...declaring his independence from the very White House that tapped him for the post, apparently winning over skeptical Democrats...and potentially setting up an easy vote to approve him.”

[The Hill](#) (7/12, Williams) calls Wray’s testimony “calm and understated.” The [Washington Post](#) (7/12, Nakashima, Demirjian) describes Wray as “an accomplished lawyer with a classic establishment pedigree...and a strong résumé as a former federal prosecutor who rose high within Justice’s ranks.”

Democrats Signal Willingness To Back Wray’s Confirmation. The [Washington Times](#) (7/12, Ernst) reports that Sen. Al Franken (D-MN), one of the President’s “most ardent critics, said he was ‘impressed’” with Wray’s performance, and [Townhall](#) (7/12, O’Brien) reports that Sen. Dianne Feinstein (D-CA) also indicated that she will back his confirmation.

Wray Pledges To Get Up Speed On Cybersecurity Issues. [Federal Computer Week](#) (7/12, Carberry) reports that Wray said on Wednesday that he “will drill down on cyber in his first 90 days, and prioritize reauthorizing foreign surveillance powers and finding a solution to the encryption debate.” FCW notes Wray “said he is not a cyber expert and will need to get up to speed if confirmed.” Wray said: “Whereas cyber was a sort of discrete topic back in, say, 2005 that had a lot of attention, now in 2017 cyber in many ways permeates every aspect of national security, of the intelligence community, of every type of criminal conduct we deal with. It’s become part of the fabric both of our security but also the threats to our security.”

House Approves Overhaul Of Law To Combat Human Trafficking.

[USA Today](#) (7/12, Kinery) reports the US House of Representatives on Wednesday “approved a sweeping reauthorization of the nation’s most comprehensive law to combat human trafficking, in a rare bipartisan vote.” The bill “allocates \$520 million over four years toward programs that aim to identify and aid victims of trafficking and prevent it from occurring.” USA Today says, “Programs covered by the act include educating children on how to avoid traffickers and training certain employers such as airlines on how to identify potential victims of trafficking.” The bill also “calls for both domestic and international efforts to combat trafficking and to prevent the sale in the U.S. of goods made by forced labor.” The House also passed the Empowering Law Enforcement to Fight Sex Trafficking Demand Act, which “would allow law enforcement to use Byrne JAG grants to fund anti-human-trafficking programs.” President Trump released a statement that said he is “hopeful that the Senate will take up

and pass these three bills as soon as possible and I look forward to my continued work with the Congress on this important issue.”

Michigan Governor Signs Law Regarding Body Camera Footage.

The [AP](#) (7/12) reports, “Beginning in January, Michigan will have rules in place for the disclosure and retention of audio or video recordings from body cameras worn by police officers.” Gov. Rick Snyder signed legislation that “exempts the recordings from public-records request under certain circumstances, including if the recordings were made in a ‘private place.’”

Recordings, under the law, will “also will be kept private during ongoing criminal or internal investigations but only for listed reasons such as public disclosure interfering with law enforcement proceedings or invading personal privacy.” Law enforcement agencies covered by the law will also be required to create a written policy regarding the use of body cameras by their officers.

CRIME & DRUGS

ICE Director: MS-13 Currently “Most Violent” Gang in The US.

[The Blaze](#) (7/12) reports acting ICE Director Thomas Homan is “making no bones about his agency’s commitment to dismantle the notorious MS-13 gang, a transnational criminal organization based in El Salvador.” Homan told the Daily Caller, “My gang is bigger than theirs.” Homan “went on to say that ICE’s Homeland Security Investigations ‘targets many gangs’ but noted that the investigative team is decidedly focused on MS-13 because ‘they seem to be the most violent right now and they think they can act with impunity.’”

In a 2,800-word piece, the [New York Times](#) (7/12, Robbins, Rodriguez) reports on the deaths of three students and a cousin visiting from out of state in April on Long Island by machete at the hands of MS-13. The Times says, “On Long Island, MS-13 has been around for decades, but it has surfaced with a vengeance in the last 18 months, responsible for 17 murders, the Suffolk County police say.” The Times adds that schools on Long Island “have witnessed a remarkable population change with the influx of these young immigrants,” and “MS-13 graffiti has showed up in bathrooms and other places hidden from surveillance cameras” in some schools.

In related news, [Reuters](#) (7/12, Walsh) reports that Attorney General Sessions “said on Wednesday the Justice Department plans to hire 300 additional assistant U.S. attorneys to help fight a recent national increase in crime, including a focus on transnational gangs such as MS-13. ‘As you all know, we have a multi-front battle in front of us right now: an increase in violent crime, vicious gangs, an opioid epidemic, threats from terrorism and human traffickers,’ Sessions said in a speech in Las Vegas.” Sessions “noted the U.S. murder rate had risen 10 percent nationwide in just one year, marking the largest increase since 1968.”

Sessions Reportedly Planning Healthcare Fraud Crackdown.

[Bloomberg News](#) (7/12, Smith, Edney, Schoenberg) reports that attorney General Sessions “is poised to announce a major law enforcement action this week targeting health-care fraud, focusing on opioid treatment programs exploiting Obamacare insurance plans, according to two people familiar with the matter.” According to Bloomberg, “in what is described as a nationwide sweep with hundreds of arrests being carried out across the U.S., the Justice Department is cracking down on fraudulent claims made to some of the nation’s biggest insurers, said one of the people.” Bloomberg adds that “people who run drug addiction treatment centers that have filed bogus claims and those who have filed reimbursement claims for drugs they then sell illegally are among those to be charged, the person said.” Arrests “will be carried out in cities including Miami, Chicago, Detroit and Los Angeles, the person said,” and “scores of arrests are expected in southern Florida, which is home to hundreds of residential drug addiction treatment centers, said the person.”

Survey Finds One-Third Of College Student Venmo Users Have Used App To Buy Drugs.

The [San Antonio Express-News](#) (7/11) details a survey of college student users of the mobile payment app Venmo that found “nearly-one third of respondents...said they have used Venmo to pay for drugs.”

Drugged Driving Summit Held In Ohio.

The [Columbus \(OH\) Dispatch](#) (7/12) details the Ohio Drugged Driving Summit held on Tuesday. The summit, “hosted by AAA and the Ohio Department of Public Safety, brought together impaired-driving experts, law enforcement officers, educators and other safety professionals to highlight what many deem a ‘crisis’ of drugged driving.” Figures from the Ohio Department of Transportation show that there were “at least 4,615 drug-related crashes on Ohio roads last year, an increase of more than 21 percent since 2013.” The article also discusses the Drug Recognition Expert program, and the state of Ohio has become a big proponent of the program since joining in 2011, according to state program coordinator Sgt. Adam Burkhardt of the Ohio Highway Patrol.

Time is running out! Only two days remaining to nominate an outstanding officer for the 2017 IACP/Target Police Officer of the Year Award. This prestigious award recognizes outstanding achievement in law enforcement and honors these heroes who work tirelessly every day to make communities around the world safer. To learn more about eligibility requirements and to nominate an outstanding officer, please visit www.theIACP.org/POY

TECHNOLOGY

DOJ Argues FBI Did Not Need Warrant For Stingray In Attempted Murder Probe.

[Ars Technica](#) (7/12) reports from Oakland, CA that “weeks before a key hearing, federal prosecutors have submitted their formal opposition to an attempted murder suspect’s recent efforts to suppress evidence found through the warrantless use of an FBI cell-site simulator, better known as a stingray.” The filing on Tuesday “reiterates the government’s position in the case known as *United States v. Ellis*, setting the stage for a key upcoming hearing next month.” Justice Department officials “say that law enforcement’s use of a stingray should not be considered an unreasonable search under the Fourth Amendment and, therefore, it never required a warrant.”

NATIONAL SECURITY

Europol Chief Defends EU Counterterrorism Efforts.

Europol Director Rob Wainwright told the [Washington Times](#) (7/12, Taylor) in an interview that Europe’s “top intelligence and counterterrorism officials are bracing for a surge of battle-hardened Islamic State foreign fighters returning home to the continent as the jihadi group loses its territorial base in the Middle East.” Wainwright also “vehemently challenged American criticism of EU counterterrorism efforts” in the wake of a series of ISIS-inspired attacks. He pointed to last year’s attack in Nice as “an illustration of the problem that we face here in Europe, with such a large number of largely disconnected radicalized people who are operating in almost a randomized way to carry out the attacks that we’ve seen now on a regular scale in the EU.”

POLICING & POLICY

Third Circuit Rules People Have Right To Record Police In Public.

The [AP](#)  (7/7, Dale) reports the Third Circuit Court of Appeals on Friday joined five other circuits in ruling that “citizens have a First Amendment right to videotape police in public.” The piece says the court joined what it said was a “‘growing consensus’ that the public can photograph or record police without retaliation.” American Civil Liberties Union of Pennsylvania staff attorney Molly Tack-Hooper said, “There’s just no question in 2017 that the right to record the police is part of the liberty protected by the First Amendment, even more so now that smartphones are as ubiquitous as they are.”

After Shooting At Congressional Baseball Practice, Some Lawmakers Want To Relax Gun Laws.

The [New York Times](#) (7/9, Cochrane) reports, “After the nation’s worst mass shootings, in Newtown, Conn.; Aurora, Colo.; Orlando, Fla.; and Columbine High School in Colorado, gun control advocates” called for “stricter background checks, limits on magazine capacities, bans on assault weapons and tougher controls on gun shows and online firearms markets – almost always to no avail.” However, in the wake of “the June 14 shooting of Republicans at a congressional baseball practice,” during which House Majority Whip Steve Scalise was gravely wounded, “the response has had a twist: Conservative lawmakers, some of whom were nearly the victims of gun violence, have pressed to loosen gun controls.” For example, a trio of “bills introduced in the Republican-held House during the past two weeks would allow lawmakers to almost always carry a concealed weapon.” The Times adds, “To Republican advocates, it is now personal.”

Sessions To Visit Las Vegas To Discuss Sanctuary Cities.

The [Las Vegas Review-Journal](#) (7/7, Davidson) reports Attorney General Jeff Sessions is slated to visit Las Vegas on Wednesday, where he will meet with federal, state and local law enforcement representatives to discuss the issue of sanctuary cities and combating violent crime. The Review-Journal says the city is under scrutiny by the Justice Department, “which has demanded the jurisdictions prove that they cooperate with federal agencies to enforce immigration laws or risk losing federal funding.”

CSMonitor Analysis: Cleveland Is Leader In Trying To Eradicate Human Trafficking.

The [Christian Science Monitor](#) (7/9, Johnston) reports from Cleveland that Renee Jones is “driving around Cleveland’s seedier neighborhoods, visiting some of this city’s most notorious strip clubs,” and her intention “is to connect with them in hopes of preventing the women from falling prey to one of the country’s most overlooked but vexing social problems: sex trafficking.” The Monitor adds that Jones “is on a crusade to stamp out sex trafficking and provide women survivors with a place of comfort and safety,” and “her novel outreach effort is part of a broader campaign under way in Cleveland that is making the heartland city a leader in trying to eradicate a problem that affects thousands of young people each year.” The initiatives “range from tougher laws against sex and labor trafficking, to special ‘safe harbor’ courts that treat children caught up in prostitution more humanely.”

Prosecutors Nationwide Offer Plea Deals To Help Immigrants Avoid Deportation.

The [Wall Street Journal](#) (7/7, A1, Ramey) reports that an increasing number of district attorneys across the country have indicated they are offering plea deals to immigrants accused of crimes in an attempt to help them avoid deportation. In at least six jurisdictions on both the East and West coasts, DA’s have purposely sought to avoid agreements or sentences that would trigger an immigrant’s deportation or prevent that person from being allowed to re-enter the country. Critics, including Attorney General Jeff Sessions, argue that this practice is unethical because citizens and immigrants are treated differently. In April, Sessions said, “It troubles me that we’ve seen district attorneys openly brag about not charging cases appropriately under

the laws of our country, so that provides an opportunity for individuals not to be convicted of a crime that might lead to deportation.”

CRIME & DRUGS

Efforts Made To Improve Hate Crime Statistics Noted.

[Voice of America](#) (7/9, Farivar) reports that in March, as part of an effort to get a better understanding of the volume of hate crime charges, Sen. Richard Blumenthal (D-CT) and Rep. Don Beyer (D-VA) “introduced legislation that aims to aid the FBI in its transition to a more comprehensive crime reporting system known as the National Incident Based Reporting System (NIBRS).” In May, the Senate Judiciary Committee “held a hearing on combating religious hate crimes, with several Democratic members pledging support for making hate crime reporting mandatory.” VOA also notes that last week, Attorney General Jeff Sessions “told a hate crimes summit in Washington that he’d tasked a newly formed subcommittee on hate crimes with finding ways to improve training, community outreach and data collection.”

IACP and AEquitas (The Prosecutor’s Resource on Violence Against Women) invite you to apply to attend the first ever [Institute on the Investigation and Prosecution of Cold Case Sexual Assault](#) (IIPCCSA), August 7-11, 2017, in Washington, DC.

IACP and AEquitas are offering a three-and-one-half-day course designed to challenge participants to strengthen their approach to prosecuting cold case sexual assault. IIPCCSA explores the complex issues faced by police and prosecutors in balancing offender accountability and the impact of criminal prosecution on victims.

Space is limited, so [apply today.](#)

OFFICER SAFETY & WELLNESS

Dallas Archivists Creating Collection Of Tributes Following Death Of Five Officers.

A [New York Times](#) (7/7, Blinder) analysis reports that archivists in Dallas’s central library have been “sorting more than 10,000 tributes that flowed in after five law enforcement officers were killed in an ambush on July 7, 2016.” The collection of tributes is “one of the largest of its kind” and is “a staggering chronicle of public grief and support that followed the attack, the first anniversary of which Dallas marked on Friday.” According to the Times, “archivists, historians and librarians have been asked to curate the aftermath of catastrophes: school massacres, a nightclub siege, a bombing, a rampage during a Bible study” in recent years. With the death of officers Lorne Ahrens, Michael Krol, Michael J. Smith, Brent Thompson and Patrick Zamarripa, the Times states “Tributes surged into Dallas.”

NYTimes Examines “One Square Mile Of Danger” Of Bronx Police Officer’s Death.

The [New York Times](#) (7/9, Mueller) reports there is a block of Bronx Police Precinct 46 referred to as “one square mile of danger,” but Officer Miosotis Familia “never let the hazards change how she treated people, residents said.” Though “guns, crack cocaine and hot tempers still seem to pool” on the block, Familia’s familiarity with the local culture meant “she had earned the respect of a steady visitor” – until she was fatally shot July 5 by “a man with a history of mental illness and an apparent plan to shoot a cop.” One resident said that while the number of murders may be lower than in 1990, now there is more “tension in the air.” Another added that because the city didn’t invest sufficiently in schools, health services, sports programs, and jobs, children increasingly have been drawn to gangs in an area whose streets, the Times says, are “flush with guns” and violence that has “grown more wanton.”

NATIONAL SECURITY

Kelly Calls Mexico “Great Partner,” While Acknowledging US’s Role In Fueling Drug Violence.

The [AP](#) (7/7) reports that in a meeting with his Mexican Interior Secretary Miguel Angel Osorio Chong on Friday, US Homeland Security Secretary John Kelly said “the United States’ demand for drugs was responsible for much of the violence on both sides of the border.” In a joint statement, Kelly said “I acknowledged to my counterpart that America’s insatiable appetite for drugs is the cause of much of the turmoil on both sides of the border.” The statement follows similarly statements made by Kelly and Secretary of State Rex Tillerson in May when Mexican officials visited Washington DC.

DHS Worries ISIS Could Use Drones To Attack US.

The [Washington Times](#) (7/8, Wood) reports that the Department of Homeland Security has become concerned about the strides the Islamic State has been making in developing the use of drone technology, which it worries “could be transferred to terror attacks in the West and specifically the United States.” A DHS spokesman said, “DHS does consider commercial drones configured or modified to employ explosives or weapons a concern. This is due to low-cost, ease of access, and the quick-pace of this evolving technology to adapt beneficial Unmanned System equipment for nefarious purposes.”

ALSO IN THE NEWS

Program Aims At Treatment To Keep Frequent Nonviolent Offenders Out Of Jail.

The [Columbus \(OH\) Dispatch](#) (7/9, Perry) reports that Sidney Jackson “has been arrested 190 times in Franklin County since 1993, costing the public at least \$519,000 – a sum last calculated when he had 162 arrests.” According to the Dispatch, 12 of Jackson’s arrests “were fifth-degree felonies, the lowest felony level in Ohio, but his 178 misdemeanor arrests show that Jackson needs more than jail, said Michael Daniels, Franklin County’s new justice-policy coordinator.” Daniels “is working to keep Jackson out of jail in a program he said is being eyed as a potential national model. ‘What we should be doing is treating them for underlying issues,’ Daniels said,” noting that “programs for substance-abuse or mental-health issues are cheaper and more beneficial than arresting, jailing and processing Jackson and dozens like him through the criminal-justice and court systems.”

POLICING & POLICY

Federal Judge In Hawaii Denies Motion Challenging Travel Ban.

The [AP](#) [f](#) [t](#) (7/6) reports that US District Judge Derrick K. Watson in Hawaii “is leaving Trump administration rules in place for a travel ban on citizens from six predominantly Muslim countries.” Judge Watson on Thursday “denied an emergency motion filed by Hawaii asking him to clarify what the United States Supreme Court meant by a ‘bona fide’ relationship in its ruling last month.” The high court “said the administration could mostly enforce its travel ban, but said those ‘with a credible claim of a bona fide relationship with a person or entity in the United States’ could enter.” Judge Watson “said the relationship question would be better posed to the Supreme Court than to him.”

The [Washington Times](#)   (7/6, Dinan) reports that Judge Watson “said the state of Hawaii and other immigrant rights groups challenging Mr. Trump should take their beef up with the Supreme Court since it was the justices’ vague ruling that has led to confusion. ‘This court will not upset the Supreme Court’s careful balancing,’ Judge Watson wrote.”

The [Washington Post](#)   (7/6, Zapotosky) reports that Judge Watson ruled that “grandparents and other extended relatives of people in the United States are not exempt from” the travel ban, and he “denied a bid to curtail enforcement of the executive order meant to keep out citizens of six Muslim-majority countries.” Judge Watson “wrote that the government could use the travel ban to block citizens of the affected countries if they were the grandparents, grandchildren, aunts, uncles, nieces, nephews, cousins, brothers-in-law or sisters-in-law of people in the United States,” and that “officials also could block refugees with a formal assurance from a resettlement agency.” The Trump Administration “had wanted to keep such people out, and thought a recent Supreme Court ruling partially lifting lower courts’ freezes on the travel ban allowed them to do so,” but “those who had sued over the ban disagreed, and they asked Watson to intervene.”

Also reporting are [The Hill](#)   (7/6, Seipel), [CNN](#)   (7/6, De Vogue, Reporter), the [Huffington Post](#)   (7/6), and [Politico](#)   (7/6, Hesson).

DOJ Questions Immigration Information Sharing By Cities.

The [AP](#)   (7/6, Gurman) reports that the Justice Department on Thursday “questioned whether some so-called sanctuary cities responded honestly when asked whether they follow the law on sharing the citizenship status of people in their custody with federal immigration authorities.” According to the AP, “in a strongly worded statement, the department said some of the 10 jurisdictions under scrutiny insist they are compliant with the law while still defiantly refusing to cooperate with efforts to detain and deport immigrants living in the country illegally.” The department “said it was reviewing policies of the jurisdictions to determine whether they should lose some federal grant money for failing to prove they are adhering to federal immigration law.” The AP adds that the cities include New York, Chicago, New Orleans and Philadelphia, and “also on the list are two states – California and Connecticut – along with Miami-Dade County in Florida; Cook County in Illinois; Milwaukee County in Wisconsin; and Clark County in Nevada.”

Border Patrol, ICE Hiring Surges Face Obstacles.

The [Dallas Morning News](#)   (7/6, Kelly) reports that President Trump has set a goal of hiring “10,000 new agents for ICE to fight cross-border crime and immigration, and 5,000 for the Border Patrol to secure national borders.” But, says the Morning News, “during the last major recruitment push under President George W. Bush, the agencies on the front lines against drug smuggling and human trafficking saw major spikes in corruption by agents.” Former CBP Commissioner W. Ralph Basham said, “It was a massive, massive administrative challenge. ... To get one Border Patrol agent, it was something in the hundreds of applications that you had to have.” Former Immigration and Naturalization Service Commissioner Doris Meissner said, “Lowering and changing standards can lead to integrity issues in the force several years later, and that did happen in the

2000s.” Acting ICE Director Thomas Homan “said that even though apprehensions at the border have dropped substantially, the new agents are needed to beef up enforcement.”

CRIME & DRUGS

CDC: Opioid Prescriptions Down, But Not Enough.

[NBC Nightly News](#) (7/6, story 7, 1:50, Guthrie) reported the CDC warned that while the number of opioid prescriptions dropped almost 20 percent between 2010 and 2015, “far too many people are still” having them prescribed “and for too long.” CDC Acting Director said there are enough opioids prescribed “for every American to be on opioid medications around the clock for three weeks. That’s just too much.” NBC (Gosk) added the CDC study found “the most prescriptions were written in low-income white communities with high unemployment.”

The [New York Times](#)   (7/6, Goodnough) reports the CDC analysis “found that the prescribing rate in 2015 remained three times as high as in 1999,” as well as “tremendous regional variation in how many opioids doctors dole out.” Schuchat said, “We still have too many people getting medicine at too high a level and for too long.” Recent anti-opioid efforts, such as CDC guidelines and state and insurer limits, aren’t reflected in the analysis, but efforts prior to 2015, such as tightened prescribing rules for hydrocodone combined with a second analgesic, state crackdowns on pain clinics and Veterans Affairs prescribing guidelines could have helped cause the decline. Dr. Caleb Alexander, co-director of the Johns Hopkins Center for Drug Safety and Effectiveness, said an issue with efforts to reduce opioid prescriptions is that despite their new restrictions on opioid prescribing, many insurers “are strictly limiting or not yet covering alternative treatments for pain.”

Boston Dealing With Spate Of Shooting And Stabbings Despite Improving Crime Rate.

The [Boston Globe](#)   (7/6, Cramer, Ransom) reports that although “crime in Boston is at a two-decade low,” it “doesn’t always feel that way in places where violent crimes remain a looming presence: sections of Roxbury, Dorchester, and Mattapan” where a “spate of shootings and stabbings...has left at least five people injured and two dead” just this week. The Globe notes that, “according to police statistics, serious crimes such as murder, rape, and assaults have fallen in those areas between 10 and 22 percent since 2014,” and there have been 23 homicides in Boston so far this year. The Globe also points out that in 2015, “according to police statistics reported to the FBI,” Boston “had 706 violent crimes per 100,000 people, much lower than cities with comparable populations.”

Looking for help to manage the cost of college or re-vamp your career after an injury? The IACP Foundation's Still Heroes Scholarship Fund is proud to announce seven scholarships to help injured officers and their families! Five scholarships are available to college students for the 2017-2018 academic year. Or earn a Bachelor's or Master's degree online or at their campus in Phoenix through the University of Phoenix. Deadline is July 12. For more information, please visit www.theIACP.org/Foundation/Scholars.

IACP Event Calendar: 

OFFICER SAFETY & WELLNESS

Surveillance Video Of Fatal NYPD Officer Shooting Released.

The CBS Evening News (7/6, story 5, 0:45, Brown) reported, “Surveillance video released [on Thursday] shows the moment New York City police officer Miosotis Familia was shot to death in her police vehicle early [Wednesday]. The gunman, Alexander Bonds, is seen running away with officers in pursuit. Bonds was shot and killed not far away.” ABC World News Tonight (7/6, story 4, 1:35, Muir) showed Police Commissioner James O’Neill saying, “Officer Familia is dead because of one reason and one reason only. That’s Alexander Bonds’ hatred for police.” ABC’s Eva Pilgrim said “the execution style killing of Familia comes as new NYPD recruits are being sworn in.” O’Neill told them, “Perhaps you and your families are questioning whether you are making the right decision today, especially after yesterday’s tragedy in the Bronx. I’m here to tell you are making the right decision.”

In the wake of the fatal shooting, NBC Nightly News (7/6, story 9, 0:30, Guthrie) reported NYPD yesterday “announced it will retrofit all of its vehicles with bullet-resistant glass. That includes mobile command units like the one Officer Miosotis Familia was sitting in when she was gunned down yesterday.”

Missouri Enacts “Blue Alert” System For Violence Against Police.

The St. Louis Post-Dispatch   (7/6, Erickson) reports that “Missouri soon will have a system to notify the general public when a law enforcement officer is killed or injured.” The report says, “patterned after the Amber Alert system for missing children, the so-called ‘Blue Alert’ law was signed Thursday by Gov. Eric Greitens, who had championed the idea.” The Post-Dispatch says “the Blue Alert provisions are designed to promote public safety and protect police officers.” According to Justice Department figures, “when the law goes into effect, Missouri will be the 28th state to adopt such a program.” Greitens said, “We must stand up for those who stand guard for us.”

One Year After Slayings, Dallas Police Train In “Mindfulness.”

The [AP](#)   (7/6, Lauer) reports from Dallas that “only hours after the ambush that killed five Dallas law enforcement officers, mental health experts began thinking ahead, searching for ways to ease the long-term effects of the attack on the men and women who patrol the nation’s ninth-largest city.” According to the AP, “police psychologists in Dallas were quickly joined by counselors from the Houston and Los Angeles police departments, the FBI and the federal air marshals service,” and “as she watched the July 7, 2016, assault unfold on the news, Dallas philanthropist Lyda Hill immediately thought of research she had funded to help returning combat veterans.” A year later, “Dallas officers are still grieving, but scores of them have received or are on track to receive specialized training in ‘mindfulness’ and other stress-management techniques that aim to teach police how to better understand and control their emotions, both on and off the job.”

TECHNOLOGY

MIT Researcher Creates Gunshot Detector That Turns On Stingray Devices For The USAF.

[CSO](#)   (7/6) reports on the potential for a “gunshot detector that automatically turns on stingray surveillance devices,” which “impersonate cell phone towers and force nearby mobile devices to connect to it instead of the cell tower.” MIT’s John Houston has created a “system and method of automatically identifying mobile communication devices within the vicinity of a gunshot.” According to CSO, “it’s problematic that stingrays are often used without a warrant; law enforcement and even the device makers don’t want to talk about it capabilities or how often the devices are used.” Houston, whose patent was approved last month, “says the invention was made with support by the U.S. Air Force, and the government ‘has certain rights in the invention.’”

Real ID Bill Passes Oregon Legislature.

The [AP](#)   (7/6, Hansen) reports that “the Oregon Legislature has passed a bill to allow local motor-vehicle offices to issue state driver’s licenses and other forms of identification that comply with federal requirements borne out of 9/11 security concerns.” The AP says “Senate Bill 374 overwhelmingly passed the Oregon House on Thursday on a 56-1 vote and now heads to Gov. Kate Brown for signing.” The report explains that “the state hopes that this week’s passage of SB 374 will be enough to earn the state another federal extension, thereby enabling Oregon residents to keep using their existing state-issued IDs in the interim at TSA security checkpoints.”

Kentucky Gets Real ID Compliance Extension. The [AP](#)   (7/6) reports that “the Department of Homeland Security has given Kentucky until Oct. 10 to comply with the federal Real ID act. State officials say they will ask for another extension in October that will give the state until January 2019.” The AP says that “earlier this year, state lawmakers passed a law allowing Kentuckians to purchase a ‘voluntary travel ID.’” The report says “the travel IDs are optional, but if you don’t have one you won’t be able to use your standard driver’s license to board a domestic flight or enter a U.S. military base.”

GAO: DHS Expedited Chemical Security Approval Program Fully Implemented, But Lacks Participation.

[Homeland Preparedness News](#)   (7/6) reports the Department of Homeland Security “has fully implemented its chemical facility anti-terrorism standards (CFATS) expedited approval program, but participation to date has been limited, “according to a recent report by the Government Accountability Office. In a congressionally mandated report to lawmakers, “DHS stated that it was difficult to assess the impact of the expedited program on security due to the fact that only one facility had used it at the time of the report.” The report says “GAO found that only two of the 2,496 eligible facilities opted to use the program and a variety of factors affected its participation.” Meanwhile, “officials from the two facilities that adopted the program said they found its prescriptive nature helped them quickly determine what they need to do to implement required security measures and reduced the time and cost to prepare and submit their security plans to DHS.”

ALSO IN THE NEWS

Security Forces Clash With Protesters In Hamburg.

The [Washington Post](#)   (7/6, Stanley-Becker) reports that “security forces clad in riot gear clashed with protesters” in Hamburg on the eve of the summit, “using water cannons and pepper spray to disperse a group with anarchist sympathies that had refused to stand down.” An estimated 100,000 protesters were expected for Friday. The [New York Post](#)   (7/6, Calder) reports that New York Mayor Bill de Blasio will be in Hamburg to protest.

[NBC Nightly News](#) (7/6, lead story, 2:35, Guthrie) reported, “12,000 people showed up to the Welcome 2 Hell protest, just hours before 20 world leaders including President Trump and the leaders of Britain, France and Russia, meet blocks away. Many here protesting capitalism and globalization. ... Tonight, authorities in Germany bracing to even bigger showdowns tomorrow.” [ABC World News Tonight](#) (7/6, lead story, 3:25, Muir) reported “violent clashes” erupted in Hamburg between protesters “fighting against globalism” and police officers. The [CBS Evening News](#) (7/6, lead story, 2:40, Brown) also had a report.

POLICING & POLICY

Federal Judge In Hawaii Denies Motion Challenging Travel Ban.

The AP  (7/6) reports that US District Judge Derrick K. Watson in Hawaii “is leaving Trump administration rules in place for a travel ban on citizens from six predominantly Muslim countries.” Judge Watson on Thursday “denied an emergency motion filed by Hawaii asking him to clarify what the United States Supreme Court meant by a ‘bona fide’ relationship in its ruling last month.” The high court “said the administration could mostly enforce its travel ban, but said those ‘with a credible claim of a bona fide relationship with a person or entity in the United States’ could enter.” Judge Watson “said the relationship question would be better posed to the Supreme Court than to him.”

The [Washington Times](#) (7/6, Dinan) reports that Judge Watson “said the state of Hawaii and other immigrant rights groups challenging Mr. Trump should take their beef up with the Supreme Court since it was the justices’ vague ruling that has led to confusion. ‘This court will not upset the Supreme Court’s careful balancing,’ Judge Watson wrote.”

The [Washington Post](#) (7/6, Zapotosky) reports that Judge Watson ruled that “grandparents and other extended relatives of people in the United States are not exempt from” the travel ban, and he “denied a bid to curtail enforcement of the executive order meant to keep out citizens of six Muslim-majority countries.” Judge Watson “wrote that the government could use the travel ban to block citizens of the affected countries if they were the grandparents, grandchildren, aunts, uncles, nieces, nephews, cousins, brothers-in-law or sisters-in-law of people in the United States,” and that “officials also could block refugees with a formal assurance from a resettlement agency.” The Trump Administration “had wanted to keep such people out, and thought a recent Supreme Court ruling partially lifting lower courts’ freezes on the travel ban allowed them to do so,” but “those who had sued over the ban disagreed, and they asked Watson to intervene.”

Also reporting are [The Hill](#) (7/6, Seipel), [CNN](#) (7/6, De Vogue, Reporter), the [Huffington Post](#) (7/6), and [Politico](#) (7/6, Hesson).

DOJ Questions Immigration Information Sharing By Cities.

The [AP](#) (7/6, Gurman) reports that the Justice Department on Thursday “questioned whether some so-called sanctuary cities responded honestly when asked whether they follow the law on sharing the citizenship status of people in their custody with federal immigration authorities.” According to the AP, “in a strongly worded statement, the department said some of the 10 jurisdictions under scrutiny insist they are compliant with the law while still defiantly refusing to cooperate with efforts to detain and deport immigrants living in the country illegally.” The department “said it was reviewing policies of the jurisdictions to determine whether they should lose some federal grant money for failing to prove they are adhering to federal immigration law.” The AP adds that the cities include New York, Chicago, New Orleans and Philadelphia, and “also on the list are two states – California and Connecticut – along with Miami-Dade County in Florida; Cook County in Illinois; Milwaukee County in Wisconsin; and Clark County in Nevada.”

Border Patrol, ICE Hiring Surges Face Obstacles.

The [Dallas Morning News](#) (7/6, Kelly) reports that President Trump has set a goal of hiring “10,000 new agents for ICE to fight cross-border crime and immigration, and 5,000 for the Border Patrol to secure national borders.” But, says the Morning News, “during the last major recruitment push under President George W. Bush, the agencies on the front lines against drug smuggling and human trafficking saw major spikes in corruption by agents.” Former CBP Commissioner W. Ralph Basham said, “It was a massive, massive administrative challenge. ... To get one Border Patrol agent, it was something in the hundreds of applications that you had to have.” Former Immigration and Naturalization Service Commissioner Doris Meissner said, “Lowering and changing standards can lead to integrity issues in the force several years later, and that did happen in the

2000s.” Acting ICE Director Thomas Homan “said that even though apprehensions at the border have dropped substantially, the new agents are needed to beef up enforcement.”

CRIME & DRUGS

CDC: Opioid Prescriptions Down, But Not Enough.

[NBC Nightly News](#) (7/6, story 7, 1:50, Guthrie) reported the CDC warned that while the number of opioid prescriptions dropped almost 20 percent between 2010 and 2015, “far too many people are still” having them prescribed “and for too long.” CDC Acting Director said there are enough opioids prescribed “for every American to be on opioid medications around the clock for three weeks. That’s just too much.” NBC (Gosk) added the CDC study found “the most prescriptions were written in low-income white communities with high unemployment.”

The [New York Times](#)  (7/6, Goodnough) reports the CDC analysis “found that the prescribing rate in 2015 remained three times as high as in 1999,” as well as “tremendous regional variation in how many opioids doctors dole out.” Schuchat said, “We still have too many people getting medicine at too high a level and for too long.” Recent anti-opioid efforts, such as CDC guidelines and state and insurer limits, aren’t reflected in the analysis, but efforts prior to 2015, such as tightened prescribing rules for hydrocodone combined with a second analgesic, state crackdowns on pain clinics and Veterans Affairs prescribing guidelines could have helped cause the decline. Dr. Caleb Alexander, co-director of the Johns Hopkins Center for Drug Safety and Effectiveness, said an issue with efforts to reduce opioid prescriptions is that despite their new restrictions on opioid prescribing, many insurers “are strictly limiting or not yet covering alternative treatments for pain.”

Boston Dealing With Spate Of Shooting And Stabbings Despite Improving Crime Rate.

The [Boston Globe](#)  (7/6, Cramer, Ransom) reports that although “crime in Boston is at a two-decade low,” it “doesn’t always feel that way in places where violent crimes remain a looming presence: sections of Roxbury, Dorchester, and Mattapan” where a “spate of shootings and stabbings...has left at least five people injured and two dead” just this week. The Globe notes that, “according to police statistics, serious crimes such as murder, rape, and assaults have fallen in those areas between 10 and 22 percent since 2014,” and there have been 23 homicides in Boston so far this year. The Globe also points out that in 2015, “according to police statistics reported to the FBI,” Boston “had 706 violent crimes per 100,000 people, much lower than cities with comparable populations.”

Looking for help to manage the cost of college or re-vamp your career after an injury? The IACP Foundation's Still Heroes Scholarship Fund is proud to announce seven scholarships to help injured officers and their families! Five scholarships are available to college students for the 2017-2018 academic year. Or earn a Bachelor's or Master's degree online or at their campus in Phoenix through the University of Phoenix. Deadline is July 12. For more information, please visit www.theIACP.org/Foundation/Scholars.

OFFICER SAFETY & WELLNESS

Surveillance Video Of Fatal NYPD Officer Shooting Released.

The CBS Evening News (7/6, story 5, 0:45, Brown) reported, "Surveillance video released [on Thursday] shows the moment New York City police officer Miosotis Familia was shot to death in her police vehicle early [Wednesday]. The gunman, Alexander Bonds, is seen running away with officers in pursuit. Bonds was shot and killed not far away." ABC World News Tonight (7/6, story 4, 1:35, Muir) showed Police Commissioner James O'Neill saying, "Officer Familia is dead because of one reason and one reason only. That's Alexander Bonds' hatred for police." ABC's Eva Pilgrim said "the execution style killing of Familia comes as new NYPD recruits are being sworn in." O'Neill told them, "Perhaps you and your families are questioning whether you are making the right decision today, especially after yesterday's tragedy in the Bronx. I'm here to tell you are making the right decision."

In the wake of the fatal shooting, NBC Nightly News (7/6, story 9, 0:30, Guthrie) reported NYPD yesterday "announced it will retrofit all of its vehicles with bullet-resistant glass. That includes mobile command units like the one Officer Miosotis Familia was sitting in when she was gunned down yesterday."

Missouri Enacts "Blue Alert" System For Violence Against Police.

The St. Louis Post-Dispatch (7/6, Erickson) reports that "Missouri soon will have a system to notify the general public when a law enforcement officer is killed or injured." The report says, "patterned after the Amber Alert system for missing children, the so-called 'Blue Alert' law was signed Thursday by Gov. Eric Greitens, who had championed the idea." The Post-Dispatch says "the Blue Alert provisions are designed to promote public safety and protect police officers." According to Justice Department figures, "when the law goes into effect, Missouri will be the 28th state to adopt such a program." Greitens said, "We must stand up for those who stand guard for us."

One Year After Slayings, Dallas Police Train In "Mindfulness."

The [AP](#) (7/6, Lauer) reports from Dallas that “only hours after the ambush that killed five Dallas law enforcement officers, mental health experts began thinking ahead, searching for ways to ease the long-term effects of the attack on the men and women who patrol the nation’s ninth-largest city.” According to the AP, “police psychologists in Dallas were quickly joined by counselors from the Houston and Los Angeles police departments, the FBI and the federal air marshals service,” and “as she watched the July 7, 2016, assault unfold on the news, Dallas philanthropist Lyda Hill immediately thought of research she had funded to help returning combat veterans.” A year later, “Dallas officers are still grieving, but scores of them have received or are on track to receive specialized training in ‘mindfulness’ and other stress-management techniques that aim to teach police how to better understand and control their emotions, both on and off the job.”

TECHNOLOGY

MIT Researcher Creates Gunshot Detector That Turns On Stingray Devices For The USAF.

[CSO](#) (7/6) reports on the potential for a “gunshot detector that automatically turns on stingray surveillance devices,” which “impersonate cell phone towers and force nearby mobile devices to connect to it instead of the cell tower.” MIT’s John Houston has created a “system and method of automatically identifying mobile communication devices within the vicinity of a gunshot.” According to CSO, “it’s problematic that stingrays are often used without a warrant; law enforcement and even the device makers don’t want to talk about its capabilities or how often the devices are used.” Houston, whose patent was approved last month, “says the invention was made with support by the U.S. Air Force, and the government ‘has certain rights in the invention.’”

NATIONAL SECURITY

Real ID Bill Passes Oregon Legislature.

The [AP](#) (7/6, Hansen) reports that “the Oregon Legislature has passed a bill to allow local motor-vehicle offices to issue state driver’s licenses and other forms of identification that comply with federal requirements borne out of 9/11 security concerns.” The AP says “Senate Bill 374 overwhelmingly passed the Oregon House on Thursday on a 56-1 vote and now heads to Gov. Kate Brown for signing.” The report explains that “the state hopes that this week’s passage of SB 374 will be enough to earn the state another federal extension, thereby enabling Oregon residents to keep using their existing state-issued IDs in the interim at TSA security checkpoints.”

Kentucky Gets Real ID Compliance Extension. The [AP](#) (7/6) reports that “the Department of Homeland Security has given Kentucky until Oct. 10 to comply with the federal Real ID act. State officials say they will ask for another extension in October that will give the state until January 2019.” The AP says that “earlier this year, state lawmakers passed a law allowing Kentuckians to purchase a ‘voluntary travel ID.’” The report says “the travel IDs are optional, but if you don’t have one you won’t be able to use your standard driver’s license to board a domestic flight or enter a U.S. military base.”

GAO: DHS Expedited Chemical Security Approval Program Fully Implemented, But Lacks Participation.

[Homeland Preparedness News](#) (7/6) reports the Department of Homeland Security “has fully implemented its chemical facility anti-terrorism standards (CFATS) expedited approval program, but participation to date has been limited, “according to a recent report by the Government Accountability Office. In a congressionally mandated report to lawmakers, “DHS stated that it was difficult to assess the impact of the expedited program on security due to the fact that only one facility had used it at the time of the report.” The report says “GAO found that only two of the 2,496 eligible facilities opted to use the program and a variety of factors affected its participation.” Meanwhile, “officials from the two facilities that adopted the program said they found its prescriptive nature helped them quickly determine what they need to do to implement required security measures and reduced the time and cost to prepare and submit their security plans to DHS.”

ALSO IN THE NEWS

Security Forces Clash With Protesters In Hamburg.

The [Washington Post](#) (7/6, Stanley-Becker) reports that “security forces clad in riot gear clashed with protesters” in Hamburg on the eve of the summit, “using water cannons and pepper spray to disperse a group with anarchist sympathies that had refused to stand down.” An estimated 100,000 protesters were expected for Friday. The [New York Post](#) (7/6, Calder) reports that New York Mayor Bill de Blasio will be in Hamburg to protest.

[NBC Nightly News](#) (7/6, lead story, 2:35, Guthrie) reported, “12,000 people showed up to the Welcome 2 Hell protest, just hours before 20 world leaders including President Trump and the leaders of Britain, France and Russia, meet blocks away. Many here protesting capitalism and globalization. ... Tonight, authorities in Germany bracing to even bigger showdowns tomorrow.” [ABC World News Tonight](#) (7/6, lead story, 3:25, Muir) reported “violent clashes” erupted in Hamburg between protesters “fighting against globalism” and police officers. The [CBS Evening News](#) (7/6, lead story, 2:40, Brown) also had a report.

Robbin and Luke,

See below. I just found this email from Monday in my SPAM folder. Who sends the Idaho pricing information to the Idaho ABC? Do you mind having that person follow up with Kari on her request below?

Steve

Subject: [SPAM:#] Price Posting

Steve,

We are in the process of creating the new lists for populating our new price posting website. Can you please send me a Excel or CSV file of our current/active posts.

I need to see product information, upc and packaging sizes.

I would appreciate this as soon as you can get it to us as we are working hard to get this going in the next 30-60 days.

Thanks,

Kari Cussins

Subject: ****Level 1 in November****
Attachments: Ron Fellows Corvette Level 1 Curriculum.pdf

Hello!

Thank you for your continued interest in Spring Mountain Motorsports, home of the Ron Fellows Performance Driving School. As the Official High Performance Driving School of Corvette, you will receive first class instruction in current model Corvettes. The cost of the 3-Day Corvette Level one is \$3,895.00 in the Stingray and \$5,695.00 in the Z06 or Grand Sport. We just released another three day level one this afternoon for **11/17-19/17**.

The goal for all levels of our schools, is to provide an exciting and educational, adrenaline-charged program. Through a dynamic series of car control exercises and maneuvers developed by Ron Fellows, we have developed a curriculum that will help you learn to process information quickly and accurately - the most important skills in the high-performance environment. Our step-by-step program integrates the exercises and maneuvers to coordinate eyes, hands, and feet providing you with a baseline for car control that will have you balancing your car with confidence and finesse. All of our Corvettes are equipped with two-way radio communications providing constant contact with our team of instructors.

We have our own Executive Chef here at Spring Mountain. We are offering a hot breakfast buffet each morning and a delicious catered lunch each day included in the price of your school. While you are on property we encourage you to take some time to enjoy all the amenities we offer. Our members clubhouse is home to an on-call massage therapist(Tina's number is (775) 513-9360), a state-of-the-art workout facility, pool and spa, conference room, billiard and poker tables, an outdoor patio with a built in BBQ, and fire pit. On property you will also find racquetball and basketball courts, as well as a horseshoe pit. I would love for you to have the opportunity to come out and experience all we offer at Spring Mountain.

We do have condos available here at the track! Rooms start out at \$110.00+tax/night. We would have the night prior to the school and the 2-nights in-between!

I have attached the class curriculum for you to review. The class runs from 8am to 4pm daily. If this date works for your schedule please call me and I will help you set everything up!

Please let me know if you have any further questions or call me if you need help getting signed up? You can book online and if you are a return client I will give you comeback special in either a refund or with a Condo!

Sincerely,

Darci Bolen

HEADLINE	06/01 Dakota Access pipeline begins service
SOURCE	http://fox11online.com/news/nation-world/38-billion-dakota-access-oil-pipeline-begins-service-06-01-2017-193504583
GIST	<p>BISMARCK, N.D. (AP) — The \$3.8 billion Dakota Access pipeline began shipping oil for customers on Thursday, as Native American tribes that opposed the project vowed to continue fighting.</p> <p>Dallas-based Energy Transfer Partners announced that the 1,200-mile line carrying North Dakota oil through South Dakota and Iowa to a distribution point in Illinois had begun commercial service. The Dakota Access pipeline and the Energy Transfer Crude Oil Pipeline from Illinois to the Gulf Coast together make up the \$4.8 billion Bakken Pipeline system, which ETP said has commitments for about 520,000 barrels of oil daily.</p> <p>"The pipeline will transport light, sweet crude oil from North Dakota to major refining markets in a more direct, cost-effective, safer and more environmentally responsible manner than other modes of transportation, including rail or truck," the company said in a statement.</p> <p>Four Sioux tribes in the Dakotas are still fighting in federal court in Washington, D.C., hoping to persuade a judge to shut down the line. Tribes and environmental groups fear it might pollute water sources. More than half a year of protests in North Dakota resulted in 761 arrests before President Donald Trump's administration and the courts allowed the pipeline to be completed earlier this year.</p> <p>"Now that the Dakota Access pipeline is fully operational, we find it more urgent than ever that the courts and administration address the risks posed to the drinking water of millions of American citizens," Standing Rock Sioux Chairman Dave Archambault said in a statement. "This pipeline became operational today, yet it has already leaked at least three times."</p>

HEADLINE	06/01 Secret Service: threats remain the same
SOURCE	https://www.usatoday.com/story/news/politics/2017/06/01/secret-service-trump-faces-same-number-threats-obama/102400210/

GIST

WASHINGTON – Despite a spate of White House security breaches and other attention-grabbing stunts, there has been no change in the number of threats to directed at President Trump during his first five months in office as compared to his predecessor Barack Obama, according to the Secret Service.

On average, agents have been pursuing six to eight threat reports each day, the new Secret Service Director Randolph "Tex" Alles told reporters Thursday.

That number that has remained relatively consistent for the past decade, regardless of the officeholder, the retired Marine Corps major general said in his first briefing since his appointment by Trump in April.

The remarks come as the agency was confronted just this week with a grim stunt organized by actress Kathy Griffin who was photographed holding a fake, severed head in the image of Trump. Griffin's actions, which drew direct rebukes from Trump and First Lady Melania Trump, has set in motion a formal investigation. The Secret Service will question the actress.

Alles, the first director selected from outside the agency in 70 years, did acknowledge however that the size of the current president's family and his multiple residences have placed added "stress" on the agency's protective division which has carried a crushing workload since Pope Francis' 2015 visit to the U.S. The visit, which required an enormous security operation, was followed quickly by a contentious election season and January's inauguration.

"There are more places we have to protect by statute," Alles said, referring to Trump's frequent retreats in Florida, New Jersey and his home located in Manhattan's Trump Tower. "That and the fact that he has a large family. That's just more stress on the organization. We recognize that. It's not something I have any flexibility on.

"I can't change the size of the president's family," Alles said, chuckling. "Nor will I attempt to do that."

Just 38 days on the job, Alles did outline an ambitious agenda to increase the size of the agency from its current 6,800 agents and uniform officers to 9,500 by 2025. The bolstered force is needed, he said, to improve persistent morale problems caused by unpredictable staffing demands and limited funds to pay overtime.

In October, USA TODAY reported that slightly more than 1,000 agents – about a third of the agent workforce – had maxed out annual overtime and salary allowances. Many of them had reached their limits in June and were not eligible for overtime during the national political conventions, which the agency secures.

The disclosure prompted Congress to approve additional funding to cover the overtime costs, but that fix only applied to last year's overtime expenditures. Unless Congress approves a permanent fix, Alles said a "couple hundred" agents and officers will max out their pay allowances this year.

HEADLINE	06/01 Rank: 114th most peaceful nation on Earth
SOURCE	http://www.washingtontimes.com/news/2017/jun/1/us-ranked-the-114th-most-peaceful-nation-on-earth/
GIST	<p>Land of the free, home of the brave - but America may not be the most peaceful spot on earth according to the 11th annual “Global Peace Index,” which bases judgement calls on a complex gauge of social, economic and political factors, including rates of homicide and terrorism activities.</p> <p>The U.S. is now at No. 114, falling 11 places in the last year, the analysis says. Armenia and Rwanda are just in front of America on the list, El Salvador and China follow.</p> <p>“Iceland remains the most peaceful country in the world, a position it has held since 2008. It is joined at the top of the index by New Zealand, Portugal, Austria, and Denmark. There was also very little change at the bottom of the index. Syria remains the least peaceful country in the world, followed by Afghanistan, Iraq, South Sudan, and Yemen,” the report said.</p> <p>Most U.S. allies are in the top-20 of the index, including Canada, Japan, Australia, Ireland and Germany. The United Kingdom is at No. 41, however.</p> <p>“The U.S. deterioration is primarily driven by the growing intensity of internal conflict within the country, which was partly seen in the divisive 2016 Presidential election, as well as increases in the perceptions of criminality across American society,” the analysis said, also citing the impact of “rising homicide rates in several major American cities” and several terrorist attacks on American soil.</p> <p>The index is produced by the Australia-based Institute for Economics and Peace, which figures that the impact of strife worldwide is \$14.3 trillion. News is not all bad, though. In a nutshell, the index found that 93 nations became “more peaceful” in the last year, 68 were “less peaceful.”</p>

HEADLINE	06/01 Record: wettest fall through spring
SOURCE	http://mynorthwest.com/649876/seattle-breaks-rain-record-in-first-few-hours-of-june/
GIST	<p>Hours before the calendar flipped to June 1, Sea-Tac broke the record for the wettest fall through spring.</p> <p>When .08 inches of rain fell late Wednesday night, it meant a total of 47.27 inches of rain had hit from Oct. 1 to May 31, according to the National Weather Service. Even if it doesn’t rain the rest of the month, we’ve already received enough to set the rain record for October through June.</p> <p>It’s the most rainfall for the October through June period since record-keeping began back in 1895. It’s just slightly above the previous record of 47.23 inches, which was set last year.</p>

	<p>There have been 95 days with measurable rain at Sea-Tac in 2017. Gary Schneider with the National Weather Service says that's three days shy of the record through June 1, set back in 1961.</p> <p>Though the rainfall was recorded at Sea-Tac, Schneider says it is representative of most of Western Washington.</p>

HEADLINE	06/01 Sound Transit, Mercer Island agree
SOURCE	http://mynorthwest.com/650091/sound-transits-10m-agreement-will-eliminate-any-legal-challenges/
GIST	<p>Mercer Island has dropped its lawsuit against Sound Transit and the Washington State Department of Transportation. It was suing the agencies for breaking a decades-old agreement that would allow solo access into the express lanes.</p> <p>Those express lanes are being turned over to Sound Transit for light rail construction on Sunday. New HOV lanes that operate in each direction also go active on Sunday.</p> <p>Under the agreement reached just before a midnight deadline on Wednesday, Sound Transit will pay just over \$10 million for traffic safety and mitigation programs and for parking spaces to replace the South Bellevue Park-and-Ride lot, which will be closed for five years.</p> <p>After a closed meeting that lasted more than six hours, the Mercer Island City Council voted (5-1) to approve Sound Transit's offer just minutes before it was set to expire on Thursday.</p> <p>Details of the offer:</p> <p>Transit Access and Safety: \$5.3 million to address vehicle, bicycle and pedestrian access issues resulting from the closure of the Center Roadway or fund "last-mile solutions" that enable Islanders to access transit without driving.</p> <p>Parking: \$4.6 million that will provide approximately 100 additional commuter parking stalls during the East Link construction period (2017-2023), and will fund construction of new commuter parking for residents.</p> <p>Bus-Rail Integration: No bus facility will be built on 80th Avenue – instead, all pick-up and drop-offs will continue to occur on North Mercer Way, as they do today, and bus volumes are comparable to today.</p> <p>"While this has been an all-consuming and expensive process for Council and staff, I'm pleased that we have finally reached a settlement that advances the mobility needs of our residents," Mercer Island Mayor Bruce Bassett said in a news release, "and we appreciate the last-minute effort to reach an agreement by members of the Sound Transit Board."</p>

HEADLINE	06/01 Snohomish Co. settles jail death lawsuit
SOURCE	http://www.seattlepi.com/news/article/Snohomish-County-to-pay-600-000-in-man-s-jail-11188059.php
GIST	<p>EVERETT, Wash. (AP) — Snohomish County has agreed to pay \$600,000 to settle a lawsuit filed by the family of a mentally ill man who died in jail in 2012.</p> <p>The Daily Herald says the family of 59-year-old Bill Williams sued the county, alleging jail staff failed to provide adequate medical care.</p> <p>The County Council approved the settlement earlier this week. The county did not admit wrongdoing.</p> <p>Williams died 17 minutes after he was brought to the jail on Sept. 14, 2012. A medical examiner concluded that a struggle with corrections officers led Williams to suffer from excited delirium, a form of mania that follows severe physical agitation. His death was ruled a homicide.</p> <p>Prosecutors said in court papers that the officers used appropriate force given their safety concerns.</p> <p>Snohomish County Prosecuting Attorney Mark Roe declined to file criminal charges against the five corrections officers who struggled to restrain Williams. He said the officers' actions were within the boundaries of the law.</p>

HEADLINE	06/01 Putin: US missiles challenging Russia
SOURCE	http://www.reuters.com/article/us-russia-economic-forum-putin-idUSKBN18S4NS

GIST	<p>Russian President Vladimir Putin said on Thursday that elements of a U.S. anti-missile system in Alaska and South Korea were a challenge to Russia and that Moscow had no choice but to build up its own forces in response.</p> <p>Putin, speaking at an economic forum in St Petersburg, said Russia could not stand idly by and watch while others increased their military capabilities along its borders in the Far East in the same way as he said had been done in Europe.</p> <p>He said Moscow was particularly alarmed by the deployment of the U.S. THAAD anti-missile system to South Korea to counter a North Korean missile threat and to reported U.S. plans to beef up Fort Greely in Alaska, a launch site for anti-ballistic missiles.</p> <p>"This destroys the strategic balance in the world," Putin told a meeting with international media, the start of which was broadcast on state TV.</p> <p>"What is happening is a very serious and alarming process. In Alaska, and now in South Korea, elements of the anti-missile defence system are emerging. Should we just stand idly by and watch this? Of course not. We are thinking about how to respond to these challenges. This is a challenge for us."</p> <p>Washington was using North Korea as a pretext to expand its military infrastructure in Asia in the same way it had used Iran as a pretext to develop a missile shield in Europe, charged Putin.</p> <p>Putin said the Kurile Islands, a chain of islands in the Far East where Moscow and Tokyo have rival territorial claims, were "quite a convenient place" to deploy Russian military hardware to respond to such threats.</p> <p>Defence Minister Sergei Shoigu said last year Russia planned to deploy some of its newest missile defence systems and drones to the islands, part of a drive to rearm military units already stationed there. He has also spoken of Russia building a military base there.</p>

HEADLINE	06/01 Doc's 1980 letter create opioid crisis?
SOURCE	http://www.cbsnews.com/news/drug-companies-1980-doctors-letter-widespread-opioids-use/
GIST	<p>Nearly 40 years ago, a respected doctor wrote a letter to the New England Journal of Medicine with some very good news: Out of nearly 40,000 patients given powerful pain drugs in a Boston hospital, only four addictions were documented.</p> <p>Doctors had been wary of opioids, fearing patients would get hooked. Reassured by the letter, which called this "rare" in those with no history of addiction, they pulled out their prescription pads and spread the good news in their own published reports.</p>

And that is how a one-paragraph letter with no supporting information helped seed a nationwide epidemic of misuse of drugs like Vicodin and OxyContin by convincing doctors that opioids were safer than we now know them to be.

On Wednesday, the journal published an editor's note about the 1980 letter and an analysis from Canadian researchers of how often it has been cited — more than 600 times, often inaccurately. Most used it as evidence that addiction was rare, and most did not say it only concerned hospitalized patients, not outpatient or chronic pain situations such as bad backs and severe arthritis that opioids came to be used for.

"This pain population with no abuse history is literally at no risk for addiction," one citation said. "There have been studies suggesting that addiction rarely evolves in the setting of painful conditions," said another.

"It's difficult to overstate the role of this letter," said Dr. David Juurlink of the University of Toronto, who led the analysis. "It was the key bit of literature that helped the opiate manufacturers convince front-line doctors that addiction is not a concern."

Hospital databases were so limited in 1980 that we can't be confident there weren't more problems, or cases discovered after patients were discharged, Juurlink said.

The letter was written by Dr. Hershel Jick, a drug specialist at Boston University Medical Center, and a graduate student.

HEADLINE	06/01 NIH new push to fight opioid crisis
SOURCE	http://www.nbcnews.com/storyline/americas-heroin-epidemic/opioid-crisis-nih-launches-new-push-epidemic-n766826
GIST	<p>The National Institutes of Health announced a new push Wednesday to fight the opioid crisis, with fresh efforts to develop better drugs to fight addiction, to treat pain, and to stop overdoses.</p> <p>The giant agency — the world's biggest funder of medical research — is meeting with drugmakers to figure out the best and fastest ways to come up with a better solution to treating pain than the current addictive opioid class of drugs.</p> <p>"Every day, more than 90 Americans die from opioid overdoses," NIH director Dr. Francis Collins and Dr. Nora Volkow, head of the NIH's National Institute for Drug Abuse, wrote in a special report for the New England Journal of Medicine.</p>

	<p>Collins said the NIH will be meeting with "a dozen or more" drug companies over the coming weeks to develop better overdose drugs; better drugs to treat opioid addiction; and pain drugs that not only work better, but that are not addictive.</p> <p>"The NIH will now work with private partners to develop stronger, longer-acting formulations of antagonists, including naloxone, to counteract the very-high-potency synthetic opioids that are now claiming thousands of lives each year," Collins and Volkow wrote.</p> <p>"Industry is very interested and committed," Collin added in the phone briefing.</p> <p>Drug companies and science alike have failed to keep moving, in part because it took a while to realize that new formulations of synthetic opioids, such as fentanyl, were even more deadly and addictive than heroin and morphine.</p> <p>"It was partly because we believed as recently as 20 years ago that we had this problem solved," Collins said.</p> <p>"The holy grail was to develop an opioid that was not addictive ... but it's failed completely," Volkow added. One big mistake was believing that if people were taking opioids to treat pain, they would not become addicted, Volkow said.</p>

HEADLINE	06/01 Russia: will respond NATO buildup
SOURCE	http://abcnews.go.com/International/wireStory/russia-envoy-moscow-respond-nato-buildup-47766752
GIST	<p>Russia's envoy to NATO warned Thursday that Moscow is concerned by the alliance's military deployment in the Baltic States and Poland, and will respond to the buildup, as thousands of U.S. and European troops trained on land, sea and in the air in central and eastern Europe.</p> <p>"NATO is building a new military security situation that we cannot ignore, that we should address using our own military instruments," Ambassador Alexander Grushko said in Brussels.</p> <p>He declined to spell out what kind of measures Russia might take, saying only that "NATO's movements will not be left without a response in terms of military planning."</p> <p>Twelve NATO countries are deploying a total of around 4,600 troops to Estonia, Latvia, Lithuania and Poland and the four battlegroups are due to be fully up and running within two weeks.</p> <p>NATO says it's a deterrent move aimed at countering aggression by Russia, which seized Ukraine's Crimean Peninsula in 2014.</p>

	<p>"NATO is a defensive alliance and we do not seek confrontation with Russia," NATO spokesman Piers Cazalet said. "NATO had no plan to deploy forces in the region before Russia's illegal annexation of Crimea."</p> <p>Separately, around 4,000 U.S. and European troops from 14 nations were taking part in the annual Baltic Operations navy exercise that opened Thursday in the Baltic Sea port of Szczecin, in Poland, one of Russia's neighbors. The war games involve ground forces backed by about 50 ships and submarines and over 50 aircraft, and will run through June 16.</p> <p>In Romania, meanwhile, another 2,000 soldiers, 1,000 assistance personnel and 500 vehicles from 11 NATO nations were training in the alliance's "Noble Jump 2017" drill.</p>

HEADLINE	06/01 NATO, partners train in eastern Europe
SOURCE	http://abcnews.go.com/International/wireStory/us-european-troops-open-massive-navy-baltic-sea-47763755?cid=clicksource_76_null_articleoll_hed
GIST	<p>Thousands of troops from NATO and its partner nations are training on land and sea in central and eastern Europe Thursday, in two major exercises that aim to demonstrate their cooperation and rapid response capabilities at a time when the region feels threatened by Russia.</p> <p>Around 4,000 U.S. and European troops from 14 nations took part in the annual Baltic Operations navy exercise that opened Thursday in Poland's Baltic Sea port of Szczecin. The 45th edition of the so-called BALTOPS exercise involves maritime, air and ground forces with about 50 ships and submarines and over 50 aircraft, and will run through June 16.</p> <p>The training includes "tracking down and fighting submarines and sea mines, the use of air defense and landing troops as well as defense against navy vessels," said Lt. Cmdr. Jacek Kwiatkowski, spokesman for the exercise.</p> <p>The European troops come from Belgium, Denmark, Estonia, Finland, France, the Netherlands, Lithuania, Latvia, Germany, Norway, Britain, Sweden and host nation Poland.</p> <p>BALTOPS began in 1972 as a NATO exercise. Former Eastern Bloc nations joined in 1993, as they opened efforts to become alliance members.</p> <p>In Romania, meanwhile, another 2,000 soldiers, 1,000 assistance personnel and 500 vehicles from 11 NATO nations are training within the alliance's so-called "Noble Jump 2017" drill that opened in Greece Monday.</p>

Poland, Romania and other countries on NATO's eastern flank are concerned for their security and defense following Russia's seizure of the Crimea Peninsula from Ukraine, and because of its support for rebels in eastern Ukraine and its air force activity over the Baltic Sea. To allay these concerns, NATO and the U.S. have deployed thousands of troops to the region and hold regular joint exercises there.

About 300 troops traveling in a military convoy arrived in Romania from Bulgaria on Thursday. Other troops are expected to join in from bases in Britain, Germany, the Netherlands, Spain, Poland, Norway and Albania.

HEADLINE	06/01 Prescription drugs, pot risk road safety
SOURCE	http://www.marketwatch.com/story/tiger-woods-dui-arrest-prescription-drugs-are-a-growing-threat-to-us-road-safety-2017-05-30
GIST	<p>Crashes involving drugged drivers have nearly doubled over the last decade. In 2015, 21% of the 32,166 fatal crashes in the U.S. involved one driver who tested positive for drugs, up from 12% of the 39,252 fatal crashes in 2005, according to the National Highway Traffic Safety Administration, according to data released last year by the government's National Highway Traffic Safety Administration. "Use of marijuana and prescription drugs is increasingly prominent among drivers on America's roads, which raises a new safety challenge," the NHTSA says. "While it's illegal across the United States to drive while drunk, the laws involving drugged driving vary across the states."</p> <p>Video footage released online showed former "Dynasty" star Linda Evans, 74, being arrested in 2014 in Washington State for a DUI after driving erratically. "Unfortunately, I believe that you are under the influence," the police officer told the actress. She was given a ticket for DUI in the footage first released last March, but this was later amended to reckless driving. Police found 30 pink pills in her car, which Evans said she used as muscle relaxers. "It's true I was driving while being in physical pain," Evans told People magazine, but I was not impaired by any narcotic. I did not take any opiate or alcohol." (Her management did not immediately reply to a request for comment.)</p> <p>Marijuana is another problem for road safety. Fatal crashes involving drivers who recently used marijuana doubled in Washington State to 17% in 2014 from 8% in 2013 after the legalization of the drug there, according to a study released last year by the AAA Foundation for Traffic Safety. Legal limits for marijuana and driving are arbitrary and unsupported by science, "which could result in unsafe motorists going free and others being wrongfully convicted for impaired driving," AAA spokeswoman Tamra Johnson said. Recreational sales of marijuana ballooned 80% to \$1.8 billion in 2016, according to data from Marijuana Business Daily.</p> <p>Another recent survey by the NHTSA found that marijuana users are more likely to be involved in accidents, which may be due to the legalization of marijuana in many states, but that the increased risk may be due in part because they are more likely to be in groups at higher risk of crashes. "In particular,</p>

marijuana users are more likely to be young men — a group already at high risk,” the study found. While fatal traffic accidents have declined gradually over the last 10 to 15 years helped by stricter laws related to drunk driving and public safety awareness campaigns, it has crept back up over the last year amid other concerns related to texting while driving.

The spike in fatalities involving drugged drivers is likely an indication of the wider problem. The rate of drug overdose deaths in the U.S. in 2015, adjusted for age, was more than 2.5 times the rate in 1999, according to recent data released by the Centers for Disease Control and Prevention, due to a fall in the price of heroin and accessibility to prescription drugs. The rate of drug overdose deaths increased to 16.3 per 100,000 in 2015 from 6.1 per 100,000 people in 1999, an average rise of 5.5% a year. The biggest spike in fatal drug overdoses took place among Generation X and baby boomers, the CDC concluded.

HEADLINE	06/01 Unflappable 12yr old wins Nat'l Spelling Bee
SOURCE	https://apnews.com/3b68e6914bb446258d0884d0febf47b/Unflappable-Ananya-Vinay-wins-National-Spelling-Bee
GIST	<p>OXON HILL, Md. (AP) — Ananya Vinay never looked all that impressed by any of the words she was given in the finals of the Scripps National Spelling Bee.</p> <p>The 12-year-old from Fresno, California, showed little emotion and didn't take much time as she plowed through word after word. Sometimes she would blurt out questions, with little intonation — “Part of speech?” “Language of origin?” — and sometimes she didn't even bother.</p> <p>Unflappable to the end, Ananya seized the opportunity when her steely opponent, Rohan Rajeev, flubbed a simple-looking but obscure Scandinavian-derived word, “marram,” which means a beach grass. She calmly nailed two words in a row, ending on “marocain,” which means a type of dress fabric of ribbed crepe, to win the 90th Scripps National Spelling Bee on Thursday.</p> <p>“I knew them all,” Ananya said.</p> <p>Ananya barely cracked a smile even when her parents and younger brother stormed onto the stage to embrace her as the confetti fell. And she took time to console Rohan, who remained in his seat, wiping tears from his eyes.</p> <p>“It's like a dream come true,” Ananya said. “I'm so happy right now.”</p> <p>Later, she flashed a broad and toothy grin as she lingered on stage accepting congratulations. She will take home more than \$40,000 in cash and prizes.</p>

	Ananya is the 13th consecutive Indian-American to win the bee and the 18th of the past 22 winners with Indian heritage, a run that began in 1999 with Nupur Lala’s victory, which was featured in the documentary “Spellbound.” Like most of her predecessors, she honed her craft in highly competitive national bees that are limited to Indian-Americans, the North South Foundation and the South Asian Spelling Bee, although she did not win either.

HEADLINE	06/02 Parking to get worse at state Capitol
SOURCE	http://www.theolympian.com/news/politics-government/article153932249.html
GIST	<p>If you’re driving to the state Capitol, beware: Beginning this summer, there will be less parking available, and you will be charged more if you manage to find a spot.</p> <p>It’s a double whammy for state workers and visitors sparked by colliding budget concerns at the Legislature and the state Department of Enterprise Services (DES), which manages the campus.</p> <p>The parking scarcity stems from the new five-story 1063 Block building under construction at the corner of Capitol Way South and 11th Avenue that has a September move-in date for tenants such as the State Patrol.</p> <p>A 261-spot parking garage was torn down to make way for the roughly \$86 million project, which officials expect will bring an estimated 300 new parkers to the campus along with more visitors.</p> <p>On top of the parking crunch, DES is hiking parking rates July 1 to help fund its budget. It’s the first time prices have been raised in more than eight years and deemed necessary because the agency is running a deficit, Reynolds said.</p> <p>Reynolds said the price still will be below market value for a similar, privately owned parking spot in Olympia.</p> <p>Enterprise Services uses parking fees to operate and maintain the Capitol Campus, and parking must be at a rate that “meets financial requirements,” according to a slideshow presentation by DES.</p> <p>State workers without reserved spots will see their rates jump from \$25 to \$35 a month unless they get a discount for ridesharing. Reserved spots will go from \$35 to \$49 a month. Metered visitor parking will see an increase of just 50 cents, from \$1.50 an hour to \$2 an hour.</p> <p>The combination of higher prices for fewer spaces has some state workers steamed.</p>

HEADLINE	06/01 Aging Japan faces healthcare crisis
SOURCE	https://www.yahoo.com/news/dementia-timebomb-ageing-japan-faces-healthcare-crisis-030948375.html
GIST	<p>One of the world's most rapidly ageing and long-lived societies, Japan is at the forefront of an impending global healthcare crisis. Authorities are bracing for a dementia timebomb and their approach could shape policies well beyond its borders.</p> <p>By 2025, one in five of the over 65s -- around 7.3 million people -- in Japan will have dementia, the health ministry estimates, up from around 4.6 million now.</p> <p>Alzheimer's Disease, a syndrome in which cognitive ability, emotional control, and social behaviour deteriorate, accounts for the majority of cases.</p>

Prime Minister Shinzo Abe is aiming to increase the number of nursing homes and raise care worker wages to tackle the problem.

There is also a goal to ease the burden of family caregivers and reduce the number of people who quit work -- such as Ito -- to care for dementia-stricken relatives -- from 100,000 a year to zero.

Dementia is a major global health issue with cases soaring as people live longer. The World Health Organization estimates a new case is diagnosed every four seconds.

Many developed countries are already facing challenges on how to fund care, but Japan's issue is pronounced because its population has aged at a faster pace.

According to a 2016 OECD report, Japanese social spending as a percentage of GDP stands at 23.1 percent, lower than other developed countries with high percentages of elderly people, such as France and Italy.

"Japan has run its social welfare system on the premise that family members would take charge," said Katsuhiko Fujimori, chief research associate at Mizuho Information & Research Institute.

The government, he said, simply can't achieve its goals without more money. But a cash injection seems unrealistic given that Japan's public debt is already more than twice the size of its economy.

And with a shrinking and ageing population and workforce, some elderly with higher incomes are already being forced to pay more out of pocket for nursing care expenses under the national insurance scheme.

The overwhelming mental, physical and economic burden of caregiving has led to tragedy.

The total number of cases of abuse of the elderly rose to 16,384 in the fiscal year 2015 -- up from 12,623 in fiscal 2006, the majority of which involved relatives, according to figures from the health ministry. The reality of caring for an incapacitated loved one can push people to the brink.

HEADLINE	06/01 San Diego heightened risk of quakes
SOURCE	http://www.latimes.com/local/california/la-me-san-diego-quake-20170601-htlstory.html
GIST	<p>New research released this week found that a fault under the heart of San Diego can produce stronger and more frequent earthquakes than previously thought.</p> <p>It's the second study in recent months pointing to heightened quake risks in the San Diego area. San Diego's Rose Canyon fault produces powerful earthquakes more frequently than once believed, according to researchers from San Diego State University.</p>

SDSU scientists who studied the fault in Old Town determined that the system — which before about 1990 was thought to be inactive — generates a magnitude 6.5 to 6.8 earthquake about once every 700 years.

Seismologist Tom Rockwell said that earlier work indicated that such quakes occur every 1,000 to 1,500 years on the 40-mile-long fault, which extends from San Diego Bay, through Old Town and across Mission Valley, and up Rose Canyon through Mt. Soledad, to offshore at La Jolla.

The fault is known to extend as far north as Oceanside offshore.

“A powerful quake in the mid-to-upper 6s could cause liquefaction around San Diego and Mission bays and locally in Mission Valley, and cause the land to be offset across the fault, which would damage buildings,” said Rockwell, one of California’s most experienced seismologists.

The research team said they also found evidence at a dig site in Old Town that the strike-slip fault has produced at least two additional quakes in the magnitude 5.0 to 6.0 range in recent centuries— shaking referred to as background seismicity.

In March, scientists proved how San Diego’s Rose Canyon should give residents of Los Angeles and Orange counties something to worry about.

Researchers said the discovery of missing links between earthquake faults shows how a magnitude 7.4 temblor could rupture virtually simultaneously underneath Los Angeles, Orange and San Diego counties. Such an earthquake would be 30 times more powerful than the magnitude 6.4 Long Beach quake in 1933, which killed 120 people.

But to get to a 7.4, the earthquake would not only have to again rupture the Newport-Inglewood fault in Los Angeles and Orange counties. It would also have to jolt the Rose Canyon fault system, which runs all the way through downtown San Diego and hasn’t ruptured since roughly 1650.

“These two fault zones are actually one continuous fault zone,” Valerie Sahakian, the study’s lead author, said earlier this year. Sahakian wrote the study while working on her doctorate at Scripps Institution of Oceanography at UC San Diego. Sahakian is now a research geophysicist with the U.S. Geological Survey.

In the past, scientists reported gaps between the two fault systems of as much as 3 miles. But this study showed the gaps are actually less than 1¼ miles apart.

HEADLINE	06/01 Secret Service relaxes marijuana policy
SOURCE	http://www.cnn.com/2017/06/01/politics/secret-service-new-marijuana-policy/index.html
GIST	<p>(CNN)Thirty-eight days into the job, the new director of the US Secret Service, Randolph Alles, is getting to know his agency.</p> <p>Alles told reporters Thursday that he's working to grow the Secret Service, including by relaxing the agency's drug policy on marijuana.</p> <p>Instead of a policy that would disqualify an applicant who has used the drug more than a certain number of times, the agency will now use a "whole-person concept" to measure marijuana use, potentially allowing candidates who admit to marijuana use based on the last age at which they used the drug and the amount of time between then and their application to the agency.</p> <p>The Secret Service has two primary missions: To investigate and prevent financial crimes, and to protect the US President as well as former US leaders and their families.</p> <p>The new director acknowledged that around-the-clock shifts and last-minute assignments have affected morale among the force, which now numbers roughly 6,500.</p> <p>He explained he is aiming to boost the ranks to almost 10,000 agents within the next eight years.</p> <p>"We need more people. The mission has changed," Alles said, citing post-9/11 threats that include terror groups like al Qaeda and ISIS, as well as homegrown terrorists. "It's more dynamic and way more dangerous than it has been in years past," Alles said.</p> <p>But despite a change in the drug policy, Alles vowed to keep standards high for agents, saying there is no consideration of downgrading the role of the polygraph in the process, as has been discussed by other federal law enforcement agencies facing staffing droughts.</p>

HEADLINE	06/01 Landmarks around the globe go green
SOURCE	http://time.com/4802727/paris-climate-accord-landmarks-green/?xid=homepage
GIST	<p>Municipal governments around the world are bathing their city halls and landmarks with green light to show their support for the Paris Agreement on climate action, after President Donald Trump announced Thursday that the U.S. would withdraw from the accord.</p> <p>In France, the 2015 climate accord's namesake lit up its city hall in a vibrant hue, fresh on the heels of Trump's announcement. "Regardless of Trump's decision, cities will apply [the] Paris Agreement," tweeted Paris Mayor Anne Hidalgo, in both French and English.</p>

	<p>Several landmarks across New York also shone green Thursday night, including One World Trade Center, the Kosciuszko Bridge and the New York City Hall.</p> <p>"World: the Empire State stands with you," tweeted New York Governor Andrew Cuomo. "New York shines green for our planet, our health and our children's future."</p> <p>The mayors of New York City, Boston, Montreal, Mexico City and others around the world joined in the show of emerald light.</p> <p>Cities in other time zones like Sydney plan to join in the action on Friday.</p> <p>Several foreign governments, and even three U.S. states, have banded together to defend the climate agreement despite Trump's decision to withdraw.</p>

HEADLINE	06/01 Property values spike in King Co.
SOURCE	http://www.king5.com/news/local/assessed-property-values-spike-in-king-county/445039991
GIST	<p>Skyrocketing home values are not all good news for homeowners. In King County, some are being put on notice now that a big bill could be coming soon.</p> <p>Tim Sandner says he bought his home in Rainier Valley six years ago for \$270,000. Today, he says it is valued around \$475,000.</p> <p>"I think it's good," said Sandner. "I mean property values going up means your area is kind of on the rise."</p> <p>At the Office of the King County Assessor, they agree Rainier Valley is on the rise. Home values are spiking 19.3% on average in the area. In White Center, home values have climbed 18.6%, in Bellevue 19%, and SeaTac more than 21%.</p> <p>"It could mean several hundred more dollars a year that you are going to be paying in property taxes," said assessor John Wilson.</p>

HEADLINE	06/01 US imposes new sanctions on NKorea
SOURCE	https://www.aol.com/article/news/2017/06/01/us-sanctions-north-korea-arms-program/22121679/
GIST	<p>WASHINGTON, June 1 (Reuters) - The United States on Thursday blacklisted nine companies and government institutions, including two Russian firms, and three people for their support of North Korea's weapons programs.</p>

The announcement from the U.S. Treasury came as diplomats said the United States and China were likely to propose on Thursday that the U.N. Security Council blacklist more North Korean individuals and entities over the country's repeated ballistic missile launches.

Russia's Interfax news agency quoted Russian Deputy Foreign Minister Sergei Ryabkov as saying Moscow was puzzled and alarmed by the U.S. decision to sanction a Russian citizen and firms over alleged connections to North Korea.

He said Russia is preparing retaliatory measures, and that the sanctions would not help efforts to restore relations between Moscow and Washington, RIA news agency reported.

The United States has struggled to slow North Korea's nuclear and missile programs, which has become a security priority given Pyongyang's vow to develop a nuclear-tipped missile capable of hitting the U.S. mainland.

The measures announced by the U.S. Treasury on Thursday sanctioned Ardis-Bearings Llc, which it said is based in Moscow, and its director, Igor Aleksandrovich Michurin, for acting as a supplier to a North Korean trading company involved in the country's missile and weapons of mass destruction programs.

Another Russian firm, Independent Petroleum Company, and a subsidiary were blacklisted for signing a contract to provide oil to North Korea and shipping over \$1 million worth of petroleum products to North Korea, Treasury said.

The Treasury also sanctioned a major North Korean zinc company, the Korea Zinc Industrial Group, and the Korea Computer Center, which it said is a state-run information technology research center that generates foreign currency for the North Korean government through programming and software development.

The center is believed to have offices in Germany, China, Syria, India and the Middle East, Treasury said. A North Korean intelligence official, Kim Su-Kwang, was also sanctioned. The Treasury said he had worked undercover at a United Nations organization in Europe.

The steps freeze any funds the individuals or companies may have in the United States, and bar Americans from dealing with them.

HEADLINE	06/01 Governors unite to back climate pact
SOURCE	http://abcnews.go.com/Technology/wireStory/california-york-washington-unite-back-climate-pact-47778881

GIST	<p>Three Democratic governors said Thursday they won't let the United States back away from a commitment to reduce greenhouse gas emissions, despite President Donald Trump decision to withdraw from an international pact.</p> <p>"This is an insane move by this president," California Gov. Jerry Brown said, blasting the decision as "deviant behavior from the highest office in the land."</p> <p>Brown joined Gov. Jay Inslee of Washington state and Gov. Andrew Cuomo of New York to form the U.S. Climate Alliance to uphold the Paris climate agreement, a pact involving nearly 200 nations aimed at slowing the warming of the planet.</p> <p>The three states already belong to an emissions reduction pact of states and cities worldwide, but Thursday's action marked a direct stand against the Trump administration and a formal commitment to upholding the targets of the Paris agreement.</p> <p>Connecticut Gov. Dan Malloy and Virginia Gov. Terry McAuliffe also expressed interest in joining the new pact.</p> <p>"We governors are going to step into this cockpit and fly the plane," Inslee told reporters. "The president wants to ground it — we're going to fly it."</p>

HEADLINE	06/02 Europe: Paris deal can't be renegotiated
SOURCE	http://abcnews.go.com/Technology/wireStory/world-leaders-reaffirm-commitment-fighting-climate-change-47770526
GIST	<p>Top European leaders pledged Thursday to keep fighting against global warming as President Donald Trump announced he was pulling out of the Paris climate accord, but they rejected his suggestion that the deal could later be renegotiated.</p> <p>The leaders of France, Germany and Italy said in a joint statement that they regretted the United States' decision to withdraw from the accord, but affirmed "our strongest commitment" to implement its measures and encouraged "all our partners to speed up their action to combat climate change."</p> <p>While Trump said the United States would be willing to rejoin the accord if it could obtain more favorable terms, the three European leaders said the agreement cannot be renegotiated, "since it is a vital instrument for our planet, societies and economics."</p> <p>President Emmanuel Macron of France repeated that belief in an English-language speech from the presidential palace, unprecedented from a French president in an address at home. He said, "I do respect this decision but I do think it is an actual mistake both for the U.S. and for our planet."</p>

	<p>"Wherever we live, whoever we are, we all share the same responsibility: make our planet great again," Macron added.</p> <p>The European Union's top climate change official, Miguel Arias Canete, said in a statement that Trump's decision to leave the Paris accord made it "a sad day for the global community," adding that the bloc "deeply regrets the unilateral decision."</p> <p>Canete also predicted that the EU would seek new alliances from the world's largest economies to the most vulnerable island states, as well as U.S. businesses and individuals supportive of the accord.</p>

HEADLINE	06/01 DHS signals shift 'temporary status'
SOURCE	http://abcnews.go.com/International/wireStory/homeland-security-chief-signals-shift-immigration-program-47778916?cid=clicksource_76_null_articleroll_hed
GIST	<p>Immigrants who have legally lived and worked in the U.S. since disasters in their countries years ago may have to start thinking about going home, the U.S. Homeland Security chief said Thursday.</p> <p>In an interview with The Associated Press, Secretary John Kelly sent strong signals that immigration benefits known as "temporary protected status" should not be as open-ended as they have become for tens of thousands of people from Haiti and Central America.</p> <p>"The point is not that there be a complete recovery of all ills in the country," Kelly said. "The point is, whatever the event is that caused TPS to be granted — that event is over, and they can return."</p> <p>That might shock 86,000 immigrants from Honduras and another 263,000 from El Salvador, who constitute the vast majority of the program's current beneficiaries.</p> <p>The Hondurans, along with more than 5,000 immigrants from Nicaragua, became eligible for the temporary protections in 1999 because of destruction from Hurricane Mitch a year earlier. Immigrants from El Salvador were included in 2001 after a series of earthquakes.</p> <p>Immigrants from those three countries make up 80 percent of the 435,000 people from 10 nations currently eligible. Their status has been renewed every 18 months, and it will be up for renewal again early next year.</p>

HEADLINE	06/01 Intel agencies seek DOJ probe on 'leaks'
SOURCE	http://abcnews.go.com/US/us-intel-agencies-formally-doj-investigate-russia-related/story?id=47779764
GIST	<p>Looking to stem the tide of bombshell news reports linking Russian operatives with associates of President Donald Trump, U.S. intelligence agencies have taken the significant step of formally referring as many as six recent leaks to the Justice Department for criminal investigation, according to sources familiar with the matter.</p> <p>Word of the criminal referrals comes as President Trump tries to use growing hostility toward the press as a means of making money for the Republican National Committee.</p>

"Do your part to fight back against the media's attacks and deceptions," the president said Friday in a fundraising email blasted out by the RNC and obtained by ABC News. "They don't care about the truth."

Meanwhile, Deputy Attorney General Rod Rosenstein may issue a private memorandum to his entire workforce in the coming weeks, reinforcing department guidelines that govern when employees can engage with members of the media, according to Justice Department insiders.

For months, President Trump and key Republican lawmakers have been calling on the Justice Department to investigate who told reporters about classified information uncovered during the U.S. government's ongoing probe of Russian meddling in last year's presidential election. But there's only one voice that can really prompt a Justice Department leak investigation: the U.S. intelligence community.

And now, according to sources familiar with the matter, U.S. intelligence agencies have officially asked the Justice Department to get to the bottom of "several" recent leaks. It's unclear if the Justice Department has opened any cases so far.

HEADLINE	06/02 Travel ban appeal to Supreme Court
SOURCE	http://abcnews.go.com/US/trump-administration-appeals-travel-ban-supreme-court/story?id=47782915&cid=clicksource_81_null_articleroll_hed
GIST	<p>The Trump administration on Thursday petitioned the Supreme Court to review its contentious travel ban, a move that could set up a high-stakes final verdict on a policy to restrict immigration from several Muslim-majority nations that has so far been stymied in several lower court decisions.</p> <p>"We have asked the Supreme Court to hear this important case and are confident that President Trump's executive order is well within his lawful authority to keep the Nation safe and protect our communities from terrorism," Justice Department spokeswoman Sarah Isgur Flores said in a statement released Thursday night. "The President is not required to admit people from countries that sponsor or shelter terrorism, until he determines that they can be properly vetted and do not pose a security risk to the United States."</p> <p>After news of the petition broke, Washington State Attorney General Bob Ferguson tweeted, "Federal judges at all levels repeatedly and consistently agree with my argument that President Trump's illegal and unconstitutional travel ban cannot go into effect. I am confident the Supreme Court will agree."</p> <p>The Justice Department petition comes after the latest setback for Trump's controversial executive order to temporarily restrict immigration from Somalia, Libya, Iran, Sudan, Syria and Yemen. Last week, the U.S. Court of Appeals for the 4th Circuit declined to lift an existing lower court ban on the administration's revised travel ban.</p>

	In order to hear the case, the Supreme Court would now have to grant certioari -- or accept the case -- by having four of its nine justices to vote in the affirmative.

HEADLINE	06/02 Cause of Wisconsin mill blast unclear
SOURCE	http://abcnews.go.com/US/wireStory/wisconsin-corn-mill-blast-unclear-worker-missing-47784377?cid=clicksource_81_null_headlines_hed
GIST	<p>Recovery crews pulled one more body from the rubble of a Wisconsin corn mill that exploded a day earlier, bringing the death toll to two, and another worker remains missing.</p> <p>The blast at the Didion Milling Plant in Cambria, a rural village about 45 miles (72.42 kilometers) northeast of Madison, left at least two people dead. Columbia County Sheriff Dennis Richards confirmed the body of the second worker was found late Thursday afternoon. Emergency crews were still searching for a third worker. Nearly a dozen other employees were taken to area hospitals.</p> <p>None of the workers have been identified.</p> <p>The cause of the blast remained unknown as of Thursday afternoon, Didion officials said.</p> <p>U.S. Occupational Safety and Health Administration investigators were on the scene.</p> <p>At a news conference Thursday evening, Cambria Fire Chief Cody Doucette said a smaller fire occurred in a different part of the facility on Monday. Investigators were working to determine whether there was a link between that fire and Wednesday night's explosion, Doucette said.</p> <p>The plant processes corn for ethanol and other uses. A review of online OSHA records shows the plant was cited in January 2011 for exposing its workers to dust explosion hazards. The records state that plant filters lacked an explosion protective system.</p> <p>Dust explosions are a serious problem in handling grain, according to the U.S. Agriculture Department. There were five grain dust explosions in the United States last year and two of the incidents resulted in fatalities, Purdue University said in an annual report. Keeping facilities clean of dust and equipment in good working order to reduce the possibility of igniting the dust are critical to preventing explosions, the report said.</p>

HEADLINE	06/01 US withdraws from Paris climate deal
SOURCE	http://abcnews.go.com/Politics/trump-withdrawing-us-paris-climate-agreement/story?id=47767077&cid=clicksource_4380645_1_hero_headlines_bsq_hed

GIST	<p>President Trump will pull the United States out of the Paris climate accord, he said this afternoon.</p> <p>"The United States will withdraw from the Paris Climate Accord, but begin negotiations to re-enter either the Paris Accord or really an entirely new transaction on terms that are fair to the United States," the president said in the Rose Garden. "So we are getting out, but we are starting to negotiate and we'll see if we can make a deal that's fair."</p> <p>All implementation of the non-binding portions of the agreement will cease to be enforced by the United States, he said.</p> <p>The decision fulfills a key promise Trump made on the campaign trail and overturns a major accomplishment by his predecessor, Barack Obama.</p> <p>Trump's speech in the rose garden centered on what he argued is the negative economic impact of the accord, calling it a bad deal for America.</p> <p>"The bottom line is that the Paris Accord is very unfair at the highest level to the United States," he said.</p> <p>Referring to the Paris deal as a "massive redistribution of United States wealth" to other countries, the president made the case that the deal fundamentally disadvantages the U.S. economically, relative to other countries.</p> <p>"I was elected to represent the citizens of Pittsburgh, not Paris," Trump continued. "I promised I would exit or renegotiate any deal which fails to serve America's interests."</p> <p>He said the Paris accord would "undermine our economy, hamstring our workers, weaken our sovereignty [and] impose unacceptable legal risk."</p> <p>Despite the withdrawal, the president noted he would be willing to rejoin the deal under terms that are more favorable to the U.S., or to work on an entirely new agreement.</p>

HEADLINE	06/02 Researchers 'wardrive' to find spy tool
SOURCE	https://www.wired.com/2017/06/researchers-use-rideshares-sniff-stingray-locations/
GIST	LAW ENFORCEMENT'S USE of the surveillance devices known as stingrays, fake cell towers that can intercept communications and track phones, remains as murky as it is controversial, hidden in non-

disclosure agreements and cloak-and-dagger secrecy. But a group of Seattle researchers has found a new method to track those trackers: by recruiting ridesharing vehicles as surveillance devices of their own.

For two months last year, researchers at the University of Washington paid drivers of an unidentified ridesharing service to keep custom-made sensors in the trunks of their cars, converting those vehicles into mobile cellular data collectors. They used the results to map out practically every cell tower in the cities of Seattle and Milwaukee—along with at least two anomalous transmitters they believe were likely stingrays, located at the Seattle office of the US Customs and Immigration Service, and the Seattle-Tacoma Airport.

Beyond identifying those two potential surveillance operations, the researchers say their ridesharing data-collection technique could represent a relatively cheap new way to shed more light on the use of stingrays in urban settings around the world. “We wondered, how can we scale this up to cover an entire city?” says Peter Ney, one of the University of Washington researchers who will present the study at the Privacy Enhancing Technology Symposium in July.

He says they were inspired in part by the notion of “wardriving,” the old hacker trick of driving around with a laptop to sniff out insecure Wi-Fi networks. “Actually, cars are a really good mechanism to distribute our sensors around and cast a wide net.”

Stingrays, also known as cell-site simulators or IMSI catchers, have become a powerful but little-understood tool for law enforcement surveillance. They work by tricking phones into connecting with the stingray, instead of a real cell tower, enabling them to intercept communications, track a suspect’s location, and even inject malware onto a target phone.

Police and federal agencies have shared as little information as possible about how and when they use them, even dropping cases against criminal suspects to avoid revealing stingray details. And in many states, the tool still remains legal to use without a search warrant.

In the absence of publicly available stingray information, the University of Washington researchers tried a new technique to find out more. Starting in March of 2016, they paid \$25 a week to 15 rideshare-service drivers to carry a suitcase-sized device they called SeaGlass. That sensor box contained about \$500 worth of gear the team had assembled, including a GPS module, a GSM cellular modem, a Raspberry Pi minicomputer to assemble the data about which cell towers the modem connects to, a cellular hotspot to upload the resulting data to the group’s server, and an Android phone running an older program called SnoopSnitch, designed by German researchers to serve as another source of cell-tower data collection. The sensor boxes drew their power from the cigarette lighter electric sockets in the cars’ dashboards, and were designed to boot up and start collecting data as soon as the car started.

For the next two months, the researchers collected detailed data about every radio transmitter that connected to SeaGlass modems and Android phones as they moved through the two cities. They identified and mapped out roughly 1,400 cell towers in Seattle, and 700 in Milwaukee. They then combed that data

for anomalies, like cell towers that seemed to change location, appeared and disappeared, sent localized weaker signals, appeared to impersonate other towers nearby, or broadcast on a wider range of radio frequencies than the typical cellular tower.

In those two months of data, the team found three noteworthy anomalies, all in the Seattle area. (They acknowledge that their coverage of Milwaukee may have been too sparse, since only 6 of their 15 drivers were based there, and they didn't work as long hours as the Seattle drivers.)

Around the Seattle office of the US Customs and Immigration Service, the researchers pinpointed an apparent cell tower that frequently changed the channel on which it broadcast, cycling through six different kinds of signal. That's far more than any other tower they tested—96 percent of their data showed towers transmitting on just one channel—and represents a telltale sign of a stingray. The devices often broadcast on multiple frequencies, so that they can impersonate a cell tower while broadcasting on a neighboring frequency to avoid interfering with the real tower, the researchers explain.

In another instance, the team spotted clues of a possible stingray at the SeaTac airport. In the midst of thousands of readings at that location that appeared to come from stable, nearby towers, they found one signal that had entirely unique identifiers—unlike any of the other millions of data points they'd collected—and appeared for only a short window of time, around the evening of April 9th, 2016.

The third outlier was a signal that appeared just once at a location in the West Seattle neighborhood, but matched all the identifiers of a cell tower they'd otherwise spotted hundreds of times at another location in downtown Seattle, more than 3 miles away. While that strange data point could be a sign of a stingray briefly appearing at that location, the researchers say it could also be a false positive.

The researchers concede that they don't have any hard evidence of a stingray being used at either the USCIS office or the airport, only strong hints in their data. But they point to a report by the Detroit News that found FBI and Immigration and Customs Enforcement (ICE) agents used one of the devices to locate and deport an El Salvadorean immigrant with no criminal record other than allegations of drunk driving and a hit-and-run car crash. In the airport, the researchers speculate, a stingray could be a powerful tool for sifting through a large crowd to find a criminal suspect's phone.

“You can imagine they were looking for a person of interest,” says Washington researcher Ian Smith. “They're very good for figuring out if a person or set of people is in that crowd.”

The researchers say they have no illusion that they've found anywhere close to all of the stingray operations in Seattle.

When WIRED reached out to law enforcement agencies to ask about the two possible stingrays, both the Seattle police and the Port of Seattle police responsible for the SeaTac airport denied ownership of any such device at the two locations. A Port of Seattle police spokesperson said the airport police “don't have

one of those,” and a Seattle Police Department spokesperson said “it’s not one of ours.” The FBI didn’t respond to requests for comment, but an ICE spokesperson wrote that ICE agents “use a broad range of lawful investigative techniques in the apprehension of criminal suspects. Cell-site simulators are invaluable law enforcement tools that locate or identify mobile devices during active criminal investigations.” A DEA spokesperson refused to confirm or deny any specific operations, but noted that stingrays are a “lawful investigative tool that can be utilized in the dismantlement of criminal organizations.”

The researchers, for their part, say their intention wasn’t to disrupt any specific law enforcement investigation, which they suggest would likely be over given that they collected their data a year ago. Instead, they say they wanted to pilot a new method to gather generalized data about how and where stingrays are being used. They hope to follow up by combining SeaGlass’s data with corroborating evidence in open record requests and journalistic investigations.

HEADLINE	06/01 DHS: WannaCry could linger
SOURCE	https://fcw.com/articles/2017/06/01/dhs-wannacry-concerns.aspx
GIST	<p>In the days following the massive WannaCry ransomware attack that infected hundreds of thousands of computers worldwide, the Department of Homeland Security told critical infrastructure providers they would be less affected by the malware than consumers -- but that they should continue to be on guard.</p> <p>The unclassified memo, sent out on May 14 and posted on the Public Intelligence open-source website on May 28, told critical infrastructure providers that WannaCry was aimed at day-to-day business systems, not their critical operational IT. The exploits that formed the basis of the malware were allegedly obtained by the hacker group Shadow Brokers from the National Security Agency.</p> <p>The WannaCry attack that began on May 12 infected almost 300,000 computers in 50 countries, largely by leveraging a gap in aging Windows software that had been left unpatched. It hit the U.K.'s National Health Service, Spain's Telefónica, as well as international operations of corporations such as FedEx.</p> <p>The impact in the U.S. was relatively minimal. Even so, DHS warned critical infrastructure providers such as electric companies and financial service providers that the malware might show up in their business systems. Catastrophic failure of operational systems, however, was unlikely, DHS said.</p> <p>"Impacts will be largely financial from business interruption" to critical infrastructure owners and operators' business control systems, said the memo, and not to process control systems.</p> <p>The memo, prepared by DHS' Office of Cyber and Infrastructure Analysis said the biggest impact for critical infrastructure providers "will be short-term financial losses from business interruption, some of which could be covered by cyber insurance, based on a review of previous ransomware attacks."</p>

	The OCIA warned, however, that if some critical infrastructure providers' industrial control systems used similar IT components as their business control systems, those systems could be theoretically affected.

HEADLINE	06/01 Evolution of the cyber hunter
SOURCE	http://www.afcea.org/content/?q=evolution-cyber-hunter
GIST	<p>The U.S. Defense Department's cyber warriors continue to improve their ability to sniff out intruders who sneak past the defenses at the network's perimeter—a perimeter that is disintegrating with the march toward mobile devices.</p> <p>Cyber hunting is a more proactive approach to locating network threats. (See also “In Cyberspace, It's Always Hunting Season.”) It offers the opportunity to observe and analyze an adversary's actions, and it provides insights into a network intruder's tactics, techniques and procedures.</p> <p>Actively hunting for cyberthreats also enhances investigatory capabilities, explains Roger Greenwell, chief of cybersecurity and authorizing official, Office of the Risk Management Executive, Defense Information Systems Agency (DISA).</p> <p>“As we collect more data, bringing that together gives you a much better ability to deal with the investigation of an incident that may be detected on the network without having to go back and do post-forensic gathering of data. You would already have a lot of that information readily available to support incident analysis,” Greenwell says.</p> <p>In an article posted on the DISA website, agency officials list three components to cyber hunting: cyber protection teams, integrated security and identity management. The cyber protection teams under DISA's control receive extensive training, including immersion training alongside red teams responsible for finding vulnerabilities. The teams also receive enhanced training on tools and systems that provide broad visibility across the Department of Defense Information Network (DODIN).</p> <p>John Hickey, DISA's cyber development executive, underscores in the DISA online article the need for industry to deliver integrated security capabilities. Along those lines, officials tout milCloud 2.0, a commercial-grade private cloud being built exclusively for defense customers. The system is expected to increase security, save money and reduce the number of separate clouds serving the defense community.</p> <p>In the area of identity management, DISA is working on derived credentials and form-factor initiatives to support mobile devices, including tablets and laptops. Adversaries, regardless of their origins, are going after credentials, which give them access to key information. Whether they gain entry through phishing activities or as insiders, the credentials are the literal keys. Once in, the intruders will move laterally through the networks to seek out stronger credentials for further access, the online article explains.</p>

	<p>The concept of cyber hunting always has been a part of protecting the Defense Department’s networks, but it originally focused more on the forensics investigation after an intruder had been successful, Greenwell says.</p> <p>Now, the department’s cyber forces are evolving into a band of hunters capable of taking action before the damage is done. “We have in place capabilities such as firewalls, intrusion detection systems and other protective capabilities, but when an adversary escapes past that point, we want to actually look for their presence on the network,” Greenwell says.</p> <p>“That’s where we’re trying to evolve to with the concept of hunt.”</p>

HEADLINE	06/02 Financial malware more prevalent
SOURCE	http://www.computerweekly.com/news/450420057/Financial-malware-more-than-twice-as-prevalent-as-ransomware
GIST	<p>Although crypto ransomware is becoming a common choice for cyber criminals, there is still a significant amount of malware targeting financial organisations and their customers, Symantec has warned.</p> <p>In 2016, attacks saw several such institutions lose millions to cyber criminals and nation state-supported attackers such as the Lazarus group, Symantec research has revealed.</p> <p>Attacks against financial institutions are on the rise, with the emergence of a handful of sophisticated cyber crime groups going after financial institutions themselves rather than customers last year.</p> <p>Researchers found that 38% of all financial threat detections were against corporations rather than consumers. Even though such attacks are harder to carry out and take longer to prepare, they yield a much higher profit, the report said.</p> <p>Although there was a 36% fall in detection numbers for financial malware in 2016 due to earlier detection in the attack chain, with more than 1.2 million annual detections, the financial threat space is still 2.5 times bigger than that of ransomware, the Symantec report said.</p> <p>For example, the number of Ramnit (W32.Ramnit) detections was roughly the same as all ransomware detections combined.</p> <p>“With all the attention ransomware is getting lately, it is easy to overlook other threats, such as those that target the financial sector and its customers,” said Symantec threat researcher Candid Wueest. “However, these types of threats are a serious and costly problem for both businesses and consumers.</p>

Return to Top	<p>“Financial threats are still profitable and therefore continue to be popular among cyber criminals. From financial Trojans that attack online banking, to attacks against ATMs, point of sale [PoS] machines and fraudulent interbank transactions, there are many different attack vectors utilised by criminals,” he wrote in a blog post.</p> <p>The financial Trojan threat landscape is dominated by three malware families – Ramnit, Bebloh (Trojan.Bebloh), and Zeus (Trojan.Zbot). These three families were responsible for 86% of all financial Trojan attack activity in 2016.</p> <p>Globally, financial institutions in the US were targeted the most, followed by Poland and Japan, with the UK ranked 8th.</p> <p>Japan is the country with the most financial malware infections. It saw a spike in infections in 2016, with 37% of global detections, up from 3% in 2015. By contrast, the US accounted for just 6% of global detections.</p> <p>The UK and Germany were among the top 10 countries targeted globally by financial Trojans, but Symantec saw a big increase in financial Trojan detections across Asia, with Japan, China and India notably appearing in the top 10 list, which researchers said shows the attackers are expanding to new markets that are less saturated and less protected.</p>
-------------------------------	---

HEADLINE	06/01 Cyberattacks hit half UK businesses
SOURCE	http://www.supplychainedigital.com/cloud-computing/cyber-attacks-hit-half-uk-businesses-2016-will-political-parties-be-next
GIST	<p>The number of UK businesses that suffered a cyber- attack doubled last year, with almost half of firms detecting a breach in 2016.</p> <p>Now, James Norton, a leading security researcher, has warned that a British political party will be the victim of a hack similar to those suffered by the Clinton and Macron presidential campaigns.</p> <p>Norton, a former official at the US Department of Homeland Security, said: “It wouldn’t surprise me if there’s already been some emails stolen ... it would surprise me if it didn’t happen.”</p>

HEADLINE	06/01 Putin: hackers are like artists; they paint
SOURCE	http://thehackernews.com/2017/06/putin-russian-hackers.html
GIST	Talking to international media at the St Petersburg Economic Forum on Thursday, Russian President Vladimir Putin made a number of statement surrounding alleged Russia's involvement in hacking.

If you are not aware, Russia has been the focus of the U.S. investigations for its purported role in interfering with the 2016 US presidential election, which saw several major hacks, including Democratic National Committee and Hillary Clinton campaign emails.

The US authorities and intelligence community concluded in January that Mr. Putin had personally directed cyber attacks against Democrats and the dissemination of false information in order to influence US election and help Mr. Trump win the election.

Today Mr. Putin denied all the allegations of Russian engagement in the U.S. election hacking, saying that the Russian state had ever been involved in hacking.

"We don't engage in that at the state level," Mr. Putin said, according to the Associated Press.

"I'm deeply convinced that no hackers can radically influence another country's election campaign," Mr. Putin added. "No hackers can influence election campaigns in any country of Europe, Asia or America."

Besides insisting that the Russian government has no involvement in such cyber attacks, Mr. Putin said that some individual "patriotic" hackers who love their country could mount such attacks against those who "speak negatively about" their country.

"If they are patriotically minded, they start making their contributions – which are right, from their point of view – to fight against those who say bad things about Russia," Mr. Putin said.

"Hackers are free people, just like artists who wake up in the morning in a good mood and start painting," Mr. Putin said.

"The hackers are the same, they would wake up, read about something going on in interstate relations and if they have patriotic leanings, they may try to add their contribution to the fight against those who speak badly about Russia."

HEADLINE	06/01 WikiLeaks: CIA 'Pandemic' silently hacks
SOURCE	http://thehackernews.com/2017/06/windows-hacking-implant.html
GIST	<p>WikiLeaks has published a new batch of the ongoing Vault 7 leak, this time detailing an alleged CIA project that allowed the agency to turn Windows file servers into covert attack machines that can silently infect other computers of interest inside a targeted network.</p> <p>Codenamed Pandemic, the tool is a persistent implant for Microsoft Windows machines that share files with remote users on a local network.</p>

The documents leaked by the whistleblower organisation date from April 2014 to January 2015.

According to WikiLeaks, Pandemic infect networks of Windows computers through the Server Message Block (SMB) file sharing protocol by replacing application code on-the-fly with a trojanized version of the software.

"Pandemic is a tool which is run as kernel shellcode to install a file system filter driver," a leaked CIA manual reads. "The filter will 'replace' a target file with the given payload file when a remote user accesses the file via SMB (read-only, not write)."

Once compromised, the infected Windows file server acts as a "Patient Zero" – the first identified carrier of any communicable disease during an outbreak – which is then used to deliver infections on machines inside the network.

Now, whenever any targeted computer attempts to access a file on the compromised server, Pandemic intercepts the SMB request and secretly delivers a malicious version of the requested file, which is then executed by the targeted computer.

According to the user manual, Pandemic takes only 15 seconds to be installed on a target machine and can replace up to 20 legitimate files (both 32-bit and 64-bit files) at a time with a maximum file size of 800MB.

Since the tool has been specifically designed to infect corporate file sharing servers and turns them into a secret carrier for delivering malware to other persons on the target network, it has been named Pandemic.

HEADLINE	06/01 Concerns rise over password managers
SOURCE	http://www.darkreading.com/attacks-breaches/onelogin-breach-reignites-concerns-over-password-managers/d/d-id/1329034?
GIST	<p>The data breach is another reminder of the risks organizations are taking in entrusting all of their passwords to a single vendor. Security experts generally consider the use of password managers a best practice because the technology can help organization implement and enforce strong password practices. However, the downside is that password managers can also become a single point of failure.</p> <p>"OneLogin and servlces like it are what I call the holy grail of hacking targets," says Paul Calatayud, CTO at security vendor FireMon. "Many security-minded companies and individuals rely on these services to reduce the complexity of password management by essentially creating a master key that holds more complex passwords in one location."</p>

The data breach is another reminder of the risks organizations are taking in entrusting all of their passwords to a single vendor. Security experts generally consider the use of password managers a best practice because the technology can help organization implement and enforce strong password practices. However, the downside is that password managers can also become a single point of failure.

"OneLogin and services like it are what I call the holy grail of hacking targets," says Paul Calatayud, CTO at security vendor FireMon. "Many security-minded companies and individuals rely on these services to reduce the complexity of password management by essentially creating a master key that holds more complex passwords in one location."

A hacker that gains access to these password vaults automatically gains access to all accounts for which they are used, Calatayud says.

Organizations and individuals using OneLogin will need to change every single password that was being stored in the system and do additional monitoring of their assets as a precaution. "Any accounts that can be elevated to using two-factor should be. This removes the value of the passwords that are stolen because the second factor allows for additional protection," Calatayud says.

HEADLINE	06/01 Decoy files found in Jaff ransomware
SOURCE	http://www.securityweek.com/decoy-files-found-pdfs-dropping-jaff-ransomware
GIST	<p>Jaff is a new ransomware family that emerged in early May, and has been distributed through the infamous Necurs spam botnet. After fueling a surge in malicious spam last year, Necurs went dark in December 2016, only to return in April 2017.</p> <p>The Locky ransomware, historically associated with spam emails distributed by the Necurs botnet, went silent in December as well, and made only a brief return in April. As of early May, Necurs switched to distributing the Jaff ransomware and continues to do so.</p> <p>The reason for this appears to be simple: Jaff was supposedly developed by the same group behind Locky and Dridex, considering the use of resources previously associated with these threats. The first Jaff variant even used a ransom note similar to Locky's, but the second variant adopted a redesigned one, along with few other changes.</p> <p>The distribution campaign uses PDF files attached to the spam emails, but with Word documents hidden inside. The email subject ranges from fake invoice notifications to fake payment receipts, and from alleged image scans to random file copies.</p>

	<p>The ultimate goal remains the same: the Word document inside the PDF file is meant to download and drop a malware executable. According to Trustwave, however, the PDF campaigns have been evolving almost daily, with a larger number of embedded files discovered inside recent attachments and with additional layers of obfuscation.</p> <p>“These additional files do nothing, and are probably just decoys. But the main .docm file, with its malicious macro, still acts as the malware downloader,” Trustwave’s Homer Pacag explains.</p>

HEADLINE	06/01 Univ. Alaska phishing scam data breach
SOURCE	https://www.scmagazine.com/phishing-scam-compromises-data-on-25000-individuals-at-university-of-alaska/article/665470/
GIST	<p>A phishing scam in December 2016 resulted in a data breach at the University of Alaska, affecting around 25,000 students, staff and faculty members, according to a report on Wednesday by local CBS affiliate KTUU Anchorage.</p> <p>The breach exposed names and corresponding social security numbers, reportedly, after one or more employees clicked on material inside an email message in their inbox. This gave the scammers access to several secured accounts.</p> <p>In response, the university terminated the perpetrator's access and locked the system down, pending an investigation. It is unclear if anyone's information was accessed in the end in the brief window of time.</p> <p>Those who were compromised weren't notified until April 2017, five months after the incident or intrusion. Last year, something else happened. Those who receive the letter will be eligible to enroll in an ID theft loss reimbursement insurance program.</p>

HEADLINE	06/01 'Fireball' infects 20% corporate networks
SOURCE	http://www.darkreading.com/threat-intelligence/chinese-fireball-malware-infects-20--of-global-corporate-networks/d/d-id/1329025?
GIST	<p>A new cybercrime operation with roots in China has infected 250 million computers and 20% of corporate networks around the world.</p> <p>The Fireball malware, operated by Beijing-based digital marketing agency Rafotech, was discovered by researchers at security software firm Check Point. It acts as a browser-hijacker but could become a fully functioning malware downloader under attackers' control.</p>

	<p>"It's not technically more advanced than other malware," says Maya Horowitz, threat intelligence group manager at Check Point. "But it is able to pull any other malware to the infected devices, so it has a maliciousness."</p> <p>The browser-hijacking malware typically spreads via two types of bundling: with other Rafotech products, or with freeware distributed online. Horowitz says users who download freeware unknowingly also get the malware, which could be dropped at a later stage.</p> <p>Fireball manipulates the browser to change users' search engines and home pages into a Rafotech search engine, and redirects all search results to Google, Yahoo, and more. The fake search engines contain tracking pixels, which give Fireball the power to collect personal data.</p> <p>The greatest hit rates were in India (10.1%) and Brazil (9.6%). While the US was on the low end at 2.2%, it still witnessed 5.5 million hits. Corporate network infections were also greatest in India (43%) and Brazil (38%); the US represented 10.7% of business networks affected.</p> <p>"We don't know how it got to so many devices worldwide," says Horowitz, adding how Fireball may have spread in ways that haven't been discovered.</p>

HEADLINE	06/01 Putin points to patriotic Russia hackers
SOURCE	http://www.darkreading.com/threat-intelligence/putin-points-to-patriotic-russian-hackers-as-possible-culprits/d/d-id/1329027?
GIST	<p>Russian President Vladimir Putin today said patriotic Russian hackers may be responsible for some of the cyberattacks against countries that are at odds with the former Soviet Union, but he noted they are doing it on their own accord and not as a nation-sponsored campaign, according to a Reuters report.</p> <p>Putin, addressing the media at an economic forum in St. Petersburg, responded to allegations that his country may find ways to interfere with Germany's elections, similar to claims that Russia is facing in the US.</p> <p>"If they (hackers) are patriotically minded, they start to make their own contribution to what they believe is the good fight against those who speak badly about Russia. Is that possible? Theoretically it is possible," Putin stated, according to a Reuters report. He denied that his government was involved with hacking against other countries; Russia is fighting cyberattacks within its own country, he said.</p> <p>Putin said he doubts hackers could materially change the outcome of an election in the US, Europe, or other countries.</p>

HEADLINE	06/01 France: no trace Russia election hacking
SOURCE	https://www.washingtonpost.com/world/europe/the-latest-putin-says-attempts-to-contain-russia-wont-work/2017/06/01/0f5d81fc-46b3-11e7-8de1-cec59a9bf4b1_story.html?utm_term=.f11276f83b94
GIST	<p>The head of the French government’s cyber security agency, which investigated leaks from President Emmanuel Macron’s election campaign, says they found no trace of a notorious Russian hacking group behind the attack.</p> <p>In an interview in his office Thursday with The Associated Press, Guillaume Poupard said the Macron campaign hack “was so generic and simple that it could have been practically anyone.”</p> <p>He said they found no trace that the Russian hacking group known as APT28, blamed for other attacks including on the U.S. presidential campaign, was responsible.</p> <p>Poupard is director general of the government cyber-defense agency known in France by its acronym, ANSSI. Its experts were immediately dispatched when documents stolen from the Macron campaign leaked online on May 5 in the closing hours of the presidential race.</p> <p>Poupard says the attack’s simplicity “means that we can imagine that it was a person who did this alone. They could be in any country.”</p>

HEADLINE	06/02 ISIS forbids fighters to use social media
SOURCE	http://www.hstoday.us/briefings/daily-news-analysis/single-article/isis-forbids-its-fighters-to-use-social-media/e67c5baf81fcb3f34a1a605a12282ee.html
GIST	<p>ISIS’s Delegated Committee, a central body overseeing ISIS's institutions, recently issued a decree forbidding its jihadi fighters from using social media on the grounds they are being used by Western intelligence services to spy on ISIS fighters and to target them.</p> <p>The memo, a copy of which was circulated on pro-ISIS Telegram channels, stated, “To all Islamic State soldiers ... The enemies of the religion are using a variety of tactics to infiltrate the ranks of the monotheists and learn their secrets. Among those tactics [are] social media websites. The increasing use of these websites by Islamic State soldiers is very harmful to the collective, especially given that they were created by the enemies of Allah and His Messenger, who monitor them day and night. Many jihad fighters have been killed because of them and many bases have been destroyed. Therefore, as of the date of this memo, it is completely prohibited to use social media websites. Any transgressor will be held accountable and dealt with.”</p> <p>While there’s been much debate about whether the US government in particular should put more pressure on social media sites to remove jihadi social media messaging, US counterterrorism officials have been ambivalent about whether this should be done given the data mining of jihadi social media some of these</p>

	<p>officials have told Homeland Security Today on background have proven useful in connecting the dots between known and suspected jihadists and direct ties by some of them to ISIS leaders, recruiters and attack facilitators.</p> <p>They also said jihadists' social media sites have proved valuable for data mining purposes to key in on specific individuals they believe have become radicalized and could become lone wolves, or who may be involved in developing jihadi ideological-motivated terrorist cells plotting attack on their own, or with the direct help of ISIS operatives.</p>

HEADLINE	06/02 Insider breached L.A. plastic surgery clinic
SOURCE	http://www.foxnews.com/health/2017/06/02/massive-security-breach-at-prominent-los-angeles-clinic-puts-thousands-at-risk.html
GIST	<p>Prominent Los Angeles celebrities are some of the thousands of patients that might be at risk after a massive security breach at a plastic surgery clinic.</p> <p>A spokesperson for the Beverly Hills plastic surgery center told CBS Los Angeles records of 15,000 of Dr. Zain Kadri's patients were stolen. The spokesperson said some of the doctor's clients include celebrities.</p> <p>The spokesperson told the station that a disgruntled former staffer allegedly committed the privacy breach after being fired for stealing. The staffer is accused of stealing financial information and stealing photos of the patients while they were unconscious and posted the pictures on social media.</p> <p>Staffers discovered the stolen photos on a company phone.</p> <p>The clinic said Los Angeles police were notified of the breach.</p>

HEADLINE	06/01 France warns: risk of war in cyberspace
SOURCE	http://abcnews.go.com/Technology/wireStory/ap-interview-france-warns-risk-war-cyberspace-47769054
GIST	<p>Cyberspace faces an approaching risk of "permanent war" between states and criminal or extremist organizations because of increasingly destructive hacking attacks, the head of the French government's cybersecurity agency warned Thursday.</p> <p>In a wide-ranging interview in his office with The Associated Press, Guillaume Poupard lamented a lack of commonly agreed rules to govern cyberspace and said: "We must work collectively, not just with two or three Western countries, but on a global scale."</p>

"With what we see today — attacks that are criminal, from states, often for espionage or fraud but also more and more for sabotage or destruction — we are getting closer, clearly, to a state of war, a state of war that could be more complicated, probably, than those we've known until now," he said.

His comments echoed testimony from the head of the U.S. National Security Agency, Adm. Michael Rogers, to the Senate Armed Services Committee on May 9. Rogers spoke of "cyber effects" being used by states "to maintain the initiative just short of war" and said: "'Cyber war' is not some future concept or cinematic spectacle, it is real and here to stay."

Poupard said "the most nightmare scenario, the point of view that Rogers expressed and which I share" would be "a sort of permanent war — between states, between states and other organizations, which can be criminal and terrorist organizations — where everyone will attack each other, without really knowing who did what. A sort of generalized chaos that could affect all of cyberspace."

Poupard is director general of the government cyber-defense agency known in France by its acronym, ANSSI. Its agents were immediately called to deal with the aftermath of a hack and massive document leak that hit the election campaign of President Emmanuel Macron just two days before his May 7 victory.

Terror Conditions

[Top of page](#)

HEADLINE	06/02 Inside the ISIS social network
SOURCE	http://www.newstatesman.com/world/2017/06/inside-isis-social-network
GIST	<p>We are learning ever more about Salman Abedi, the terrorist who walked into the Manchester Arena and killed 22 other people, including ten in their teens or younger. From the moment Abedi detonated his device on 22 May, it was clear this was a more sophisticated and ambitious plot than most previous acts of terrorism on our shores. He was not acting alone.</p> <p>Since 2013, along with several colleagues from King's College London, I have mapped the flow of foreign fighters travelling to Syria and Iraq. It has become clear to us, having closely examined these clusters, looking at the networks of interpersonal relationships and offline socialisation, that the challenge facing this country is complex and diverse.</p> <p>What the data shows is that real-world interactions play a highly significant role in the process of someone moving from merely supporting extremism to becoming a terrorist.</p> <p>It is best to think of this in the following terms. A large pool of people consumes extremist content for all sorts of reasons – by accident, for professional purposes, out of curiosity or through experimentation.</p>

Significantly smaller numbers then subscribe to it ideologically and become active supporters. An even smaller proportion mobilises and either travels abroad for terrorist purposes or conducts attacks at home.

The testimony of Jake Bilardi, an Australian convert who joined Islamic State at the age of 17, brings this into sharp relief. A self-published account on his blog reveals that he wanted to join IS for several months but was thwarted because he “hit one key roadblock, how was I to get in? I had no contacts to assist me. After failed attempts at finding a contact I gave up all hope of making hegira [migrating: in this case to Syria].”

He then decided to launch a series of bomb attacks in Melbourne; these he never carried out, but he eventually found a way into Syria. Within months of doing so, he became a suicide bomber for IS, blowing himself up in Ramadi, Iraq, in March 2015.

Bilardi’s case underscores the importance of real-world networks, which often help the transition into terrorism. This is why we see concentrations of fighters emerging from specific locations. A small cluster of people from the Manchester areas of Chorlton, Moss Side and Fallowfield, the area where Abedi was raised, have joined IS. Pull at the threads of his connections and a worrying picture emerges.

Abedi knew and was linked to perhaps one of the worst young men from Britain to have joined IS, Raphael Hostey, who took the nom de guerre Abu Qaqa al-Britani (it is worth pointing out that two British fighters took this name and they are frequently confused by the media). Even by IS’s depraved standards, Hostey was particularly doctrinaire and sadistic.

Within weeks of arriving in Syria, towards the end of 2013, Hostey was shot in the foot while fighting in Deir az-Zour province. His recovery was slow, involving multiple operations in makeshift field hospitals run by IS surgeons. Unable to fight, Hostey was confined to the back room. There he concentrated on propaganda, recruitment and inspiring attacks at home, something that suited his personality, as he fancied himself as an intellectual of sorts.

He was part of a network of fighters from Manchester, including Anil Raoufi and Mohammed Javeed. The group travelled to Turkey together after Javeed’s elder brother, Jamshed, gave them £1,400 to buy tickets. Jamshed Javeed was arrested for trying to join IS, too, after his family called the police.

Hostey’s group is connected to two more, one from Portsmouth and the other from Cardiff. The Portsmouth cluster was led by Ifthekar Jaman, who became the most prolific and significant IS recruiter in the country. Without him, the other prospective jihadis from Portsmouth, Cardiff and Manchester would probably have found it much harder to make the journey.

Jaman initiated a chain reaction of exponential recruitment – akin to a pyramid selling scheme – in which each one of his recruits would recruit another group of people. This is the pattern of mobilisation apparent

across the country and it explains why groups of fighters are often concentrated in some communities and areas.

It is not only in Britain that this pattern occurs. More than 59 people affiliated with Sharia4Belgium, an international chapter of a group founded in Britain by Anjem Choudary, travelled to Syria, most of its members originating from the geographical axis of Antwerp, Mechelen, Vilvoorde and Brussels. The same is true in Sweden, where 11 fighters were identified as having resided in two small neighbouring suburbs of Gothenburg – Angered and Bergsjön.

When the Dutch intelligence service, AIVD, investigated Sharia4Holland, it concluded that such movements create “an environment in which people with similar ideas meet and develop radical ideas into jihadist ideologies. This group dynamic has led to a rapid radicalisation of many individuals as well as concrete attempts to join the jihad in Syria.”

Many of the fighters maintain contact with friends back home who, as a result, are far more likely to engage in terrorist activity of some kind. It is precisely from within this kind of milieu that Abedi and his deadly plot emerged.

HEADLINE	06/02 Bomber's cousins: 'he did it secretly'
SOURCE	http://www.bbc.com/news/uk-40122572
GIST	<p>Two cousins of the Manchester bomber say they had no idea he was planning his attack, which killed 22 people.</p> <p>Isaac and Abz Forjani were arrested by police after the suicide bombing - and were questioned for a week - but have since been released without charge.</p> <p>They say they did not know about Salman Abedi's extremist views - adding that he may have been radicalised abroad.</p> <p>It comes as police released new CCTV images of Abedi before the attack at Manchester Arena on 22 May. Sixteen people have been arrested over the bombing at an Ariana Grande concert and 10 remain in custody.</p> <p>Meanwhile, police said they had so far found no record of any calls to the anti-terrorist hotline about Abedi. After the attack, a community worker said two people had made separate calls to the hotline about five years ago to raise concerns about his behaviour.</p> <p>The Forjani brothers were arrested in Fallowfield, south Manchester, the day after the attack.</p>

Isaac, 24, said: "It's not easy being connected to 22 lost, innocent lives. The fact that the person that did this is related to us by blood is something that's going to stay with me for the rest of my life. My thoughts are with the families of the victims. I really do feel for them. We went in, we could come out, we can try and move on with our lives. They've lost their loved ones."

The two brothers said they last saw Abedi three months before the attack, when he got his hair trimmed at Abz Forjani's barber shop.

Abz, 21, said he had a "pretty close relationship" with Abedi. He said his cousin was not part of "a big network".

He said: "I believe it was all done by one man, (who) developed some sort of thoughts in the past few years which he kept to himself, secretly to himself. He never shared it with any members of the family - if he would of, we could have done something to stop that happening. He never admitted extremist views - it was just political opinions, so it wasn't focused or aimed at a particular group," Abz added.

"The thought was he was just a religious man taking it way too far, becoming judgmental maybe. "There's never been a hint of extremism."

The brothers also insisted they shared the same British values as everyone else.

HEADLINE	06/02 Ireland police on alert as fighters return
SOURCE	https://www.thesun.ie/news/1079467/irelands-terror-cops-on-high-alert-as-30-irish-jihadis-set-to-return-after-fighting-war-in-syria/
GIST	<p>GARDAI are secretly preparing for the return of Irish nationals who travelled to fight with Islamic militants, we can reveal.</p> <p>Foreign fighters in Mosul, Iraq, and Raqqa in Syria are expected to flee in the coming months as US-backed local troops continue to pound Islamic State's de facto capitals.</p> <p>Earlier this month US Air Force Colonel John Dorrian said IS is "on the brink of total defeat in Mosul", while soldiers inch ever closer to the extremists' Raqqa stronghold. And we can reveal that security officials in Ireland have now drawn up a list of 30 individuals based abroad that they are tracking.</p> <p>Gardai are "worried" by the prospect of IS and Free Syrian Army fighters travelling here in the coming months and have stepped up monitoring of "interested parties".</p> <p>Returning jihadis are also of major concern to authorities in the United Kingdom, who have estimated that 850 British-born foreign fighters remain in the Middle East.</p>

A source said: “IS are urging those fighting in Iraq and Syria to return home and cause more carnage. They know the end is coming. That’s the big worry at the moment. Whether it actually happens is another question. But we have to be prepared and watch those coming into the country. We are not just talking about Irish nationals. There have been a number of foreign-born individuals who have Irish children, and who have left from Ireland. In many cases they lived here for a number of years beforehand. If they return with their child then they cannot be stopped.”

Our source explained: “There are a number of different levels of radicals here in Ireland. There are a few hardcore lads but it’s mostly sympathisers or those who provide financial support. A lone wolf is the biggest threat though.”

It’s understood that dozens of radicals have travelled from Ireland to the Middle East to fight with IS. In many cases, such as suicide bomb frop Khalid Kelly, their travel was organised by a Jordanian man booted out of Ireland last year.

The Jordanian — who we are not allowed to name — was kicked out in July after the High Court dismissed his appeal to stay.

The State dubbed him the “main recruiter” of IS in Ireland. He is still communicating with supporters on social media from Jordan.

As we revealed after his death, Kelly went to the Middle East after being radicalised by the recruiter, who also had a role in radicalising the two men arrested in Dublin in connection to a terror group.

HEADLINE	06/02 Singapore terror threat at highest level
SOURCE	http://www.straitstimes.com/singapore/terror-threat-to-singapore-at-highest-level-in-recent-years
GIST	<p>The rising tide of extremism worldwide has not left Singapore untouched, and it faces its highest terror threat level in recent years, the Ministry of Home Affairs (MHA) said yesterday.</p> <p>"Singapore was specifically targeted in the past year, and the regional threat has heightened," the MHA said in its first Singapore Terrorism Threat Assessment Report.</p> <p>In October last year, an Arabic online publication titled The Fall Of The Idol: External Action And Individual Jihad singled out two entities here as potential targets - part of a wider bid to bring down United States and Western interests.</p> <p>The Straits Times understands that the targets were the Singapore Exchange and a port. MHA said security measures have been ramped up in the areas.</p>

Saying that security agencies remain on high vigilance, it added: "The public should continue to stay alert and be prepared."

The report said that the worsening threat in the region arose mainly from terror group Islamic State in Iraq and Syria (ISIS) and its affiliates.

In the Philippines, a group calling itself "IS East Asia" overran Marawi City in Mindanao late last month. While Philippine forces have moved to retake the city, the MHA said the siege of Marawi attests to the group's potential to turn parts of Mindanao into an "ISIS wilayat", or province for militants in the region.

"Should this entity proliferate into a regional network, like the Jemaah Islamiyah had done previously, the terrorism threat will deepen further in South- east Asia," it said.

At home, the threat remains very serious, the ministry added.

"Singapore is a key target. We have taken part in international coalitions against terrorism, and we represent many things that are anathema to ISIS," said the report.

HEADLINE	06/01 Center: police training needs updating
SOURCE	http://www.bnd.com/news/local/article153937674.html
GIST	<p>Police protocol and training may need to be updated after recent terrorists attacks, <u>according to a new paper</u> by the Combating Terrorism Center at West Point.</p> <p>The law enforcement foundation reviewed how police responded to the Orlando, Fla., nightclub attack in June 2016, where a gunman carried out the deadliest terrorist attack in the U.S. since 9/11, fatally shooting 49 people, and the terrorist attacks at the Inland Regional Center in San Bernardino, Calif., that killed 14 people.</p> <p>Hostage situations and terrorist attacks are usually handled by SWAT team members, the paper says, but patrol officers are usually the first on the scene.</p> <p>“Recent incidents have demonstrated that the actions taken by patrol and other non-tactical unit officers greatly impacts the outcome of the event,” the authors wrote. “Routine patrol work places officers in neighborhoods where terrorists hide, plan and attack, giving them the opportunity to gather critical intelligence as well as to identify potential threats.”</p> <p>And local police training agencies like the Southern Illinois Law Enforcement Commission, agree. They recently created courses designed to teach local officers how to handle terrorism threats on a local level.</p>

“When these incidents occur, everybody has to be trained the same way in response to them,” said David Hayes, director of SILEC. “Even if they’re from a local small agency, they may not be as susceptible or as high a target, but they may be used as manpower in larger areas where manpower needed.”

SILEC’s courses teach first responders, civilian partners and telecommunicators about what to do in case of a terrorist attack. A recent class focused on Islamist terrorism and the impact of global terror threats on U.S. law enforcement.

Police training needs to match the emerging trends seen from terrorist groups, Hayes said. That’s where intelligence centers can come in — they can figure out what tactics may be used.

“I don’t know if we can ever fully prepare for a terrorist incident, “ Hayes said. “If they’re bound and determined to give up their own life to take others, it’ll be hard to prevent.”

Even so, the authors of the West Point paper say that because the Islamic State is calling for attacks all across the nation, police need to be prepared for improvised explosive devices, suicide bombers and hostage situations.

“Terrorist attacks and other instances of mass public violence ... demonstrate that no community is immune from the threat and that local law enforcement, in particular, must develop strategies that, in the words of former (Department of Homeland Security) Secretary Jeh Johnson, ‘anticipate the next attack — not the last one,’” according to the paper.

HEADLINE	06/01 What is the Haqqani Network?
SOURCE	https://www.voanews.com/a/what-haqqani-network/3883271.html
GIST	<p>Afghan officials are blaming Wednesday's massive truck bombing that killed more than 100 and injured over 400 in the Afghan capital on the Taliban-affiliated and al-Qaida-linked Haqqani network. Here's what is known about the group:</p> <p>What is the Haqqani network? The Haqqani network is a militant group that continues to fight Afghan and U.S. forces in Afghanistan. Afghan officials and international terrorism authorities consider it the most lethal terrorist group in Afghanistan. It has been blamed for some of the deadliest violence in the country, including attacks on embassies in Kabul, the Afghan parliament building, local residents and U.S. military bases.</p> <p>When was the network founded? Jalaluddin Haqqani, a former anti-Soviet commander in Afghanistan, formed the network. In 1995, he pledged allegiance to the Taliban, which emerged a year earlier from a network of madrassas in</p>

Afghanistan and Pakistan. The network became a component of the Taliban and helped it capture the capital, Kabul, in 1996. Haqqani was appointed minister of tribal affairs, a position he held through 2001, when the U.S. invasion of Afghanistan ousted the Taliban.

Haqqani is believed to have studied in the Dar al-Ulum Haqqaniyaa madrassa in Pakistan, which is widely known for links to, and has publicly expressed sympathies for, the Taliban. One of his two wives is from the United Arab Emirates. He is held in high regard in largely Sunni Gulf Arab states.

Who leads the network?

Because of ill health, Haqqani handed over operational control of the group to his son, Sirajuddin, who also acts as deputy leader of the Taliban. Khalil al-Rahman Haqqani, a U.S.-designated foreign terrorist, is a major fundraiser for the network. He has reportedly engaged in weapons training and distribution by the network, according to a Stanford University research paper on the group.

Anas Haqqani, Jalaluddin Haqqani's son from his Emirati wife, is in Afghan custody and has been sentenced to death by a local court. The Taliban has warned of "disastrous consequences" if Anas is executed.

Where is the network based?

The group is reportedly based in Miram Shah, a town in the Federally Administered Tribal Areas in northern Pakistan where it operates base camps for conducting activities, including weapons acquisitions, training of suicide bombers and logistical planning for military operations, according to media reports. Kabul and U.S. officials have long accused Pakistan's Inter-Services Intelligence of covertly providing sanctuaries to the Afghan Taliban and the Haqqani network. Pakistan denies any links.

How large is the network?

According to various estimates, the number of group members ranges from 3,000 to over 10,000. The network is reportedly well-funded with support from various sources, including from wealthy Arab Gulf individuals. Haqqani and his sons have frequently traveled to the Arab Gulf countries to solicit funds. Haqqani, who speaks fluent Arabic, established personal connections with many individuals and organizations in the Arab Gulf region. The network has also generated funds through criminal activities such as smuggling of Afghan mineral supplies.

How is the network linked to militant groups?

In addition to its Taliban ties, the network has forged alliances with several militant groups, including al-Qaida, Tehreek-i-Taliban in Pakistan, the Islamic Movement of Uzbekistan and Pakistan-based Lashkar-e-Taiba, which has been accused of orchestrating a 2008 attack in India that killed 166 people. The network is believed to be holding several Western nationals, including two faculty members of American University who were abducted from Kabul last year.

What are the possible links to Wednesday's bombing?

	<p>"The attack has a signature of the Haqqani network," Marvin Weinbaum, an analyst at the Middle East Institute in Washington, told VOA's Urdu service. "They've pulled off some of the most dramatic attacks on Kabul over the last several years. So in that sense, you cannot separate this from the Taliban in general, because Sirajuddin, who heads the Haqqani network, is effectively the military commander of the whole Taliban. ... Of course, the Afghans will identify Haqqani because that's the link to, and they want to pin this on, ISI. Whether or not they were involved is another matter. At least that much is clear — that it probably was Haqqani network."</p>

HEADLINE	06/01 Philippine ISIS faction claims credit
SOURCE	http://www.washingtontimes.com/news/2017/jun/1/philippine-isis-faction-claims-assault-manila/
GIST	<p>Members of the Islamic State faction battling Filipino forces in the southern part of the country are claiming credit for an ongoing armed assault on a hotel resort in downtown Manila.</p> <p>A representative of the Filipino faction of the terror group known as ISIS or ISIL claims the gunmen currently laying siege to the Resort World hotel and casino were “lone wolf soldiers of Khilafa,” SITE Intelligence Group reported.</p> <p>Explosions and gunfire enveloped the resort complex, located near Ninoy Aqino International Airport in the Pasay district of metropolitan Manila early Friday morning, The Associated Press reported. Local reports claim several gunmen clad in black hoods and clothing were responsible for the ongoing gunfight inside the hotel complex.</p> <p>Philippine police and assault units have been sent to the scene, as hotel management warned guests to shelter in place, while State Department officials warned U.S. citizens to avoid the area.</p> <p>The hotel assault comes as Philippine military and police have been engaged in pitched, street-to-street fighting with Islamic State gunmen in and around the besieged city of Marawi in Mindanao’s Lanao del Sur province in the country’s south over the last several days.</p> <p>Manila’s counterattack came a week after Islamic State fighters raised the group’s black banners over Marawi, prompting Philippine President Rodrigo Duterte to declare martial law in the Mindanao region.</p>

HEADLINE	06/01 Taliban warns govt. against retaliation
SOURCE	http://www.reuters.com/article/us-afghanistan-blast-idUSKBN18S42J?il=0
GIST	<p>The Taliban warned the Afghan government on Thursday against harming any of their prisoners after reports that President Ashraf Ghani would order the execution of 11 militants on death row in revenge for the devastating truck bomb attack in Kabul.</p>

Ghani's fragile and divided government has come under increasing pressure over its failure to provide security following a series of high-profile attacks that have killed hundreds of soldiers and civilians so far this year.

Wednesday's blast, at the start of the Muslim holy month of Ramadan, ripped through a traffic-clogged street, packed with people on their way to school or work during the morning rush hour, causing hundreds of casualties in an instant and sending a tower of black smoke into the sky.

One of the worst such attacks since the U.S.-led campaign to oust the Taliban in 2001, it was only the latest in a grim series that has killed thousands of civilians over the years.

The Taliban have denied responsibility. But the National Directorate for Security, Afghanistan's main intelligence agency, has blamed the Haqqani network, an affiliate group directly integrated into the Taliban, and said it had acted with the help of Pakistan's intelligence service.

HEADLINE	06/01 Taliban recruits young: rape, blackmail
SOURCE	http://www.foxnews.com/world/2017/06/01/taliban-using-rape-blackmail-to-recruit-young-terrorists.html
GIST	<p>KABUL, Afghanistan -- Tucked deep inside the compound of Afghanistan's paramount foreign and domestic intelligence agency is a detention facility that houses the country's most hardened accused terrorists. It's a quiet place of old pale buildings, few windows and layers upon layers of security.</p> <p>Outside, a low-profile, gray Toyota Hilux pulls up and two freshly captured terrorists, blind-folded, are carefully pulled from the back of the pickup and led into their new confinement at the National Directorate of Security (NDS) facility.</p> <p>Inside, a young Taliban fighter is brought upstairs from the cell he shares with several others and led into a small, dimly lit ground floor room. Wearing his prison garb of black flip-flops and a deep green, orange-trimmed shalwar -- the traditional men's Afghan dress -- he sits down, appearing nervous. There are neither handcuffs nor blindfolds.</p> <p>His name is Haibatullah, and like many Afghans only uses one name. He is 18 years old. Haibatullah agrees to speak to Fox News, of his own will, to detail his descent into the dark path of Taliban terrorism, which started when he was 17, some 10 months ago.</p> <p>A friend, he says, convinced him to travel more than 300 miles from his home in the southeastern province of Ghazni to the Pakistan border city of Quetta, a city known to be a haven for Taliban members and one filled with people who support the group's hard-line ideology.</p>

"He said that the Americans and foreigners do whatever they want to our country," Haibatullah says, referring to his friend's "motivation" speech. "And we must fight the foreigners."

Once in the Quetta camp, which he refers to as the "secret brick camp," the indoctrination of hate only went deeper. For two months, Haibatullah was trained to use an array of guns and weapons and recite verses from the Quran to convince him that it was "mandatory to use jihad against foreigners" and "fight the infidels."

Haibatullah -- a timid, unshaven, almost child-like figure -- cowers a little more and suddenly announces that he has something to say. He buries his head in his hands and weeps silently. For long moments, nothing is said.

During training, a mullah told him to prepare to be a suicide bomber, but he refused on the grounds that he "was not ready." He says he was repeatedly told to engage in sexual acts with the mullah, but he continued to say no. Then one day after lunch, Haibatullah -- just 17 at the time -- claims that the mullah called him away. He woke up in a state of confusion and excruciating pain some time later, his legs covered in blood.

"After that," Haibatullah goes on, fidgeting and grief catching his voice. "He told me that he filmed the rape and if I didn't follow his orders and bomb myself, he would reveal the tape."

Haibatullah was raped two more times after that. The mullah, he says, called his parents and told them that their son was with the Taliban and because of that he had nowhere to go, nobody wanted him. Haibatullah suspects others also were drugged and raped, but he never said a word and nor did anyone else.

Haibatullah is currently awaiting trial and will be moved to another detention facility after sentencing. Typically, notes an NDS official, terrorists found guilty receive anything from a 20-year sentence, to life behind bars, to execution, depending on their crimes.

HEADLINE	06/01 Germany arrests suspect terror member
SOURCE	http://abcnews.go.com/International/wireStory/german-authorities-arrested-suspected-nusra-front-member-47770444?cid=clicksource_76_null_articleroll_hed
GIST	<p>German authorities have arrested a Syrian man on suspicion of membership in the extremist Nusra Front group.</p> <p>Federal prosecutors say the 22-year-old suspect, identified only as Ahmet A. A., was arrested Wednesday in the western state of North Rhine-Westphalia.</p> <p>In a statement Thursday, prosecutors said the man is suspected of having joined the Nusra Front in 2012 together with a previously arrested other man, Abdul Jawad A. K.</p>

	<p>The men's full surnames weren't released because of German privacy laws.</p> <p>Prosecutors said Ahmet A. A. took part in fighting against Syrian government troops, including during fighting in the Syrian city of Tabqa in 2013.</p>

HEADLINE	06/01 ISIS mortar fire strikes fleeing civilians
SOURCE	http://www.reuters.com/article/us-mideast-crisis-iraq-mosul-idUSKBN18S4KB
GIST	<p>At least seven civilians were killed and 23 wounded by Islamic State mortar shells as they tried to flee Mosul's militant-controlled Zanjili district on Thursday, Iraqi police said.</p> <p>Zanjili is part of the enclave that remains in the hands of Islamic State in the northern Iraqi city, alongside the Old City centre and the Medical City hospitals complex.</p> <p>U.S.-backed Iraqi government forces retook eastern Mosul in January and began a new push on Saturday to capture the enclave where about 200,000 people are trapped, regularly dropping leaflets telling families to flee.</p> <p>The wounded from Zanjili were taken to a field clinic, a police officer told Reuters, adding that more people could have been killed while trying to flee. They were part of the first group of civilians who have managed to escape.</p> <p>Several dozen other civilians managed to reach government-held lines unhurt, using the same exit route, the officer said.</p>

HEADLINE	06/01 ISIS seals off symbolic mosque in Mosul
SOURCE	http://abcnews.go.com/International/wireStory/seals-off-area-symbolic-mosque-mosuls-city-47765313
GIST	<p>Islamic State group militants have blocked the area around a highly symbolic mosque in Mosul's Old City where the group's leader made his first and only public appearance in 2014, a resident said Thursday.</p> <p>The move came as U.S.-backed Iraqi forces are pushing to recapture the city's remaining pockets.</p> <p>The militants have ordered families living near al-Nuri mosque — also known as the Great Mosque — to leave their houses and sealed all the roads leading to it, said the resident who lives in the IS-held sections of Mosul.</p>

	<p>Abu Bakr al-Baghdadi delivered a Friday sermon in al-Nuri mosque in 2014 after IS seized almost a third of Iraq and declared an Islamic "caliphate" on territory it controlled in Iraq and neighboring Syria.</p> <p>The iconic 840-year-old "Crooked Minaret," which leans somewhat like Italy's Tower of Pisa, survived destruction by IS militants as residents formed a human chain to protect it when the militants came to blow it up. The extremists demolished dozens of historic and archaeological sites in and around Mosul, saying they promote idolatry.</p> <p>"The militants are not moving in groups anymore, we see one or two from time to time in the streets as a majority of them are moving through the houses, using the holes they made in the walls," he told The Associated Press, speaking on condition of anonymity for fear for his safety.</p> <p>According to U.N. estimates, more than 100,000 people are still trapped in their houses in IS-held areas. Mosul's Old City is an ancient district of narrow alleyways and tightly packed homes, two main challenges to security forces.</p>

HEADLINE	06/01 Top ISIS figure killed in Syria
SOURCE	http://www.cnn.com/2017/06/01/middleeast/top-isis-figure-killed-in-syria/index.html
GIST	<p>(CNN)One of ISIS' most important figures has been killed by an airstrike in eastern Syria, according to sources close to his family and Telegram accounts of ISIS supporters.</p> <p>Sources tell CNN that Turki al-Binali was killed in Mayadin, near Deir ez-Zor, in recent days. The US Department of Defense confirmed Saturday that coalition forces had conducted strikes near Mayadin on May 25 and 26.</p>

	<p>The strikes were conducted against ISIS propaganda production facilities in Iraq and Syria, the Pentagon said.</p> <p>The Telegram account of ISIS supporters posted a brief eulogy and a biography of the ISIS leader. Telegram is an instant messaging service.</p> <p>Binali, a Bahraini who was about 32 years old, was regarded as one of the group's most influential ideologues and preachers.</p> <p>ISIS has not confirmed his death through its official media outlets.</p> <p>The terror group has come under increased pressure in Syria in recent months, steadily losing ground to US-backed Kurdish fighters and Syrian government forces.</p>

HEADLINE	06/02 Violence in protest at Kabul bombing site
SOURCE	http://www.cbsnews.com/news/protest-at-site-of-kabul-afghanistan-bombing-turns-violent/
GIST	<p>Violence broke out in Kabul Friday after hundreds of protesters gathered near the site of this week's car bomb attack to demand the resignation of Afghan President Ashraf Ghani's government. At least 7 demonstrators were killed and several wounded.</p> <p>On Wednesday, at least 90 people were killed and hundreds wounded when a sewage tanker packed with explosives blew up near the entrance to Kabul's secure Green Zone area in what was the city's deadliest attack since 2001.</p> <p>Afghan security forces fired into the air to hold the demonstrators back as they approached the Presidential Palace, some throwing rocks. Police used water hoses to disperse the crowds.</p> <p>The protesters accused Afghan president Ashraf Ghani and his chief Executive Abdullah Abdullah of being responsible for the attack, with some demanding that the government execute prisoners from the Taliban-affiliated Haqqani network, which intelligence officials blamed for the bombing. They installed a tent and said they would block a main road until their demands were met.</p> <p>One sign showed images of bloodstained children and read "Ghani! Abdullah! Resign! Resign!" Reuters reported.</p> <p>Some protesters were chanting, "Death to America, Pakistan, Ghani, Abdullah."</p>

	Despite its relatively moderate size, the protest highlighted a growing public anger towards the government for failing to ensure public security nearly three years after most international troops left the country.

HEADLINE	06/01 ISIS turns Ramadan into killing season
SOURCE	http://time.com/4801216/isis-ramadan-killing-season-muslims/?xid=homepage
GIST	<p>On May 21, President Donald Trump stood in a vast bejeweled auditorium in Saudi Arabia's capital and delivered a challenge to the world's 1.8 billion Muslims: Rid your communities of extremists. "Drive them out," he intoned. The same day, he joined Saudi Arabia's King Salman and Egypt's President Abdel-Fattah el-Sisi as the three leaders placed their hands on a glowing white orb in a ceremony to inaugurate a new counter-extremism center.</p> <p>In the 10 days that followed, the extremists answered with acts of killing across the planet. A suicide bomber detonated explosives at a pop concert in the British city of Manchester, killing 22 people. In Egypt, masked gunmen opened fire on a convoy carrying Coptic Christians to a monastery in the country's Minya province. In Baghdad, ISIS militants set off a pair of bombs, targeting families queuing up for ice cream and older people collecting their pensions. In the Philippines, the government battled to regain control of the southern city of Marawi, which had been seized by gunmen linked to ISIS.</p> <p>Then in Afghanistan, a truck bomb killed more than 80 people on Wednesday in a central district of Kabul near the country's presidential palace. The attack has not yet been claimed by any group, but the Taliban denies responsibility, heightening speculation of the Islamic State's role.</p> <p>The global tableau of violence is beginning to look like a repeat of a campaign of attacks carried out by ISIS and affiliated groups in 2016 timed to coincide with Ramadan, a holy month of dawn-to-dusk fasting and prayer. For the overwhelming majority of the world's practicing Muslims, Ramadan is a month for reflection, for heightened spirituality, for spending time with family. Adherents of the Islamic State have identified the month as a season for killing. "The group has made it into sort of its own sick tradition to make Ramadan an especially bloody month," says Mokhtar Awad, a research fellow at George Washington University's Program on Extremism.</p> <p>During Ramadan last year, militants carried out attacks on Istanbul's main airport, on civilians out after dark in Baghdad, and on people in an embassy district of Dhaka. ISIS also attached its name to the mass shooting at the Pulse nightclub in Orlando, Florida. Before Ramadan in 2016, ISIS spokesperson Abu Mohammed al-Adnani issued a call for attacks in western states. In May 2017, the group's Nashir news service issued a similar call, and urging "righteous believers" to action in a message distributed over the smartphone app Telegram.</p>

Experts say it is unlikely that ISIS' central organization based in Syria and Iraq planned the current wave of attacks, but rather that affiliates and individuals in several countries chose to mount attacks during Ramadan and in the days leading up to it. "It's more a case of individual groups separately commemorating the month with a view to make it look like it was centrally-planned Ramadan offensive," says Charlie Winter, a senior fellow with the International Center for the Study of Radicalization in London.

The wave of attacks exposes some of the naive assumptions of the Saudi summit. The world's governments are fighting not one monolithic extremist threat—as Trump's speech suggested—but a loose network of groups embedded in local insurgencies around the world. Even as a U.S.-backed military coalition moves to roust the Islamic State from its central base of operations in Iraq and Syria, satellite branches of the organization in the Middle East, North Africa, and Asia reassert the group's persistence. And lone attackers, many radicalized from afar, continue to do the group's bloody work in Europe.

The sheer number of different ISIS franchises and affiliates throughout the world present a dizzyingly complex challenge to counterterrorism efforts. The organization thrives where state institutions collapse, such as in Iraq, Syria, Libya, and Yemen, and seeks to recruit and inspire individuals—whether Muslim or non-Muslim—across the world. But it has also been successful insinuating itself into homegrown insurgencies — as in Egypt, where the group has launched a series of attacks on Coptic Christians, bombing a cathedral in December and a pair of churches on Palm Sunday.

ISIS is behaving less like a single strategic organization, in other words, and more like a franchisor — selling its brand to radicalized individuals and small jihadi groups across the world to extend its influence. The ambition, says analyst Michael S. Smith II, the co-founder of a consultancy that has advised U.S. government officials, is to draw in a range of rival militant groups under a single banner. "This is an important feature of their larger strategic calculus when it comes to that effort to eclipse the specter of al-Qaeda, the Afghan Taliban, and other groups that refuse to merge with Islamic State," he says.

HEADLINE	06/02 Saudi official: extremists killed inside car
SOURCE	http://abcnews.go.com/International/wireStory/saudi-official-extremists-killed-inside-car-47785840?cid=clicksource_76_null_articleroll_hed
GIST	<p>A spokesman for Saudi Arabia's Interior Ministry says security forces have fired at a car, setting it on fire, and killing two extremists inside in a restive town in the country's eastern province.</p> <p>Maj. Gen. Mansour al-Turki said in a statement early Friday that security forces in the heavily Shiites populated town of Qatif spotted a stolen car on Thursday evening and found inside it weapons and remain of munition that cause the explosion.</p>

The incident was reported late Thursday by state-linked Saudi media showing a car engulfed in fire and thick plumes of black smoke.

Violence between Shiite militants and security forces there has increased in recent weeks, with several incidents of militants firing rocket-propelled grenades at police. The Islamic State group has previously launched attacks on Shiites in Qatif.

HEADLINE	06/01 'Violent threat' Evergreen State College
SOURCE	http://www.thenewstribune.com/news/local/article153815799.html
GIST	<p>Officials at The Evergreen State College in Olympia evacuated the campus late Thursday morning because of a threat, and the campus will remain closed Friday.</p> <p>“In response to a direct threat to campus safety, the college is closing immediately for the day,” college officials posted on Evergreen’s website. “All are asked to leave campus or return to residence halls for instructions.”</p> <p>College spokesman Zach Powers told The Olympian that the closure was “out of an abundance of caution ... due to a violent threat against the college received by local law enforcement.”</p> <p>Powers said the threat was called in late Thursday morning to the business line for Thurston 911 Communications, which dispatches emergency calls in Thurston County. Officials at that agency informed Evergreen Police Services about the threat, and they passed it on to college president George Bridges.</p> <p>Powers posted to the college’s website at 5:25 p.m. on Thursday evening, to suspend Friday’s classes. His post says college officials were notified around 10:30 a.m. about an individual using an unknown phone number, who claimed to be armed and headed toward Evergreen’s campus.</p> <p>Powers said students and staff were notified of the original closure on Thursday morning through an emergency alert system that many subscribe to, and intercom messages that were broadcast in buildings, and through social media posts.</p> <p>“Evergreen police are being supported on site by members of local law enforcement,” Powers said. “There are other (law enforcement) agencies on site as people leave.”</p> <p>College spokeswoman Sandra Kaiser said Olympia police officers and Thurston County Sheriff’s deputies were assisting in the investigation, which was being led by the nine-person Evergreen police department.</p>

	<p>During a news conference at 1 p.m. Thursday at the nearby McLane Fire Department, Kaiser said she didn't know many details about the nature of the threat.</p> <p>The evacuation came after weeks of unrest on campus. Hundreds of students protested last week, citing institutional racism and bias on the campus by some of the college's employees.</p> <p>When asked whether there was any reason to believe that Thursday's threat was connected to recent events on campus, Kaiser said: "There's nothing that I know of that connects these things directly. But, of course, we live in troubled times and you've got to take public safety as a priority for everybody."</p>

HEADLINE	06/01 Deadbeat dads as UN peacekeepers?
SOURCE	http://www.reuters.com/article/us-haiti-un-feature-idUSKBN18S4LO
GIST	<p>For Roseleine Duperval, the United Nations mission to stabilize Haiti will always remind her of one thing - her 8-year-old daughter, who she says was fathered by a Uruguayan peacekeeper.</p> <p>Duperval is among a group of Haitian women who embarked on a long and largely fruitless journey to try to force peacekeepers who they say fathered their children to contribute to their upbringing. While some have succeeded with their paternity claims, barely any have secured any form of child support.</p> <p>"Since I became pregnant, he never sent money," said Duperval, who still has identity documents she says her daughter Sasha Francesca's father left behind, apparently because he wanted to be legally recognized as the father. "I have to call friends all the time to help me support my (child)."</p> <p>The paternity and child support issue is another awkward legacy of the 13-year U.N. mission, known as MINUSTAH, which is winding up in October after being sent in to stabilize a country riven by political turmoil. The mission introduced a cholera epidemic that killed about 10,000 people and has also been dogged by accusations of sexual assault.</p> <p>Paternity cases in recent years have confirmed seven children in Haiti as having had U.N. peacekeepers as their fathers, according to figures released on the peacekeeping body's conduct and discipline website. More than two dozen Haitian women are still pursuing paternity claims, second only to Democratic Republic of Congo in the number of claims against a U.N. mission worldwide since 2010, according to U.N. data.</p> <p>The cases also highlight a lack of accountability, critics say, since many of the women's paternity claims are never confirmed either way. Even when paternity is proven, the process rarely delivers any financial support for mothers.</p>

	<p>Under the United Nations' "zero-tolerance policy" against sexual exploitation and abuse, sexual relationships between peacekeepers and residents of countries hosting a U.N. mission are strongly discouraged.</p> <p>However, the world body says its peacekeeping arm does not take responsibility for financial assistance to children fathered by peacekeepers. It says the peacekeepers' countries, or the fathers themselves, must organize payment.</p> <p>In practice, that often means mothers must raise children alone in some of the world's poorest, most troubled nations.</p>

HEADLINE	06/01 Sweden: 76% child refugees are adults
SOURCE	https://heatst.com/world/tests-show-76-of-suspicious-child-refugees-in-sweden-are-actually-over-18/
GIST	<p>Age verification tests carried out on migrants who claim to be children have found that 76% of them are actually aged 18 or over.</p> <p>Swedish migration authorities released the findings of a wave of tests carried out on new arrivals to the Scandinavian country who claimed to be underage, but raised the suspicions of authorities.</p> <p>Medical examinations, which included analysis of migrants’ teeth and knee joints, found that the majority of those claiming to be children actually were not.</p> <p>Sweden’s Rättsmedicinalverket (forensic medical agency) has so far tested 581 migrants, and found evidence that 442 of them were 18 or older.</p> <p>The tests were only carried out on “children” who migration authorities thought could be lying – those who were clearly younger than 18 were not put through the procedure.</p> <p>There are around 3,700 suspicious cases still due to be assessed by the medical experts, according to the Swedish TT news agency.</p> <p>If the proportions from the previous tests hold true, a total of around 2,800 alleged child migrants will have been found not to actually be children, around 7.5% of all applicants.</p> <p>Correctly assessing the ages of people claiming asylum in Europe as part of the ongoing migrant crisis has proved a contentious issue across the continent.</p>

HEADLINE	06/01 China trying hard enough with NKorea?
-----------------	--

SOURCE	http://www.foxnews.com/world/2017/06/01/north-korea-is-china-trying-hard-enough-to-stop-pyongyang-threat.html
GIST	<p>WASHINGTON – Recent actions by South Korea President Moon Jae-in and China's President Xi Jinping have raised questions about the sincerity of both countries in helping the U.S. reign in North Korea's nuclear program.</p> <p>President Trump invited President Xi to visit Mar-a-Lago last winter, and expressed optimism about the good intentions of President Xi in this Monday tweet: "North Korea has shown great disrespect for their neighbor, China, by shooting off yet another ballistic missile...but China is trying hard!"</p> <p>But some analysts believe President Xi and South Korean President Moon are playing a duplicitous game – with China hoping to pull South Korea, as well as North Korea, closer into its orbit and away from the U.S. sphere of influence.</p> <p>South Korea's President Moon lashed out at the U.S. on Tuesday after his own defense ministry failed to notify him that the Pentagon sent four more batteries of THAAD (Theatre High Altitude Area Defense missiles) to South Korea.</p> <p>China is also wary of those missiles, fearing the U.S. may place them in Japan, too, as a part of a NATO-like alliance of Japan, South Korea and the U.S. to block Chinese ambitions.</p> <p>"It's another symptom of the fact that relations between the U.S. and South Korea today and will become ever more troubled as we see the events on the Korean peninsula unfold," said Graham Allison, professor of government at Harvard's Kennedy School of Government and author of the new book, "Destined for War: Can America and China Escape Thucydides's Trap?"</p> <p>South Korea's Jeju Air said on Tuesday that China had approved a plan to double its flights to China starting Friday. Cultural exchanges between the two countries are also being increased. That, as it becomes clear China's moratorium on the purchase of North Korean coal exports have largely been a ruse.</p> <p>"We know that the Chinese bought North Korean coal in February after the announcement [of the moratorium] in March, in April, and in May," said Gordon Chang, author of "The Coming Collapse of China." "The Chinese have been buying minerals that the UN Security Council resolution prohibits North Korea from selling."</p> <p>Indeed, in the first quarter of 2017, China-North Korea trade was up 37.4 percent from the same period in 2016.</p> <p>Yet, the U.S. remains hopeful that it will be Chinese influence that ultimately gets North Korea to halt its nuclear program.</p>

HEADLINE	05/31 Drone delivers donuts to police, fire
SOURCE	http://hosted.ap.org/dynamic/stories/U/US_DENVER_DRONE_DOUGHNUTS?SITE=AP&SECTION=HOME&TEMPLATE=DEFAULT&CTIME=2017-05-31-19-42-50
GIST	<p>DENVER (AP) -- Doughnuts were delivered Wednesday by drone to Denver's mayor and the city's police and fire departments in an event that provided a glimpse into what companies hope will be a quick, inexpensive way to get merchandise to customers.</p> <p>Denver's LaMar's Donuts hired Austin, Texas-based company Drone Dispatch to deliver four boxes of doughnuts using piloted drones flown from parking lots within a block of the delivery targets.</p> <p>LaMar's spokesman Tami Osifodunrin said Federal Aviation Administration regulations prohibit commercial drone pilots from losing sight of drones.</p> <p>Denver Mayor Michael Hancock was outside city hall when a drone delivered doughnuts.</p> <p>"We're doing it completely legal, we have very, very short deliveries from the drone where we have a safe takeoff location and the landing area is a Drone Dispatch team member who's receiving the box of doughnuts," said Chris Bonnet, CEO of Drone Dispatch.</p> <p>The drones took off from parking lots near the Denver City and County Building, the police department, the fire department and an alleyway near a pedestrian mall.</p> <p>Amazon and other companies have been testing autonomous drones for deliveries, while drone maker Flirtey last year began limited deliveries for 7-Eleven in Reno, Nevada.</p> <p>The doughnuts were delivered as part of a week of celebrating a tradition that dates to World War I, where Salvation Army volunteers made doughnuts for soldiers on the front lines. National Doughnut Day is celebrated the first Friday of every June.</p>

HEADLINE	06/01 Scenic view? Buy homes' 'air rights'
SOURCE	http://q13fox.com/2017/06/01/want-to-protect-your-scenic-view-you-can-buy-the-air-rights-above-homes/
GIST	<p>SEATTLE — Seattle is one of the fastest growing cities in the nation, and now a popular trend in some of the country's largest metropolitan areas is becoming more common here in Seattle.</p> <p>People are buying air above homes to protect views, usually from new construction or neighbors wanting to remodel and build larger homes that will block views.</p> <p>Imagine a house lower down on a hill and a home above it. The home above has a nice view and suddenly the person down below decides to put on a second story and the view up top gets obstructed. Buying air legally, known as air rights, or view rights, is becoming a growing protection option for residents.</p>

	<p>Call it air rights or view rights, these days people can buy anything and in Seattle’s hot housing market, a slice of the sky can also be bought.</p> <p>Real estate agents say residential air rights aren’t as popular in Seattle as they are in places like Los Angeles or New York, but the trend here is growing, and as Seattle’s population continues to grow at a rapid pace, the precious views become more valuable.</p> <p>“Welcome to Magnolia, Queen Anne, Clyde Hill, Somerset, Blue Ridge, wherever there’s a view there’s somebody who want to keep it, and money is going to be discussed,” said Richard Hagar of American Home Appraisal.</p> <p>The cost is anywhere from \$10,000 to hundreds of thousands of dollars, depending on location.</p> <p>“We just did some view rights over in Clyde Hill and we were able to determine the view was worth \$600,000 -- not the land, just the right for the guy behind him to look over and have his view,” said Hagar.</p>

HEADLINE	06/01 Dubai police enlist first robotic cop
SOURCE	https://www.yahoo.com/tech/first-robotic-cop-joins-dubai-police-092135132.html
GIST	<p>Dubai (AFP) - After bringing in Lamborghinis and Ferraris to patrol roads, Dubai police have enrolled a robotic officer, the first in a unit that aims to make up a quarter of the force by 2030.</p> <p>The robotic cop stood to attention Wednesday night at the foot of Burj Khalifa, the world's tallest tower, as tourists and passersby snapped selfie souvenir photos by its side.</p> <p>Wearing a police cap and moving on wheels, the robot features a computer touch-screen on its chest that can be used to report a crime or inquire about speeding tickets.</p> <p>"Our aim is to raise the number of robots to 25 percent of the police force by 2030," said Brigadier Khaled al-Razzooqi, head of Smart Services at Dubai police.</p> <p>The robot, to be deployed mainly at tourist spots, is equipped with a camera that transmits live images to the operations room and it can identify suspects wanted by police.</p> <p>The main purpose is to "find a new way to deal with people", said Razzooqi, while acknowledging that robots could not replace humans on tasks such as making arrests.</p> <p>Police in Dubai, a growing tourism hub which attracted nearly 15 million visitors last year, have previously attracted media attention by parading expensive luxury cars as patrol vehicles.</p>

HEADLINE	06/01 Shortest international flight North America
-----------------	--

SOURCE	http://www.king5.com/news/local/the-shortest-international-flight-in-north-america-comes-to-friday-harbor/444990379
GIST	<p>Rick Hughes says he just trying to be romantic when he looked at whisking away his wife for a Valentine's Day weekend in Victoria.</p> <p>That was until he realized how tough it would be to make the roughly 16-mile journey from Friday Harbor to Vancouver Island. So close, yet so far.</p> <p>That time of the year, there is no state ferry service from the San Juans to Sidney, BC, and getting to Vancouver Island would require an exhausting trip to Anacortes, north to the Canadian Border, to Tsawwassen, and a BC ferry across to Victoria - or, says Hughes, "a \$700 charter flight."</p> <p>Even using the ferry to Sidney during the summer months often requires an overnight stay, he says. The San Juan County commissioner says that's when he decided something needed to change.</p> <p>Hughes lobbied his friends in local government, like Duncan Wilson, the Friday Harbor town administrator.</p> <p>"To be 14-16 miles away from an area that shares so much with us, and to not be able to get there easily is very bad," he said.</p> <p>So they started pitching the idea of regular plane service between Friday Harbor and Victoria. The U.S. Office of Customs and Border Protection said there would need to be security screening, and they had very little money to contribute. But it would provide staffing if the opportunity came to fruition.</p> <p>"We didn't have the infrastructure in place," acknowledged CBP Blaine District leader Ken Williams.</p> <p>Hughes says local leaders wrote to both U.S. Senators Patty Murray and Maria Cantwell and Congressman Rick Larsen. They also pitched their fellow elected Port officials on an idea: paying for a customs screening facility at the Friday Harbor Airport. They found \$30,000 in local lodging tax revenue to build out a former airport office, complete with handheld scanners. CBP agreed to staff it for 1 1/2 hours every morning and afternoon in return.</p> <p>It led to a moment months in the making on Thursday, when customs officials, along with Hughes and Wilson, cut the ribbon on the facility and welcomed the first official "Shortest International Flight in North America."</p> <p>Sidney, BC, town crier Kenny Podmore made the official welcome on the tarmac at Friday Harbor. Canada-based Northstar Air says it is planning on offering daily, 12-minute service between Friday Harbor and Victoria, perhaps as early as July. Northstar's Henry Emson says early-bird rates will be \$49 each way.</p>

HEADLINE	06/01 Florida officials: outbreak of dog flu
SOURCE	http://abcnews.go.com/Health/outbreak-virulent-dog-flu-florida-suspected-infecting-13/story?id=47767417
GIST	<p>Florida officials are monitoring an outbreak of "dog flu" that has been confirmed or suspected in 13 dogs. Seven of the cases are confirmed, and six are suspected, according to the Florida Department of Agriculture and Consumer Services.</p> <p>This is the first time the highly contagious H3N2 virus has appeared in Florida, according to the department.</p> <p>Dog flu is usually not life threatening, but it can lead to pneumonia. While the virus can spread rapidly among dogs, it cannot infect humans.</p>

HEADLINE	06/02 South Sudan botched vaccine campaign
SOURCE	http://abcnews.go.com/International/wireStory/south-sudan-15-children-die-botched-vaccine-campaign-47785841?cid=clicksource_76_null_articleroll_hed

GIST	<p>South Sudan's government says 15 young children have died in a botched measles vaccination campaign that saw people as young as 12 years old administering the vaccines.</p> <p>The health ministry on Friday blamed the deaths on human error. One syringe was used for all the children, and the vaccine was not stored properly.</p> <p>The government says all of the children who died were under the age of 5. It is setting up a commission to determine who is responsible and whether victims' families will be compensated.</p> <p>The measles vaccination campaign is targeting more than 2 million children across the country.</p>

HEADLINE	06/01 DC mayor reacts to fake ICE flyers
SOURCE	http://abcnews.go.com/US/tear-dc-mayor-reacts-fake-ice-flyers-posted/story?id=47773474
GIST	<p>Washington, D.C. Mayor Muriel Bowser ordered the removal of the fake U.S. Immigration and Customs Enforcement (ICE) flyers that were posted around the city Thursday, calling it an effort to divide residents in the nation's capital.</p> <p>Bowser confirmed via Twitter that she is working with the D.C. Police Department and the Department of Public Works to remove the official-looking flyers that show a U.S. Department of Homeland Security logo beside U.S. Immigration and Customs Enforcement written in large block letters.</p> <p>The flyer reads, "Sanctuary City Neighborhood Public Notice," and goes into claims about possible penalties for supporting illegal immigration.</p> <p>Balkans Bohemia, who posted an original image of the flyer that the Mayor retweeted, told ABC News that he first spotted the flyers a little after 9.a.m Thursday local time on his walk to the train.</p> <p>Bohemia said he knew the posters were fake when he spotted a D.C. government logo at the bottom corner and said "anyone who knows D.C. government knows they are a pro-sanctuary city."</p> <p>ICE immediately responded to the fake flyers via Twitter disowning the flyers.</p> <p>"The immigration enforcement notices appearing across Washington, D.C., were not issued or sanctioned by U.S. Immigration and Customs Enforcement (ICE)," spokesperson Carissa Cutrell told ABC News.</p> <p>"Just like false reports of immigration checkpoints or random sweeps, notices like these are dangerous and irresponsible. Any person who actively incites panic or fear of law enforcement is doing a disservice to the community, endangering public safety and the very people they claim to support and represent," Cutrell added.</p>

HEADLINE	06/01 Car prowls remain a problem in Seattle
SOURCE	http://q13fox.com/2017/06/01/despite-some-arrests-car-prowls-remain-a-problem-in-seattle/
GIST	<p>SEATTLE, Wash. — An early morning arrest served as a good reminder to always take valuables out of your car. And always lock your car doors.</p> <p>About 12:20 a.m., officers were dispatched to the 8800 block of 42nd Avenue with report of a car prowler, Seattle police said. Before they could arrive, the call was updated to say the suspect was rummaging through multiple cars, and trying to open locked doors.</p> <p>Police arrested the suspect after he was positively identified by witnesses.</p> <p>But the sobering fact remains: there's more car prowls in Seattle than there were five years ago.</p> <p>One thousand and eighty two car prowler thefts were reported in April, bringing this year's total to well over 4,000. That's about the same as last year, but a roughly ten percent increase from 2012.</p> <p>Seattle Police Detective Mark Jamieson calls car prowls "crime of opportunities" that happen year-round.</p> <p>But as more people head to crowded summer parks, clothes or other valuables are often left in the car. That's when car prowlers strike.</p> <p>"They'll check parks and do their own kind of surveillance in the parks," Captain Marcia Harnden of the Bellevue Police Department said. "They're watching. When the person goes off into the park they smash the window and pop the trunk."</p> <p>Police say it takes less than a minute for an experienced car prowler to break into a parked vehicle.</p>

HEADLINE	06/01 Germany: Russian mafia in fraud scam
SOURCE	https://www.occrp.org/en/daily/6525-germany-russian-mafia-plundering-billions-through-nursing-services
GIST	<p>German authorities are investigating some 230 nursing services believed to be charging the government more than €1.2 billion annually for fictitious staff and hours spent on caring for the elderly and sick, media reported Tuesday.</p> <p>A police report leaked to Die Welt am Sonntag allegedly linked the services to the Russian mafia.</p>

Its network of companies allegedly routinely defraud insurance providers, patients and pharmacies by claiming for services they are not providing, falsifying documents, employing unqualified carers and making multiple claims for a single patient.

The fraud scheme works by making contact – via, for example, church communities – with relatives of severely ill people in need of 24-hour care and offering them a private nursing service, according to the Welt am Sonntag.

In reality, untrained nursing staff only check on patients two or three times a day, but then charge the government for 24-hour care by highly qualified staff. In some cases, patients’ family members are complicit and take a cut of the profits.

Due to the presence of shell companies, signs of money-laundering and links to the gambling industry, police suspect that organized crime networks from Russia and Eurasia are behind the scam.

The leaked report is based on searches of nursing offices and private apartments made last September, in which two Kalashnikov assault rifles and two semi-automatic weapons were also seized, Deutsche Welle reported.

The report also found that some former heads of the companies under investigation were already known to police as suspected contract killers.

The ‘roof’ of the criminal association are believed to be the notorious gang Thieves-in-Law, who staff the organizations mainly with Eastern European immigrants, according to Crime Russia.

Thieves-in-Law was founded in Stalin’s labor camps by ethnic Russians from across the Soviet Union. They have their own ‘laws’ and a secret language, and are thought to recruit members today from within German prisons, the Welt am Sonntag reported.

Care work is reportedly a particularly juicy target for fraud, as it offers big profits against low risk. With Germany’s aging population, authorities expect such opportunities to increase in the future.

HEADLINE	06/01 Vietnam busts country’s largest drug ring
SOURCE	http://e.vnexpress.net/news/news/vietnam-busts-largest-ever-drug-cartel-3593664.html
GIST	Police raided 13 drug-producing labs across Vietnam, seizing over \$8.8 million worth of narcotics. Ho Chi Minh City police have arrested more than 20 people believed to be members of what they call the country's largest drug ring operating across the country.

The ring, headed by Van Kinh Duong, 36, has allegedly produced nearly 300 kilograms (660 pounds) of ecstasy pills and other synthetic drugs.

Duong was sentenced to six years in prison for illegal possession of drugs in 2008, according to Ho Chi Minh City's Cong An newspaper. However, he managed to escape from prison and set up his own drug production ring using the fake name Tran Ngoc Hieu.

His network included many labs in Ho Chi Minh City, Hanoi, Nha Trang and some southern provinces, according to the police. The labs were often set up in deserted areas and they would be relocated after every batch of narcotics produced. To avoid police detection, Duong would manage and monitor these labs through a social network and a camera system instead of physically visiting them.

The dozens of people working in the labs are all Duong's relatives.

Duong's network has churned out nearly 300 kilograms of synthetic drugs and sold about 200,000 ecstasy pills between early 2016 until it was busted.

Police arrested Duong just as he landed at Ho Chi Minh City's Tan Son Nhat airport on April 6. At the same time, more than 200 police officers raided 13 of his ring's establishments across the country and arrested many members of the ring.

More than 500,000 ecstasy pills and 120 kilograms of narcotic powders with an estimated value of VND200 billion (\$8.8 million) were seized during the raids. Police also seized VND10 billion (\$440,000), 7 cars including a VND25 billion supercar and some real estate related to the crime.

The drug seizure was the largest ever in Vietnam, Phan Anh Minh, deputy director of the Ho Chi Minh City police department, said.

HEADLINE	06/01 Soldier lied for Purple Heart; jailed 3yrs
SOURCE	http://www.thenewstribune.com/news/nation-world/article153895434.html
GIST	<p>SEATTLE - A federal judge on Thursday sentenced a former soldier who lied his way to a Purple Heart to three years in prison and ordered him to repay nearly \$650,000 in stolen government benefits.</p> <p>Darryl Wright, 48, a former Idaho National Guardsman, feigned injuries from an explosion in Iraq in 2005 and doctored statements from fellow soldiers to obtain two awards, a Combat Action Badge and a Purple Heart, which is reserved for those wounded in action.</p> <p>The Army has since revoked the awards, though Wright still has the medals.</p>

Return to Top	<p>He pleaded guilty to two counts of fraud last year. Prosecutors were seeking a prison term of five years, and they wanted the judge to order Wright to return the medals and a Purple Heart license plate.</p> <p>Settle declined to go that far, but he did order Wright to serve three years, followed by three years of supervised release, and to repay \$646,300 in benefits.</p> <p>Wright's attorney, Christopher Black, called it "the right sentence."</p> <p>"He acknowledged responsibility for the bad decisions that he's made and apologized for them," Black said.</p> <p>He described the defendant as a "complicated man" with psychological issues, but said he has been doing well in therapy.</p> <p>Assistant U.S. Attorneys David Reese Jennings and Gregory Gruber said Wright parlayed the medals he received to obtain "every possible benefit that might be available to a wounded veteran," including a wide range of disability benefits and the forgiveness of more than \$40,000 in student loans. Prosecutors said he defrauded 16 state, federal, local and private agencies, programs and organizations.</p> <p>"This guy was a master at weaponizing his phony status as a Purple Heart Veteran," Jennings said.</p>

HEADLINE	06/01 Palestinian teen stabs Israel soldier
SOURCE	http://abcnews.go.com/International/wireStory/army-palestinian-woman-attacks-soldier-knife-47763452?cid=clicksource_76_null_article%20roll_hed
GIST	<p>An Israeli soldier was injured on Thursday in a stabbing attack by a 15-year-old Palestinian girl who was then shot and critically wounded by troops at the scene, the army and the girl's father said.</p> <p>The attack took place near an Israeli settlement in northern West Bank.</p> <p>Okab Infeat said his 15-year-old daughter Nouf had gone to school on Thursday to pick up her eighth-grade report card and didn't return home.</p> <p>Infeat said he was questioned by Israeli security forces for four hours about the girl and her family life. Infeat said his daughter did not suffer from social or psychological problems.</p> <p>The Israeli military said the soldier was moderately wounded. In its initial statement, it referred to the assailant as a woman, not a teenage girl.</p> <p>The army said the soldier and the assailant were taken by ambulance to an Israeli hospital.</p>

	Since violence escalated in 2015, Palestinians have killed 42 Israelis, two visiting Americans and a British student in attacks. During that time, some 246 Palestinians died by Israeli fire; Israel has said most of them were attackers.

HEADLINE	06/01 Ex-nurse pleads guilty serial killings
SOURCE	http://abcnews.go.com/International/wireStory/canadian-nurse-plead-guilty-murder-charges-47769119?cid=clicksource_76_null_articleroll_hed
GIST	<p>A former nurse pleaded guilty Thursday to first-degree murder in the deaths of eight nursing home residents in one of the worst serial-killer cases in Canadian history.</p> <p>Elizabeth Wettlaufer also pleaded guilty to four counts of attempted murder and two counts of aggravated assault.</p> <p>The 49-year-old, who appeared in a Woodstock, Ontario, courtroom, admitted to killing eight seniors and hurting six others in part because she said she felt angry with her career and her life's responsibilities.</p> <p>Wettlaufer acknowledged under questioning from the judge that she injected all 14 with insulin for no medical reason.</p> <p>All the incidents allegedly occurred between 2007 and 2014 in three Ontario long-term care facilities where Wettlaufer worked as a registered nurse, and at a private home.</p> <p>The prosecution read from an agreed statement of facts, saying that Wettlaufer told police she knew that "if your blood sugar goes low enough, you can die." She also told police she had refrained from logging her use of insulin in order to avoid detection, court heard.</p>

HEADLINE	06/01 Chicago violence decreasing so far
SOURCE	http://abcnews.go.com/US/chicago-sees-decrease-violence-year-long-bloody-2016/story?id=47766800
GIST	<p>After a long and violent 2016 in Chicago ended with a record number of shootings and the most homicides in two decades, the city has seen a decrease in killings and shootings so far this year.</p> <p>There were 56 homicides and 257 shootings in the city in May 2017, down from 68 and 316, respectively, in May 2016, the Chicago Police Department said.</p> <p>Overall, shootings are down nearly 14 percent this year compared to last year and this is the third straight month when shooting incidents have decreased citywide, the police said.</p>

	<p>Last year homicides in the Windy City reached 762, which was the highest level since 1996, when 796 homicides were recorded, according to historical data from the Chicago Police Department.</p> <p>In a statement released overnight, the Chicago police pointed to several policies implemented in May that may have contributed to the decrease, including: the launch of a police "Summer Mobile team" to target lakefronts and parks; the deployment of 1,300 additional police officers citywide over Memorial Day weekend; multiple raids over Memorial Day weekend; and the launch of "the fourth annual Summer of Faith and Action, a citywide initiative designed to promote positive community engagement and alternative programming for youth throughout the summer months."</p> <p>In the police statement, spokesman Anthony Guglielmi added, "more work certainly remains to be done."</p>

HEADLINE	06/01 Child sex sting nets 3 arrests
SOURCE	http://www.seattlepi.com/news/crime/article/Child-sex-sting-in-Washington-lands-3-arrests-11188082.php
GIST	<p>TACOMA, Wash. (AP) — Three Washington men have been arrested after they contacted an undercover agent who posed as a mother offering her underage children for sex.</p> <p>KCPQ-TV reported Wednesday that the men were charged with attempted child rape. They are 56-year-old Paul Hobgood, 34-year-old Gregory Harrison and 35-year-old Daniel Moody Jr.</p> <p>The men are accused of answering an online advertisement posted in late April by the undercover agent. Their bail was set at \$500,000 each.</p> <p>Prosecutor Mark Lindquist's office states the men described the acts they wanted the children to perform, and agreed to meet the mother to pick up the kids. They were arrested at the arranged meeting point.</p> <p>Washington authorities have conducted seven "net nanny" stings since 2015, arresting 84 people.</p>

HEADLINE	06/01 Juvenile offenders: Shakespeare or jail
SOURCE	http://www.cbsnews.com/news/juvenile-offenders-massachusetts-alternative-sentence-shakespeare-acting-stage/
GIST	To act or not to act, that is the question for some juvenile offenders in Massachusetts. They can choose to be part of an alternative sentencing program involving Shakespeare instead of lockup.

Jail time or acting seems like a pretty obvious choice for someone facing hard time. But if you think that's getting off easy, ask the kids who now say they believe in the genius of William Shakespeare and his sonnets of life lessons, reports CBS News correspondent Michelle Miller.

Reciting Shakespeare is tough enough for novices, without adding fight scenes with real broadswords.

"They're like the huge weapons," said the girl who portrays the character Titania from "A Midsummer Night's Dream." Titania, queen of the fairies, and Puck, the sprite, are stage names we're using to protect the minors' identities.

What baffles leads Titania and Puck more than anything is that they would be trusted with a weapon at all.

"I think that what they're trying to do is prove that like even though you have a juvenile delinquent, you can trust them and they can, like, move on from assault and battery. Also, I think it's to get our anger out," Titania said.

Titania and Puck landed in Berkshire juvenile court after committing misdemeanor offenses, which could be anything from breaking and entering to substance abuse or assault.

"When I was fighting my dad, I had no clue I actually fought him until the cops came," Puck said.

This was their second chance. Puck thought he'd get "more probation and a week or two in jail."

"If Shakespeare were alive he most definitely would probably end up in this court," said Paul Perachi.

The former first justice began sentencing troubled teens to the bard 17 years ago, because he saw the 16th century playwright as the ultimate outsider.

"That gives him instant credibility with the kids," Perachi said. "Shakespeare was a tyrant. He was always against the way people were doing things."

Not everyone was sold.

"They think we're coddling them. Whether they're placed on probation or whether they're sent away, someday going to come out, come back into the same environment and if we don't help them get some new skills they're going to continue on to a life of crime," Perachi said.

The hope is, after six weeks of playing the part, something sticks -- and in front of family, friends and parole officers, all the world's a stage.

Three hundred fifty kids have been sentenced to the stage.

	The current judge, Joan McMenemy, says it has been a success by her standards.

HEADLINE	06/01 Oakland police settle teen sex scandal
SOURCE	http://www.cbsnews.com/news/teen-in-oakland-police-sex-scandal-settles-for-nearly-1-million/
GIST	<p>OAKLAND, Calif. -- The city of Oakland, California, will pay a teenager nearly \$1 million to settle claims that city police officers sexually abused her while she worked as an underage prostitute - a settlement that comes as she pursues similar cases against five other San Francisco Bay Area law enforcement agencies.</p> <p>Saying she was relieved with the settlement announced Wednesday, the woman said she appreciates the support she received from family and friends once she came forward last summer.</p> <p>"I thought I was alone," said the woman, who is now 19.</p> <p>CBS News is not identifying her because she is the alleged victim of sex crimes.</p> <p>She appeared nervous and gave short and terse answers during a news conference Wednesday in her lawyer's Oakland office. She said she was "very satisfied" with the settlement.</p> <p>Her mother is a dispatcher with the Oakland Police Department. Neither of her parents, who are divorced, attended the news conference.</p> <p>The scandal emerged last summer when a federal judge overseeing the troubled Oakland Police Department said he was dissatisfied with the internal affairs investigation of an officer who committed suicide in 2015.</p> <p>The teen said the officer was among those who abused her over a nearly three-year period. Most of the implicated officers worked in Oakland.</p> <p>The Oakland City Council voted 7-1 to pay \$989,000 to settle the claims against the city. Councilwoman Desley Brooks voted against the settlement, saying the city should have paid more.</p> <p>"Think about this young girl, who was victimized under the color of authority," Brooks said. "There is something wrong with this."</p> <p>Mayor Libby Schaaf said she approved of the deal.</p>

	The woman's lawyer, John Burris, said she has similar legal claims pending against police departments in San Francisco, Richmond and Livermore, and the sheriff's offices of Alameda and Contra Costa counties.

HEADLINE	06/01 Older gang members spurring violence?
SOURCE	http://komonews.com/news/local/are-older-gang-members-spurring-an-increase-in-violence
GIST	<p>SEATTLE -- The surge in violent crime washing over parts of King and Pierce counties is more than a mere "uptick," according to King County Sheriff John Urquhart.</p> <p>"An uptick is an extra two or three shootings than what we saw before. This is an avalanche. This is war."</p> <p>In Lakewood, police Detective Jeff Martin says he knows where it's coming from.</p> <p>The past.</p> <p>Martin, whose work is focused on gang activity, says the perpetrators of gang violence 25 years ago are coming back to haunt us.</p> <p>"We're seeing a lot of elder gang members who have been to prison and completed their sentences are coming back on the street," he says.</p> <p>The '90s were tough times for police nationwide. Many departments found their officers literally outgunned by gangs who could finance their arsenals with money from the sale of crack cocaine. The number of deaths attributed to handguns had more than doubled between 1985 and 1990 according to a Rutgers University study.</p> <p>But by the end of the decade, violent crime began to drop nationwide. As more gang members were sent to prison, the number of homicides dropped 42 percent compared to figures from 1990. Violent crime fell by a third.</p> <p>The worst, it seemed, was over.</p> <p>But in southern King and Pierce County, the number of gun crimes has been on the rise. Martin believes that's directly related to the release of criminals who finished serving their sentences for crimes committed in the violent '90s.</p> <p>He recalls a case from late April where a recent parolee, convicted of "a very violent crime" in the mid-90s was killed after apparently returning to his criminal ways.</p>

In some cases, the old-school gang members are being turned away by the younger gangsters who replaced them when they were sent to prison. In others, Martin says, the paroled gang members were hailed as returning heroes.

"In some places, you see a lot of respect being paid to the members who are just returning from prison. And the younger people immediately look up to them -- unfortunately -- because they have paid the price of their work on the street, which is to go to prison, come out and share their experiences," Martin points out.

But the return of criminals who've completed doing their time was not unexpected by law enforcement. "Tactics have changed," Martin says. "They've changed tremendously. We try not to sit back and wait for the violent crimes to happen."

One of the most significant tools at Martin's disposal is the high priority offender program, instituted last year by Pierce County Prosecutor Mark Lindquist. The program correlates arrest data from different points throughout Pierce County, allowing detectives like Martin to piece together a complete picture of crimes committed in places like Tacoma, Puyallup and Sumner.

In many cases, high priority offender status comes as a surprise to suspects who are dubbed high priority offenders, says Lindquist.

"Once an offender is identified as 'high priority,' " he says, "police take note. My office takes note. And when they re-offend, we hit them hard."

Lindquist credits his high priority offender program in part for a 60 percent reduction in Pierce County gang violence. The program is so effective that Lindquist says his office is now sending letters to high priority offenders, notifying them that they've been identified as high priority offenders and warning them that, if they do more crimes, they'll be specially targeted for prosecution.

"When we take a high priority offender off the streets," Lindquist says, "we're preventing dozens - sometimes hundreds - of future crimes."

HEADLINE	06/01 Calif. jail guards guilty in death of inmate
SOURCE	http://www.cbsnews.com/news/california-jail-guards-guilty-2nd-degree-murder-mentally-ill-inmate-michael-tyree/
GIST	<p>SAN JOSE, Calif. -- Three jail guards were found guilty by a Santa Clara County Superior Court jury Thursday afternoon of second-degree murder for the death of mentally ill inmate Michael Tyree, 31, at San Jose's Main Jail in 2015, reports CBS San Francisco.</p> <p>Jereh Lubrin, 30, Rafael Rodriguez, 28, and Matthew Farris, 28, had been on trial since March for the beating of Tyree on the night of Aug. 26, 2015.</p> <p>The trio was also charged with assault under color of authority of 48-year-old schizophrenic inmate Juan Villa on the same night Tyree died, and Lubrin was charged for a separate beating of Villa on July 25, 2015. However, a mistrial was declared on those charges.</p> <p>Family members of the jail guards were in tears, CBS San Francisco reports, though the guards themselves were stoic and calm after the verdicts were read.</p> <p>Farris, Rodriguez and Lubrin face sentences of 15 years to life in prison.</p> <p>Tyree's injuries included lacerations to the liver and spleen, which was nearly severed in two, when he was found in his cell naked and covered in vomit and feces.</p> <p>The defense argued that Santa Clara County medical examiner Joseph O'Hara jumped to the conclusion that Tyree had been beaten to death.</p>

	<p>Text messages between some of the deputies, who are out on \$1.5 million bail and on paid administrative leave, included boasts of beating inmates in areas of the jail without security cameras.</p> <p>Rodriguez's Google search history showed search queries the morning Tyree was found dead in his cell including "can you die from punches to you," "can you die if someone punches you in the armpit" and "can you die if someone punches you in the rib."</p>

HEADLINE	06/01 Hate on display; string high-profile crimes
SOURCE	http://www.cbsnews.com/news/hate-on-display-high-profile-crimes/
GIST	<p>WASHINGTON -- LeBron James is now playing in the NBA finals, but basketball isn't the only thing on his mind during a week in which hate has been on display in places like Washington, Portland and Los Angeles.</p> <p>"Racism will always be a part of the world, a part of America," James said.</p> <p>When LeBron James speaks, the world listens. At an NBA championship press conference, James responded to his L.A. home getting spray-painted with the "N-word."</p> <p>"No matter how much money you have, no matter how famous you are, no matter how many people admire you, you know, being black in America is tough," James said.</p> <p>It's one of many recent crimes that have become more public and brazen.</p> <p>On Wednesday, someone left a noose at the National Museum of African American History and Culture in the "segregation" exhibit.</p> <p>"A noose is not something that is simply a symbol. It really is something -- to me -- that symbolizes loss," said historian and museum director Lonnie Bunch.</p> <p>"I'm a historian, so one thing I know that as America has evolved and improved, race is still a major factor in America," Bunch says.</p> <p>Hate crimes like this are on the rise, up six percent in 25 of the largest cities in 2016, according to the Center for the Study of Hate and Extremism at California State University. African Americans are the most common target of hate crimes -- nearly 30 percent, according to the FBI.</p> <p>In March, James Jackson got on a bus from Baltimore to New York City to target black people. He ended up killing 66-year-old Timothy Caughman for no other reason.</p>

	And lately, several videos have gone viral, showing people spewing hateful speech on a daily basis.

HEADLINE	06/02 Sad twist deadly Portland train stabbings
SOURCE	http://www.cbsnews.com/news/portland-stabbing-victim-stolen-bag-ring/
GIST	<p>PORTLAND, Ore. -- A man is wanted for allegedly stealing a backpack and wedding ring from Ricky Best, one of the two men killed in the May 26 attack on the light rail train here.</p> <p>Portland police say Best's family realized the items were missing while making funeral arrangements Thursday. While reviewing surveillance video of the crime scene, police determined the bag had been stolen, reports CBS Portland affiliate KOIN-TV.</p> <p>The suspect was caught on video carrying Best's black backpack off of the train. The suspect was also carrying another backpack but police said they don't know who it belongs to.</p> <p>"They've suffered an immense loss and this is just one more layer of tragedy to their already awful experience," Sgt. Pete Simpson said, adding that it was "really an unconscionable act" and "awful scenario for this family."</p> <p>Simpson said the news has angered detectives involved with the attack investigation.</p> <p>"Everybody that's learning about this in the police bureau wants to find this person, wants this property back for these family members who suffered an incredible loss," Simpson said.</p> <p>Police are hoping the thief has some humanity, as Simpson put it, and will see that he has stolen something priceless and return it.</p>

HEADLINE	06/02 Botched Philippine casino robbery; 36 dead
SOURCE	https://www.usatoday.com/story/news/world/2017/06/02/gunman-attacks-philippine-casino/102415428/
GIST	<p>At least 36 people died after a lone gunman stormed a casino resort in the Philippines, opened fire and set gaming tables alight on Friday. Authorities believe it was a botched robbery and have ruled out terrorism.</p> <p>An official from Resorts World Manila, which says it is the country's largest casino resort, said 13 employees and 22 guests were among the dead. Videos posted on social media showed people fleeing in terror amid several loud bangs.</p>

Ernesto Abella, a spokesman for President Rodrigo Duterte, said there was no evidence to link the attack with fighting between Islamist extremists and government forces in the south of the county.

"All indications point to a criminal act by an apparently emotionally disturbed individual," Abella told reporters. "Although the perpetrator gave warning shots, there apparently was no indication that he wanted to do harm or shoot anyone."

He said the victims died "due to suffocation at the second floor gaming area, which had been set on fire by the perpetrator" before the gunman committed suicide on the fifth floor of the resort's Maxim Hotel.

"This particular situation in Manila is not related in any way to a terrorist attack," Abella said.

Manila police chief Oscar Albayalde said firefighters found the bodies in smoky rooms. He said the victims died from suffocation and smoke inhalation and none had gunshot wounds.

Police spokesperson Kimberly Molitas said authorities recovered 113 million Philippine pesos (\$2.27 million) worth of casino chips that were stolen during the raid.

HEADLINE	06/01 Hacked credit cards to buy \$1M cigarettes
SOURCE	http://abcnews.go.com/Technology/wireStory/sentenced-hacked-credit-cards-buy-cigarettes-47773813?cid=clicksource_79_null_articleroll_hed
GIST	<p>Seven people are facing prison sentences after they were accused of using stolen credit card numbers and counterfeit gift cards to buy more than \$1 million in cigarettes in North Carolina, federal prosecutors said.</p> <p>The defendants then sold those cigarettes on the black market, completing a scheme that began with stolen credit information they obtained from overseas hackers.</p> <p>Federal prosecutors said the group encoded the credit card information onto gift cards, which they took to Walmart stores and bought genuine Walmart gift cards. The genuine gift cards were then taken to Sam's Club stores to buy the cigarettes, which were then sold to a vendor, according to prosecutors.</p> <p>U.S. Attorney John Stuart Bruce said in a statement that the seven received sentences on Wednesday ranging from about three years to 12 years after pleading guilty to conspiracy to commit money laundering and aggravated identity theft. Four of the seven are from Raleigh, and the other three are from Charlotte, Durham and New York.</p> <p>Tendai Munyaradzi Makoni, 34, of Durham received the harshest sentence of the seven when he was given a 12-year prison term. An eighth person was convicted at trial last September and was sentenced to 30 months in prison.</p>

	<p>The seven were forced to forfeit 117 items, ranging from gift cards and debit cards to iPhones, video game systems and computers.</p> <p>"This group sounds very well-organized. You don't see this every day," said Avivah Litan, an analyst for Gartner, Inc., a Connecticut-based technology research firm. "It certainly is very sophisticated. They knew exactly what they were doing."</p>

HEADLINE	06/01 Utah opioid bust: far reach of small ring
SOURCE	http://abcnews.go.com/Health/wireStory/officials-oidium-bust-utah-shows-reach-small-ring-47771621
GIST	<p>U.S. authorities said they have busted a multimillion-dollar opioid-drug ring based in a suburban Salt Lake City basement, underscoring how a small operation can quickly turn out hundreds of thousands of potentially fatal fentanyl pills to buyers nationwide.</p> <p>The seizure of nearly 500,000 pills ranks among the largest in the country, U.S. Attorney for Utah John Huber said Wednesday. The group, who met working at eBay, bought drugs from China and pressed them into fake prescription drugs sold online, Huber said.</p> <p>"What disturbs me is people can so easily get into this business and exploit it for their profit," he said.</p> <p>The drugs were especially dangerous because they were manufactured to look like prescription pain pills, he said. Users could have overdosed more easily because they didn't realize they were taking the more powerful fentanyl — the drug blamed for the death of entertainer Prince.</p> <p>Officials believe they can trace 8,000 drug shipments to buyers around the country back to the operation in the upscale suburb of Cottonwood Heights, Huber said. Investigators say it made \$2.8 million in less than a year.</p> <p>Authorities unveiled an 11-count indictment against six people accused of participating in an operation that first came to light in November with the arrest of 27-year-old Aaron Shamo, the group's suspected ringleader.</p> <p>If convicted on the first count alone, knowingly engaging in a criminal enterprise, Shamo could face up to life in prison. His lawyer, Greg Skordas, could not immediately be reached for comment.</p> <p>Prosecutors say he had a partner, Drew Wilson Crandall, 30, who was arrested in Hawaii in early May.</p>

	<p>Agents found guns and more than \$1 million in cash stuffed in garbage bags in the raid on Shamo's Cottonwood Heights home, prosecutors say, as well as the pills made to look like Xanax, an anti-anxiety drug, and the painkiller oxycodone.</p> <p>Four other people also are charged with helping package the drugs and send them to customers, many through the mail.</p> <p>The case shows that a relatively small number of people can have an outside effect as the country deals with an opioid crisis, said Brian Besser, district agent in charge for the Drug Enforcement Administration.</p>

HEADLINE	06/02 Bangladesh seizes arms cache near capital
SOURCE	http://abcnews.go.com/International/wireStory/bangladesh-recovers-arms-ammunition-capital-47785108?cid=clicksource_76_null_articleroll_hed
GIST	<p>Police in Bangladesh recovered a huge cache of arms and ammunition near the capital and were questioning three people, officials said Friday.</p> <p>Police official Faruk Hossain said 62 Chinese-made machine guns, two rocket launchers, 40 magazines and grenades were found in a canal at Rupganj, just outside Dhaka, in an overnight raid.</p> <p>He said three people have been arrested but their identities were not immediately clear.</p> <p>Bangladesh's police chief Shahidul Hoque said at the scene that they suspected the arms and ammunition were brought for "sabotage" but he would not elaborate.</p> <p>"Some quarters want to destabilize the country, they want to thwart the development," he said.</p> <p>Hossain said they conducted the operation based on information from a man who had been arrested earlier. Divers continued their search of the canal where most of the weapons were found submerged.</p>

HEADLINE	06/02 Disgruntled driver sets school bus on fire
SOURCE	http://abcnews.go.com/International/wireStory/police-bus-driver-killed-chinese-korean-kids-fire-47784907?cid=clicksource_76_null_articleroll_hed
GIST	<p>Chinese police say a disgruntled driver started a fire aboard his school bus last month that killed 13 people, including 11 children from China and South Korea.</p> <p>A statement from the city government of Weihai on Friday said the driver in the May 9 fire had apparently been angered by the halting of his overtime bonus and night shift pay.</p>

He bought gasoline which he ignited while the bus was travelling through a tunnel in the coastal city that is home to many South Korea businesses. Police determined that the fire started on the floor of the bus next to the driver's seat, where the cap to a cigarette lighter and gasoline residue were found, the statement said.

Investigators ruled out a traffic accident or electrical short circuit as potential causes of the fire, the statement said.

All 13 people aboard the bus were killed, including the driver himself, a female teacher and 11 children between the ages of 3 and 6, five of them from South Korea.

FAIR USE Notice All rights to these copyrighted items are reserved. Articles and graphics have been placed within for educational and discussion purposes only, in compliance with 'Fair Use' criteria established in Section 107 of the Copyright Act of 1976. The principle of 'Fair Use' was established as law by Section 107 of The Copyright Act of 1976. 'Fair Use' legally eliminates the need to obtain permission or pay royalties for the use of previously copyrighted materials if the purposes of display include 'criticism, comment, news reporting, teaching, scholarship, and research.' Section 107 establishes four criteria for determining whether the use of a work in any particular case qualifies as a 'fair use'. A work used does not necessarily have to satisfy all four criteria to qualify as an instance of 'fair use'. Rather, 'fair use' is determined by the overall extent to which the cited work does or does not substantially satisfy the criteria in their totality. If you wish to use copyrighted material for purposes of your own that go beyond 'fair use,' you must obtain permission from the copyright owner. Subject: Vehicular Homicide Class Information
Importance: High

Jared,

I have attached a letter with the class details, a PDF containing an agenda, an aerial map of the crash location, and the hotel details page for your convenience.

We will be conducting a mock pedestrian crash in the parking lot of Harpoon Harry's Restaurant next door to the hotel. Everyone is to report directly to the restaurant parking lot Tuesday morning, not the hotel meeting room!

Should you have any questions, please contact via email or at the number listed below.

HEADLINE	05/21 Flames rip thru Salmon Bay boat house
SOURCE	http://komonews.com/news/local/breaking-news-crews-respond-to-fire-at-shilshoal
GIST	<p>SEATTLE -- Several boats were burned when a fire ripped through a boat house on Salmon Bay, Seattle fire officials said.</p> <p>The fire broke out just before 8 p.m. in the 5100 block of Shilshole Avenue Northwest in Ballard, sending a plume of smoke visible throughout much of the Seattle area.</p>

	<p>Fire officials said a 70-foot wooden boat inside the boat house was on fire. Video from witnesses on nearby boats showed flames shooting through the boat house amid small explosions.</p> <p>Fire officials said other smaller boats were burned. People who were in the boat house escaped and no one was injured.</p> <p>The cause of the fire is unknown at this point and is under investigation.</p>

HEADLINE	05/21 Teen presumed drown Snoqualmie River
SOURCE	http://www.king5.com/news/local/missing-teen-presumed-drowned-after-trying-to-swim-across-snoqualmie-river/441707046
GIST	<p>A 16-year-old boy is missing and presumed to have drowned after trying to swim across the Snoqualmie River Sunday afternoon.</p> <p>Rescue crews with Eastside Fire and the King County Sheriff's Office suspended the search for the teen Sunday night after a lengthy afternoon search near Weeks Falls. Divers were not able to enter the water due to the dangerous currents.</p> <p>Sheriff's deputies said the missing boy was with two other teens who were trying to cross the river when two of them got into trouble. One of the teens was able to swim to safety while the other was swept downstream by the currents.</p> <p>As temperatures rise, people will often try to find relief at nearby rivers and lakes but do not realize that the water temperature is extremely cold.</p> <p>Crews from both Eastside Fire and the Sheriff's Office will resume a surface level search and rescue efforts Monday morning.</p>

HEADLINE	05/21 SCSO honored with national safety award
SOURCE	http://q13fox.com/2017/05/21/snohomish-county-sheriffs-office-honored-with-national-award-for-officer-traffic-safety/
GIST	<p>EVERETT — A change in culture is never easy for any organization but Snohomish County Sheriff Ty Trenary knew his department needed to drastically improve efforts to keep officers and the public safe. “We’d had a series of collisions. We had a series of litigation claims, lost work time and injured people and knew that one change to policy or some new training wasn’t going to cut it,” said Sheriff Trenary.</p>

Nationwide, traffic-related deaths continue to be one of the leading causes of line-of-duty deaths for law enforcement. In 2016, 53 officers were killed in traffic-related incidents which accounted for almost 40% of all US police line-of-duty deaths that year, a 10% increase from 2015.

So, the department changed their pursuit policy in early 2016 to protect the public and deputies so that they would only give chase if the public was in imminent danger. “They are so courageous and they work so hard that sometimes catching a bad guy, they’ll put themselves in harm’s way and sometimes, we just have to put the reins on,” said Undersheriff Rob Beidler.

It’s one step in a 15 prong approach to safety that has earned them national recognition. The Snohomish County Sheriff’s Office was selected as the 2017 recipient of the Officer Traffic Safety Award by the National Law Enforcement Officer Memorial Fund. To be recognized as the top agency nationally for officer traffic safety is a big deal to us. We’ve worked really, really hard to make some improvements. We had a long ways to go,” said Sheriff Trenary.

The agency experienced 11 on-duty collisions in 2015 that resulted in major injury for employees and civilians. The cost of these collisions included \$151,000 in medical, legal and wage costs, three totaled patrol cars and \$2.3 million in litigation costs.

The Sheriff’s Office incorporated the tenets and testimonials of Below 100, a national program designed to eliminate preventable line-of-duty deaths and injuries, into agency-wide communications and mandatory training. At the end of 2016, the Sheriff’s Office saw a significant reduction in traffic-, pursuit-, and collision-related injuries and damages, decreasing major injury collisions by 32% and pursuits by 38%. “We’re not saving pennies here. We’re saving millions or potentially millions. Litigation, equipment costs, fuel savings, not to mention injuries to our citizens, to our deputies.” said Undersheriff Breidler.

In addition, all Sheriff’s Office commissioned employees – deputies and supervisors were required to attend or watch a presentation by Kim Schlau, the mother of two daughters killed by a speeding Illinois State trooper. “That’s a tough thing to listen to a woman who has lost two children at the hands of law enforcement but she’s there to make us better,” said Sheriff Trenary.

HEADLINE	05/19 FBI intel analysts input for next director
SOURCE	http://gsnmagazine.com/node/48411?c=federal_agencies_legislative
GIST	WASHINGTON The FBI Intelligence Analysts Association — which seeks to elevate the importance of the FBI’s intelligence mission and to represent the professional interests of the FBI’s 3,100 plus Intelligence Analysts (IAs) — recently requested the President, members of the Senate and House of Representatives, and the Attorney General to consider the association’s views on the critical matter of selecting the next Director of the Federal Bureau of Investigation (FBI).

In its letter to senior government officials, the FBI IAA articulated the need for the selection of a nonpartisan Director who will maintain the FBI's traditional neutrality and independence. The FBI IAA believes it is vital that the next Director come without attachment to, or a background as, a partisan elected official in a political party. Additionally, the FBI IAA listed three necessary traits for a successor to manage the FBI in the 21st century, specifically that the next Director:

- Has Deep Understanding of and Commitment to the FBI's Dual Intelligence and Law Enforcement Mission;
- Has the Ability to Strengthen a Culture of Collaboration within the FBI and Across the Law Enforcement and Intelligence Communities; and
- Is Innovative, Adaptable, and Forward-Leaning to Effectively Target the Nation's Criminal and National Security Threats

The FBI IAA emphasized that it is vital for the next Director continue to build the FBI's Intelligence Career Service (ICS), with intelligence leadership, and be committed to strengthening a culture of collaboration, which engages the diverse talents of the entire FBI workforce. The next Director must also quickly adapt the FBI's priorities and develop new ways of doing business, including technology advancements, in the face of an ever-changing set of diverse and sophisticated threats.

While the association chose not to endorse a specific candidate as the ideal successor, the FBI IAA will welcome a Director who will be as strong of an advocate for the FBI's intelligence mission as former Director Comey.

HEADLINE	05/21 Cholera outbreak spreading in Yemen
SOURCE	http://www.upi.com/Top_News/World-News/2017/05/21/Cholera-outbreak-spreading-at-unprecedented-speed-kills-315-in-Yemen/4721495383985/?utm_source=fp&utm_campaign=lh&utm_medium=3
GIST	<p>May 21 (UPI) -- A cholera outbreak in war-torn Yemen has killed 315 people since April 27 and is spreading with "unprecedented" speed, the United Nations' World Health Organization said Sunday.</p> <p>More than 29,300 suspected cases have been reported in 19 of the country's 22 provinces, the agency posted on Twitter. The highest number of likely cases -- more than 6,000 -- are in the capital city, Sana'a, where the Houthi government declared a state of emergency one week ago.</p> <p>On Friday, the WHO warned that Yemen could have as many as 300,000 cases of cholera within six months and an "extremely high" number of deaths.</p>

HEADLINE	05/22 Montenegro jilts Russia by joining NATO
SOURCE	http://www.reuters.com/article/us-montenegro-nato-idUSKBN1810W3?il=0
GIST	<p>Tiny Montenegro will take a huge step towards integrating with the West when it becomes the 29th member of NATO this week, but it risks paying a heavy price for spurning Russia.</p> <p>For nearly a decade after Montenegro split from Serbia in 2006, Moscow cultivated close ties with the former Yugoslav republic, and money poured in from Russian investors and tourists.</p> <p>It was a love affair underpinned not just by commercial and diplomatic logic but also by historic, religious and linguistic ties between the two Slav countries.</p> <p>"Back in 2006 Montenegro was advertised as a desirable destination for Russians, because it is a beautiful country and an Orthodox Christian one," said Vadim Verhovski, a Russian investment banker who, with partners, has invested 25 million euros (\$28 million) to buy land near the coastal town of Budva.</p> <p>Now the romance has turned to rancor. Montenegro blamed Russia for an alleged plot to assassinate its prime minister last October which officials said was aimed at blocking its entry to NATO. The Kremlin called that absurd.</p> <p>In April, Russian foreign ministry spokeswoman Maria Zakharova warned of a "surge of anti-Russian hysteria" in Montenegro.</p> <p>The chill is hitting tourism: latest available data, for March, showed Russians accounted for 7.3 percent of all tourist overnight stays that month compared to nearly 30 percent in March 2014 and 19.2 percent in March 2016.</p> <p>Advertising hoardings in Russian, promoting luxury apartments with views of the Adriatic, were once ubiquitous along the coastal highway. Now they have vanished, and Russian-language signs have largely disappeared from shops.</p> <p>Prime Minister Dusko Markovic said a recent Russian ban on imports of wine from Montenegro was linked to its NATO membership. Moscow said it had discovered banned pesticides in the wine.</p> <p>"We are prepared for any decision (by Russia) and nothing is going to deter us from the path we decided to take," Markovic told reporters.</p>

HEADLINE	05/21 Australia targets 'fake refugees'
SOURCE	http://www.abc.net.au/news/2017-05-21/peter-dutton-october-deadline-asylum-seekers-protection/8544890
GIST	<p>Immigration Minister Peter Dutton has given 7,500 asylum seekers living in Australia until October to lodge an application for protection, or face deportation, declaring the "game is up" for "fake refugees".</p> <p>Mr Dutton said the asylum seekers had all arrived by boat under the previous Labor government, most without identity documents, and had so far either failed or refused to present their case for asylum with the Immigration Department.</p> <p>"They need to provide the information, they need to answer the questions and then they can be determined to be a refugee or not."</p> <p>The asylum seekers have now been given until October 1 to lodge an application for processing or they will be cut off from Government payments, subject to removal from Australia, and banned from re-entering the country.</p> <p>According to Mr Dutton, the group is costing taxpayers about \$250 million each year in income support alone and the deadline would ensure the Government is "not providing financial support to people who have no right to be in Australia".</p>

HEADLINE	05/22 America's cities running out of room
SOURCE	https://www.bloomberg.com/news/articles/2017-05-22/america-s-cities-are-running-out-of-room
GIST	<p>A shortage of homes for sale has bedeviled U.S. house hunters in recent years, so why don't builders build more? One problem is that they're running out of lots to build on—at least in the places that people want to live.</p> <p>Cities that were sprawling before the Great Recession have begun to sprawl again. Space-constrained cities, meanwhile, have run out of room to build. That reality has spurred developers to focus on center-city neighborhoods where high-density building is allowed—and new units command exceedingly high prices.</p> <p>At some point, said Issi Romem, chief economist at BuildZoom, vacant lots in desirable urban neighborhoods will run out. “If you have three days of rations left, you’ll be fine on day one, two, three,” said Romem, author of new research demonstrating home construction patterns. “On day 4, you have a problem.”</p> <p>Historically, cities grew outward, as builders developed tracts on the periphery—then filled in the land between various developments over time. When these so-called expansive cities of the South and Southwest run out of infill land on which to build, developers simply pushed out further.</p> <p>Some of these cities, like Austin and Nashville, have seen downtown boomlets. But more broadly, the building trends in those metros looks more like Dallas: Inside a 30-mile radius from the center of the city, new home sales decreased from 2000 to 2015. Outside the radius, though, sales are up by more than 50</p>

	<p>percent. The same trend has played out to varying degrees in Phoenix, Atlanta, and San Antonio, among other cities.</p> <p>In America's most expensive cities, however, that dynamic has been turned inside out (or perhaps outside in). New construction trends in places like New York City have been tightly focused on downtown clusters where zoning rules permit high-density construction. These cities stopped expanding their geographic footprint decades ago, leaving builders to concentrate on finding buildable lots inside existing boundaries. As those lots became harder to find, land prices increase, reducing options for builders hoping to turn a profit. Developers building on pricey lots generally seek to offset land prices by building more densely, Romem said. In many cases, that means focusing on high-end apartments that offer better profit margins. The wealthiest residents are the only ones who can buy, and a vicious cycle is created.</p>

HEADLINE	05/22 NKorea: ready mass-produce new missile
SOURCE	http://abcnews.go.com/International/wireStory/north-korea-ready-deploy-mass-produce-missile-47552675
GIST	<p>North Korea says it's ready to deploy and start mass-producing a new medium-range missile capable of reaching Japan and major U.S. military bases there following a test launch it claims confirmed the missile's combat readiness and is an "answer" to U.S. President Donald Trump's policies.</p> <p>The solid-fuel Pukguksong-2 missile flew about 500 kilometers (310 miles) and reached a height of 560 kilometers (350 miles) Sunday before plunging into the Pacific Ocean. North Korea's media said more missiles will be launched in the future.</p> <p>Trump, traveling in Saudi Arabia, had no immediate public comment.</p> <p>North Korean leader Kim Jong Un ordered the launch and watched from an observation post, state media reported Monday. The Korea Central News Agency said the test verified technical aspects of the weapon system and examined its "adaptability under various battle conditions" before it is deployed to military units.</p> <p>Kim reportedly said the launch was a success, "approved the deployment of this weapon system for action" and said that it should "be rapidly mass-produced."</p>

HEADLINE	05/20 Firefighters: enjoy but be careful
SOURCE	http://komonews.com/news/local/firefighters-enjoy-the-water-as-temperatures-climb-but-be-extremely-careful
GIST	<p>LAKE SAMMAMISH, Wash. -- It seems like we’ve waited a long time for them, but the blue skies and sunshine are back across Western Washington.</p> <p>Lakes and rivers were popular go-to's on Saturday across the Puget Sound region, but they can be very dangerous if you’re not prepared, firefighters said.</p>

Return to Top	<p>One of the biggest problems firefighters see this time of year is people who underestimate the temperature of the water and their swimming abilities, said Eastside Fire & Rescue Lt. Mark Vetter.</p> <p>That's why the Eastside Fire Fighters Benevolent Fund launched a new life jacket loaner program at the Lake Sammamish boat launch in early May. The Paris White Foundation donated all of the life jackets for the stations, firefighters said. The Benevolent Fund also received a grant from Seattle Children's Hospital to help pay for the signs.</p> <p>In early May, technical crews with Eastside Fire & Rescue spent two days training for rescues on area rivers. With most lakes, the water really hasn't had a chance to warm up yet, Vetter said. The flow in many rivers can change from day to day, he added. You really need to watch out for strainers, or trees, that fall into the water.</p> <p>"We're gonna be busy and we know that. Just 'cause everybody wants to get out and enjoy the sun. It's been 7 months since we've seen the sun," he added.</p>

HEADLINE	05/20 Wash. loses major fight to save salmon
SOURCE	http://www.kiro7.com/news/local/washington-loses-fight-might-pay-up-to-2b-to-save-salmon/524830574
GIST	<p>Washington state lost a major legal battle Friday, which could force it spend nearly \$2 billion to restore salmon habitat by removing barriers that block fish migration.</p> <p>A panel of the 9th U.S. Circuit Court of Appeals last year affirmed a lower court's 2013 ruling ordering the state to fix or replace hundreds of culverts — large pipes that allow streams to pass beneath roads but block migrating salmon.</p> <p>Idaho and Montana joined Washington state in asking the appeals court to reconsider the case. The court declined to do so Friday, but several judges dissented from that decision, saying it should be reconsidered because of its significance.</p> <p>"This is a win for salmon, treaty rights and everyone who lives here," Lorraine Loomis, chair of the Northwest Indian Fisheries Commission, said in a statement. The group represents 21 tribes in western Washington that challenged the state over the culverts in 2001, part of decades-long litigation over tribal fishing rights.</p> <p>"Fixing fish-blocking culverts under state roads will open up hundreds of miles of habitat and result in more salmon," she said.</p>

HEADLINE	05/21 Junta deeply embedded in Thai life
-----------------	---

SOURCE	http://www.reuters.com/article/us-thailand-military-idUSKCN18G0ZJ
GIST	<p>On Friday evenings in Thailand, sandwiched between the evening news and a popular soap opera, is a prime-time program that has been running for three years, or ever since the military took power in a May 22, 2014 coup.</p> <p>Called "Sustainable Development from a Royal Philosophy" it stars junta leader and former army chief Gen. Prayuth Chan-ocha speaking on a range of topics, from the virtues of modesty to the state of the economy.</p> <p>The military has always played a prominent role in Thai life. But Prayuth's show is just one of many examples of how embedded the junta has become in Thai society.</p> <p>Thailand's military government has acknowledged it wants to weaken political parties and maintain permanent influence over future elected governments, partly through a new constitution approved by Thailand's king last month.</p> <p>But data compiled by Reuters shows the military is not just trying to influence Thailand's political life. It is leaving an imprint on nearly every institution of Thai society, with brass hats far more entrenched in senior positions than under previous military governments.</p> <p>The military now controls 143 out of 250 parliamentary seats. Under the previous junta after the 2006 coup, the military held 67 out of 242 seats. The cabinet is stacked with soldiers. Out of the 36 cabinet members, 12 have a military background. In 2006, only four military officers were among the 37 cabinet members.</p> <p>The military is also entwined with the powerful monarchy - the name of Prayuth's show is derived from the philosophy of the late king Bhumibol Adulyadej, who died last October after seven decades on the throne.</p> <p>More than half of the 13 members of the Privy Council, the body that advises new King Maha Vajiralongkorn – himself a former soldier - are military men. It was just under half in the previous Council.</p> <p>Cinema and television stations are increasingly showing pro-military themes and the school curriculum features military slogans.</p> <p>"The military coup of 2014 offered the armed forces the chance to put in place a wider footprint and they are doing so," Paul Chambers, a professor at Naresuan University and an expert on the Thai military, told Reuters in an e-mail.</p>

	<p>"A younger generation of retired military officers are, since the end of 2016, sitting on the Privy Council," he noted.</p> <p>The public does not appear too concerned. The government says military recruitment numbers doubled in 2017 from the previous year and attribute that to public approval of their hard-line tactics in breaking a political impasse that had persisted for years.</p> <p>Polls backed by the military government show Thais are content with military rule, although no such polls have been published in recent months.</p> <p>Perhaps more revealing than a military government stacked full of military men is the number of orders issued by the junta: 358 in total since 2014.</p> <p>The orders aimed to impose discipline on every aspect of Thai public life. They ranged from making seatbelts mandatory for passengers in the backseats of cars to holding parents accountable for student fights.</p>

HEADLINE	05/21 Pacific ministers commit to move ahead
SOURCE	http://abcnews.go.com/International/wireStory/pacific-ministers-commit-move-ahead-pact-us-47539240
GIST	<p>The Pacific Rim trade ministers meeting in Vietnam committed Sunday to move ahead with the Trans Pacific Partnership trade pact after the United States pulled out.</p> <p>New Zealand Trade Minister Todd McClay said the remaining 11 TPP countries are open to others joining provided they accept the trade agreement's high standards on labor and environmental protection. He said the door remains open to the U.S., even after President Donald Trump withdrew from the pact in January, saying he prefers bilateral free trade deals.</p> <p>"It's clear that each country is having to consider both economic values and strategic importance of this agreement, but in the end there are a lot of unity among all of the countries and a great desire to work together to come up with an agreement among 11 that not only delivers for all of our economies and the people of our countries, it's also open to others countries in the world to join if they can meet the high standards in the TPP agreement," McClay told reporters.</p> <p>Since the U.S withdrawal, Japan and New Zealand have been spearheading efforts to revive the deal. In its current form, the TPP requires U.S. participation before it can go into effect. That means the remaining countries would need to change the rules for any deal to go ahead, and it would be significantly smaller without the involvement of the world's largest economy.</p> <p>The 11 countries represent roughly 13.5 percent of the global economy, according to the World Bank.</p>

HEADLINE	05/20 Venezuela unrest 50 days of protests
SOURCE	https://www.yahoo.com/news/venezuela-anti-government-unrest-marks-50th-day-huge-205225227.html

GIST	<p>CARACAS/SAN CRISTOBAL, Venezuela (Reuters) - Hundreds of thousands of Venezuelans took to the streets on Saturday to mark 50 days of protests against the unpopular government of President Nicolas Maduro, with unrest gaining momentum despite a rising death toll and chaotic scenes of nighttime looting.</p> <p>At least 46 people have been killed in the worst turmoil faced by Maduro since he won the presidency in 2013. Venezuelans from civilians to police have been killed, sometimes during increasingly frequent spates of looting or street melees.</p> <p>Many Venezuelans are furious with Maduro's government, blaming it for soaring inflation, shortages of everything from food to medicine, and a crackdown on human rights. They are demanding elections, freedom for jailed activists, foreign aid, and autonomy for the opposition-led legislature.</p> <p>Major opposition marches took place across the oil-rich nation of 30 million on Saturday, with protesters in Caracas brandishing placards that read "No More dictatorship in Venezuela" while in the volatile border city of San Cristobal masked youths threw rocks, and a Reuters witness saw two protesters wielding machetes.</p> <p>The Andean area near Colombia suffered a week of mayhem that included looting, prompting the government to send in 2,000 troops.</p> <p>Opposition protesters say the government is trying to maintain its grip on power despite the economic crisis. More than 2,600 protesters have been arrested across the country, more than a third of whom remain detained, according to a local rights group.</p>

HEADLINE	05/20 CBP rogue agent clouds hiring process
SOURCE	https://www.nytimes.com/2017/05/20/us/politics/border-patrol-immigration-trump.html
GIST	<p>BROWNSVILLE, Tex. — Joel Luna was just the kind of job candidate the Border Patrol covets. He grew up on both sides of the border, in Mexico and South Texas. He participated in the Reserve Officers Training Corps in high school and later served in the Army, seeing combat in Iraq.</p> <p>Mr. Luna joined the agency as part of a hiring surge that began under the George W. Bush administration, patrolling a rural area about 100 miles north of Mexico. But six years later, his decorated career came to a shocking end: He was arrested and charged with helping to send illegal weapons to Mexico and ship drugs into the United States. He was convicted in January and sentenced to 20 years in prison.</p> <p>Now, as President Trump plans a similar hiring surge at the Border Patrol, Mr. Luna's case is casting a large shadow. The president wants to make 5,000 new hires, under a streamlined process that critics fear could open a door to other rogue agents like Mr. Luna.</p>

Agency officials, some members of Congress and the Border Patrol union say the current process has made it too hard to hire agents. It typically takes more than a year to vet candidates and get them on the job.

At the center of this notoriously slow and stringent process — which Customs and Border Protection, the patrol’s parent agency, put in place after a number of corruption cases — is a mandatory polygraph test. Officials are considering changing the test, and in some cases the agency would simply waive it.

“C.B.P. has a big problem in not being able to hire agents because of the polygraph test,” said Senator Jeff Flake, Republican of Arizona, who has sponsored the legislation to make hiring agents easier and faster. “I’m not saying that we should get rid of the polygraph, but we want to make sure the process isn’t an overall detriment to good candidates.”

Three weeks ago, the agency began using a different lie detector test that takes less time than the current one and asks fewer questions. And legislation moving through Congress would grant the agency the authority to waive the polygraph for some former law enforcement officers and military veterans.

Top officials said the changes would allow the agency, which is losing agents faster than it can replace them, to compete for qualified candidates with other law enforcement agencies more effectively without sacrificing standards. Applicants would still undergo a background check in addition to the shorter polygraph test, officials said.

“No one wants corrupt agents inside the Border Patrol,” said Jayson Ahern, a former acting commissioner of Customs and Border Protection. “What C.B.P. is proposing is a sensible way to weed out corruption but speed up the hiring.”

But some current and former Department of Homeland Security officials said the proposed changes could expose the agency to corrupt individuals who could use their position to help drug cartels or human smugglers. Border Patrol agents work largely by themselves in isolated areas and are routinely targeted by criminal organizations.

“It could put C.B.P. at significant risk,” said John Roth, the Department of Homeland Security’s inspector general. “While it may sound reasonable to say you could waive requirements from former military personnel because they have passed a polygraph, Border Patrol agents work in a different environment that is not as controlled as the military.”

Mr. Roth said the agency needed to identify other ways to make hiring “more efficient without sacrificing integrity and effectiveness.”

SOURCE	https://www.nytimes.com/2017/05/20/world/asia/china-cia-spies-espionage.html? r=0
GIST	<p>WASHINGTON — The Chinese government systematically dismantled C.I.A. spying operations in the country starting in 2010, killing or imprisoning more than a dozen sources over two years and crippling intelligence gathering there for years afterward.</p> <p>Current and former American officials described the intelligence breach as one of the worst in decades. It set off a scramble in Washington’s intelligence and law enforcement agencies to contain the fallout, but investigators were bitterly divided over the cause. Some were convinced that a mole within the C.I.A. had betrayed the United States. Others believed that the Chinese had hacked the covert system the C.I.A. used to communicate with its foreign sources. Years later, that debate remains unresolved.</p> <p>But there was no disagreement about the damage. From the final weeks of 2010 through the end of 2012, according to former American officials, the Chinese killed at least a dozen of the C.I.A.’s sources.</p> <p>According to three of the officials, one was shot in front of his colleagues in the courtyard of a government building — a message to others who might have been working for the C.I.A. Still others were put in jail. All told, the Chinese killed or imprisoned 18 to 20 of the C.I.A.’s sources in China, according to two former senior American officials, effectively unraveling a network that had taken years to build.</p> <p>Assessing the fallout from an exposed spy operation can be difficult, but the episode was considered particularly damaging. The number of American assets lost in China, officials said, rivaled those lost in the Soviet Union and Russia during the betrayals of both Aldrich Ames and Robert Hanssen, formerly of the C.I.A. and the F.B.I., who divulged intelligence operations to Moscow for years.</p> <p>The previously unreported episode shows how successful the Chinese were in disrupting American spying efforts and stealing secrets years before a well-publicized breach in 2015 gave Beijing access to thousands of government personnel records, including intelligence contractors. The C.I.A. considers spying in China one of its top priorities, but the country’s extensive security apparatus makes it exceptionally hard for Western spy services to develop sources there.</p> <p>At a time when the C.I.A. is trying to figure out how some of its most sensitive documents were leaked onto the internet two months ago by WikiLeaks, and the F.B.I. investigates possible ties between President Trump’s campaign and Russia, the unsettled nature of the China investigation demonstrates the difficulty of conducting counterespionage investigations into sophisticated spy services like those in Russia and China.</p> <p>The C.I.A. and the F.B.I. both declined to comment.</p> <p>Details about the investigation have been tightly held. Ten current and former American officials described the investigation on the condition of anonymity because they did not want to be identified discussing the information.</p>

HEADLINE	05/20 Crews dismantle Bertha chunk by chunk
SOURCE	http://www.seattletimes.com/seattle-news/transportation/with-torches-and-a-crane-crews-dismantle-berthas-massive-cutter-head-chunk-by-chunk/
GIST	<p>Within a few days, the final pieces of tunnel-boring machine Bertha's famed cutting disc will be removed and taken to a scrap-metal yard.</p> <p>Only two of the eight longest spokes, plus the center, remained Friday afternoon, after a pair of workers wielding high-power torches sliced away another 100,000-pound piece — still a mere one-third of a spoke. Even in afterlife, Bertha continues to generate jobs.</p> <p>Frontier-Kemper, the disassembly subcontractor, employs 50 people. They are beginning to remove arc-shaped shield pieces and hydraulic thrusters behind the cutter head. Dozens of other workers, predominantly local union members, remain on the job with Seattle Tunnel Partners (STP), continuing to build the road decks of the Highway 99 tunnel.</p> <p>More than 35 lifts will be needed to remove all the pieces from the pit near Seattle Center where Bertha's trip under downtown Seattle ended. The giant drill's re-usable trailing gear, more than 200 feet long, will be extracted mainly through the rear of the 1.7-mile tunnel in Sodo.</p> <p>Flatbed trucks carry the scrap crosstown to Seattle Iron & Metals Corp. in the Duwamish industrial area. There, three more workers carve the spokes into yet smaller chunks.</p> <p>Seattle Iron & Metals cuts the pieces to 5 feet by 2 feet by 2 feet so they can be trucked, unloaded and melted down by Nucor Steel in West Seattle, which calls itself the state's biggest recycler.</p> <p>A few spoke lengths are being saved in case someone wants them as historical artifacts or public art, Thomas said.</p> <p>Talks continue between Hitachi Zosen, the Japanese company that built and owns Bertha, and the Museum of History & Industry (MOHAI) in South Lake Union to save some parts of the machine.</p> <p>At more than 57 feet in diameter, Bertha was the world's largest tunnel drill when it was launched on July 30, 2013. It emerged April 4, more than two years behind schedule.</p>

HEADLINE	05/19 NOAA: 50% odds hotter summer
SOURCE	http://mynorthwest.com/635996/western-washington-may-have-warmer-than-usual-summer/

GIST	<p>The odds of a “warmer than normal” summer in Western Washington are tilting toward above average, according to NOAA.</p> <p>Areas around Puget Sound have as high as a 50 percent chance of being hotter than a typical summer. Seattle has a 48 percent probability of seeing higher than normal temps, according to NOAA.</p> <p>That may come as a surprise — or perhaps relief — for a region that has put up with record-breaking rainfall for months. Seattle measured 44.7 inches (114 centimeters) of rain between October and April, making it the wettest such period since records began in 1895, according to the National Weather Service. It’s been a bit of a drag for a region that typically experiences cold-weather systems with dry breaks in between.</p> <p>Forecast models from NOAA indicate below-normal precipitation beginning Sunday. That dry period is expected to continue through at least Thursday.</p> <p>University of Washington Professor of Climatology Cliff Mass says a dry period in mid-May isn’t unusual. It represents “the interregnum between the weakening storms of the winter season and the unpleasant June-gloom of late May and June.”</p> <p>Though the Puget Sound region has a higher than normal chance for a hot summer, it isn’t guaranteed. There is a 33 percent chance for a near-average summer and 27 percent chance for a cooler summer, according to NOAA.</p>

HEADLINE	05/19 Earthquakes near Bremerton continue
SOURCE	http://mynorthwest.com/636789/earthquakes-near-bremerton-continue-but-you-likely-cant-feel-them/
GIST	<p>Earthquakes continue to be recorded near Bremerton, but there aren’t many people who are reporting that they feel them.</p> <p>The last noteworthy quake was recorded Thursday morning. Six people reported to the USGS that they felt it, including one person in Carnation and another in Anacortes — the other four were more local.</p> <p>Seismologist Bill Steele told the Kitsap Sun that “hundreds” of quakes have been recorded since the beginning of the month. However, most go unnoticed. That’s because of how deep the quakes are.</p> <p>Most of the quakes are about 15 miles beneath the Earth’s surface. Many are also fairly weak, registering in below magnitude 2.</p>

	The earthquake swarm caught the attention of Puget Sound area residents after several were felt by people around the region, and not just necessarily those who live nearby. Seismologists have said that a swarm like this can slightly increase the chances of a larger event, but not by much.

HEADLINE	05/19 Quakes in Mount St Helens 'recharging'
SOURCE	http://www.seattlepi.com/local/article/Swarm-of-quakes-sign-of-Mount-St-Helens-11159234.php
GIST	<p>With well over 100 earthquakes detected on Mount St. Helens since early April, things are getting a little rumbly up there.</p> <p>The earthquakes are likely a sign of the volcano "recharging," as magma moves beneath it again, according to the U.S. Geological Survey.</p> <p>Coincidentally, yesterday marked 37 years since the mountain blew its top, sending ash 80,000 feet in the air and destroying a swath of the landscape 23 miles wide and 19 miles long with a combination of the blast, landslide and volcanic mud flows (lahars). The eruption killed 57 people and is considered the most destructive volcanic eruption in U.S. history.</p> <p>But fear not, as the earthquakes have come to be almost common since the mountain began its recharging process back in 2008, with swarms detected regularly.</p> <p>"The similarity of swarms at Mount St. Helens leads us to believe that similar processes cause them, and they are likely tied to magma recharge first detected in 2008," USGS said in a May 5 blog post.</p> <p>The USGS said the earthquakes are not a sign of a coming eruption.</p> <p>The earthquakes detected in this swarm have depths that vary from sea level to roughly 3 miles deep and magnitudes up to 1.3 on the Richter scale.</p> <p>What exactly is causing the quakes — the specific process, that is — is hard to pinpoint, according to the USGS.</p> <p>But the signs all point to the swarms not being a sign of an imminent eruption.</p>

HEADLINE	05/19 Special session costing \$87K so far
SOURCE	http://www.kiro7.com/news/local/heres-what-youve-paid-so-far-for-the-special-session-in-olympia/524399833

GIST	<p>Lawmakers are racking up extra pay as they continue negotiating a budget in special session this year, sticking taxpayers with a growing bill that was more than \$87,500 halfway through the current 30-day overtime.</p> <p>With no compromise in sight, a second overtime is all but certain. That means the costs will keep climbing.</p> <p>Records show lawmakers took roughly \$75,500 in per diem between April 24 and May 7. The money typically pays for session expenses such as rent and dry cleaning.</p> <p>Legislators also pocketed around \$11,600 in reimbursement for the cost of travel related to legislative work. That might be an incomplete figure since senators have up to 60 days to submit travel expenses, Senate counsel Jeannie Gorrell said.</p> <p>The first overtime period ends on Tuesday and follows a 105-day regular session where the majority-Democrat House and the GOP-led Senate failed to reach a deal on a final budget.</p> <p>Lawmakers can take their \$120-a-day stipend, also known as per diem, any time the Legislature is in session or when they have legislative obligations such as a committee hearing during the interim.</p> <p>But the money draws more scrutiny during a special session. House Chief Clerk Bernard Dean said that's in part because only key budget writers are actually at the Capitol for most of the special session, making it harder for other lawmakers to justify taking the allowance even if they do some legislative work away from Olympia.</p> <p>Leadership at the Capitol typically sends rank-and-file lawmakers home while negotiators iron out a deal.</p>

HEADLINE	05/19 Jury: Starbucks pay \$100K coffee spill
SOURCE	http://www.kiro7.com/news/local/starbucks-ordered-to-pay-woman-100000-over-hot-coffee-spill/524567257
GIST	<p>A jury ordered Starbucks to pay up – to the tune of \$100,000 – after a woman was burned when the lid on her coffee cup came off in her car and the hot coffee burned her.</p> <p>It's not the first time there has been a lawsuit over hot coffee that injured someone.</p> <p>In 1994, a 79-year-old woman suffered third-degree burns when a McDonald's cup of coffee accidentally spilled on her lap. She was awarded \$640,000.</p>

	<p>In the Starbucks case, the lawsuit claimed a Starbucks employee contributed to a customer being injured after a 190-degree Venti spilled on the lap of a Jacksonville, Fla., woman and severely burned her. According to the woman, the lid popped off the cup when the employee handed her the drink at a drive-through.</p> <p>During the trial a Starbucks employee testified they receive about 80 complaints a month related to loose lids.</p>

HEADLINE	05/19 Seattle's mayoral race: 21 candidates
SOURCE	http://www.seattletimes.com/seattle-news/politics/open-seattle-mayors-race-draws-a-long-list-of-candidates/
GIST	<p>Seattle voters will have no shortage of choices to replace outgoing Mayor Ed Murray when the August primary rolls around.</p> <p>Twenty-one candidates filed in the race by the Friday 4:30 p.m. deadline — the most in any King County contest.</p> <p>The roster includes former Mayor Mike McGinn, former U.S. Attorney Jenny Durkan, state Rep. Jessyn Farrell, state Sen. Bob Hasegawa, educator and attorney Nikkita Oliver, and urban planner Cary Moon — and more than a dozen others.</p> <p>The city's first open-seat mayoral contest since 1997 was spurred by Murray's decision to forgo his re-election bid amid allegations — which he has strongly denied — that he sexually abused teenagers decades ago.</p> <p>"Seattle is exploding, in terms of influence ... it's a place that many people want to put their imprint on, and we're seeing that in the caliber of the candidates running for mayor," said Marco Lowe, a Seattle University politics professor and former aide in the mayoral administrations of McGinn and Greg Nickels.</p> <p>The top two vote-getters in each race in the Aug. 1 primary will advance to November's general election. With the crowded mayoral field, candidates could advance with support in the high teens or low 20s, Lowe said.</p> <p>Voting in the all-mail primary will begin July 14.</p>

HEADLINE	05/19 Treatment plant failures \$57M damage
SOURCE	http://www.king5.com/news/local/seattle/failure-caused-up-to-57m-in-damage-to-west-point-treatment-plant/441362127

GIST	<p>Equipment failures caused between \$49 million and \$57 million of damage to the West Point Wastewater Treatment Plant, according to an analysis released Friday.</p> <p>The repair costs are expected to be covered by property insurance and will not impact King County sewer rate in 2017-18, according to the King County Wastewater Treatment Division. King County will be responsible for a \$250,000 deductible.</p> <p>Insurance is not expected to cover potential regulatory fines or additional environmental monitoring.</p> <p>CH2M engineers calculated the repair cost to include existing orders for broken equipment, work orders, staff labor changes, and asset inventories. It also accounts for unknown costs, such as building code changes and highly specialized equipment.</p> <p>King County's property insurance covers costs up to \$500 million, with a flood-related damage sub-limit of \$250 million.</p> <p>The West Point Treatment Plant in Discovery Park suffered a historic breach February 9 when an equipment failure caused untreated wastewater and stormwater to flow into the Puget Sound.</p>

HEADLINE	05/19 Why office snacks make you fat
SOURCE	http://www.nbcnews.com/better/diet-fitness/are-office-snacks-making-you-fat-why-n761551
GIST	<p>Confession time: Even though I eat a (mostly) healthy diet at home, I often find myself mindlessly drifting from M&M to Cheeto and back during a stressful day at work.</p> <p>Snacks have become such a common office perk that one recent survey from Jobvite found millennial workers were more likely to get free food at work than they were to receive health care or retirement plans.</p> <p>In our office, we have bagel Wednesdays, guacamole Thursdays and occasional pizza Fridays on top of the day-to-day snacks that fill our multiple snack drawers.</p> <p>Just having those snacks available — and visible — could be the problem. Add in stress, multitasking, boredom and procrastination, and you have a perfect storm of office snackery.</p> <p>"Oftentimes hunger is less about legitimate hunger and more about decisions based on psychological influences like stress, boredom, impulse, happiness and fatigue," says nutritionist Keri Glassman. "When food is easily accessible, and also free, we are more likely to reach for it, and continue to overeat."</p> <p>Problem 1: Location, Location, Location</p>

In one frequently cited study, researchers at the Cornell Food & Brand Lab gave secretaries containers of Hershey's kisses and [recorded how many they ate](#). When the candies were on the secretaries' desks, they ate 48 percent more than they did if they were placed 2 meters away. When the containers were see-through instead of opaque, they ate about 2 extra kisses per day.

So reducing snacking might be as easy as changing where and how the snacks are displayed. [Google set out to hack its snacking problem](#) with help from researchers from the Yale Center for Customer Insights. First, they targeted their most popular snack item: bulk M&Ms. Google had been giving them out self-serve in 4 oz cups. Switching to individual snack packets reduced the average serving by 58 percent, from 308 calories to 130.

Then they hid the M&Ms in opaque containers, while using glass jars to display healthier snacks like dried fruit and nuts. They found that in the New York office alone, employees ate 3.1 million fewer calories from M&Ms over seven weeks - equivalent to nine regular-sized packages of M&Ms for each of the office's 2,000 workers.

Then they prominently displayed bottled water at eye level behind clear glass, and hid sugary sodas down below behind foggy glass. That helped water consumption rise 47 percent while sugary drinks dropped 7 percent.

And as with secretaries and chocolates, the Google study found location mattered. One drink station was 6.5 feet from the snack bar; the other was 17.5 feet from the snack bar. The researchers found that people who used the beverage station closer to the snacks were 50 percent more likely to grab a snack with their drink. For men, the researchers said that would add up to about a pound of fat per year for each daily cup of coffee.

Problem 2: It's FREE!

Next, we must acknowledge that special frenzy that happens around free food. Anyone who's been near a Costco sample table understands this phenomenon. But why is free food so tempting? We're usually talking about a \$1 snack pack here, not champagne and truffles. In other words, you're not saving that much money. But not having to pay for something removes one barrier to eating it, says Traci Mann, a University of Minnesota psychology professor and author of ["Secrets from the Eating Lab: The Science of Weight Loss, the Myth of Willpower, and Why You Should Never Diet Again."](#)

Another factor: Nabbing those extra snacks might make you feel better if you think you don't get paid enough, says Dr. Susan Albers, clinical psychologist at the Cleveland Clinic and author of the New York Times best-selling ["Eat Q: Unlock the Weight-Loss Power of Emotional Intelligence."](#)

"Before you reach for the free snack, ask yourself why you are taking it," says Albers, "If you don't love it, leave it is my motto."

Problem 3: You're a Mess

Sitting at your desk for long stretches, you're likely to encounter a range of emotions that could trigger snacking. Stress. Boredom. Procrastination.

In a 2012 study published in Health Psychology, students were more likely to cite boredom as a reason for eating than any other emotion. [Work burnout](#) is another significant trigger for emotional eating. And because eating feels purposeful, it can be "a rock solid way" to avoid a task you're dreading, Albers says. There's even a special term for this: [Procrastin-eating](#).

Grabbing a snack may even be a sneaky way to socialize if you're feeling isolated or lonely. Earlier this year, the [Washington Post conducted its own informal study](#) of the office candy jar and found that people felt compelled to comment as they took the candy - even if they were saying they shouldn't eat it, or that the candy wasn't very good. They called this "The Kevin effect," for the guy who had the candy jar on his desk.

A correlary to the Kevin effect: People are less likely to eat the candy if it's on the boss' desk.

Problem 4: You're Multitasking

I assume most office snacks are consumed the way I eat them: Shamefully, while staring straight ahead and spreading Cheeto dust across the keyboard. Eating at your desk is among the worse things you can do for your diet. It's the opposite of mindful eating.

A 2001 study of French women found that those who were distracted by a detective story [ate 15 percent more](#). And women in particular are [more likely to eat while using digital devices](#), according to a 2014 survey of global snack habits by the Nielsen organization.

Albers says her best advice is to avoid eating at your desk: "If you are going to have a snack, that is fine, just move to a different location. Or, swivel away from your desk. This will ensure that you don't mindlessly much in front of your screen."

Glassman has even suggested leaving empty wrappers on your desk as a reminder of just how much you've eaten.

And the Solution?

Here's the good news: Your office snacking problem isn't a problem with your willpower, at least not entirely.

"It is very difficult to use willpower to resist tempting food," Mann says. "But putting obstacles between oneself and food does help slow us down."

	<p>The best solution, of course, is nixing the candy jar. People who keep candy at their desks weigh 15.4 pounds more than people who don't, according to Cornell's Brian Wansink.</p> <p>Learn from the Google team and keep healthier snacks and water at hand. Chewing gum can help in a pinch. Or if you're feeling bored, stressed or lonely — try taking a walk with a colleague.</p>

HEADLINE	05/19 Ferris wheel riders blamed for accident
SOURCE	http://www.king5.com/news/local/human-error-caused-ferris-wheel-accident-company-says/441303124
GIST	<p>A spokesperson for the amusement ride company involved in a Ferris wheel accident in Port Townsend Thursday night says the people on board the ride are to blame.</p> <p>The spokesperson, who asked that his name not be used, said no mechanical problems were found on the ride and indicated those who were injured were moving around inside the Ferris wheel basket, causing it to tip.</p> <p>A family of three, including a 7-year-old boy, were hurt when their basket flipped, sending them plummeting about 15 feet to a steel platform below. Mikhail Groth Swartwood, 7, and Crystal Groth, 47, suffered minor injuries. Shawn Swartwood, 59, is in satisfactory condition at Harborview Medical Center in Seattle.</p> <p>The incident happened at the annual Rhododendron Festival in Port Townsend. The festival is going on as planned Friday, although the ride in question has been shut down by the state until further notice. There are conflicting reports as to exactly what happened.</p> <p>Oregon-based Funtastic claims those who fell from the ride were told to sit still and caused the basket to flip themselves.</p>

HEADLINE	05/19 Hanford: signs of another leaking tank
SOURCE	http://www.king5.com/news/local/hanford/radioactive-contamination-found-of-clothes-of-hanford-worker/441263419
GIST	<p>Hanford's owner, The U.S. Department of Energy, is scrambling to deal with the second emergency at the nuclear site in 10 days' time.</p> <p>Signs have emerged that a massive underground double shell nuclear waste holding tank may be leaking. The tank is known as AZ 101 and was put into service in 1976. The tank's life was expected to be 20 years. Now it has been holding hot, boiling radioactive and chemically contaminated waste for 41 years.</p>

A seven-person crew was undertaking a routine job around 7 p.m. Thursday night. They had deployed a remote controlled device into the safety space of what is known as a double shell tank. The device is used to evaluate structural integrity of the aging tanks. Normally, equipment lowered in this two-foot wide outer shell of the tank comes up clean. But not this time. A radiation specialist on the crew detected higher than expected readings.

“Radiological monitoring showed contamination on the unit that was three times the planned limit. Workers immediately stopped working and exited the area according to procedure,” said Rob Roxburgh, deputy manager of WRPS Communications & Public Relations, the government contractor in charge of all 177 underground storage tanks at the nuclear site.

Detection equipment was then used to check for contamination that might have become airborne and adhered to the workers. They found radioactive material on one worker in three spots: on one shoe, on his shirt, and on his pants in the knee area. According to workers in the field, the contaminated items were removed, bagged and appropriately disposed of.

“Everybody was freaked, shocked, surprised,” said a veteran worker, who is in direct contact with crew members. “(The contamination) was not expected. They’re not supposed to find contamination in the annulus (safety perimeter) of the double shell tanks.”

Of Hanford’s 177 underground tanks, 28 of them are double-shells. They were built to withstand the test of time – a more robust model that was supposed to hold the worst nuclear waste on the reservation until a permanent solution for disposal is developed. But Thursday night’s incident means this could be the second double shell tank to fail.

HEADLINE	05/19 Last 1992 L.A. riots victim identified
SOURCE	http://www.cbsnews.com/news/authorities-identify-victim-who-died-1992-los-angeles-riots/
GIST	<p>LOS ANGELES -- Authorities on Friday identified the last of the 53 people killed during the riots in Los Angeles -- more than 25 years later.</p> <p>The man was recently identified through fingerprints as 18-year-old Armando Ortiz Hernandez, said Los Angeles County coroner's spokesman Ed Winter.</p> <p>Hernandez died of "inhalation of smoke, soot, carbon monoxide and thermal burns," Winter said. His body was found May 2, 1992, inside an auto parts shop that was set ablaze during the unrest in South Los Angeles.</p> <p>Investigators have said they were able to lift a single fingerprint from the man's left middle finger. The coroner's office did not immediately respond to questions Friday about whether Hernandez's fingerprints had been run through databases previously.</p> <p>The looting and violence that would turn into one of the deadliest race riots in American history was sparked after a jury acquitted four white police officers in the beating of black motorist Rodney King. Video footage captured officers repeatedly striking, kicking and using a stun gun on King, even after he was on the ground.</p> <p>A total of 53 people were killed and more than 2,000 injured during several days of unrest.</p>

HEADLINE	05/19 Forecasters: another hot summer
SOURCE	http://www.cbsnews.com/news/us-forecasters-another-hot-summer/

GIST	<p>WASHINGTON -- U.S. forecasters are predicting another warmer than normal summer for most of the country along with wetter weather in a swath of states stretching from Texas to Montana.</p> <p>The hot weather forecast came amid what's already shaping up to be another unusually hot year. The National Oceanographic and Atmospheric Administration (NOAA) said last month was the second warmest April on record globally — just a fraction of a degree behind the hottest in 2016. And so far 2017 is the second warmest year-to-date on record.</p> <p>The National Weather Service's summer outlook issued Thursday predicts greater chances for hot weather in states that fall along the East Coast, Texas, Alaska and pretty much everywhere else.</p> <p>The exceptions are Montana, Wyoming, the Dakotas, Minnesota, Iowa, Nebraska, Kansas and parts of Missouri and Colorado.</p>

HEADLINE	05/19 'Clock boy' loses federal lawsuit
SOURCE	http://www.cbsnews.com/news/clock-boy-ahmed-mohamed-discrimination-lawsuit-dismissed/
GIST	<p>A federal judge has dismissed a discrimination lawsuit brought by the family a Muslim student who was arrested for bringing a homemade clock to school that officials believed to be a bomb, saying the student's attorneys failed to prove he was treated differently based on his race or religion.</p> <p>In September 2015, Ahmed Mohamed, an avid hobbyist who was 14 at the time, assembled the clock using a circuit board and digital display and proudly brought the clock to school to show to his teachers. One of his teachers heard the device beeping and brought Mohamed to the principal's office. He was then arrested and suspended for three days.</p> <p>Mohamed's arrest sparked a social media firestorm over his treatment, with supporters alleging he faced discrimination because of his religion and ethnicity. Users dubbed Mohamed "clock boy" and expressed support with the hashtag #IStandWithAhmed. Mohamed was among the guests invited to the White House for an astronomy event and spoke with President Obama several weeks after his arrest.</p> <p>Mohamed Mohamed, the student's father, filed a federal lawsuit in August 2016 against the Irving Independent School District (IISD), MacArthur High School principal Daniel Cummings and the city of Irving, Texas, alleging officials violated the boy's civil rights by imposing a 3-day suspension for bringing the clock to school.</p>

HEADLINE	05/20 Indonesia ferry catches fire; 5 dead
SOURCE	http://abcnews.go.com/International/wireStory/dead-indonesian-ferry-catches-fire-java-sea-47524878?cid=clicksource_76_null_articleroll_hed
GIST	<p>A search for survivors of a ferry that caught fire in the Java Sea, killing five people, has been suspended for the night, an Indonesian search and rescue official said Saturday.</p> <p>The national search and rescue agency's operations director, Ivan Ahmad Riski, said 193 people have been rescued. The number of missing was unclear.</p> <p>The agency's initial figure for the number of people aboard, apparently based on the vessel's manifest, was 178. It is not uncommon for ferries, a regular form of transport in the Indonesian archipelago, to be overcrowded or to carry more passengers than declared.</p> <p>The accident happened on Friday night about 3 kilometers (2 miles) from Masalembo Island. A nearby ship went to the aid of the stricken ferry, which was also carrying many cars and trucks.</p> <p>Riski said survivors told authorities that the fire started on the ferry's vehicle deck and spread uncontrollably, forcing the captain to order all on board to abandon ship. In panic, some people jumped into the sea without wearing lifejackets or waiting for lifeboats, they said, according to Riski.</p>

HEADLINE	05/19 Court strikes down federal drone rule
SOURCE	http://thehill.com/policy/transportation/334233-appeals-court-strikes-down-federal-registration-rule-for-toy-drones
GIST	<p>A D.C.-based appeals court struck down a Federal Aviation Administration (FAA) rule on Friday requiring recreational drone users to register their model aircraft with the federal government, in a major win for drone hobbyists.</p> <p>The U.S. Court of Appeals for the D.C. Circuit sided with plaintiff John A. Taylor, a recreational drone pilot, who argued that the FAA doesn't have the power to make him register his toy drones because Congress already said the FAA can't regulate model aircraft.</p> <p>"The FAA's 2015 registration rule, which applies to model aircraft, directly violates that clear statutory prohibition," the opinion said. "We therefore grant Taylor's petition and vacate the registration rule to the extent it applies to model aircraft."</p> <p>In December 2015, the FAA issued an interim rule requiring drone hobbyists to register their recreational aircraft with the agency.</p> <p>The court called the registration process "quite extensive, as one would imagine for airplanes."</p> <p>The rule — which had not been formally finalized — requires model aircraft owners to provide their name, email address and physical address; pay a \$5 registration fee; and display a unique drone ID number at all times. Those who fail to comply could face civil and criminal penalties.</p>

HEADLINE	05/19 Mayor sorry in honoring cop killer
SOURCE	http://www.cnn.com/2017/05/19/us/cincinnati-mayor-apology-proclamation-cop-killer/index.html
GIST	<p>(CNN)Cincinnati Mayor John Cranley apologized after his office inadvertently issued a proclamation honoring a man who ambushed and killed a Cincinnati police officer.</p> <p>"I am really sorry that my office, that we mistakenly issued a proclamation on behalf of a man that killed, murdered Sonny Kim," Cranley said Thursday night.</p> <p>Cranley choked back tears as he spoke at a local police union hall. His face was red as he paused several times during his brief, tear-filled statement.</p> <p>"He was a hero," Cranley said about Kim, a father of three, who was fatally shot in June 2015.</p> <p>Last week, the mayor's office received a request for a proclamation from Ronald Hummons for his son's birthday. The request didn't contain his son's full name and the staff member reviewing the request wasn't aware that the man being honored had killed Kim, according to the mayor's letter of apology to the Cincinnati Fraternal Order of Police.</p> <p>A staff member wrote the proclamation, granting June 1, 2017, "Tre Day" in Cincinnati. The proclamation was then approved by the communications director.</p> <p>Once the mayor's office became aware of the mistake, it retracted the proclamation.</p> <p>"This was a huge mistake," Cranley said. "It was not done intentionally. It was a human error, but the buck stops with me."</p> <p>The mayor said he apologized to Kim's widow, the Cincinnati Police chief and the officer who returned fire when Kim was shot. Cranley voiced his support for the police department, got choked up and stepped away from the podium.</p> <p>Cincinnati Fraternal Order of Police President Dan Hils said he felt sick when he heard about the proclamation, but that Cranley appeared to own up to the error.</p>

HEADLINE	05/20 States take closer look under bridges
SOURCE	http://www.cnn.com/2017/05/20/us/bridges-atlanta-collapse-states-policies/index.html
GIST	<p>(CNN)When an elevated section of Atlanta's Interstate 85 crashed to the ground in a fire this spring, motorists already navigating one of the nation's most congested cities braced for what the city's mayor called a transportation crisis.</p>

The span was rebuilt in six weeks and reopened last weekend, sooner than expected. But the closure inflicted pain. Traffic volume on nearby surface streets more than doubled, drivers endured longer commutes and rebuilding the bridge cost more than \$16 million.

Investigations aren't finished, but officials say someone started the fire beneath the highway, apparently fueled in part by construction materials -- flexible plastic and fiberglass tubes -- that the state had stored on a lot for nearly six years.

It was enough to shock other states into taking a look at themselves and asking: What exactly are we storing under our elevated roads? And could it pose a threat?

To address these questions, CNN contacted departments of transportation in all 50 states. Of the 44 that responded, more than two-thirds said the Atlanta I-85 collapse prompted them to reinspect their bridges or consider changes to their storage policies.

Some said they didn't allow material under bridges anyway, but practices vary from state to state, and even the definition of "hazardous" may be part of the reckoning.

Before the Atlanta fire, few would have identified these tubes -- including the plastic ones, otherwise known as high-density polyethylene, or HDPE -- as being dangerous, said Pete Rahn, secretary of Maryland's transportation department.

Until now, Maryland might have allowed contractors or its own workers to store HDPE on state-owned space under bridges during a construction project, Rahn said. Not anymore.

"(It was) unimaginable that plastic conduit could cause damage like this," Rahn said.

Meanwhile a federal investigation into the bridge collapse is ongoing and the Federal Highway Administration is pushing states to take another look at their practices is pushing states to take another look at their practices.

"Until the investigation is completed, this event highlights the need for concern about storing materials under bridges," Thomas D. Everett, associate administrator of the Federal Highway Administration's (FHWA) infrastructure office, wrote to state transportation officials last month.

Whether such plastic tubes should have been considered too hazardous to store under the bridge will be part of a National Transportation Safety Board investigation.

"A couple points of interest include the integrity of the infrastructure, the flammability of the materials and the issue of storing flammable material under a bridge," NTSB spokesman Keith Holloway said.

The state safety fire commissioner is helping GDOT review its policies on storing materials under bridges and elevated highways, spokesman Glenn Allen said. McMurry said the storage was not believed to have broken any current state policy.

The tubes don't catch fire easily, McMurry says. In a letter to the FHWA, he said the flash point for these particular HDPE tubes is 341 degrees Celsius (645 degrees Fahrenheit).

The flammability of HDPE is relatively low, agreed Tony Radoszewski, president of the Plastics Pipe Institute, a trade group based in Irving, Texas. HDPE would have to be exposed to a high-temperature flame for a considerable amount of time for it to burn, he said.

"Somebody had to start a fire. It doesn't combust by itself -- it needs fuel," Radoszewski said. "Someone had to do it. It's not like someone would have dropped a match and it started."

McMurry has said the fire raises questions about whether the materials were stored securely enough. The materials were behind a chain-link fence with a locked gate and a "no trespassing" sign, he said.

"Obviously, what we know now, if we knew then, we would not have the material stored in the fashion that it was stored," he said April 4, responding to a question about how secure the site was. "The gating and the fencing was really to keep the material from being stolen or removed from the area," as opposed to keeping people out, he said.

A check after the fire revealed that no other bridge in Georgia had HDPE stored under it, McMurry said.

HEADLINE	05/20 Iran president wins re-election
SOURCE	http://www.cnn.com/2017/05/20/middleeast/iran-rouhani-election/index.html
GIST	<p>Tehran, Iran (CNN)Iranian President Hassan Rouhani handily won re-election in what amounts to a victory for the Shiite nation's reformist camp and a sign that citizens favor fruitful engagement with the outside world.</p> <p>Rouhani, who defeated his conservative challenger Ebrahim Raisi in the Friday elections, garnered 57% of the vote, Interior Minister Abdolreza Rahmani Fazli said. He'll serve another four years in the post.</p> <p>Rouhani, a moderate, was a key architect of the 2015 nuclear deal with the United States, the European Union and other partners, and his first term was marked by an emergent international outreach.</p> <p>The agreement has been controversial in both the United States and Iran, and it emerged as a top campaign issue, with the election seen in part as a referendum on the deal.</p>

	More than 40 million Iranian voters flocked to polling stations Friday, according to the head of Iran's Interior Ministry State Elections Committee. More than 70% of eligible voters cast ballots.

Cyber Awareness

[Top of page](#)

HEADLINE	05/19 WannaCry infected medical devices
SOURCE	https://www.hackread.com/wannacry-responsible-infecting-medical-devices/
GIST	<p>It is not surprising to know that Internet-connected Medical devices are vulnerable to cyber attacks. There have been several cases in the recent past in which cyber criminals took over life-saving devices and held them to ransom.</p> <p>Now, it has been identified that WannaCry ransomware, the heinous ransomware that has been on the loose for over a week now, has been reported to have infected not only computer systems but also medical devices that were connected to the overall network of healthcare organizations.</p> <p>The British National Health System: As you may already know, a number of organizations were attacked by the WannaCry ransomware and victims are still being targeted. However, the British National Health System (NSH) was among the most heavily infected with a number of healthcare organizations having their systems hacked by the ransomware.</p> <p>Initial reports said that it was mainly the management systems that were affected. Later, however, the Health Information Trust Alliance in the U.S, stated that medical devices had also been infected. This is because these devices were connected to the infected networks and had Windows running on them. Therefore, WannaCry was able to spread to these devices as such.</p> <p>Advisories released to fight the ransomware: As part of warning the customers who might have such devices, ICS-CERT released a list of vendors who have issued security advisories so as to protect customers from the attack. Companies including General Electric, Rockwell Automation, Philips, Siemens and much more are part of the list.</p> <p>Beckton, Dickson, and Company have provided a list of a number of affected devices along with guidelines as to how Windows-based systems can be secured. Similarly, Siemens has reported that it is working to fix the flaw in the SMB system of Windows.</p>

HEADLINE	05/19 WannaCry exploit spreads spy Trojan
SOURCE	https://www.infosecurity-magazine.com/news/wannacry-exploit-used-to-spread/

GIST	<p>Threat actors are using the same EternalBlue exploit employed by WannaCry to deliver other malware—specifically, a remote access trojan (RAT) typically used to spy on people’s activities or take control of their computers.</p> <p>During the recent pandemic attack, CyphortLabs discovered a similar attack to one of its honeypot servers. “We initially thought this is WannaCry, but upon further investigation, we discovered a stealthier RAT,” researchers said, in an analysis. “Unlike WannaCry, this threat infects only once and does not spread. It is not a worm.”</p> <p>The RAT has plenty of spy features, the firm said, including screen and keyboard monitoring, audio and video surveillance, the ability to transfer, download or delete files and data, and general control of the infected machine. It also takes care to block the exploit from being used for other malware.</p> <p>“The threat actors probably did not want other threats mingling with their activity,” CyphortLabs said.</p> <p>Researchers added, “At first glance, the threat we discovered may not appear to be as destructive as the WannaCry ransomware, but it may be equally dangerous if not more, depending on the attacker’s intent.”</p> <p>Interestingly, the analyzed sample was first seen on VirusTotal on April 2—and since then, there have been 12 other similar samples reported. “This is an indication that they might have been using the EternalBlue exploit well before the WannaCry outbreak on May 12,” CyphortLabs said.</p>

HEADLINE	05/22 UK WannaCry phishing scam spotted
SOURCE	https://www.infosecurity-magazine.com/news/wannacry-bt-phishing-scam-spotted/
GIST	<p>Fraud experts are warning UK netizens of a sophisticated new phishing scam which uses the recent WannaCry ransomware attack campaign in an attempt to trick users into clicking on malicious links.</p> <p>ActionFraud issued an alert late last week, claiming to have already received several reports of the BT-branded scam email.</p> <p>“After analyzing the email, the domains appear very similar and this could easily catch out those who are concerned about the security of their data after the global attack”, the fraud prevention organization warned.</p> <p>The message itself is pretty convincing, urging recipients in near flawless English to click on a “confirm security upgrade” button to re-establish full access to a BT account it claims has been restricted following the WannaCry outbreak.</p>

	“If you receive one of these emails do not click on any links and follow our advice on how to stay safe. Instead, go to the BT website directly and log in from there,” Action Fraud advised.

HEADLINE	05/19 Experts: WannaCry isn't NKorea style
SOURCE	http://www.securityweek.com/wannacry-does-not-fit-north-koreas-style-interests-experts
GIST	<p>Some experts believe that, despite malware code similarities, the WannaCry ransomware is unlikely to be the work of North Korea, as the attack does not fit the country's style and interests.</p> <p>The WannaCry ransomware, also known as Wanna Decryptor, WanaCrypt0r, WannaCrypt, Wana Decrypt0r and WCry, has hit hundreds of thousands of systems worldwide, including ones housed by banks, hospitals, ISPs, government agencies, transportation companies and manufacturing plants.</p> <p>The first clue that the WannaCry ransomware may have been created by North Korea was uncovered by Google researcher Neel Mehta. The expert noticed that a variant of WannaCry making the rounds in February, when the threat was less known, had code similarities with a tool used by the North Korea-linked cyber espionage group named Lazarus. The code in question was removed from later versions of the ransomware.</p> <p>Security firms such as Symantec and Kaspersky confirmed the connection to Lazarus, and Kaspersky said it was “improbable” that this was a false flag. Even the Shadow Brokers, the group that leaked the Equation Group exploits leveraged by WannaCry, attributed the attack to North Korea.</p> <p>However, not everyone agrees that North Korea is behind WannaCry. The threat intelligence team at endpoint security firm Cybereason believes North Korea is unlikely to be behind the campaign.</p> <p>“Nothing in North Korea's past cyber campaigns or in their conventional military and foreign policy fit this mold. Looking at national identity, foreign policy and strategic messaging will greatly reduce the likelihood that Pyongyang ordered this campaign,” the company said in a blog post on Friday.</p> <p>One reason is that North Korea, guided by its self-reliance ideology, has never used commodity malware or generic tools in its cyberattacks. All the tools and exploits leveraged by the Lazarus group have been custom-built, Cybereason said.</p> <p>Another reason for which North Korea is unlikely to be behind the WannaCry ransomware attack is the fact that China and Russia, two of the country's biggest allies, were among the most affected. Furthermore, some of Pyongyang's biggest enemies, including the U.S., Japan and South Korea, had fairly low infection rates.</p>

	<p>Cybereason is not the only company that is skeptical of North Korea’s involvement in the WannaCry attack. Bogdan Botezatu, senior e-threat specialist at Bitdefender, also believes that the scenario in which a state-sponsored actor – especially one as sophisticated as Lazarus – would switch to ransomware is unlikely.</p> <p>“The attack wasn't targeted and there was no clear gain for them,” Botezatu told SecurityWeek. “It's doubtful they would use such a powerful exploit for anything else than espionage.”</p>

HEADLINE	05/21 Terror EK gets fingerprint capabilities
SOURCE	http://www.securityweek.com/terror-exploit-kit-gets-fingerprinting-capabilities
GIST	<p>Recent changes made to the Terror exploit kit (EK) allow it to fingerprint victims and target specific vulnerabilities instead of carpet bombing the victims with many exploits at the same time, Talos researchers discovered.</p> <p>Terror was initially detailed in January this year, when security researchers observed that it was targeting vulnerabilities with exploits taken from Metasploit or from either Sundown or Hunter EKs. Terror activity increased last month, after the Sundown EK inexplicably disappeared from the threat landscape.</p> <p>Previously, the EK was observed carpet bombing victims with many exploits at the same time, even if those exploits didn’t match the targeted browser environment. Now, the threat has added more exploits and is fingerprinting victim’s system to determine what exploit would be successful based on operating system, patch level, browser version, and installed plugins.</p> <p>The use of more targeted exploits makes it more difficult for investigators to determine which exploits the toolkit has. However, “it is interesting to note that the adversaries are using an URL parameter in cleartext for the vulnerability they are going to exploit,” Talos says.</p>

HEADLINE	05/22 WikiLeaks details malware made by CIA
SOURCE	http://www.securityweek.com/wikileaks-details-malware-made-cia-and-us-security-firm
GIST	<p>WikiLeaks has published documents detailing another spy tool allegedly used by the U.S. Central Intelligence Agency (CIA). The latest files describe “Athena,” a piece of malware whose developers claim it works on all versions of Windows.</p> <p>Documents apparently created between September 2015 and February 2016 describe Athena as an implant that can be used as a beacon and for loading various payloads into memory. The tool also allows its operator to plant and fetch files to or from a specified location on the compromised system.</p>

	<p>A leaked diagram shows that Athena can be loaded onto the targeted computer by an asset, a remote operator, or via the supply chain. The implant is said to work on all versions of Windows from XP through 10, including Windows Server 2008 and 2012, on both x86 and x64 architectures.</p> <p>While WikiLeaks has not made available the actual Athena tool, experts pointed out that the leaked documents include information on file and registry changes made by the implant, which can be useful for determining if a system has been compromised.</p>

HEADLINE	05/19 ACLU FOIA on CBP stingrays usage
SOURCE	https://www.scmagazine.com/aclu-files-foia-request-to-see-how-ice-uses-cell-phone-trackers/article/663167/
GIST	<p>Through a Freedom of Information Act request filed Friday, the American Civil Liberties Union (ACLU) is seeking to find out how Immigration and Customs Enforcement (ICE) and U.S. Customs and Border Protection (CBP) are using cell phone trackers known as Stingrays.</p> <p>“We’re troubled to see evidence of ICE using invasive surveillance equipment for immigration enforcement purposes, especially given this administration’s hyper-aggressive approach in this area,” ACLU attorney Nathan Freed Wessler said in a release. “It’s crucial that the government release this information so the public can understand how immigration authorities are using Stingrays and what limits they’re placing on this technology.”</p> <p>The Detroit News had reported earlier in the day that a search warrant was issued to ICE agents, authorizing them to use one of the devices to find a deportable immigrant. The civil rights organization said it’s the first time it’s uncovered evidence that ICE is using the technology.</p>

HEADLINE	05/19 Google adds Android malware scanner
SOURCE	http://thehackernews.com/2017/05/google-play-protect-android.html
GIST	<p>In order to keep its billions of users safe, Google has introduced another security defense for its Android devices, called Google Play Protect.</p> <p>Google Play Protect, which is part of the Google Play Store app, uses machine learning and app usage analysis to weed out the dangerous and malicious apps, which have always been albatross around the tech giant’s neck.</p> <p>Since Google Play Protect actually comes with the Google Play Store, users do not need to install or activate this security feature separately.</p> <p>Google Play Protect for Android devices consists:</p>

- App scanning
- Anti-Theft Measures
- Browser Protection

Google Play Protect is an always-on service on devices which said to scan 50 billion apps each day across a billion Android devices to ensure they are safe.

Google already has a number of security measures in place to help keep your smartphones safe, including Verify Apps and its Bouncer service, but once apps are uploaded to the Play Store and installed on your device, Google does not have anything in place to monitor the behavior of those apps – something that most malware apps were abusing.

Running automatically in the background, Google Play Protect is actually built into devices, which will not only analyse apps before appearing on the Play Store, but also monitor them once installed on the device, including apps that have been installed from third-party stores as well.

HEADLINE	05/22 Hackers hit Russia bank customers
SOURCE	http://www.reuters.com/article/us-russia-cyber-banks-idUSKBN18I0VE
GIST	<p>Russian cyber criminals used malware planted on Android mobile devices to steal from domestic bank customers and were planning to target European lenders before their arrest, investigators and sources with knowledge of the case told Reuters.</p> <p>Their campaign raised a relatively small sum by cyber-crime standards - more than 50 million roubles (\$892,000) - but they had also obtained more sophisticated malicious software for a modest monthly fee to go after the clients of banks in France and possibly a range of other western nations.</p> <p>Russia's relationship to cyber crime is under intense scrutiny after U.S. intelligence officials alleged that Russian hackers had tried to help Republican Donald Trump win the U.S. presidency by hacking Democratic Party servers.</p> <p>The Kremlin has repeatedly denied the allegation.</p> <p>The gang members tricked the Russian banks' customers into downloading malware via fake mobile banking applications, as well as via pornography and e-commerce programs, according to a report compiled by cyber security firm Group-IB which investigated the attack with the Russian Interior Ministry.</p>

	<p>The criminals - 16 suspects were arrested by Russian law enforcement authorities in November last year - infected more than a million smartphones in Russia, on average compromising 3,500 devices a day, Group-IB said.</p> <p>The hackers targeted customers of state lender Sberbank, and also stole money from accounts at Alfa Bank and online payments company Qiwi, exploiting weaknesses in the companies' SMS text message transfer services, said two people with direct knowledge of the case.</p> <p>Although operating only in Russia before their arrest, they had developed plans to target large European banks including French lenders Credit Agricole, BNP Paribas and Societe General, Group-IB said.</p>

HEADLINE	05/21 Leak: Facebook rules on violent content
SOURCE	https://www.theguardian.com/news/2017/may/21/revealed-facebook-internal-rulebook-sex-terrorism-violence?CMP=share_btn_tw
GIST	<p>Facebook’s secret rules and guidelines for deciding what its 2 billion users can post on the site are revealed for the first time in a Guardian investigation that will fuel the global debate about the role and ethics of the social media giant.</p> <p>The Guardian has seen more than 100 internal training manuals, spreadsheets and flowcharts that give unprecedented insight into the blueprints Facebook has used to moderate issues such as violence, hate speech, terrorism, pornography, racism and self-harm.</p> <p>There are even guidelines on match-fixing and cannibalism.</p> <p>The Facebook Files give the first view of the codes and rules formulated by the site, which is under huge political pressure in Europe and the US.</p> <p>They illustrate difficulties faced by executives scrambling to react to new challenges such as “revenge porn” – and the challenges for moderators, who say they are overwhelmed by the volume of work, which means they often have “just 10 seconds” to make a decision.</p> <p>“Facebook cannot keep control of its content,” said one source. “It has grown too big, too quickly.”</p> <p>Many moderators are said to have concerns about the inconsistency and peculiar nature of some of the policies. Those on sexual content, for example, are said to be the most complex and confusing.</p> <p>One document says Facebook reviews more than 6.5m reports a week relating to potentially fake accounts – known as FNRP (fake, not real person).</p>

Using thousands of slides and pictures, Facebook sets out guidelines that may worry critics who say the service is now a publisher and must do [more to remove hateful, hurtful and violent content](#).

Yet these blueprints may also alarm free speech advocates concerned about Facebook’s de facto role as the world’s largest censor. Both sides are likely to demand greater transparency.

The Guardian has seen documents supplied to Facebook moderators within the last year. The files tell them:

- [Remarks such as “Someone shoot Trump” should be deleted](#), because as a head of state he is in a protected category. But it can be permissible to say: “To snap a bitch’s neck, make sure to apply all your pressure to the middle of her throat”, or “fuck off and die” because they are not regarded as credible threats.
- [Videos of violent deaths](#), while marked as disturbing, do not always have to be deleted because they can help create awareness of issues such as mental illness.
- Some [photos of non-sexual physical abuse and bullying of children](#) do not have to be deleted or “actioned” unless there is a sadistic or celebratory element.
- [Photos of animal abuse can be shared](#), with only extremely upsetting imagery to be marked as “disturbing”.
- All “handmade” art showing nudity and sexual activity is allowed but digitally made art showing sexual activity is not.
- Videos of abortions are allowed, as long as there is no nudity.
- [Facebook will allow people to livestream attempts to self-harm](#) because it “doesn’t want to censor or punish people in distress”.
- Anyone with more than 100,000 followers on a social media platform is designated as a public figure – which denies them the full protections given to private individuals.

Other types of remarks that can be permitted by the documents include: “Little girl needs to keep to herself before daddy breaks her face,” and “I hope someone kills you.” The threats are [regarded as either generic or not credible](#).

In one of the leaked documents, Facebook acknowledges “people use violent language to express frustration online” and feel “safe to do so” on the site.

HEADLINE	05/21 YouTubers make money targeting kids
SOURCE	http://www.thedailybeast.com/articles/2017/05/21/youtube-toy-channels-target-kids-who-watch-instead-of-play
GIST	Ms. Hands (who asks I keep her real name private) uploads a video a day to each of her three channels: Fizzy Toy Show, Fizzy Fun Toys, and ZigZag Toys. Today, she is rescuing Boss Baby and the Smurfs from Gargamel’s Dragon. The toys are carefully organized on a clean living room table, and her palms are

stretched out in front of the camera to introduce our crisis. The dragon is threatening to eat Boss Baby and the Smurfs alive. As usual, the only way we can stop him is by opening more toys.

The plot is entirely tertiary—a simple angle to get shiny things in front of five-year olds. So, a plushie Boss Baby gets a pair of Num Nom Lights Mystery Packs (a line of small, scented chibis that retail for \$7 a pop at your local Target). Smurfette receives a Hello Kitty Chocolate Surprise Egg (with a Hello Kitty magnet inside), and Ms. Hands squeezes a Thomas the Tank Engine gummy, which she ranks a “10 out of 10” on her homebrew “squish meter.”

The video is 13 minutes long, which is the perfect length to maximize profits from YouTube’s advertisement algorithms. This is the seventh Boss Baby-centric episode she’s released this week, standing shoulder to shoulder alongside previous entries like “Don’t Wake Boss Baby! Trolls Smurf Play and Try Not Wake The Bad Crying Baby,” or “Boss Baby Opens Lots of LOL Surprise Dolls Spit, Cry, or Tinkle.” The customer is always right, and in this particular moment in the spring of 2017, the customers want Boss Baby.

In a sense, Ms. Hands is a professional pantomimer—she plays with toys the way all parents do when they’re desperate to keep a young child sated. But she’s also broadcasting to a one million subscriber count. In a single day, the dragon video has racked up 190,000 views, which is low compared to the 1.7 million views on last week’s “Greedy Grandma Chef Game! Trolls & Boss Baby Try to Get Food and Not Wake Granny!”

YouTube is notoriously reticent with concrete revenue specifics for their creators, but the SocialBlade, the touted third-party resource that calculates for YouTube and Twitch channels, estimates that Ms. Hands is making at least six figures a year for her work. “I can’t say how much I’m pulling in,” she says, when I ask. “I can say I’m making more than I did as a school psychologist!”

Ms. Hands, who’s tells me she’s over 30 but declines to give her exact age as some of her fans think she’s a teenager, quit that psychology job after the birth of her son. The long hours drafting cognitive evaluations ate into her off-time, and after five years of miscarriages and failed IVF treatments, she wanted a schedule that would afford her more time with her new family.

“I started thinking of other ways to earn money. One day I was watching videos on YouTube to figure out how to highlight my hair. I looked at the views on these videos and it hit me—these women were making pretty good money making these videos.” she says.

“I did some research and saw the top YouTube earners were gamers and toy reviewers. Since I worked with kids, I thought toy reviews was right up my alley. But, I had no toys, no camera and had never edited a movie. I bought some toys, a cheap camcorder and learned iMovie. Slowly, but surely, I started cranking out videos.”

Ms. Hands has made 922 videos since she started Fizzy Toy Show in the November of 2014. In a few months she'll eclipse one billion total views, undoubtedly solidifying her as one of the true moguls of Toy YouTube.

It's an industry that happened by total accident. Exhausted parents started off-loading babysitting duties to the family iPad, and those boys and girls represented a pretty lucrative market. By 2015, four of the five most popular channels on YouTube were aimed at kids. A generation of content creators realized that they could build a channel presence that would mine those juvenile clicks all day long.

Right now, it's Boss Baby; last year it was Moana and Zootopia. It's similar to the strategies employed by Nickelodeon and Cartoon Network for years—filling up hours of after-school television with garish, hypnotizing reruns. But people like Ms. Hands realized they could have the same success with far less overhead. Fizzy Toy Show is a one woman job. YouTube's autoplay feature slams all her videos together in a neat, never-ending playlist. Her mortgage is paid by kids in the backseats of mini-vans all over the world.

Last year, The Guardian reported that for the first time, children aged between 5 and 15 were spending more time on the internet than watching TV. In March of 2015, four of the five most popular channels on YouTube were focused squarely on a primary-school audience. However, this genuine enterprise can often look hilarious from the outside.

There is a long, long history of marketing executives pushing shameless junk on kids, so it seems strange to bellyache about it now. But it's also never been easier to get in the game. There is no watchdog authority to children's content on YouTube. All it takes is a camera and a small toy collection. The sector is percolating, and naturally, people who've never had any humanitarian interest in children's entertainment are getting involved.

“If you look at the top toy channels you'll see the same the content. If it performs well for one big channel you'll see everyone else try to replicate that success,” says Melissa Hunter, the mommy from the “Mommy and Gracie Show”—one of the first prominent kid-centric channels on the site. “Everybody has quit their job. They bought their big house and drive their fancy car—it then becomes imperative for the channel to continue to perform at that level to support that family's lifestyle. Because you never know what's going to catch on or not, I think it's really hurt the originality and innovation.”

It can often feel that Kid YouTube is founded on the premise that young children lack distinguishing taste. That they cannot tell the difference between an FCC-approved, million-dollar television show and a mom unwrapping action figures on a kitchen counter. It is a cynical, and potentially accurate perspective. It's a hard thing to argue against when there are reams and reams of highly profitable Boss Baby videos being uploaded everyday.

	To be clear, Ms. Hands works incredibly hard. She shoots a week's worth of videos all at once, and reserves an entire day to edit late into the night. Her breaks are rare, but she has absolutely no guilt about the monotony of her craft. Ms. Hands makes kids laugh, and in turn she makes a lot of money. Squeezing a Thomas the Tank Engine mini has never been so fulfilling.

HEADLINE	05/21 NKorea special cyber cell: Unit 180
SOURCE	http://www.reuters.com/article/us-cyber-northkorea-exclusive-idUSKCN18H020
GIST	<p>North Korea's main spy agency has a special cell called Unit 180 that is likely to have launched some of its most daring and successful cyber attacks, according to defectors, officials and internet security experts.</p> <p>North Korea has been blamed in recent years for a series of online attacks, mostly on financial networks, in the United States, South Korea and over a dozen other countries.</p> <p>Cyber security researchers have also said they have found technical evidence that could link North Korea with the global WannaCry "ransomware" cyber attack that infected more than 300,000 computers in 150 countries this month. Pyongyang has called the allegation "ridiculous".</p> <p>The crux of the allegations against North Korea is its connection to a hacking group called Lazarus that is linked to last year's \$81 million cyber heist at the Bangladesh central bank and the 2014 attack on Sony's Hollywood studio. The U.S. government has blamed North Korea for the Sony hack and some U.S. officials have said prosecutors are building a case against Pyongyang in the Bangladesh Bank theft.</p> <p>No conclusive proof has been provided and no criminal charges have yet been filed. North Korea has also denied being behind the Sony and banking attacks.</p> <p>North Korea is one of the most closed countries in the world and any details of its clandestine operations are difficult to obtain. But experts who study the reclusive country and defectors who have ended up in South Korea or the West have provided some clues.</p> <p>Kim Heung-kwang, a former computer science professor in North Korea who defected to the South in 2004 and still has sources inside North Korea, said Pyongyang's cyber attacks aimed at raising cash are likely organized by Unit 180, a part of the Reconnaissance General Bureau (RGB), its main overseas intelligence agency.</p> <p>"Unit 180 is engaged in hacking financial institutions (by) breaching and withdrawing money out of bank accounts," Kim told Reuters. He has previously said that some of his former students have joined North Korea's Strategic Cyber Command, its cyber-army.</p>

"The hackers go overseas to find somewhere with better internet services than North Korea so as not to leave a trace," Kim added. He said it was likely they went under the cover of being employees of trading firms, overseas branches of North Korean companies, or joint ventures in China or Southeast Asia.

The U.S. Department of Defense said in a report submitted to Congress last year that North Korea likely "views cyber as a cost-effective, asymmetric, deniable tool that it can employ with little risk from reprisal attacks, in part because its networks are largely separated from the Internet".

"It is likely to use Internet infrastructure from third-party nations," the report said.

South Korean officials say they have considerable evidence of North Korea's cyber warfare operations. "North Korea is carrying out cyber attacks through third countries to cover up the origin of the attacks and using their information and communication technology infrastructure," Ahn Chong-ghee, South Korea's vice foreign minister, told Reuters in written comments.

North Korea was also suspected of staging cyber attacks against the South Korean nuclear reactor operator in 2014, although it denied any involvement.

That attack was conducted from a base in China, according to Simon Choi, a senior security researcher at Seoul-based anti-virus company Hauri Inc.

"They operate there so that regardless of what kind of project they do, they have Chinese IP addresses," said Choi, who has conducted extensive research into North Korea's hacking capabilities.

Dmitri Alperovitch, co-founder of prominent U.S. security firm CrowdStrike Inc, added: "Their capabilities have improved steadily over time, and we consider them to be a threat actor that is capable of inflicting significant damage on U.S. private or government networks."

HEADLINE	05/19 Victims' call hackers bluff in deadline
SOURCE	http://www.seattletimes.com/nation-world/victims-call-hackers-bluff-as-ransomware-deadline-nears/
GIST	<p>With the clock ticking on whether a global hacking attack would wipe out his data, Bolton Jiang had no intention of paying a 21st-century ransom.</p> <p>Since a week ago, when the malware first struck, Jiang had been fixing and replacing computers at the electronics company where he works in Shanghai. Meeting the hackers' demands was a bother, he said, and there was no guarantee he would get his data back.</p> <p>"Even if you do pay, you won't necessarily be able to open the files that are hit," he said.</p>

Tens of thousands of computer users worldwide made the same decision, refusing to pay the anonymous hackers behind the ransomware attack known as WannaCry. The attackers had demanded that individuals pay up to \$600 by Friday to regain control of their machines, or face losing their data.

As of Friday evening in New York, about 300 payments had been made, netting the hackers about \$95,000 worth of the digital currency bitcoin, according to companies monitoring the hackers' payment accounts.

But the malicious software, which attacked versions of Microsoft's Windows software, exposed the widespread vulnerability of computers to such attacks and offered a peek at a new type of crime capable of being committed on a global scale.

The latest strain of ransomware was particularly troubling, security experts warned, because it was based on software stolen from the U.S. National Security Agency (NSA) that had been posted online last month.

Law-enforcement agencies in the United States and elsewhere have been searching for the WannaCry culprits, with attention focused on hackers linked to North Korea.

Along with broad attacks in Europe, many of the estimated 200,000 computers hit by WannaCry were in Asia, where widespread use of pirated software has increased their vulnerability. Those affected, including hospitals, government offices and universities, have lost access to business information, term papers and medical records.

Some victims have struck a defiant tone. The Japanese conglomerate Hitachi, which was identified in the news media as a victim, declined to confirm those reports Friday but said it had no intention of paying a ransom and that it expected to be fully secure against future attacks by Monday. Nissan Motor, another Japanese industrial giant, also said it would not pay a ransom.

HEADLINE	05/19 Ford over-the-air software updates
SOURCE	http://www.reuters.com/article/us-ford-motor-software-idUSKCN18F2BJ
GIST	<p>Ford Motor Co said on Friday it would delve into the growing arena of "over-the-air" software updates, adding Android Auto and Apple CarPlay to its Sync 3-equipped 2016 vehicles for the first time via a wireless software update.</p> <p>The latest upgrade to Sync 3, Ford's interactive touch-screen system, will be accomplished through an over-the-air (OTA) update using Wi-Fi, not unlike how new software gets uploaded to smartphones by manufacturers.</p>

	<p>After Tesla Inc's early lead in 2015 introducing OTAs, traditional automakers are slowly beginning to embrace the new technology, within limits. Concerns about security and resistance from dealers worried about losing service revenue have hampered its adoption.</p> <p>Thus far, established automakers have not used OTAs for safety systems, only for non-critical systems like infotainment.</p> <p>Customers can also get the update via the traditional means of visiting their dealer or using a USB drive, Ford said.</p> <p>Android Auto and Apple CarPlay are operating systems from Alphabet's Google and Apple Inc that allow drivers to connect their smartphones to their vehicles' dashboard.</p>

HEADLINE	05/19 Social media's impact on mental health
SOURCE	http://www.marketwatch.com/story/lonely-people-are-more-likely-to-share-on-facebook-2017-03-06
GIST	<p>Being constantly bombarded by other people's supposedly successful and happy lives may not be good for your mental health.</p> <p>Instagram, an app that people use to share photos of their lives as seen through a series of flattering filters, was rated worst for the mental health of young people in a study by the Royal Society for Public Health in the U.K. The researchers asked nearly 1,500 British social media users aged 14 to 25 about five of the most popular social media platforms: Facebook, Instagram, Snapchat, Twitter and YouTube. The aim of the survey was to find out how they feel each of these platforms impacts their health and well-being.</p> <p>Based on the 14 health-related questions, Instagram came out the worst, followed by Snapchat, Facebook, Twitter and YouTube.</p> <p>"Social media has been described as more addictive than cigarettes and alcohol," Shirley Cramer, chief executive of the Royal Society for Public Health, said in a statement. "It is no longer possible to ignore it when talking about young people's mental health issues." (Indeed, one-quarter of millennials look at their phone more than 100 times a day compared with just 10% of baby boomers, a study released this week found.) Both Instagram and Snapchat "are very image-focused and it appears they may be driving feelings of inadequacy and anxiety in young people," she says. (The social networks mentioned in the report did not immediately reply to request for comment.)</p> <p>What's more, teenagers suffering from depression or anxiety often use smartphones as a coping skill rather than learning to sit with their emotions and developing relationships, according to Cole Rucker, co-founder and chief executive of Paradigm Malibu, an adolescent mental health and drug abuse treatment center.</p>

Oversharing on Facebook has previously been linked to loneliness. People who spent the most time on social media had twice the odds of having greater perceived social isolation, a recent study of more than 1,700 people published in the academic “American Journal of Preventive Medicine.” Social isolation, a state in which an individual lacks a sense of social belonging, true engagement with others, and fulfilling relationships, is associated with increased morbidity and mortality, the researchers said.

It isn’t the first time scientific research has linked sadness and Facebook either. More than 79% of the users who describe themselves as “lonely” disclosed personal information, such as their favorite books and movies, compared with less than 65% of other users, according to a 2014 study published by researchers at Charles Sturt University in New South Wales, Australia, which appeared in the journal, “Computers in Human Behaviour.” The study analyzed Facebook postings of more than 600 women — half of them described themselves as “lonely.”

What’s more, nearly 98% of the lonely users shared their relationship status publicly on Facebook instead of restricting it to just friends, and they even publicly shared their home address online, according to the study’s authors, associate professor Yeslam Al-Saggaf and lecture Sharon Neilson from CSU’s School of Computing and Mathematics. People who don’t explicitly state that they’re lonely on Facebook (though some might be) tend to share more about subjects like religion and politics, the study found.

Of course, social media is also a boon for people who feel isolated. “It makes sense that the people who felt lonely would disclose this type of information,” Al-Saggaf says. “They want to make it easier for others to initiate contact with them, which may help them overcome their feelings of loneliness.” But over-dependence on social networks as a social outlet can also lead to what some doctors call “Facebook Depression,” according to a 2010 report, “The Impact of Social Media on Children, Adolescents and Family,” by the American Academy of Pediatrics. (A spokesman for Facebook pointed to its own research that shows connecting with friends online improves well-being.)

Terror Conditions

[Top of page](#)

HEADLINE	05/22 Claim: Dylann Roof’s jihad envy
SOURCE	http://www.thedailybeast.com/articles/2017/05/22/inside-the-head-of-dylann-roof-a-terrorist-paradigm
GIST	<p>He is the classic “lone wolf,” radicalized in front of the glowing computer screen in the darkened room of his own home, brooding over what he reads on the internet, but going back there again and again to feed his frustrations, his dreams of glory, his anger, and his hatred until finally he feels compelled to act.</p> <p>He could be the shooter in Orlando’s Pulse nightclub last June, or the man who drove a truck through the crowd on the seaside promenade in Nice, France, last July; those, too, were people with no clear links to</p>

any terrorist organization (despite ISIS claims), but long histories as losers who couldn't get their lives together.

But those murderers died at the scene of their crimes. This one didn't have the courage to kill himself, and didn't emerge from the carnage he inflicted to die in a hail of bullets as he'd expected.

This one was arrested, and confessed, and was interrogated, and given multiple psychological exams. And now the records of those many hours of interviews have been unsealed by a federal court, giving us some of the most detailed information we will ever have about a murderous lone wolf's psychology—if only we recognize that's what he is.

The catch is that this terrorist is Dylann Roof, who is not a Muslim. He is the young white supremacist who murdered nine black men and women in a Bible study group at Emanuel African Methodist Episcopal Church in Charleston, South Carolina, one evening in June 2015, and because his atrocity does not fit into the category of "radical Islamic terror," it's assumed his way of thinking must be very different from other lone wolves.

As terrorism authority Peter Bergen points out in his book, *United States of Jihad*, "By any reasonable standard, the attack on the church in Charleston was terrorism," but it did not "fit into the political and media narrative that... Muslim militants are the major terrorist problem in the United States."

As a result, the importance of what can be learned from Roof's psychological profiles has largely been missed, starting with the fact that while he did not embrace the doctrines of Islam or jihad, he compared himself to those who did, and saw himself very much in the mold of a holy warrior for his own cause.

James C. Ballenger M.D., who conducted multiple interviews with Roof to judge his competency to stand trial and participate in the death penalty hearing that came after it, wrote in January in a just-unsealed evaluation that Roof "stated the best way he has found to explain his thinking is the analogy of being a Jihadist."

Later in the same interview, Roof "stated clearly that his situation is like a Palestinian in an Israeli jail after killing nine people. He said the Palestinian would not be upset or have any regret, because he would have successfully done what he tried to do."

Typically, people who engage in terrorist causes, particularly the lone wolves or "stray dogs," as Rand's veteran authority on terrorism Brian Jenkins calls them, share at least three basic characteristics.

First there's testosterone. Almost all are young men, and often very frustrated young men on the edge of society with difficulty holding down jobs and problems as well in their sexual relationships, if they have such relationships at all.

Second, there's a narrative. This is perhaps the most important and most misunderstood element in the shaping of a terrorist's thinking. It's often confused with ideology or with religion, but what's important is identification with a story in which a people are oppressed and the terrorist sees himself as a hero who comes to the rescue, even if the price of his courage and commitment is martyrdom.

It is no accident that the seminal ideological tract for al Qaeda is Ayman Zawahiri's Knights Under the Prophet's Banner, or that the so-called caliphate of the self-proclaimed Islamic State tries to cloak its atrocities in the language of ancient chivalry. But this identification with narratives of oppression is not unique to Islamist extremists. One could say the same of terrorists over the years carrying out attacks, for instance, in the name of oppressed Irish Catholics, or downtrodden Tamils, or the peasants of Peru.

And third, the terrorist wants his act to have theatrical impact, projecting his cause and his identification with it on the world stage, a task made much easier today by the prevalence of social media.

What the unsealed psychological evaluations of Dylann Roof show is that this formula of testosterone, narrative, and theater—TNT, if you will—fits his case perfectly.

HEADLINE	05/21 ISIS tests chemical weapons on humans
SOURCE	http://www.independent.co.uk/news/world/isis-iraq-chemical-weapons-nazi-experiments-human-guinea-pigs-a7747156.html
GIST	<p>Isis are conducting chemical weapons experiments on "human guinea pigs" before launching attacks on Western targets, according to secret documents.</p> <p>The extremist group has reportedly poisoned prisoners by spiking their food and water with compounds used in pesticides that are easy to obtain.</p> <p>Security forces now fear the terror network may hatch a twisted plot to contaminate Western food supplies with formulas that quickly dissolve in liquid.</p> <p>The experiments were recorded in a stash of papers found hidden in Mosul University after Iraqi special forces recaptured the city from IS fighters.</p> <p>They reveal one victim was fed thallium sulphate - a colourless, tasteless salt that can be dissolved in water - and began to suffer fever, nausea, and swelling of the stomach and brain before dying in agony ten days later.</p> <p>Isis described the chemical as an "ideal lethal poison" and claimed to be in "possession of an ample amount of the solution to fill demands", according to the documents, which were verified by British and US forces and later obtained by The Times.</p>

	<p>Terrorists also injected a nicotine-based compound, said to have no antidote, into another victim who passed out within seconds and died hours later. Ingredients for the poison are contained in cigarettes and vaping supplies, while thallium sulphate is available for sale in many countries including the US.</p> <p>The chemical weapons report also contained recipes and guides for producing the toxic nicotine compound.</p> <p>Chemical weapons expert Hamish de Bretton-Gordon told The Times: "This is a horrifying throwback to the Nazis who would test nerve agents on live humans. During the Second World War, the Nazis conducted thousands of deadly experiments with mustard gas on prisoners at Sachsenhausen concentration camp, near Berlin."</p> <p>They are thought to have used Mosul University, one of the largest in the Middle East, to develop chemical weapons for the last three years.</p> <p>The programme is now believed to have moved to the group's headquarters in Raqqa, Syria.</p>

HEADLINE	05/21 Suicide attack Syria stronghold kills 14
SOURCE	http://abcnews.go.com/International/wireStory/suicide-attack-syrias-insurgent-stronghold-kills-47541040?cid=clicksource_76_null_articleroll_hed
GIST	<p>A twin explosion, believed to be caused by a suicide attack, in Syria's rebel-controlled Idlib province Sunday killed at least 14 members of a powerful ultraconservative insurgent group, Syria opposition activists said.</p> <p>It was not clear who was behind the attack. Northern Idlib is an opposition stronghold, but an al-Qaida-linked group has the most sway there and it is at odds with Ahrar al-Sham, the powerful ultraconservative group targeted in the attack.</p> <p>The clashes between the two groups were triggered earlier this year by a new push for rebels to take part in Russia-backed talks to bring about cease-fire. The talks also called for rebel groups to battle against the al-Qaida-linked group, which labelled the talks as treason. But the two groups are essentially fighting for control over Idlib, the one province in Syria that is totally under opposition control and has a border with the outside world, through Turkey.</p> <p>The battles that raged in February were considered the worst infighting in years. But the violence has largely subsided as each group keeps control of separate parts of the province.</p> <p>The attack Sunday hit a meeting of the group's leaders in eastern Idlib. The opposition-operated Baladi News Network quoted a witness as saying at least 15 people were killed in the attack in the village of Tal Touqan, to the east of the provincial capital, targeting a meeting of the group. The news network said the attackers reached the area on a rigged motorcycle.</p> <p>At first, the Britain-based Syrian Observatory for Human Rights said at least five Ahrar al-Sham members were killed. It later said the death toll rose to 14, including a local leader, in the twin attacks.</p>

HEADLINE	05/21 Afghan officials: Taliban kill 20 police
SOURCE	http://www.reuters.com/article/us-afghanistan-taliban-idUSKBN18H085?il=0
GIST	<p>At least 20 Afghan policemen were killed in Taliban ambushes in south central Afghanistan, officials said on Sunday, as security forces sought to dislodge insurgents in multiple districts.</p> <p>Fighting is ongoing in Zabul province, where the police were attacked in Shah Joi district, provincial governor Bismullah Afghanmal said. He said the Taliban had ambushed police in the areas of Chino and Ghulam Rabat.</p> <p>"The report we have right now indicates that 20 policemen are martyred and 10 others are wounded. The number may increase," Afghanmal told Reuters.</p>

HEADLINE	05/20 Chibok girls reunited with families
SOURCE	http://www.bbc.com/news/world-africa-39987271
GIST	<p>A group of the "Chibok girls" freed from Nigeria's Boko Haram militants have been reunited with their families.</p> <p>The 82 girls, who were part of a huge group kidnapped from their school in 2014, are in the care of security services in the capital, Abuja. Their parents travelled by bus through the night to meet their daughters.</p> <p>More than 100 of the 276 girls, taken from the town of Chibok, are still being held by the militant group. Their whereabouts are unknown.</p> <p>The reunion in Abuja had a celebratory atmosphere, with music and dance.</p> <p>The BBC's Alistair Leithead says the girls were already dancing when their parents got off the bus and raced towards them, in an emotional reunion.</p> <p>The 82 young women were only freed two weeks earlier in exchange for five Boko Haram militants.</p> <p>The most recent group freed was supposed to have 83 girls - but one refused to leave, saying she was happy and had found a husband, a Nigerian government spokesman said.</p> <p>The freed girls remain in government care - under the eye of security services who are questioning them about their time spent as captives.</p>

HEADLINE	05/19 Israel intel furious over Trump reveal
SOURCE	http://www.newsmax.com/Newsfront/Israeli-intelligence-officials-furious/2017/05/19/id/791254/
GIST	<p>Israeli intelligence officials are furious that President Donald Trump revealed sensitive information about an ISIS plot during a meeting with Russian officials, fearing he may have compromised a vital source, Foreign Policy reported Friday.</p> <p>"To them, it's horrifying," a U.S. defense official in military planning told Foreign Policy, saying Israeli officials were shouting at their American counterparts. "Their first question was: 'What is going on? What is this?'"</p> <p>According to Foreign Policy, behind a public display of harmony ahead of Trump's visit with Israel Prime Minister Benjamin Netanyahu next week, Israeli intelligence officials are angry about Trump's disclosures during a May 10 meeting in the White House with Russian Foreign Minister Sergei Lavrov and the Russian ambassador to the United States, Sergey Kislyak.</p> <p>The details likely came from a source who was also useful on Iran's Islamic Revolutionary Guard Corps and its Hezbollah proxies in Syria and Lebanon — high priorities for Israel, Foreign Policy reported.</p> <p>Trump's national security adviser, Lt. Gen. H.R. McMaster, said the counterterrorism information Trump shared was "wholly appropriate."</p> <p>But according to Foreign Policy, Israeli intelligence officials didn't expect Trump to be careless with "one of their most sensitive of accesses," the official said.</p> <p>"Sources aren't infinite," the defense official said. "They are already reassessing: 'Where are we going to be able to gain that kind of information?'"</p>

HEADLINE	05/19 ISIS, AQ rally fighters; exploit Trump
SOURCE	http://www.nbcnews.com/storyline/isis-uncovered/isis-al-qaeda-use-trump-rally-jihadis-n762201
GIST	<p>As President Trump embarks on a nine-day trip to meet with U.S. allies in the Middle East, counterterrorism officials and experts say ISIS and al Qaeda are trying to use his rhetoric and military moves to turn Muslims against the U.S.</p> <p>"There's a lot of jihadist propaganda that conveys the U.S. as increasingly incompetent and Islamophobic under Trump," said Alex Kassirer, senior analyst at Flashpoint Intelligence, which monitors jihadi web posts for NBC News.</p> <p>A U.S. counterterrorism official confirmed that on the social media accounts most closely associated with the core of ISIS, there has been discussion of Trump's rhetoric. The official said the same narrative, particularly about Trump's so-called Muslim "ban," is found in ISIS recruiting forums.</p> <p>While ISIS has the largest social media presence among Islamic terrorist groups, Kassirer said that al Qaeda and its affiliates have been active in their messaging about U.S. policies under Trump.</p> <p>"There's been a jihadist-wide uptick in this narrative, including not just ISIS, but al al Qaeda as well, and actually al Qaeda and its affiliates have been more vocal," said Kassirer.</p> <p>Just nine days into the Trump presidency, on Jan. 29, Navy Seals raided a Yemeni village on January 29. Fourteen jihadis were killed as well as several women and children. The raid also resulted in the death of an American SEAL.</p> <p>The raid was condemned by Al Qaeda in the Arabian Peninsula (AQAP) on Jan. 31.</p> <p>"This criminal raid came only a few days after the new American President Trump took the reins of power," said a social media post, "thus confirming to the world that America is still the bearer of the banner of criminality against the oppressed in the world and that America persists on targeting Muslim peoples and unjustifiably attacking women and children in the ugliest of images."</p> <p>One of the dead was Nawar "Nora" al-Awlaki, the 8-year-old daughter of Anwar al-Awlaki, the American Muslim cleric who had been killed in 2011.</p> <p>That same week, the President signed the executive order limiting immigration from six Islamic nations. Kassirer said that the so-called Muslim "ban" led to a surge in internet traffic criticizing U.S. treatment of Muslims.</p> <p>"After that, we witnessed a wave of jihadists explaining how that executive order was evidence of anti-Islamic sentiments in the U.S.," said Kassirer. "For example, many were pointing to the late Anwar al-Awlaki's quote that reads: "The West will eventually turn against its Muslim citizens."</p>

	<p>Typical, she said, was a posting on Telegram, an instant messaging service, that read, "what Trump has done has clearly revealed the truth, and harsh reality behind the American government's hatred towards Muslims #MuslimBan."</p> <p>"There has been an abundance of chatter," she said, noting that it can be found not just on social media sites like Telegram and Twitter, but deep web forums reserved for communications between hardline jihadis.</p> <p>Trump has been a unifying figure in the jihadi world, and sometimes both ISIS and al Qaeda will send out the same message about him.</p> <p>How effective is it all? Hard to tell, says experts like Kassirer, who notes that slamming Trump is just a new twist on an old narrative.</p> <p>"The concept that the U.S. (and the West generally) has some sort of disdain for Islam is something that's long been spewed by terrorist organizations and their followers, especially as a major part of their recruitment strategy is to present this binary vision in which the entire world is against Muslims as a way of rallying potential supporters against a common enemy."</p> <p>Trump's rhetoric, she said, has just enhanced that narrative.</p>

HEADLINE	05/19 Car bombings in Baghdad kill 11
SOURCE	http://abcnews.go.com/International/wireStory/iraqi-officials-car-bombings-baghdad-kill-11-people-47519377?cid=clicksource_76_null_articleroll_hed
GIST	<p>Two car bombs in southwestern Baghdad killed 11 people, including four police officers, and wounded at least 20 late on Friday night, according to Iraqi police and hospital officials.</p> <p>The first attack targeted a police checkpoint in the neighborhood and moments later, the second blast hit a nearby street crowded with civilians, the officials said, speaking on condition of anonymity because they were not authorized to talk to reporters.</p> <p>No group immediately claimed responsibility for the attack but it bore the hallmarks of the Islamic State group, which has claimed similar bombings in the past.</p> <p>The attack comes as Iraqi forces, backed by the U.S.-led coalition, are slowly moving in on the last neighborhoods held by the Islamic State group in Mosul, Iraq's second-largest city.</p>

HEADLINE	05/20 Brazil's controversial terror law
SOURCE	http://abcnews.go.com/International/wireStory/harsh-sentences-sympathizers-brazil-test-law-47525228
GIST	<p>After months of trading messages on social media praising violence by the Islamic State militant group, Leonid El Kadre de Melo said it was time to act.</p> <p>"I want to be clear," he wrote in a message recovered by Brazilian authorities on the eve of the Rio 2016 Olympics. "My intention is to put together a real and concrete group" to launch attacks.</p> <p>While de Melo's defenders portray that message as a bit of social media bravado, it alarmed Brazilian officials worried that the global Games could prove a target for terrorists. De Melo and 12 other men were detained in July during a high-profile sweep under a new law that greatly widened the scope of what could be considered terrorism in Latin America's largest nation.</p> <p>This month, he and seven other of the men were sentenced to prison terms ranging from 6 years to nearly 16 for de Melo, labelled by authorities as the group's leader.</p> <p>The first — and so far only — use of the law has been controversial in Brazil, a nation that has never suffered a known Islamist terror attack and in a broader region where they have been extremely rare.</p> <p>Former Public Security Secretary Jose Vicente da Silva said the quick reaction of officials "was the only thing that could stop such a crime," and said the sentence was justified given the threat the men posed.</p> <p>But others suggested the law goes too far.</p> <p>Many Brazilians saw little need for such a law: The country of 200 million people has seen little open friction involving its 1.5 million Muslim citizens. In recent decades, intelligence agencies have expressed concerns about possible terrorism activity in Brazil's triple border area with Paraguay and Argentina, but residents there wave aside the concerns, saying the region is simply a melting pot of cultures.</p> <p>The country accounted for only three of the tens of thousands of foreign fighters for the Islamic State group counted in a 2015 study by the Soufan Group, a private intelligence firm.</p> <p>A more visceral worry for many was possible misuse of anti-terror laws in a country and region that suffered through oppressive conservative dictatorships that killed thousands of South Americans. Human rights groups warned that overly broad language could provide tools to suppress free speech.</p> <p>The law calls for up to eight years in prison for "advocating terrorism," and 10 to 20 years for "joining terrorist organizations," though "terrorism" and "terrorist" are not defined.</p>

	<p>In his sentence, federal judge Marcos Josegrei da Silva noted that the men never began planning an attack, but said that "it doesn't matter if there really was any intent to translate public declarations of support into preparations or concrete actions."</p> <p>Still, many doubt the men, most recent converts to Islam, posed much of a threat. Some had visited the Middle East, though authorities have not accused them of making connections with terror groups abroad.</p> <p>The men range in age from 21 to 42, come from different regions of Brazil and have varying levels of education and work experience.</p>

HEADLINE	05/20 Iraq: suicide attack near oil-rich Basra
SOURCE	http://abcnews.go.com/International/wireStory/iraq-suicide-attack-oil-rich-basra-kills-47526977?cid=clicksource_76_null_articleroll_hed
GIST	<p>A suicide bombing near the oil-rich city of Basra killed at least eight people as the Islamic State group took the fight against Iraqi forces deep into the country's south, a military commander said Saturday.</p> <p>Five civilians and three troops were killed when the bomber blew up his explosives-laden car on Friday at a checkpoint north of Basra just behind a bus waiting to be cleared, said chief of the Basra Operations Command, Lt. Gen. Jamil al-Shimmari.</p>

	<p>At least 41 others were wounded, al-Shimmari said.</p> <p>A second attacker drove down a desert road after the explosion and security forces killed him, al-Shimmari added.</p> <p>Basra, about 550 kilometers (340 miles) southeast of Baghdad, is home to about 70 percent of the country's proven oil reserves of 153.1 billion barrels. Located on the Persian Gulf and bordering Kuwait and Iran, the city is also Iraq's only outlet to the sea and the hub for most of the country's oil exports, with 3.23 million barrels exported from Basra last month.</p> <p>In an online statement, IS claimed responsibility for the attack, saying it targeted Shiites.</p>

HEADLINE	05/19 Pentagon plans to 'annihilate' ISIS
SOURCE	https://www.yahoo.com/news/pentagon-plans-annihilate-fighters-220433783.html
GIST	<p>Washington (AFP) - President Donald Trump has instructed the Pentagon to "annihilate" the Islamic State group in Syria in a bid to prevent escaped foreign fighters from returning home, Defense Secretary Jim Mattis said Friday.</p> <p>The move to encircle then kill as many jihadists in place as possible -- rather than letting them exit a city and targeting them as they flee -- reflects an increased urgency to stop battle-hardened jihadists bringing their military expertise and ideology back to European capitals and other areas.</p> <p>The president has "directed a tactical shift from shoving ISIS out of safe locations in an attrition fight to surrounding the enemy in their strongholds so we can annihilate ISIS," Mattis said, using an acronym for IS.</p> <p>"The intent is to prevent the return home of escaped foreign fighters."</p> <p>Trump, who campaigned on a pledge to quickly defeat IS, signed an executive order soon after taking office giving his generals 30 days to come up with a revised plan to wipe the jihadists out.</p> <p>The review resulted in the new "annihilation campaign" and saw commanders gain greater autonomy to make battlefield decisions.</p>

HEADLINE	05/21 Report: WHO spends \$200M a year travel
SOURCE	http://www.cbsnews.com/news/world-health-organization-un-agency-spends-big-on-travel-report/
GIST	<p>LONDON -- The World Health Organization routinely spends about \$200 million a year on travel -- far more than what it doles out to fight some of the biggest problems in public health including AIDS, tuberculosis or malaria, according to internal documents obtained by The Associated Press.</p>

As the cash-strapped U.N. health agency pleads for more money to fund its responses to health crises worldwide, it has also been struggling to get its own travel costs under control. Despite introducing new rules to try to curb its expansive travel budget, senior officials have complained internally that U.N. staffers are breaking the rules by booking perks like business class airplane tickets and rooms in five-star hotels.

Last year, WHO spent about \$71 million on AIDS and hepatitis. On malaria, it spent \$61 million. And to slow tuberculosis, WHO invested \$59 million. Still, some health programs do get exceptional funding -- the agency spends about \$450 million trying to wipe out polio every year.

On a recent trip to Guinea, where WHO director-general Dr. Margaret Chan praised health workers in West Africa for triumphing over Ebola, Chan stayed in the biggest presidential suite at the Palm Camayenne hotel in Conakry. The suite has an advertised price of 900 euros, about \$1,008, a night. The agency declined to say who picked up the tab, noting only that her hotels are sometimes paid for by the host country.

But some say that sends the wrong message to the rest of the agency's 7,000 staffers.

Ian Smith, executive director of Chan's office, said the chair of WHO's audit committee said the agency often did little to stop misbehavior.

In a statement to the AP, the U.N. health agency said "the nature of WHO's work often requires WHO staff to travel" and said costs had been reduced 14 percent last year compared to the previous year -- although that year's total was exceptionally high due to the 2014 Ebola outbreak in West Africa.

But staffers are still openly ignoring the rules.

An internal analysis in March, obtained by the AP, found that only two of seven departments at WHO's Geneva headquarters met their targets, and concluded the compliance rate for booking travel in advance was between 28 and 59 percent.

Since 2013, WHO has paid out \$803 million for travel. WHO's approximately \$2 billion annual budget is drawn from the taxpayer-funded contributions of its 194 member countries, with the United States the largest contributor.

HEADLINE	05/22 Claim: Venezuela 5,000 Russia SAM missiles
SOURCE	http://www.reuters.com/article/us-venezuela-arms-manpads-idUSKBN1810E9

GIST	<p>Venezuela possesses 5,000 Russian-made MANPADS surface-to-air weapons, according to a military document reviewed by Reuters, the largest known stockpile in Latin America and a source of concern for U.S. officials amid the country's mounting turmoil.</p> <p>Venezuela's socialist government has long used the threat of an "imperialist" invasion by the United States to justify an arms buildup. Much of that arsenal was obtained from Russia by Venezuela's late President Hugo Chavez, whose tenure lasted from 1999 until his death in 2013.</p> <p>The missiles, which are shoulder-mounted and can be operated by one person, pose a serious threat to commercial and military aircraft. Weapons experts said there have long been fears that the weapons could be stolen, sold or somehow channeled to the wrong hands, concerns exacerbated by the current civil unrest in Venezuela and the economic crisis roiling the oil-producing nation.</p> <p>According to a Venezuelan military presentation seen by Reuters, the South American country has 5,000 SA-24 Man-Portable Air-Defense System (MANPADS) missiles, also known as the Igla-S.</p> <p>The document seen by Reuters provides the most complete count to date of the size of the arms stockpile. Public weapons registries confirm the bulk of the numbers seen on the Venezuelan military presentation.</p>

HEADLINE	05/20 Arctic 'doomsday' seed vault breach
SOURCE	http://www.upi.com/Science_News/2017/05/20/Arctic-doomsday-seed-vault-suffers-breach-from-permafrost-melt/7721495287446/?utm_source=fp&utm_campaign=ts&utm_medium=16
GIST	<p>May 20 (UPI) -- The remote Arctic "doomsday" seed vault that houses some 800,000 vital crop seeds to be used in the event of a disaster suffered a water breach from melting permafrost due to soaring Arctic temperatures officials said Friday.</p> <p>The Svalbard Global Seed Vault, more commonly known as the "Doomsday Vault," was built in 2008 in a mountain on the Norwegian island of Spitsberge as a failsafe way to protect important crops in the event of a man-made or natural disaster. An unexpected heat wave in the Arctic triggered melting of snow and ice.</p> <p>The seeds were protected from the water, but the incident alarmed some officials who thought the layers of permafrost, which is made up of Ice Age-era soil, bone fragments and water, would never melt. The water only made it as far as the entranceway to the seed vault and refroze.</p> <p>"A lot of water went into the start of the tunnel and then it froze to ice, so it was like a glacier when you went in," said Hege Njaa Aschim, from the Norwegian government, which owns the vault.</p>

	Scientist Cary Fowler, who helped create the vault, said the seeds are protected from any sort of melt because the area where the seeds are located is positioned uphill from the vault entrance.

HEADLINE	05/20 NKorea missile passes reentry test
SOURCE	http://www.telegraph.co.uk/news/2017/05/20/northkorea-missile-passes-re-entry-test-breakthrough-nuclear/
GIST	<p>The ballistic missile launched by North Korea on May 14 successfully re-entered the Earth's atmosphere, according to analysts, a significant breakthrough for Pyongyang's missile programme.</p> <p>Defence officials in South Korea and the US have confirmed that the launch of the liquid- fuel Hwasong-12 was a success.</p> <p>North Korea claimed that the weapon reached an altitude of 2,111.5 km (1,312 miles) and travelled a distance of 489 miles before breaching Japan's Air Defence Identification Zone and splashing down in the Sea of Japan.</p> <p>The missile took a steep parabolic route that tested its ability to survive re-entry into the atmosphere, with North Korean state media reporting that the missile - capable of carrying a "large-size, heavy nuclear warhead" to a target on the US mainland - had come through "the worst re-entry situation" and struck its intended target.</p> <p>Analysts have long considered the largest challenges to North Korea's ballistic missile programme to be achieving re-entry and miniaturising a nuclear warhead to enable it to be mounted on a missile.</p>

HEADLINE	05/19 Spike in Seattle apartments with A/C
SOURCE	http://www.seattletimes.com/business/real-estate/big-spike-in-apartments-with-a-c-as-seattle-gets-warmer-landlords-launch-arms-race/
GIST	<p>As Seattle summers keep getting hotter and hotter, a once-unthinkable perk for renters here has become more commonplace: air conditioning.</p> <p>Traditionally, there hasn't been much of a point for local developers to spend the extra money to install A/C: Seattle has among the coolest summers in the country, and new construction was rare enough that new buildings didn't need extras — they stood out just for being new.</p> <p>But now the record apartment construction boom sweeping the city has created what some in the industry have called an “amenities arms race” to attract tenants.</p> <p>Things like rooftop decks, gyms and dog play areas are a dime a dozen. Now A/C has become a way for landlords to stand out in a sea of apartment ads.</p> <p>Before this decade, only 6 percent of all rentals in the Seattle metro area had central air conditioning, according to Census statistics— the lowest rate for any major region in the country.</p> <p>But 25 percent of apartments built so far this decade in greater Seattle have central A/C — a four-fold increase over the old days. (These numbers don't include the cheaper window units, but those are on the rise, too — more on that later.)</p> <p>Megan Murphy, a senior manager at one of the biggest developers in town, Paul Allen's Vulcan Real Estate, said that just a decade ago the company never would have even considered including A/C in its buildings. But now it's standard for all apartments in Vulcan's new high-rises, and comes included at many of the units in its smaller projects.</p> <p>Another factor: A/C is standard in a lot of other regions, and with the rise in new residents moving from locales with hotter summers like California, Texas, Chicago and New York, tenants come with the expectation that air conditioning will be included, Murphy said.</p> <p>The increase in air-conditioned apartments might be more noticeable here, but it matches a similar, nationwide trend: About 82 percent of U.S. rentals built this decade had central air, up from a previous average of 56 percent. The typical U.S. apartment is nearly eight times more likely to have central air than one in Seattle.</p> <p>The planet had its hottest year on record last year, topping 2015, which topped 2014, continuing a warming trend that's been going on for more than a decade.</p>

	<p>About 14 percent of apartments in the Seattle region had air conditioners that only cool one room each in 2015, up from 11 percent in 2013. That trend spans apartments of all ages, suggesting that renters are actively seeking out and installing more air conditioning or landlords are retrofitting them with smaller A/C units.</p> <p>Overall, when including all types of A/C, 21 percent of apartments in the greater Seattle region had air conditioning as of 2015, making us the least air-conditioned place in the country for renters, among major metro areas.</p> <p>By comparison, 86 percent of U.S. apartments have some kind of air conditioning. It's 55 percent in the Portland region and 27 percent in the San Francisco area.</p>

HEADLINE	05/19 Skin cancer rates on rise in Washington
SOURCE	http://www.king5.com/news/health/skin-cancer-rates-on-the-rise-in-washington/441314590
GIST	<p>While most of Washington is used to rainy days and overcast skies, new data reveals residents are getting more sun exposure than they may think, as statistics report the rate of melanoma cases are on the rise.</p> <p>Melanoma is a form of skin cancer, and according to data from the Washington State Cancer Registry, the rates have been increasing by about 2 percent per year since 2000. According to the Department of Health, Washington is in the top 10 states for the highest rates of newly diagnosed melanoma cases.</p> <p>Puget Sound communities, specifically Jefferson, Island, King, San Juan, Kitsap, Skagit, and Snohomish counties, also have significantly higher levels of sun damage than the rest of the state. Between 2010 and 2014, the rates of newly diagnosed cancer cases from these communities combined were higher than those of the state as a whole.</p> <p>This news may come as a surprise to Washington residents, who are used to the gray weather and lack of sun. However, according to the Department of Health, the Environmental Protection Agency says that 80 percent of the sun's ultraviolet (UV) rays pass through clouds and can be reflected off water, sand, and snow.</p> <p>"It may be surprising that skin cancer is high in areas where rain and clouds dominate the sky for so many months of the year," said Janna Bardi, who oversees the department's Comprehensive Cancer Control Programs, in a release.</p>

HEADLINE	05/20 Suicides highest w/middle-age men
SOURCE	http://www.nbcnews.com/news/us-news/it-s-not-just-chris-cornell-suicide-rates-highest-among-n762221
GIST	<p>The news that 52-year-old Seattle grunge rock icon Chris Cornell had killed himself after a concert in Detroit shocked and saddened fans of the Soundgarden frontman.</p> <p>But perhaps even more shocking is the fact that Cornell was scores of middle-aged American men who took their own lives on Wednesday: 121 Americans die by suicide each day, according to the Centers for Disease Control — and 93 of them are men. (The Wayne County medical examiner's office declared Cornell's death a suicide by hanging; Cornell's wife has disputed that ruling and suggested her late husband's anti-anxiety medication may have played a role.)</p> <p>In fact, American men make up the bulk of suicides nationwide. Victims of death by suicide are overwhelmingly white (7 out of 10), male and — just like Cornell — between the ages of 45 and 65. Middle-aged male suicide is a silent crisis, one that experts say often comes as a surprise to loved ones who typically do not see signs of mental health struggles until it's too late.</p> <p>"Men notoriously don't seek help," said Julie Cerel, president of the American Association of Suicidology and a professor at the University of Kentucky School of Social Work. "And as people are aging and at a place in their lives where the world isn't looking the way they want, men especially don't know how to reach out and get help or express that they're feeling pain."</p> <p>Doreen Marshall, a psychologist and the Vice President of Programs at the American Foundation for Suicide Prevention, told NBC News that "you don't need to be a clinician to help somebody."</p>

	<p>Marshall said one of the challenges of combating suicide in middle-aged men is that they are difficult to reach through traditional methods, like professional mental health clinics. So her organization has had to get creative, reaching out to at-risk men by going to them directly.</p> <p>"We formed a partnership with the National Shooting Sports Foundation," said Marshall, "to get the message out to retailers and gun ranges, hunting clubs, those kinds of groups."</p> <p>At some gun shops, you might receive a pamphlet about suicide risk and prevention along with your latest purchase. That, Marshall says, is part of the effort to fight the most prevalent method — nearly half of all U.S. suicides involve firearms.</p>

HEADLINE	05/19 Hanford: worker clothing contaminated
SOURCE	https://www.wsj.com/articles/workers-clothing-exposed-to-radioactive-contamination-at-hanford-nuclear-site-1495242578
GIST	<p>A worker’s clothing was exposed to radioactive contamination at a former nuclear-weapons production site in Washington state late Thursday, in what Gov. Jay Inslee called an “alarming incident” that should prompt federal officials to expedite their cleanup of the decommissioned facility.</p> <p>Earlier in the day, Mr. Inslee and Oregon Gov. Kate Brown, both Democrats, sent a letter to President Donald Trump and other White House officials asking for more funding to accelerate the cleanup of the troubled Hanford nuclear-weapons site, about 200 miles southeast of Seattle.</p> <p>The letter was sent after the collapse last week of an underground tunnel containing radioactive materials, prompting an emergency declaration and evacuation of some employees.</p> <p>While there was no indication of radioactive contamination after the collapse, federal officials said, the incident was another setback to a cleanup begun in 1989 of the complex, which contains highly radioactive material from World War II and the Cold War.</p> <p>No injuries were reported in the Thursday incident at Hanford. But U.S. Department of Energy officials said unusually high contamination was discovered when a robotic device used to measure the thickness of tanks containing radioactive waste was being maneuvered by a contractor.</p>

HEADLINE	05/19 ‘Kissing bug’ deadlier than thought
SOURCE	http://www.cnn.com/2017/05/19/health/chagas-kissing-bugs-disease-deaths-underestimated/index.html
GIST	(CNN)The nickname given to the insects that spread Chagas disease is somewhat bittersweet: kissing bugs.

Their name stems from the fact that they like biting humans around their lips and faces as they sleep, after which they defecate into the wound with feces that harbor an infectious parasite, Trypanosoma cruzi.

The parasite then enters the bloodstream and causes Chagas disease, also known as trypanosomiasis.

Though the disease is generally considered to be mild or even asymptomatic among most, a new study has found that deaths fueled by the infection are much more common than we know -- and are going unrecognized.

In the study, published Thursday in the journal PLOS Neglected Tropical Diseases, infection with Chagas was found to increase risk of death by two to three times.

"In every age category, people who had Chagas died more than people who didn't have Chagas," said Dr. Ligia Capuani, an infectious disease researcher at Faculdade de Medicina da Universidade de Sao Paulo, in Brazil, who led the research.

"So if you're infected early in life, you should be treated," she said.

Diagnosis is a challenge in many parts of Central and South America, where the disease is most prevalent, with people often finding out that they are infected only when they donate blood, explained Capuani.

The kissing bugs behind the disease have also been reported in 25 US states, with the largest concentration in the South.

More than 6 million people are estimated to be infected globally, according to the World Health Organization, with up to 30% of people chronically infected developing heart issues and 10% developing digestive or neurological symptoms.

The CDC estimates that there are 300,000 cases of Chagas in the United States, with most of those contracted in other countries.

HEADLINE	05/19 IBM ends work from home for many
SOURCE	http://money.cnn.com/2017/05/19/technology/ibm-work-at-home/index.html
GIST	<p>For thousands of IBM employees, the ability to work from home is a key advantage of their job. But the company said Friday that it's ending that benefit for many of them.</p> <p>The technology giant has been a leader in terms of letting employees work from home, and has bragged about the savings and increased productivity that's resulted. About 40% of its nearly 400,000 employees</p>

worldwide did not have a traditional office, the company said in 2007, which the last time it released such data.

But now the company is changing its policy, and many of its employees will have to reacquaint themselves with office life.

"In many fields, such as software development and digital marketing, the nature of work is changing, which requires new ways of working," said a statement from the company. "We are bringing small, self-directed agile teams in these fields together." The policy change was reported earlier by the Wall Street Journal.

IBM declined to say how many employees will have to return to the office, or where they will be located. It did say some will still be able to work remotely.

The vast majority of workers who have been asked to return the office have agreed to do so, IBM said.

The company added that while some exceptions to the policy will be made, some employees will lose their jobs if they're unwilling to work in offices.

HEADLINE	05/21 South King Co. cities gang violence
SOURCE	http://www.rentonreporter.com/news/renton-and-other-cities-reorganize-task-force-to-address-rising-south-king-county-gang-violence/
GIST	<p>Gang violence is on the rise in all of South King County. Regional leaders, including Renton officials, got together on Tuesday, May 10 to discuss how to get ahead of the issue.</p> <p>Federal Way Mayor Jim Ferrell and Auburn Mayor Nancy Backus convened a meeting last week that was attended by South King County mayors, police chiefs, city managers, city administrators and staff from Auburn, Algonia, Burien, Des Moines, Federal Way, Kent, Pacific, Renton, SeaTac and Tukwila, as well as the Seattle Police Department and the King County Sheriff's Office.</p> <p>"This is not just a Federal Way problem or a Kent problem," Ferrell said Wednesday. "This is a King County problem."</p> <p>Backus said in a news release South King County has already experienced 16 gun homicides, 48 other shootings in which victims were wounded, and almost 100 incidents of reported shots fired in the last few months.</p>

Federal Way Police Chief Andy Hwang said the coordinated effort among South King County cities to take on gang violence is not something that's occurred before. While each agency has worked with the FBI, this collaboration, which will include working with the King County Prosecutor's Office on stricter penalties, is unprecedented.

First, the Valley Narcotics Enforcement Task Force will be refocused to become the Valley Enforcement Gangs and Narcotics task force. That group is supported by the FBI, Drug Enforcement Administration and Bureau of Alcohol, Tobacco, Firearms and Explosives. Then, local police chiefs will also hold weekly meetings for up-to-date information sharing.

"Here at FWPD, we're using our Special Investigations Unit and gang officers to address specific individuals and target homes in Federal Way," Hwang said, adding that he's excited about the intel meetings as they will be "critical."

While Ferrell wouldn't identify the gangs in the South King County area so as not to increase their status, he did say they are allying themselves with other gangs and are in a warfare. Specifically, "the Hispanic gang conflict occurring right now" started last year and began in another part of the county and was "territorial in nature," Ferrell added.

Identifying offenders, finding out where they live, learning about conflicts within gangs and arresting gang members will be a key strategy in preventing anymore violence, Ferrell said.

"I'm doing this now because the weather is heating up as we get into summer," Ferrell said. "What I will not do is tolerate, as mayor, innocent civilians caught in the crossfire. We're going to get ahead of it, on top of it and address it."

Ferrell said there are no budget implications associated with the task force's reorganization.

HEADLINE	05/21 Police respond to stabbing at street fair
SOURCE	http://www.kiro7.com/news/local/man-stabbed-in-university-district/525003556
GIST	SEATTLE - Seattle police responded to reports of a stabbing around 2:30 p.m. Saturday afternoon at University Way NE and NE 42nd Street in the University District. Seattle police officers were putting pressure on the wound, but the incident did not sound life threatening. The victim is being transported to Harborview Medical Center.

	The incident occurred at the 48th annual University District Street Fair that brings “together the best in local arts and crafts, music, and food” according to the event website.

HEADLINE	05/21 Yakima man shot waiting to cross road
SOURCE	http://q13fox.com/2017/05/21/man-shot-in-face-while-waiting-to-cross-the-road-in-yakima/
GIST	<p>YAKIMA, Wash. (AP) — The Yakima County Sheriff’s Office is investigating after a man was shot in the face while waiting at a crosswalk.</p> <p>Deputies were called to the area near Highway 97 at about 7:15 p.m. Saturday. The 24-year-old victim was from the Toppenish, Washington, area.</p> <p>Deputies say the victim and a relative were waiting to cross the road when a silver sedan carrying four people drove by. Someone in the back seat leaned out and yelled something at the victim before pulling out a pistol and opening fire.</p> <p>At least five shots were fired and one struck the victim in the face.</p> <p>The victim didn’t know the suspects and officials don’t think it was gang related.</p> <p>The man was treated at the Toppenish Hospital before being flown to a Seattle hospital for surgery.</p>

HEADLINE	05/22 Calif. pot convictions go up in smoke
SOURCE	http://hosted.ap.org/dynamic/stories/U/US_CALIFORNIA_MARIJUANA_CONVICTIONS?SITE=AP&SECTION=HOME&TEMPLATE=DEFAULT&CTIME=2017-05-22-05-04-16
GIST	<p>LOS ANGELES (AP) -- Jay Schlauch's conviction for peddling pot haunted him for nearly a quarter century.</p> <p>The felony prevented him from landing jobs, gave his wife doubts about tying the knot and cast a shadow over his typically sunny outlook on life.</p> <p>So when an opportunity arose to reduce his record to a misdemeanor under the voter-approved law that legalized recreational marijuana last year, Schlauch wasted little time getting to court.</p> <p>"Why should I be lumped in with, you know, murderers and rapists and people who really deserve to get a felony?" he asked.</p> <p>This lesser-known provision of Proposition 64 allows some convicts to wipe their rap sheets clean and offers hope for people with past convictions who are seeking work or loans. Past crimes can also pose a deportation threat for some convicts.</p>

It's hard to say how many people have benefited, but more than 2,500 requests were filed to reduce convictions or sentences, according to partial state figures reported through March. The figures do not yet include data from more than half of counties from the first quarter of the year.

While the state does not tally the outcomes of those requests, prosecutors said they have not fought most petitions.

Marijuana legalization advocates, such as the Drug Policy Alliance, have held free legal clinics to help convicts get their records changed. Lawyers who specialize in pot defense have noted a steady flow of interest from new and former clients.

HEADLINE	05/19 Baltimore food stamp fraud cases
SOURCE	http://www.baltimoresun.com/news/breaking/bs-md-food-stamp-fraud-20170519-story.html
GIST	<p>A Baltimore man was ordered Friday to pay more than \$3.7 million in restitution for illegally trafficking in food stamps.</p> <p>U.S. District Judge Richard D. Bennett also sentenced Mohammad Shafiq, 51, to almost four years in prison, followed by three years of supervised release.</p> <p>Shafiq's sentencing was part of a series of prosecutions involving 14 Baltimore-area retailers who were indicted in August 2016 by a federal grand jury for food stamp and wire fraud.</p> <p>The operators collectively obtained more than \$16 million from the U.S. Department of Agriculture by illegally trading food stamp benefits for cash, according to the indictment. Twelve of the fourteen charged defendants have pleaded guilty and two were sentenced this week.</p> <p>Mohammad Irfan, 59, of Baltimore County was sentenced Thursday to more than four years in prison and ordered to pay about \$3.6 million in restitution. He also faces three years of supervised release.</p>

HEADLINE	05/22 Police: bomb at Thai hospital wounds 25
SOURCE	http://abcnews.go.com/International/wireStory/thai-authorities-bomb-hospital-bangkok-wounded-20-people-47553995
GIST	<p>A bomb exploded at a military-run hospital in Bangkok on Monday, the third anniversary of a military coup, and police said 25 people were wounded.</p> <p>Investigators found remnants of batteries and wires at the scene of the blast on the ground floor of Phramongkutklao Hospital, said Srivara Ransibrahmanakul, the deputy national police chief.</p> <p>"We can confirm at this stage that it is a bomb," he said.</p>

	<p>Three people suffered serious shrapnel injuries to the face and neck, but most of the victims had minor wounds, said Sansern Kaewkumnerd, a government spokesman.</p> <p>It was not immediately clear who was behind the explosion or if it was connected to the anniversary of the 2014 military coup that overthrew a democratically elected government.</p> <p>Phramongkutklao is a military-run hospital that is also open to civilians. The blast radius from the explosion was 2 to 3 meters (up to 9 feet), police said.</p> <p>Since the 2014 coup, at least six explosions have occurred in Bangkok. Last Monday, a bomb went off in front of the country's National Theater. Last month, a similar explosion took place in front of an old government lottery office.</p>

HEADLINE	05/21 Driver claims reach out to mental health
SOURCE	http://abcnews.go.com/US/veteran-claims-sought-treatment-prior-driving-times-square/story?id=47543783
GIST	<p>Richard Rojas, the 26-year-old Navy veteran who rammed his car into a crowd in New York's Times Square last week, killing an 18-year-old woman and injuring 20 others, claims that he reached out to a mental health counselor prior to taking his fateful drive.</p> <p>“He said he’d call me on Monday,” Rojas told the New York Post in a jailhouse interview while speaking about his attempts to seek counselling. “Monday hasn’t come yet.”</p> <p>Shortly before noon on Thursday Rojas, a resident of the Bronx, was driving south on 7th Avenue when he slowed down and allowed traffic to pass. He then made a U-turn at 42nd Street, accelerated, and started to strike down pedestrians, according to police.</p> <p>He accelerated and continued driving until he crashed at 45th Street, the NYPD said. After Rojas crashed, he exited the vehicle.</p> <p>“I wanted to kill them,” he said of his victims, according to prosecutors.</p> <p>Kenya Bradix, 47, a Planet Hollywood door supervisor, tackled Rojas and helped hold him until police arrived, he told ABC News.</p> <p>Court records said Rojas was observed with “glassy eyes, slurred speech, and was unsteady on his feet.” He had smoked pot laced with PCP before the incident, he told police, who later confirmed that he had the drug in his system at the time.</p>

	<p>The Post, which interviewed Rojas from New York's Riker's Island jail complex, described him as being "weepy," while discussing his attempts to seek help.</p> <p>"I was trying to get help," Rojas told the Post. "I wanted to fix my life. I wanted to get a job. Get a girlfriend."</p>

HEADLINE	05/19 Pierce Co. eyes crew in bold heist
SOURCE	http://q13fox.com/2017/05/19/cell-phone-store-crooks-help-id-crew-of-bold-well-organized-pierce-county-suspects/
GIST	<p>The search is on in Pierce County for a crew of crooks who pulled off a bold heist at a cell phone store and detectives are hoping you can help identify the three suspects.</p> <p>Watch the video to see them enter the store pretty nonchalantly. This happened at the Metro PCS on 72nd St. E. in Tacoma. They walk off-camera. That's when detectives say they violently ripped three iPhones from the display. You see the first suspect start to run out the door. The other two suspects scoot past the worker who tries to stop them — even pushing her out of the way a bit as they run out — and then they're gone.</p>

“This is obviously an organized theft,” says Pierce County Det. Ed Troyer. “They were in and out in 15 seconds. There was some pre-planning and they stole the high-end items and organized retail theft groups, that’s how they make their living, so we’d like the public’s help to get these guys caught.”

HEADLINE	05/19 FBI \$20K reward for Tacoma killer
SOURCE	http://q13fox.com/2017/05/17/fbi-offers-reward-up-to-20000-for-info-on-whereabouts-of-accused-tacoma-killer/
GIST	<p>TACOMA — The FBI and Tacoma Police Department are offering a cash reward of up to \$20,000 for information leading to the arrest of a suspect wanted in two murders.</p> <p>On February 7, 2010, detectives say Santiago “Pucho” Villalba Mederos was looking to retaliate against rival gang members when he encountered a brother and sister in their car, chased them and fired multiple shots into the vehicle.</p> <p>The two innocent victims were not involved in gang activity and police say he targeted them solely because of the color of their vehicle. The 18-year-old girl, Camille Love, was killed and her brother Joshua seriously wounded.</p> <p>“He just comes from behind us and gets in the lane next to us, speeds up to us, gets beside us and he just started shooting,” Joshua told Washington’s Most Wanted in 2010. “She wasn’t moving. I grabbed the side of her face and I was like, Cami, Cami. She had a blank look on her face.”</p> <p>Mederos was also allegedly involved in the murder of another innocent person on March 25, 2010.</p> <p>Prosecutors say he and other gang members went to collect money from a person they knew. According to investigators, Mederos and other gang members broke into and ransacked that person's vehicle. Several innocent bystanders observed this situation and confronted the group. A fight ensued during in which Mederos allegedly fired a single gunshot towards the bystanders, striking and killing an innocent 25-year-old man.</p> <p>"These crimes that were committed, we don't forget about them and we seek justice for the victims of these homicides, so it's important for us to find them and bring them back to face the charges," said FBI Special Agent Terry Postma.</p> <p>Mederos facing a slew of charges in Pierce County Superior Court including Murder in the First Degree, Attempted Murder in the First Degree, Conspiracy to Commit Murder in the First Degree and Murder in the 2nd Degree.</p> <p>The FBI believes Mederos may be in Mexico. He speaks both English and Spanish.</p>

HEADLINE	05/19 'Joker' gets 40yrs prison for murder
SOURCE	http://q13fox.com/2015/05/23/update-federal-way-police-identify-suspect-in-homicide/
GIST	FEDERAL WAY — May 19, 2017 Michael Espinosa aka 'Joker' was sentenced in King County Superior Court to 39 years and 8 months in prison after he was convicted of Murder 2nd Degree with a rapid recidivism and gun enhancement. Espinosa shot and killed the victim in Federal Way less than two months after he was released from prison on March 27, 2015.

HEADLINE	05/19 Bainbridge schools spike in sex assaults
SOURCE	http://komonews.com/news/local/bainbridge-high-students-report-more-sexual-assaults
GIST	BAINBRIDGE ISLAND, Wash. -- Bainbridge police have seen a significant spike in sexual assault reports from high school students on Bainbridge Island since the start of 2016. Police Chief Matthew Hamner says the department investigated three reported assaults total between 2014 and 2015. But last year alone, students reported eight assaults, with five more already reported this year. He says two students have come forward just this month. “I was shocked, because we really have great youth on the island,” Hamner said. Hamner says most of the alleged attackers were other students, and alcohol or drugs was involved in the majority of cases. Two teenagers are awaiting trial right now for alleged crimes after a party at Pritchard Park last August. One allegedly gave a 15-year-old girl Xanax, then raped her as she begged him to stop. He is charged with third-degree rape. The other teen is charged with third-degree child molestation for alleged sexual contact with another 15-year-old. But Hamner says those numbers may not mean more assaults are actually happening. He says Bainbridge police have worked hard to create a trust with the community that would encourage victims to come forward and report incidents. He thinks perhaps more victims are just reporting. Bainbridge Island School District sent a letter home to parents earlier this month to acknowledge the reports of sexual assault and offer resources for students and parents in need.

	Bainbridge police also want victims to feel safe reporting assaults. Only four of the 13 reports since the start of 2016 have led to charges, Hamner says. He attributes that to the burden of proof with these charges. But he stressed the department will always support a victim who comes forward.

HEADLINE	05/19 Men charged in brutal Metro bus attack
SOURCE	http://www.kiro7.com/news/local/3-charged-with-assault-in-brutal-attack-of-metro-bus-rider/524493099
GIST	<p>Three men have been charged with assault after attacking a rider on a Metro bus April 5, the Seattle Times reported.</p> <p>KIRO 7 reported on Wednesday that a Seattle teen was facing assault charges over his involvement in a brutal attack on a homeless man. The incident was caught on a bus' camera.</p> <p>Shortly after midnight, a man got off a RapidRide D Line bus on 15th Ave. NW in Ballard.</p> <p>A young man can be seen following the man and soon after, he pushes the man into other people and then throws him to the ground. He is then joined by two others.</p> <p>Suddenly, the three men converge on the man, pushing and hitting him. The three appear to gang up on the man, pummeling him and throwing him to the ground.</p>

	King County court documents state that the man was punched 27 times, some that were running kicks to the head. Supervisors at Harborview Medical Center told police the man will have long-term traumatic brain injuries.

HEADLINE	05/19 Mexico: gunmen rob busload of police
SOURCE	http://abcnews.go.com/International/wireStory/gunmen-rob-busload-federal-police-officers-mexico-47516613?cid=clicksource_76_null_articleroll_hed
GIST	Authorities in Mexico say gunmen have assaulted and robbed a bus full of federal police.

	<p>The National Security Commission reports that the bus was carrying 29 unarmed officers dressed in civilian clothes Monday night to Mexico City, where they were to be on leave after 25 straight days on duty in the Pacific resort city of Acapulco.</p> <p>The commission says the driver pulled over to check a mechanical problem near a toll booth in the state of Morelos. Armed men then boarded the bus, threatened him and the passengers and relieved them of their possessions.</p> <p>A statement late Thursday says the officers did not resist in order to avoid injuries or loss of life. Authorities are searching for the robbers.</p>

HEADLINE	05/20 Man faces charges flight disturbance
SOURCE	http://www.cnn.com/2017/05/19/us/american-airlines-passenger-removed/index.html

GIST	<p>(CNN)A man who caused a disturbance aboard an American Airlines flight from Los Angeles to Honolulu on Friday was detained and will likely face charges, an FBI special agent said.</p> <p>The man, identified as Anil Tuvanc Uskanli -- a Turkish national born in 1991-- was subdued by crew members and passengers, including an off-duty Los Angeles police officer.</p> <p>He is expected to face federal charges for interference with a flight crew, FBI special agent Paul Delacourt told reporters.</p> <p>Investigators are still trying to determine the motive behind the disturbance.</p> <p>Allison Forburger, who lives in Hawaii, where she works for the Navy, said the man was moving toward the first-class section of the cabin with a blanket over his head when a flight attendant directed him to stop.</p> <p>As the suspect approached the drink cart at the rear of first class, the flight attendant in economy told him, "Sir, please stop. Sir, I need you to go back to your seat."</p> <p>Forburger, sitting in an aisle seat at the front of economy class, said other passengers helped the flight attendant get the passenger back toward the back of the plane.</p> <p>The man did not fight with the other passengers and left a black laptop he had been clutching to his chest on the drink cart, she said.</p> <p>The incidents is still under investigation but officials said there were no other threats to the American Airlines or any other aircraft. No explosives were found on the airplane and the cockpit was not breached, Delacourt said.</p>

Subject: ***FREE*** Spring Mountain Motor Resort SPECIAL DEAL
Attachments: SM Things To Do Emailer 06.29.15.pdf; Photography options.pdf; 2015 Corvette Owners School Curriculum.pdf; 2017 C7 Schedule 4-25-17.pdf

Hello,

I wanted to take a moment to let you know about an **AWSOME** deal Spring Mountain Motor Resort is offering to all its clients! Regardless of whether you are a new owner, an existing owner, or not an owner at all, we are inviting **EVERYONE** to come out and attend the two day Corvette Owners Program and take advantage of this special offer!!!!

Corvette Owners School SUMMER SPECIAL!

Call today! All Corvette Owners Schools booked
for June 1st – September 15th will receive:

2 free nights stay

1 free dinner for 2

\$50 merchandise
gift certificate

1 free Paddleboarding
session for 2

16GB SD card for your
Performance Data Recorder

\$450 value!

As the Official High Performance Driving School of Corvette, you will receive first class instruction in current model Corvettes. The 2016 C7 Stingray Z51's are the exclusive car of the Ron Fellows Performance Driving School and we have added the Z06 and Grand Sport. The cost of the **Corvette Owner Program** in a Stingray is \$2,500.00 for the two day class and \$3695.00 in a Z06 and Grand Sport. Also bring additional students along and we will give you 10% off the price of the second school.

The Corvette Owners School is exclusive to the Spring Mountain Motor Resort and cannot be used at any other Race Track.

The goal for all levels of our schools, is to provide an exciting and educational, adrenaline-charged program. Through a dynamic series of car control exercises and maneuvers developed by Ron Fellows, we have developed a curriculum that will help you learn to process information quickly and accurately – the most important skills in the high-performance environment. Our step-by-step program integrates the exercises and maneuvers to coordinate eyes, hands, and feet providing you with a baseline for car control that will have you balancing your car with confidence and finesse. All of our Corvettes are equipped with two-way radio communications providing constant contact with our team of instructors.

We have a kitchen in our Clubhouse and have hired our own executive chef which allows us to offer a hot breakfast buffet each morning, and a delicious catered lunch **included in the price of your school**.

While you are on property we encourage you to take some time to enjoy all the amenities we offer. Our members clubhouse is home to an on-call massage therapist, a state-of-the-art workout facility, pool and spa, conference room, billiard and poker tables, an outdoor patio with a fire pit. On property you will also find a lake, racquetball and basketball courts, as well as a horseshoe pit. I would love for you to have the opportunity to come out and experience all we offer at Spring Mountain.

Dates are filling up fast! Below is the link to the 2017 dates that we have opened up. I have also attached a schedule to this email. I will keep you updated on dates as they are added.

Depending on where you are located, you may need to book a flight into Las Vegas and **rent a car**, as we are about 50 miles outside of Las Vegas.

<http://www.springmountainmotorsports.com/calendar>

Let me know if there is anything else I can help you with.

Thank you again for your interest.

Subject: 13-Year-Old Son of Steve Irwin Is Expert With Wild Animals Just Like Dad Was

Steve Irwin's son showed off his animal skills on "The Tonight Show" and they are quite impressive. Robert Irwin, 13, handled baby black bears and legless lizards like a pro, only upping the ante with a venomous scorpion. The public was shocked when the boy's father, also known as the "Crocodile Hunter," was killed by a stingray in 2006. Since then, both of his children have been in the spotlight proving their father's legacy lives on.

Subject: Man Crashes His Corvette 2 Times in 7 Minutes In 2 Separate Towns

 According to the local police, a New Hampshire man driving a Chevrolet Corvette was involved in two separate accidents in the span of just seven minutes. 54-year-old Kevin Cullinane of New Boston, NH, has been charged reckless operation, operating under the influence of drugs, and conduct after an accident after a pair of crashes in two New Hampshire towns on Saturday evening, according to police, and more charges may still be filed. No one was seriously injured after either incident, police said. Goffstown, NH police said they responded to a report of a hit-and-run in the center of town at 7:15 p.m. on Saturday, according to the New Hampshire Union Leader. Witnesses reported that a late-model Corvette—a convertible Stingray, based on the picture from the newspaper—was seen leaving the scene on the road to Manchester. Sure enough, at 7:22 p.m., Manchester police responded to an accident roughly seven miles to the east of the first incident, where a late-model Corvette had crashed into another vehicle. According to eyewitness reports, the 'Vette was bobbing through traffic at high speed when it hit another car, pushing the other vehicle into a telephone pole. Witnesses then detained the Corvette's driver when he attempted to leave, according to police. Also, it has no bearing on the case as far as we know, but we at The Drive thought it was worthy of mentioning, as it may speak to the character of the driver: The white C7-generation Corvette Cullinane was driving wore a vanity plate with a shortened name of his last name on it. HEADLINE	03/24 Keystone XL pipeline approved
SOURCE	http://www.cbsnews.com/news/trump-administration-approves-keystone-xl-pipeline/

GIST	<p>The Trump administration has issued a presidential permit to pipeline builder TransCanada to build the Keystone XL pipeline.</p> <p>White House press secretary Sean Spicer tweeted that President Donald Trump would discuss the pipeline later Friday morning.</p> <p>The State Department says that it determined that building Keystone serves the U.S. national interest. That's the opposite conclusion to the one the State Department reached during the Obama administration.</p> <p>The State Department says it considered foreign policy and energy security in making the determination.</p> <p>In January, Mr. Trump signed an executive action advancing the pipeline.</p>

HEADLINE	03/23 Civilians investigate Seattle cops; good?
SOURCE	http://crosscut.com/2017/03/civilians-might-investigate-seattle-cops-will-it-backfire/
GIST	<p>For years, Lisa Daugaard thought civilians were the best people to investigate police misconduct. She would even show up to election forums and demand candidates support an all-civilian disciplinary board.</p> <p>But after four years sitting on the Community Police Commission (CPC), the well-known public defender had a change of heart. “Many of us came to the CPC from a long background of active campaigning for an all- civilian review board where civilians would review officer misconduct,” Daugaard said. “But the reason we didn’t recommend it is that model has not proven particularly effective as a model for change.”</p> <p>The CPC is the voice of the community in the complicated and bureaucratic police reform process. Its members are a cross-section of volunteer community representatives, activists and lawyers. They meet every other Wednesday in a small room in Seattle City Hall and sketch their vision for the Seattle Police Department. Sometimes, that vision gets them in trouble with the mayor or the city attorney, but how the members challenge authority is celebrated by the public.</p> <p>And yet, CPC members have come to appreciate having officer involvement in the accountability review process. They’re not convinced an all-civilian board to review misconduct is the way to go. That could put them at odds with some of the activist community they most closely represent.</p> <p>The Office of Professional Accountability (OPA) is the disciplinary arm of the Seattle Police Department. It is currently comprised of all sworn officers. When there’s a complaint from a member of the public — or another police officer — about excessive use of force or an officer not turning on a dashboard camera — it is the job of these investigators to find the evidence and recommend what discipline, if any, should follow.</p>

	<p>The entire accountability structure of the police department, OPA included, has been under increased scrutiny in recent years. In 2010, Seattle Police Officer Ian Birk shot Native American woodcarver John T. Williams in the back. The shooting death triggered a Department of Justice investigation of the entire department, an investigation that concluded officers routinely used too much force.</p> <p>After the DOJ investigation, the city agreed to overhaul its police department, including its systems for holding officers accountable. An overhaul included improving the OPA. Who should staff it — civilians, officers or a mix of both — remains one of the major unanswered questions for the accountability office.</p>

HEADLINE	03/23 Tacoma fined again withholding data
SOURCE	https://www.scmagazine.com/tacoma-wash-ordered-to-pay-fine-for-withholding-stingray-info/article/646034/
GIST	<p>For the second time this month, the city of Tacoma, Wash. was fined for withholding information concerning its use of Stingray devices.</p> <p>Last week a count judge ordered the city to pay public records activist Arthur West \$44,000 for violating the Public Records Act, according to The News Tribune.</p> <p>A daily fee of \$100 will also be charged as the judge ruled the withholding was done in bad faith and should additional records be found to have been withheld the fees may be adjusted, according to court documents. The plaintiff's request was filed in August of 2014.</p> <p>On March 3, 2017, the city was also ordered to pay the Seattle-based Center for Open Policing \$50,000 plus undetermined attorney fees for withholding similar information and the municipality faces a third case related to Stingray documents concerning the American Civil Liberties Union of Washington.</p>

HEADLINE	03/23 'Meatball John' serves up to firefighters
SOURCE	http://www.king5.com/features/meatball-john-keeps-firefighters-in-peppers-and-cheese/424921560
GIST	<p>SILVERDALE — The sandwich in front of Robert Pierson — nearly a foot long and filled with meatballs, peppers and cheese — would be more at home in a deli on the East coast.</p> <p>“It’s fantastic,” Pierson, a paramedic at Station 51 in Silverdale, said as he took a bite. “It floods the senses. It’s really, really good.”</p> <p>Pierson and the rest of the B shift crew at Central Kitsap Fire and Rescue's Station 51 are the latest Kitsap firefighters to experience John Duefrane’s culinary chops.</p> <p>For the past two years, Duefrane — aka “Meatball John” or “Johnny Meatball” — has been making his way to each fire station in Kitsap, serving up his meatball subs to the firefighters.</p> <p>Since 2014, Duefrane has served every shift and every station in South Kitsap, Bremerton and now Central Kitsap. He has plans to travel to Pierce County stations once he finishes here.</p> <p>“It’s really nice, we really appreciate it,” said Tony Giove, an apparatus operator at Station 51.</p> <p>Duefrane, who lives in Port Orchard, spent 22 years as a firefighter in Milford, Connecticut. He moved to Washington after his sons got out of the military in 2005. Before that, he experimented with meatball sandwiches in Montana in the '80s and '90s.</p> <p>The idea for the station-by-station tour came after a bad accident in Port Orchard that prompted a large-scale response from South Kitsap Fire and Rescue. Knowing that some of those firefighters would be on scene for hours and probably hadn’t eaten, Duefrane drove out to feed them.</p> <p>It quickly became apparent that it would be easier to visit the stations. And once he started cooking, word spread. Soon, Duefrane was getting requests to make his subs at other stations.</p> <p>"It's just giving back to what I done, what I love to do," Duefrane said.</p>

HEADLINE	03/23 Most UK police don't carry guns
-----------------	--

SOURCE	http://www.nbcnews.com/storyline/london-parliament-attack/why-london-won-t-arm-all-police-despite-severe-terror-n737551
GIST	<p>LONDON — Wednesday's attack near the heart of Britain's democracy may have been shocking, but authorities have known for years that something like it was coming.</p> <p>Last year — when Brits watched terrorists strike France, Germany, and Belgium — London's police chief warned it was a case of "when, not if" the U.K. joined that list.</p> <p>And yet more than 90 percent of the capital's police officers carry out their daily duties without a gun. Most rely on other tools to keep their city safe: canisters of mace, handcuffs, batons and occasionally stun-guns.</p> <p>This is no accident.</p> <p>The Metropolitan Police, which covers most of London, was founded in 1829 on the principle of "policing by consent" rather than by force.</p> <p>Giving everyday police officers guns sends the wrong message to communities, so this thinking goes, and can actually cause more problems than it solves.</p> <p>Although there are higher numbers of armed police guarding Parliament, the attacker who rushed the gates Wednesday was shot dead by a relatively rare member of the country's security forces — one who had been trained to use a firearm.</p> <p>Some of these gun-wielding officers patrol the city in pairs, others are members of crack response teams — units dressed in body-armor, helmets and carrying long rifles — who are called to the scene of violent incidents like these.</p> <p>In most instances, they don't use their weapons.</p> <p>In the year up to March 2016, police in England and Wales only fired seven bullets. (Although these government figures do not include accidental shots, shooting out tires, or killing dangerous or injured animals.)</p> <p>These officers fatally shot just five people during that period, according to British charity Inquest, which helps families after police-related deaths.</p> <p>The Metropolitan Police carried out some 3,300 deployments involving firearms in 2016. They didn't fire a single shot at a suspect.</p>

It's a world away from the United States, where cops killed 1,092 people in 2016, according to figures compiled by The Guardian.

While British officials have long since accepted that an attack is "highly likely," they believe that intelligence-gathering and stronger links with the community — rather than gun-toting cops — will do more to keep the city safer.

"In a free and democratic society, there is going to be a balance between democracy, freedom and openness, and a police state — and none of us want to live in a police state," said Brian Dillon, former head of the Met's firearms command who now runs the counterterrorism consultancy Rubicon Resilience.

"Therefore at some point some attacks are regrettably going to hit home, that's inevitable," he added. "Not everything can be stopped."

While shootings involving police are relatively common in the U.S., authorities in Britain say they review each one with painstaking diligence.

HEADLINE	03/23 S. Sudan refugees pour into Uganda
SOURCE	http://abcnews.go.com/International/wireStory/uganda-breaking-point-south-sudan-refugees-pour-46321580?cid=clicksource_76_null_articleroll_hed
GIST	<p>Uganda is at a "breaking point" as almost 3,000 South Sudanese refugees pour into the country every day, the United Nations refugee chief and Uganda's government said Thursday, calling for international help to support over 800,000 people now sheltering there.</p> <p>The U.N. has called it the world's fastest-growing refugee crisis.</p> <p>More than 570,000 refugees have arrived from South Sudan since July — and the number could pass one million by the middle of this year, the joint statement by U.N. chief Filippo Grandi and Uganda's government said.</p> <p>"We are at breaking point. Uganda cannot handle Africa's largest refugee crisis alone," Grandi said. "The lack of international attention to the suffering of the South Sudanese people is failing some of the most vulnerable people in the world when they most desperately need our help."</p> <p>The refugees — more than 60 percent of them children — have been arriving since neighboring South Sudan's civil war began in late 2013. More than 1.6 million have fled the country overall.</p>

	The unprecedented surge in refugee arrivals since fighting broke out in South Sudan's capital in July has placed "enormous strain" on public services and infrastructure, Uganda's Prime Minister Ruhakana Rugunda said.

HEADLINE	03/23 Homeless shelter near Seattle playground
SOURCE	http://www.kiro7.com/news/local/new-homeless-shelter-near-seattle-center-playground/505587768
GIST	<p>SEATTLE - Feet from where children come to play at the heart of the Seattle Center, the city has carved out space for 75 overnight shelter beds.</p> <p>A new place for homeless men to sleep from 9 p.m. until 6 a.m. opened Thursday night and will close in mid-April.</p> <p>"I think it's too close to the kids," said Cherrie Spell who works at the Seattle Center.</p> <p>"I've come here all my life and safety is first always. I think it's a big issue with the parents. Shelters need to be somewhere, but not here at the Center."</p> <p>However, organizers with non-profit Compass Housing Alliance said the shelter is important.</p> <p>The same 75 beds that now occupy an unused room under the monorail station were at previous a location on Capitol Hill.</p> <p>The city took that old space to use for other homeless services. In return, the city offered the new space for use until mid-April.</p> <p>Shelter organizers insist there is no possibility of the shelter remaining open beyond mid-April because there are other plans for the space in late spring and during the summer.</p>

HEADLINE	03/23 Always rush hour for SFD's aid cars
SOURCE	http://www.seattletimes.com/pacific-nw-magazine/the-seattle-fire-departments-aid-cars-are-always-there-when-we-need-them/
GIST	<p>SHE WAS BLUE when her neighbor found her at lunchtime, unconscious and slumped in an overstuffed leather chair. Minutes later, her studio apartment is crammed with people in uniform who have been summoned to save her.</p> <p>Getting there after the 911 call had been excruciating, even with light afternoon traffic: an 11-block drive with sirens wailing, followed by a cramped ride in a slim elevator that crept slowly toward the ninth floor,</p>

as if powered by AAA batteries. The hallways in the vintage apartment building are narrow, and the doorway barely wide enough to accommodate a modern gurney.

The woman's neighbor is shaking with shock in the foyer, trying to process what might have happened had she not stopped by to see whether the woman could stomach lunch after a double dose of chemotherapy. As the stream of firefighters from Fire Station 2 enters the apartment with equipment, the neighbor presses herself up against a wall, answering questions from firefighters and the police.

Firefighter Matt Lujan is the first inside the apartment. He rode shotgun on Aid 2, the most-frequently dispatched piece of equipment in the entire Seattle Fire Department. Lujan calls the woman's name as he checks her vital signs. Her pulse is strong, but she's barely breathing. He places a breathing apparatus onto her mouth and nose, and manually pumps oxygen into her lungs. For the next 20 minutes, he will stand by her side, helping her breathe.

As the woman is prepared for transport to Harborview Medical Center with paramedics, Lujan hands off breathing duties to Nestor Mitchell, his partner for the day, and fills out paperwork that will accompany the woman to the hospital.

Even in the chaos, you can see the order. No one is idle. When the medic unit heads off to Harborview, firefighters who responded to the call mingle briefly in the street next to their equipment as passers-by take photos and ask what happened.

In a year in which we've been confronted with endless suffering — refugees adrift at sea, children pulled from the rubble of civil wars, squalid tent cities on our own streets — it is a profoundly moving experience to be reminded that there are people who move heaven and earth every day to save a life.

But try telling that to Lujan, who will respond to about one call an hour during his 24-hour shift on Aid 2. "As firefighters, we're on to the next thing," he says. "I won't even remember that call in the morning." Adds Mitchell, "People ask me what call I went on. I don't even remember. It's weird."

When you're riding the busiest piece of firefighting equipment in the city, there's not much time to reflect. Life is what's happening right in front of you.

THEY'RE A FAMILIAR sight — so much so, that it's easy to forget they're a lifeline for thousands of people, a source of contact and care, especially for people living on the streets.

Those 12 cherry-red Christmas package vehicles, big and boxy and missing only the bow, traverse our city streets tens of thousands of times a year. We see their flashing lights, and our only duty is to get the heck out of the way.

Seven Seattle Fire Department cars are medic units, staffed with firefighters trained as paramedics who administer advanced life support in the field under the remote direction of a Harborview doctor. The remaining five are aid cars, staffed with firefighters who are all emergency medical technicians trained to provide basic life support. (In June, the Seattle City Council approved an additional car in its 2017 budget to help cover the spike in daytime calls downtown and in Belltown.)

The city's aid cars are the urgent-care centers of the department, where everyone is guaranteed glove-to-flesh contact regardless of the backstory. It's a sort of Demilitarized Zone — a place that exists outside politics or judgment, where society's values are brought to bear in Technicolor: A call for help will yield help. In the moment, every person matters.

It's a place of grace, in every sense of the word. A cancer patient, an opium addict, an assault victim, a tourist passed out in a bar, a bicyclist injured by a careless driver; all will be cared for.

It's also a place of efficiency and routine, where responsibilities are so delineated that two firefighters who never laid eyes on each other can climb into a vehicle and work together as if they had been partners for a decade.

That expertise doesn't come cheaply, though: The city pays \$1.3 million a year to staff a single car 'round the clock, and another \$80,000 a year for leasing, maintenance and equipment, according to department spokeswoman Kellie Randall.

Aid 2 is housed inside Station 2, the city's oldest working fire station, in Belltown. Not that it spends much time there. Though its primary coverage area accounts for only 1.25 square miles — a tiny fraction of the 84 square miles the department is responsible for — calls for Aid 2 have mushroomed over the years.

Last year, it responded to 8,121 aid calls, an average of more than 22 calls a day. The overwhelming majority, 5,588, were for general assistance. But Aid 2 also is everywhere it's needed: fires, freeway crashes, natural-gas leaks, even water rescues.

"I would gamble to say it's the busiest unit in four states," says Capt. Vance Anderson, a 20-year veteran of the department who began his career at Station 2 and now heads its ladder company. "The aid car used to get 10 to 15 runs a day, and now it gets 20 to 30 a day."

Population increase accounts for some of the spike in calls, most of which don't require intensive assistance, says Anderson. But he suspects it has more to do with the proliferation of cellphones; people call 911 and keep moving, instead of sticking around to help.

"All fire departments are addressing this issue," he says. "No one's figured it out yet. I'm not sure it ever will be [figured out]."

HEADLINE	03/23 Study confirms: cancer often random
SOURCE	http://www.nbcnews.com/health/cancer/it-s-not-your-fault-researchers-confirm-cancer-often-random-n737776
GIST	<p>Random mutations are the single biggest factor in causing cancer, researchers reaffirmed Thursday.</p> <p>About two-thirds of the genetic mutations that lead to cancer happen simply because of random errors made as cells divide and not because of diet, chemicals or inherited genes, the team at Johns Hopkins University said.</p> <p>"We hope that this research offers comfort to the literally millions of patients who have had cancer but who have lived nearly perfect lifestyle — who have never smoked, who have avoided the sun ... who exercise regularly," Dr. Bert Vogelstein of the Johns Hopkins Kimmel Cancer Center told a news conference.</p> <p>"It's not your fault. Nothing you did or didn't do was responsible for your illness."</p> <p>And Vogelstein says he really wants to reassure parents whose children get cancer. Most childhood cancer is caused by random mutations, he said.</p> <p>"They need to understand that these cancers would have occurred no matter what they did. We don't need to add guilt to an already tragic situation."</p> <p>More importantly, it means everyone needs to be screened for cancer when possible even if they think they're at low risk because of family history and their own healthy habits, Vogelstein said, because their findings mean everyone's at risk of cancer, the No. 2 killer in the United States.</p>

HEADLINE	03/23 World fragile cities need \$78 trillion boost
SOURCE	https://www.bloomberg.com/news/articles/2017-03-23/our-world-s-fragile-cities-need-a-78-trillion-boost
GIST	<p>More people are living in urban areas than rural, creating massive infrastructure needs in urban areas.</p> <p>The urban population is seen rising to 70 percent by 2050 from 55 percent in 2016, and its share of gross domestic product will almost double to \$115 trillion by 2030. Getting city development right will be a big factor in eliminating poverty, according to Bank of America Merrill Lynch, and this will need serious money.</p> <p>"More than 80 percent of the world's cities show signs of fragility yet the success or failure in meeting the world's most pressing challenges will be decided in them," BAML analysts, led by Sarbjit Nahal, London-based head of thematic investing, wrote in a report this month. Infrastructure will need \$71 trillion to \$78</p>

trillion in investment over the next decade, and the "smart city" market will grow to about \$1.6 trillion by 2020 from \$1 trillion now, they estimate.

Urbanization helped lift 500 million Chinese out of poverty and the World Bank estimates that a 230 percent increase in a country's urbanization rate will double per capita income. The OECD suggests that for each doubling in population size, the productivity level of a city increases by 2 percent to 5 percent due to competition, or deeper labor markets and the faster spreading of ideas.

About 700 large cities in China alone will account for \$7 trillion, or 30 percent, of global urban consumption growth to 2030. Middleweight emerging-market cities such as India's Ahmedabad and Kochi may offer the best growth opportunities.

However, there are also challenges. A UN survey identifies poor governance and weak institutions as the No. 1 obstacle to prosperity, followed by corruption, crumbling infrastructure and rising inequality and crime. Cities occupy about 3 percent of the earth's land mass but consume more than 75 percent of natural resources and account for 50 percent of global waste, roughly 76 percent of both energy use and greenhouse gas emissions.

About 75 percent of the world's cities have higher levels of income inequality than two decades ago. By the early 2030s, 2 billion people will be living below the poverty line in cities and 1 billion new homes will be needed by 2025.

As governments look to address these issues, the focus is shifting to "smart cities." These use technology and strong institutions to make the city more connected (services and information easily accessible), integrated (different services such as health and transport can communicate and interoperate), personalized (offer each citizen the best locations and delivery methods) and predictive (such as using current transit patterns to predict future road usage for maintenance and expansion).

HEADLINE	03/23 UN: sanctions disrupt aid to NKorea
SOURCE	http://abcnews.go.com/International/wireStory/report-sanctions-disrupt-humanitarian-aid-north-korea-46340596?cid=clicksource_76_null_articleroll_hed
GIST	<p>International sanctions on North Korea are taking a serious toll on humanitarian aid activities, according to a United Nations-led report.</p> <p>The report issued this week by the U.N.'s senior resident official in Pyongyang said sanctions are inadvertently hindering legitimate operations on the ground and have indirectly contributed to a "radical decline" in donations it said are badly needed by millions of North Korean women and children.</p>

It said "chronic food insecurity, early childhood malnutrition and nutrition insecurity" continue to be widespread in the North, which it noted ranked 98th out of 118 countries in the 2016 Global Hunger Index.

More than 10 million people — or about 41 percent of the North Korean population — are undernourished, it said.

To meet the "urgent needs of the most vulnerable," it called for \$114 million in donations.

That could be a hard sell, no matter how dire the need.

Critics have long argued that aid to the North in effect serves to prop up the government by allowing it to focus more of its limited resources on building nuclear weapons, funding the country' million-man army or enriching the ruling elite, rather than spending on the segments of its population that are in the most need.

The report acknowledged such concerns have made getting donations increasingly difficult.

The report also noted sanctions are making it harder to conduct aid activities.

"While international sanctions imposed on DPRK clearly exempt humanitarian activities, they have unintentionally caused disruptions to humanitarian operations," it said.

In particular, it said the "regular disruption" of banking channels since 2013 has made it difficult or impossible to transfer funds into the country. It also cited the additional requirements for licenses and the time it takes to determine what is or is not a potential sanctions' violation as the cause of considerable delays that have forced agencies to "reprioritize" their aid activities.

It said the sanctions also have the psychological effect of making donors reluctant to provide funds for projects in the North.

HEADLINE	03/23 Seattle-King Co. 4th highest increase
SOURCE	http://komonews.com/news/local/census-bureau-seattle-king-county-scores-nations-4th-highest-population-gain
GIST	WASHINGTON - King County, including the city of Seattle, had the fourth-highest population increase in the country from 2015 to 2016, according to data released Thursday by the U.S. Census Bureau. The data showed that King County gained about 36,000 more residents between July 1, 2015, and July 1, 2016.

	<p>Some 15,500 new residents migrated to the area from other countries, while 8,511 moved here from other locations inside the United States.</p> <p>In addition, there were 25,905 births in King County during the year-long period, which were partially offset by 13,580 deaths.</p> <p>King County's total population at the end of the period was 2,149,970.</p> <p>One other Washington state county - Kittitas - made the nation's top 10 in population growth as measured by percentage. That county's population grew by 4.2 percent - to 44,866 - making it 10th highest when measured by that criteria.</p>

HEADLINE	03/23 State Dept. cables: closer visa scrutiny
SOURCE	http://www.cnn.com/2017/03/23/politics/visas-state-department-vetting/index.html
GIST	<p>Washington (CNN) Secretary of State Rex Tillerson sent four cables directing embassies worldwide to identify certain groups that should get extra scrutiny when they apply for visas, including screening of applicants' social media, according to US officials.</p> <p>The cables were sent after President Donald Trump signed a revised executive order restricting travel from most Muslim countries on March 6.</p> <p>The State Department cables, all marked "sensitive" but not classified, direct embassies to convene security and intelligence working groups to determine "a list of criteria identifying sets of post applicant populations warranting increased scrutiny."</p> <p>The first two cables were sent on March 10 and 15, before a federal judge in Hawaii ordered a temporary restraining order nationwide on the travel ban on the evening of March 15.</p> <p>Additional cables were sent on March 16 and March 17, revising instructions after courts blocked the executive order. The executive order prohibits citizens from Iran, Syria, Sudan, Libya, Yemen and Somalia from getting visas for at least 90 days and bars refugees from entering the US for 120 days.</p> <p>The specific language calling for closer scrutiny of certain groups was sent in two different cables, including the March 17 cable, which acknowledged that courts had blocked Trump's executive order. The news about the cables was first reported by Reuters.</p> <p>A State Department official said the cables were meant to provide "operational guidance to our embassies and consulates around the world. Instructions to our embassies and consulates are internal communications, which we do not share publicly."</p>

The official did say that "the US government's national security-focused visitor screening and vetting procedures are designed to effectively identify individuals who could pose a threat to the United States," adding that "we welcome this opportunity to review and improve our systems and procedures."

HEADLINE	03/23 WikiLeaks: CIA Apple hacking tools
SOURCE	http://www.securityweek.com/wikileaks-releases-data-cias-apple-hacking-tools
GIST	<p>WikiLeaks has released a new round of Vault 7 files. The latest dump, dubbed "Dark Matter," details some of the tools allegedly used by the CIA to target Apple devices.</p> <p>The tools are named Sonic Screwdriver, Der Starke, Triton, DarkSeaSkies, NightSkies and SeaPea and, based on the descriptions provided in the files made available by WikiLeaks, they can be used to spy on iPhones and Mac computers. However, in most cases, deploying them requires physical access to the targeted device.</p> <p>Sonic Screwdriver, for instance, is a tool that can be used to execute code from a USB thumb drive or other external disk connected to a Mac laptop even if the firmware is protected by a password. The documents obtained by WikiLeaks show that Sonic Screwdriver is stored on the firmware of a Thunderbolt-to-Ethernet adapter.</p> <p>The DarkSeaSkies implant is designed for targeting the EFI on MacBook Air computers, and it's meant to be delivered via "a supply chain intercept or a gift to the target." DarkSeaSkies relies on the DarkMatter EFI driver for persistence and installing other tools, and the SeaPea OS X rootkit for stealth and execution of other implants. One such implant is NightSkies, which provides command and control capabilities.</p> <p>The documents show DarkSeaSkies can be installed by booting the targeted system with an external flash drive. The implant is persistent across OS upgrades and reinstalls, but it can be removed by the attacker using a special command. Under certain conditions, the implant may also remove itself automatically.</p> <p>Another set of tools includes a piece of OS X malware dubbed Triton, its infector Dark Mallet, and Der Starke, the EFI-persistent version of Triton.</p> <p>One version of the NightSkies tool is designed for targeting iPhones. Once installed on a device, it can be used to execute arbitrary commands, download additional tools to the phone, and steal various types of files, including the address book, SMS messages and call logs. NightSkies, which also requires physical access to the targeted device, is recommended for "factory fresh" devices.</p>

	The documents are dated 2008, 2009 and 2012, but WikiLeaks claims other Vault7 files show the CIA has continued to improve these tools. The organization also pointed out that the files show the intelligence agency has been “infecting the iPhone supply chain of its targets since at least 2008.”

HEADLINE	03/23 Report: BEC attacks rise 45%
SOURCE	https://www.scmagazine.com/bec-attacks-up-45-and-gaining-in-sophistication-proofpoint/article/645909/
GIST	<p>Cybercriminals upped their activity against corporations when it comes to email scams. A new Proofpoint report found a 45 percent increase in business email compromise (BEC) attacks during the closing months of 2016.</p> <p>The extent of BEC activity uncovered by the survey was quite high, with 75 percent of the more than 45,000 companies contacted by Proofpoint reporting at least one BEC incident during the last three months of 2016. Attackers pushed out more sophisticated attacks at a faster rate than the prior year, the report found.</p> <p>The industries attacked most often from July to December 2016 were manufacturing, retail and technology with Proofpoint researchers speculating that cybercriminals hoped to take advantage of more complex supply chains and SaaS infrastructures that are often used by these companies.</p> <p>One aspect of the increased sophistication of the attacks included having the malicious actors doing their homework and creating campaigns targeted at specific companies and personnel. This extra legwork resulted in two-thirds of the emails using a domain spoofed from the targeted company and being sent by a familiar name, thus making the email appear even more realistic to an unwary recipient.</p> <p>Not only is a well-known name being used, the spearphishers have also moved beyond attempting to just spoof senior executives; for example, sending a CFO an email purportedly from the CEO.</p> <p>Most emails were sent to accounts payable, for wire transfer fraud attempts; to human resources for confidential tax information and identities; and to engineering for intellectual property theft, the survey said.</p> <p>Careful consideration was also given to the subject lines, with the terms most often used being: urgent, at 30 percent; payment, at 21 percent; and request, at 21 percent.</p>

HEADLINE	03/23 Arrest in \$100M multinational BEC attacks
-----------------	---

SOURCE	https://www.scmagazine.com/lithuanian-arrested-in-100-million-multinational-bec-whaling-fraud/article/645998/
GIST	<p>A man has been arrested for defrauding two unnamed multinational internet companies out of over \$100 million (£80 million) using sophisticated whaling attacks.</p> <p>Evaldas Rimasauskas, a Lithuanian national, was arrested late last week by Lithuanian authorities.</p> <p>Rimasauskas is alleged to have opened a company and a variety of bank accounts in Lithuania, Latvia and Cyprus. Rimasauskas is meant to have opened a company called Company-2, similar to the name of an Asian company, Company-1.</p> <p>The indictment says that Rimasauskas then contacted the two multinationals, whom Company-1 regularly did business with, and directed them to send money to the accounts that the suspect had set up.</p> <p>Rimasauskas then took his ill gotten gains and wired them through a vast network of accounts all over the world. To aid the process, Rimasauskas allegedly forged invoices, contracts and letters adorned with false corporate stamps and signatures designed to allay the suspicions of the banks receiving the hefty sums. Some of the stolen funds have apparently been recovered.</p> <p>Rimasauskas is charged with one count of wire fraud and aggravated identity theft and three of money laundering. He could face in excess of 20 years in US prison.</p> <p>Acting US Attorney Joon H. Kim said in a statement, “This case should serve as a wake-up call to all companies – even the most sophisticated – that they too can be victims of phishing attacks by cyber-criminals. And this arrest should serve as a warning to all cyber-criminals that we will work to track them down, wherever they are, to hold them accountable.”</p> <p>A whaling attack is more formally known as business email compromise (BEC). While antivirus solutions and technical forms of defence against cyber-attack have gotten much better, security professionals still have not figured out how to stop people from compromising themselves.</p>

HEADLINE	03/23 Minecraft players download fake apps
SOURCE	https://www.scmagazine.com/nearly-a-million-minecraft-players-feel-like-blockheads-after-installing-fake-mod-apps/article/646022/
GIST	A batch of malicious apps falsely posing as mod programs for the popular world-building game Minecraft were downloaded by users roughly 990,000 times on Google Play before they were reported last month, according to researchers from ESET .

Of these 87 phony apps, which supposedly allowed players to modify the mobile game in various ways, 73 of them redirected users to scam websites and 14 were in reality an aggressive ad-displaying downloader identified as Android/TrojanDownloader.Agent.JL, ESET reported in a Thursday [blog post](#).

The redirection apps, detected by ESET as *Android/FakeApp.FG*, were added to Google Play between January and March of this year and were installed up to 910,000 times, the report continues. When installed, these apps display a screen with a download button, which when clicked opens a browser and takes the user to a malicious websites whose content at times included ads, surveys, coupon offers, prizes, porn, and fake updates and virus warnings.

The 14 fake mod programs detected as Android/TrojanDownloader.Agent.JL were installed around 80,000 times. In order to display out-of-app advertisements, the downloader trojan leverages an additional malicious component disguised as a downloadable module that is supposedly needed to install the mods. Called "Block Launcher Pro," this module requires several intrusive permissions from the user, including device administrator rights, and has no real functionality other than to aggressively display ads.

Because Android/TrojanDownloader.Agent.JL is capable of downloading additional apps, it could potentially introduce even more harmful malware to infected users in the future, ESET has warned.

HEADLINE	03/23 Experts call bluff on iCloud ransom claim
SOURCE	https://www.scmagazine.com/hackers-holding-icloud-accounts-hostage-most-likely-bluff-industry-pros/article/645920/
GIST	<p>A group of hackers are threatening to lockdown 200 million iCloud accounts if Apple doesn't pay a \$75,000 ransom in bitcoin, or \$100,000 in iTunes gift cards by April 7, however, some security professionals are calling bluff.</p> <p>Industry insiders told SC Media that Apple doesn't believe the claims are true and that the cybercriminals have likely culled the info from previous leaks and are cross referencing the information to see if users are using the same credentials across multiple accounts. Furthermore the scammers are likely using the media to hype the situation.</p> <p>"There have not been any breaches in any of Apple's systems including iCloud and Apple ID. The alleged list of email addresses and passwords appears to have been obtained from previously compromised third-party services," an Apple spokesperson told SC Media.</p> <p>"We're actively monitoring to prevent unauthorized access to user accounts and are working with law enforcement to identify the criminals involved. To protect against these type of attacks, we always recommend that users always use strong passwords, not use those same passwords across sites and turn on two-factor authentication."</p>

	Justin Jett, technical marketing manager at security analytics firm Plixer questioned the legitimacy of the breach and told SC Media that it's just another example of a high-profile extortion attempt by hackers.

HEADLINE	03/23 Report: 20M mobile devices at high-risk
SOURCE	http://www.darkreading.com/threat-intelligence/20-million-mobile-devices-at-high-risk-of-attack-study-finds-----/d/d-id/1328463?
GIST	<p>Numbers-crunchers, check this out: In a new report released this morning, Skycure found that 1.19% of all mobile devices are at high risk for malware infections.</p> <p>While that might sound like a good number, Varun Kohli, vice president of marketing at Skycure, explains that 1.19% of 2 billion mobile devices worldwide translates to 23.8 million infected devices.</p> <p>"It's kind of deceiving, but for a company with 1,000 employees that means that 10 devices are at high risk," Kohli says. "All a bad guy needs is one device to get into the network and start compromising data."</p> <p>The study also found that 71% of mobile devices are running on security patches that are at least two months old. This information is fairly in line with Google's newly published Android Security report, which found that about 50% of Android devices didn't install a single security update in 2016.</p> <p>"We still see a lot of vulnerabilities on mobile devices, especially as people hold on to their devices longer," says Phil Hochmuth, program director for enterprise mobility at IDC. "However, mobile security is getting better, the biometrics have improved, and at corporations if people bring their own devices, they have to comply with the company's mobile management software."</p> <p>Mobile malware - adware, hidden apps, potentially unwanted apps, spyware, and Trojans - grew more than 500% from the first quarter of 2016 to the fourth quarter of that year, according to Skycure's data.</p>

HEADLINE	03/23 Bitcoin scams infest social media
SOURCE	https://www.infosecurity-magazine.com/news/bitcoin-scams-infest-social-media/
GIST	<p>A new breed of financial scam involving Bitcoin is actively spreading across social networks.</p> <p>“They succeed by leeching onto the money-driven hype associated with the latest and greatest hallmarks of popular culture,” said researchers at ZeroFOX, which uncovered the campaign. “Earlier this month, the price of a single Bitcoin eclipsed the price of an ounce of gold for the first time ever. This news, coupled with the exploding adoption of its underlying technology—blockchain—beyond the financial world, is attracting a new flock of clientele, investors and entrepreneurs to the fledgling cryptocurrency.”</p> <p>There are four main categories of scam, ZeroFOX noted in an analysis: Malware gambits, Bitcoin phishing impersonators, Bitcoin-flipping scams and Bitcoin pyramid schemes.</p> <p>On the malware front, bad actors try to entice users to click through URLs posted to social media using the promise of Bitcoin. The URL leads to a website that attempts to download a malware-laden app. Fake Bitcoin surveys are often used to distribute malware too.</p> <p>Meanwhile, impersonators post links on social media that lead to phishing websites that allegedly offer a search service, enticing users to enter in their private Bitcoin key to see if it exists in their database. Once entered, the private key will simply be phished, allowing the scammer to spend directly from the curious Bitcoin owner’s wallet.</p> <p>Flipping scams advertise on Instagram and elsewhere, and offer to instantly exchange Bitcoins for money after paying an initial startup fee or a promise to double your initial investment overnight. Of course once turned into the “exchange bureau,” the Bitcoins are stolen immediately.</p> <p>In the pyramid scheme, scammers are hawking high-yield investment programs and multi-level marketing. It’s a well-known configuration that goes back decades in the real world: A low initial investment can be multiplied by signing up additional members using referral links. The Bitcoin version often involves fake donations; people involved use social media to spread word of the scheme.</p> <p>The rise of the Bitcoin scam is a result of a perfect storm of trends, the firm noted. For one, social media is a perfect conduit to the right kind of victim.</p>

	Also Bitcoin, as a virtual currency, is anonymous—much like cash. But unlike the cold, hard stuff, it’s decentralized and not controlled by any financial institution or government.

HEADLINE	03/23 Vault 7: CIA bugs factory fresh iPhones
SOURCE	http://heavy.com/news/2017/03/wikileaks-vault-7-leak-cia-bugs-iphones-factory-fresh-darkmatter-darkseaskies/
GIST	<p>A new WikiLeaks Vault 7 leak titled “Dark Matter” claims, with unreleased documents, that the Central Intelligence Agency has been bugging “factory fresh” iPhones since at least 2008.</p> <p>The documents are expected to be released after a 10 a.m. EDT “press briefing” that WikiLeaks promoted on its Twitter.</p> <p>A summary of the documents has been released on the WikiLeaks website. It reads:</p> <p>Today, March 23rd 2017, WikiLeaks releases Vault 7 “Dark Matter”, which contains documentation for several CIA projects that infect Apple Mac Computer firmware (meaning the infection persists even if the operating system is re-installed) developed by the CIA’s Embedded Development Branch (EDB). These documents explain the techniques used by CIA to gain ‘persistence’ on Apple Mac devices, including Macs and iPhones and demonstrate their use of EFI/UEFI and firmware malware.</p> <p>Among others, these documents reveal the “Sonic Screwdriver” project which, as explained by the CIA, is a “mechanism for executing code on peripheral devices while a Mac laptop or desktop is booting” allowing an attacker to boot its attack software for example from a USB stick “even when a firmware password is enabled”. The CIA’s “Sonic Screwdriver” infector is stored on the modified firmware of an Apple Thunderbolt-to-Ethernet adapter.</p> <p>“DarkSeaSkies” is “an implant that persists in the EFI firmware of an Apple MacBook Air computer” and consists of “DarkMatter”, “SeaPea” and “NightSkies”, respectively EFI, kernel-space and user-space implants.</p> <p>Documents on the “Triton” MacOSX malware, its infector “Dark Mallet” and its EFI-persistent version “DerStake” are also included in this release. While the DerStake1.4 manual released today dates to 2013, other Vault 7 documents show that as of 2016 the CIA continues to rely on and update these systems and is working on the production of DerStarke2.0.</p> <p>Also included in this release is the manual for the CIA’s “NightSkies 1.2” a “beacon/loader/implant tool” for the Apple iPhone. Noteworthy is that NightSkies had reached 1.2 by 2008, and is expressly designed to be physically installed onto factory fresh iPhones. i.e the CIA has been infecting the iPhone supply chain of its targets since at least 2008.</p>

	While CIA assets are sometimes used to physically infect systems in the custody of a target it is likely that many CIA physical access attacks have infected the targeted organization's supply chain including by interdicting mail orders and other shipments (opening, infecting, and resending) leaving the United States or otherwise.

HEADLINE	03/23 Slip-up that caught Jewish bomb caller
SOURCE	http://www.thedailybeast.com/articles/2017/03/23/the-slip-up-that-caught-the-jewish-center-bomb-caller.html
GIST	<p>The suspect arrested Thursday for a wave of bomb threats against Jewish Community Centers in the United States employed an array of technologies, including Bitcoin and Google Voice, to make himself virtually untraceable for months, The Daily Beast has learned. But in the end, it only took one careless slip-up to lead police to his door.</p> <p>Police arrested 19-year-old Michael Kaydar, who has joint Israeli-U.S. citizenship, at his home in Ashkelon, a coastal city in southern Israel. He's suspected of phoning in over 100 bomb threats to JCCs and Jewish day schools in 33 states since January, with the most recent calls made two weeks ago. Police also suspect him of making similar threats in Israel, Europe, Australia, and New Zealand.</p> <p>The arrest followed an international probe that began with the first U.S. threats in January, and quickly hit its first roadblock, according to sources close to the investigation. The FBI traced the phone calls back to a service called SpoofCard that allows users to mask their caller ID, so their phone calls can appear to come from any number they choose.</p> <p>The FBI sent a subpoena to the company that runs the service, New Jersey-based TelTech, in the hope of obtaining the caller's real number. But that phone number turned out to be a disposable Google Voice line established under an alias.</p> <p>The server logs from both TelTech and Google weren't much more helpful. They showed that the suspect routed his Internet connection through anonymous proxy servers overseas. Even the caller's voice was anonymous—he used Spoofcard's voice-changing option to make himself sound like a voice synthesizer imitating a woman. And rather than use a traceable credit card or PayPal, the perpetrator paid for his Spoofcard in Bitcoin—another dead end.</p> <p>Meanwhile, the bomb threats continued, coming in six separate waves. Jewish centers and day schools began evacuating with almost routine regularity. The threats were generally seen as evidence that anti-Semitic fringe groups were feeling emboldened by the election of Donald Trump. Then in March, a St. Louis man was arrest for a handful of copycat bomb threats he allegedly staged in an effort to frame an ex-girlfriend.</p>

But in his rush to reach as many Jewish institutions as possible, the original bomb hoaxer grew careless. On at least one occasion, he neglected to route his Internet connection through a proxy server, leaving behind a real IP address in the server logs. The address was in Israel, where police traced it to a WiFi access point that Kaydar was allegedly accessing through a giant antenna pointed out a window in his home.

A motive for the suspect, who is himself Jewish, hasn't been established, but his lawyer reportedly said Kaydar has suffered from a brain tumor since age 14. The tumor affects his behavior, the lawyer claims.

SpoofCard and services like it have plenty of legitimate users, such as undercover cops, or domestic abuse victims who use it to conceal their phone numbers from an ex. But the JCC calls aren't the first time SpoofCard has been used for evil either. In one example, in 2007 a gang of malicious phone hackers in Texas were arrested for using the service in a "swatting" campaign against their enemies. They would call the police and claim to be holding hostages in their home, while spoofing the victim's phone number. The result: the police storm the victim's house with guns drawn.

But normally spoofing isn't much of an impediment to law enforcement, and sometimes even incidentally helps build a case. The Texas swatters voluntarily used SpoofCard's recording option during their calls to police, allowing the FBI retrieved the recordings with a search warrant. It's unclear whether the JCC caller used that feature. Reached by The Daily Beast, TelTech emphasized that it cooperates with law enforcement when its service is abused.

HEADLINE	03/23 Israel arrests hacker in JCC bomb threats
SOURCE	http://abcnews.go.com/International/wireStory/israel-police-arrest-suspect-threats-us-jewish-targets-46323677
GIST	<p>A 19-year-old American-Israeli Jew was arrested Thursday as the prime suspect in a wave of bomb threats against U.S. Jewish community centers, a startling turn in a case that had stoked fears of rising anti-Semitism in the United States.</p> <p>The surprising arrest of the man, a hacker who holds dual Israeli and American citizenship, came after a trans-Atlantic investigation with the FBI and other international law enforcement agencies. U.S. Jewish groups welcomed the breakthrough in the case, which had drawn condemnation from President Donald Trump.</p> <p>Israeli police described the suspect as a hacker, but said his motives were still unclear.</p> <p>"He's the guy who was behind the JCC threats," police spokesman Micky Rosenfeld said, referring to the scores of anonymous threats phoned in to Jewish community centers in the U.S. over the past two months.</p>

Police banned publication of his name, but said he was a dual citizen and would remain in custody until at least March 30. During the arrest raid, they said he tried to grab an officer's gun but was stopped by another officer.

The young man appeared briefly in court in the central Israeli city of Rishon Letzion. He wore khaki pants and a blue sweater that he used to cover his face as he walked past reporters. He made no comment.

His lawyer, Galit Bash, said her client had a "very serious medical condition" that might have affected his behavior. She said the condition had prevented him from attending elementary school, high school or enlisting in the army, which is compulsory for most Jewish men.

"That's why the medical condition can actually affect the investigation," she said. "This is one of the things the judge told the police to check, to talk to his doctors, to get more documents and to investigate him according to his medical situation."

Channel 10 TV said the condition was a brain tumor. It also showed images of a large antenna outside the suspect's house in the southern Israeli city of Ashkelon. Police said the suspect's father was also detained, apparently because of the equipment. Late Thursday, police said the father's detention had been extended by eight days.

In Washington, the FBI confirmed the arrest of the main suspect.

U.S. authorities have also arrested a former journalist from St. Louis, Juan Thompson, for allegedly threatening Jewish organizations and charged him with one count of cyberstalking. But Israeli police described the local man as the primary suspect in the wave of threats.

Police said he used sophisticated "camouflage technologies" to disguise his voice and mask his location. They said a search of the teen's home uncovered antennas and satellite equipment.

"In sophisticated cyber activity that I cannot detail, we obtained what we obtained and of course exposed him and his equipment," national police chief Roni Alsheich told reporters. "This does not bring honor to the state of Israel of course. But I think it does bring respect to Israel's police."

Police said the threats had caused panic, "significant economic damage" and disrupted public order at locations around the world.

Harel Menashri, a former cyber expert with Israel's Shin Bet internal security agency, said it was not "too complicated" for the suspect to do what he did.

He said it appeared the suspect had penetrated neighbors' Wi-Fi systems to create multiple computer addresses.

"One of the things that helped him evade capture was he apparently took control over additional computers on the way and created a kind of computer chain," he said.

Nimrod Vax, a co-founder of the U.S.-Israeli cybersecurity firm BigID, said catching the suspect was a more complicated task.

He said authorities would have had to sift through "billions, if not trillions" of pieces of data, including phone records, routing logs and IP connections.

Ron Hosko, a retired FBI assistant director, said such investigations require massive manpower to solve.

Investigating a bomb threat by phone normally means getting a subpoena for a phone company and getting subscriber information to identify the incoming call. But the suspect used computer software, such as Tor, to obfuscate his whereabouts.

The software "puts you in a cloud of IP addresses" that link to different computers and make it extremely difficult to trace, he said.

HEADLINE	03/24 Football loving teen to terror attacker
SOURCE	http://www.telegraph.co.uk/news/2017/03/23/violent-extremist-dropped-polices-radar/
GIST	<p>This is the first photo of Khalid Masood, the terrorist responsible for the Westminster attack. Smiling broadly for the camera, he is photographed in his school football team.</p> <p>The picture is not dated but he appears to be about 14-years-old. Almost 40 years later, he would go on to wreak havoc at the heart of British democracy, murdering four innocent people.</p> <p>Masood was born Adrian Elms and used the name Adrian Ajao, his stepfather Philip's surname during his school years. In the photograph, Masood is sixth from the left in the back row. His arms are folded and he gives no clue as to the murderous path he would take. Masood went to Huntley School for Boys in Tunbridge Wells in Kent where he grew up.</p> <p>After school, he Masood quickly turned to a life of petty and violent crime.</p> <p>Khalid Masood, the Westminster attacker, snapped because of racism in his village and slashed the face of a cafe owner before being radicalised in jail. This led to his involvement in terrorism.</p>

Masood has been identified as the man formerly known as Adrian Elms, a career criminal with a history of violent knife crime.

Reports emerged on Friday that the Muslim convert had recently become a grandfather, after neighbours said that the daughter of his wife had just had a baby.

Records suggest that Masood, who had given his occupation as an English tutor on several forms over the years, was married to a 39-year-old woman named Rohey Hydara, who lives in an Olympic Village apartment in east London.

Masood went off the rails in July 2000, slashing a man across the face after an argument that had "racial overtones". The attack would land him in jail and his life, already in a fragmented state, would fall apart.

In another attack three years later, he stabbed a man in the nose before reportedly travelling to Saudi Arabia.

The extraordinary revelations will cause deep unease. Elms – or Masood, the Islamic name he adopted – was known to the authorities as a vicious thug whose 'violent extremism' had brought him to the attention of MI5. Yet at some point a decision was taken that he was no longer considered a threat.

On Wednesday, having stayed the night before the attack in a cheap hotel in Brighton, he got into a hired car, drove to London and then used it as a weapon to kill pedestrians on Westminster bridge.

Then brandishing a knife, he slaughtered a police officer, trying to protect the palace of Westminster, in cold blood.

Masood told staff at the Preston Park Hotel: "I'm off to London today" as if he was a tourist. The capital, he declared, "isn't like it used to be." Masood, whose mother was white and father black, was born in Dartford in Kent.

Masood was 35 and living in the quiet Sussex village of Northiam when in 2000 he slashed cafe owner Piers Mott in the face with a knife after a row that had 'racial overtones'.

Hove Crown Court heard that the attack left Masood and his young family "ostracised" in the village. He had been in conflict with his victim before. After leaving the pub, in which he argued with his victim, Masood lost his temper and slashed seat covers in Mott's car. When Mott arrived at his car, Masood waved the knife at him and caught his face, leaving him needing more than 20 stitches.

The court heard at the time that Masood had consumed four pints during the afternoon and had the knife because he was decorating his daughter's bedroom.

Judge Charles Kemp sentenced Elms to a total of two years in prison.

Commenting on the row between the victim and Elms, Judge Kemp said: "While it doesn't afford any excuse for your behaviour it may afford some degree of explanation."

Masood, one of only two black men Northiam - according to a court report at the time - was ostracised from the community. He was jailed for two years for the attack.

Three years later and now out of jail, Masood was accused of stabbing a man in the nose, leaving him needing cosmetic surgery. He was sent back to jail for another six months for possession of offensive weapon. He served time in Lewes jail, East Sussex, Wayland prison in Norfolk, and Ford open prison, West Sussex.

It is quite likely he was radicalised during a spell in jail.

By 2005 he was working in Yanbu, Saudi Arabia, then teaching workers at the General Authority of Civil Aviation (GACA) in Jeddah, according to The Sun, which says it obtained a copy of Masood's CV.

In the CV, which was sent out just weeks ago, he is said to describe himself as "British", "friendly and approachable" and a good listener.

The document reportedly claims he had a economics degree. He apparently began in sales and was later promoted to manager at Aaron Chemicals in Bodiam, East Sussex.

In 2004 he is understood to have married a Muslim, Farzana Malik. It is unclear what became of their marriage and whether Masood converted to Islam at the time. In the same year, The Sun reports, Masood's CV claims he gained a TESOL certificate, allowing him to teach English to foreigners.

In spring 2009, Masood reportedly returned from Saudi Arabia to the UK. After a five-month gap, he is said to have joined a TEFL college in Luton as a "senior English teacher".

Theresa May, in a statement to MPs at 10.30am on Thursday, was quick to absolve her security services of blame.

"His identity is known to the police and MI5 and, when operational considerations allow, he will be publicly identified," she said.

"What I can confirm is that the man was British-born and that – some years ago – he was once investigated in relation to concerns about violent extremism. He was a peripheral figure. The case is historic – he was not part of the current intelligence picture.

“There was no prior intelligence of his intent or of the plot.”

Five hours later, the Metropolitan Police made public one of his adopted names – Khalid Masood- in a short statement that gave scant details of his long history of violent crime. None, they stressed, were for terrorism offences.

Police finally admitted on Thursday night that Masood was not his birth name, adding to mystery about why his real name Adrian Elms was being withheld.

Masood, a burly bodybuilding enthusiast, received his first conviction in November 1983 for criminal damage when he was 18 and his last one in 2003 for possession of a knife.

In a 20-year criminal career he also received convictions for causing grievous bodily harm. He has lived a nomadic existence including stints on the south coast as well as in Kent.

It is thought that after his time in prison, he came onto MI5’s radar. A Whitehall source said he had been a person of interest but “peripheral” to a terror investigation. The source declined to identify the terror cell.

Over the past five or six years, Masood, his wife, aged 39, and their young children, have been on the move. Electoral roll records show him living in areas notorious for pockets of Islamist extremism.

He lived for more than two years until 2013 in Luton, where Anjem Choudary, an influential preacher now in jail for terror offences, had been a regular and often mob-handed visitor.

A former neighbour in Luton, Katie Garriques, 48, a former headteacher, remembered a “polite, shy” and “quite portly man” whom she often saw gardening at the front of the property and playing with his children.

From Luton, Masood and his family moved to Forest Gate in east London. A neighbour, who asked not to be named, said Masood frequented a mosque in nearby Leyton. Another neighbour, Ibrahima Kone, 57, a cab driver, said the family lived there for three years. At some stage Masood’s wife had moved to a new property on the site of the Olympic Village. A property there was raided by police on Wednesday night.

In the past year, Masood and his family moved to Birmingham to a block of flats at Quayside in Winson Green. It is not clear why they moved there, but that property was also raided by anti-terror police following the attack.

Student Kaodi Campbell, 25, confirmed the man in the picture was her neighbour. “He was always polite and would say ‘hello, hello’ to me,” she said.

“You could tell they were religious, his wife always wore traditional dress. I last saw them just over a month ago. They had three children. He had a job and you would see him leaving for work or taking his children to school.”

Local children remember him joining in games of football. One boy said: “Sometimes he’d play as well, though he wasn’t very good. He wore a skull cap and had a long bushy beard.”

On Monday or Tuesday, Masood turned up at the car hire company Enterprise at its Spring Hill depot in Birmingham and rented the Hyundai SUV used in Wednesday’s attack.

He gave his profession as a teacher and, it is understood, his address as a rented flat close to Edgbaston and not far from the Enterprise offices. On Wednesday at 11pm, armed police stormed the upstairs flat at Hagley Road. More than a dozen officers armed with machine guns stormed the premises, making three arrests. One witness, who works in a shop near the second-floor flat, said: “The man from London lived here. They came and arrested three men.”

Scotland Yard said on Thursday it had made eight arrests, seven in Birmingham and one in east London of a 39-year-old woman. A property in Brighton, where The Sun reported Masood spent his last night, and another in south-east London were also searched.

David Videcette, a former Scotland Yard counter-terrorism officer and security expert, said it was odd that Masood had committed the atrocity at the age of 52.

“His age is surprising as most terrorists are radicalised at a much younger age,” said Mr Videcette. “It would be my assessment that he has probably had quite a troubled past, with involvement in drink or drugs leading him into criminality.

“Then at some point, possibly in the last decade, he has converted to Islam and changed his name. Then it appears that he has fallen under the malign influence of others who have encouraged or persuaded him to carry out this attack, possibly for money for his family.”

Mr Videcette added: “What will be key is establishing why he has suddenly and quite recently moved to Birmingham, having spent most of his life in the South East.

“Pretty much every terror case I worked on had some Birmingham connection somewhere along the line. It is likely there were people there who were part of his close circle and the police will want to look at that aspect very closely indeed.”

HEADLINE | **03/23 Psychology behind London terror attack**

SOURCE	https://www.psychologytoday.com/blog/slightly-blightly/201703/the-psychology-behind-londons-terrorist-attacker
GIST	<p>Very little is yet known about the assailant at the centre of the London terrorist outrage; it looks like they acted alone.</p> <p>With the police now declaring arrests have been made linked to the crime, a question remains over how much this resembles a so-called ‘lone-wolf’ attack?</p> <p>BBC News is currently reporting that a police officer was stabbed to death outside the Houses of Parliament while four other people died, including the attacker, and at least 40 others were injured as people on Westminster Bridge were driven into by a speeding car.</p> <p>‘Lone-actors’ appear to have been behind more recent terrorist incidents, compared to organisations or groups. Security agencies may have become better at penetrating and intercepting groups of extremists.</p> <p>Loners on the other hand may represent a particular challenge because, by definition, they don’t communicate or get involved with others. Penetrating ‘inside the head’ of an isolated individual seems implausible.</p> <p>Does this mean that incidents like the most recent one in Westminster, if this does turn out to be another ‘lone-wolf’ attack, signal we have now reached the end stage of the ultimate terrorist weapon?</p> <p>Or can useful predictions be made about what security agencies might uncover about this perpetrator in the coming days?</p> <p>Academics Paul Gill, John Horgan and Paige Deckert, recently published in the <i>‘Journal of Forensic Sciences’</i>, one of the most comprehensive studies of lone-wolf attackers. They investigated 119 who engaged in or planned such terrorism within the United States and Europe.</p> <p>Their investigation reveals psychological patterns providing avenues to pursue in preventing what can appear threats impossible to defend against.</p> <p>For example, this study found that much tactical planning goes into lone-actor terrorist events.</p> <p>Approaching one third of offenders engaged in ‘dry runs’ of their intended attacks. Given what appears to be a relative increase in this kind of terrorism, there seems to be direct knowledge transfer between them. This study found approximately a quarter consumed information concerning other lone-actor terrorists while 15.1% digested literature or propaganda produced by other lone-actor terrorists.</p> <p>Someone, somewhere will be viewing the horrific images on our screens and plotting the next attack.</p>

Half of these perpetrators changed address within the 5 years prior to the terrorism, and of those who did transfer address, 45% did so within 6 months of their eventual terrorist attack or arrest.

While often characterised as 'loners', in fact this study found their social isolation was often not enduring, but instead arose from more recent interpersonal conflict. For example, while approaching a third experienced problems in close personal relationships, of this group, almost one third experienced these difficulties within the 6 months prior to their terrorist attack.

The study, entitled, '*Bombing Alone: Tracing the Motivations and Antecedent Behaviors of Lone-Actor Terrorists*', found 41.2% had previous criminal convictions, a much higher proportion than suggested for members of formal terrorist organizations. Organised terrorists prefer recruits without past criminal records; less likely to raise red flag alerts with the security community.

The majority of those with a crime history had been in jail; it was while serving time that at least a third became 'radicalised', adopting an ideology from prison that would underpin eventual terrorist attack.

The authors of this study, based at University College London, Georgia State University in Georgia and The Pennsylvania State University, also found 'lone-actor' terrorist events were rarely sudden and impulsive; evidence that this kind of assailant might be defended against if their patterns were better understood.

Religiously inspired lone actors constitute the largest group of perpetrators at approaching half, in terms of ideological reasons for committing the terrorism. The balance between the different motivations has evolved. Religion as a reason for the attack has risen dramatically in recent years, while right-wing ideologies and single-issue campaigners such as abortion activism has relatively declined.

A fifth of the total sample converted to a religion before engaging in an event. The religiosity and anger of many noticeably increased in the build-up to their terrorism.

In terms of plotting, 41.2% of the offenders specifically targeted, or intended to target, people with the most commonly sought-after target civilians (27.7%), followed by government-related targets (23.5%) with military targets at just 6.7%.

The military are therefore attacked on a far less consistent basis compared to terrorist groups. Most (58%) lone-actor terrorist plots are located in public spaces while in 24.4% of cases, the offender had a previous history with the location of the attack (e.g., was previously employed there).

The study, sponsored by the U.S. Department of Homeland Security's Science and Technology Directorate and coordinated through the U.K. Home Office, found in most cases, others knew some aspect of the offender's grievance, intent or extremist beliefs prior to the terrorism. In 58.8% of cases, the offender produced letters or public statements before the event outlining beliefs.

In almost two thirds of cases, family and friends were aware of the individual's intent to engage in terrorism-related activities because the offender told them. This is comparatively a lower figure than the 81% found in school shooters, but these findings still suggest that friends and family can play important roles in efforts that seek to prevent terrorist plots. In approaching a quarter of cases, the individual provided a specific pre-terrorist event warning.

What this research might be pointing to is that knowledge of the antecedents to such attacks needs to be better disseminated amongst the public. Possibly it is the wider community who are the key intelligence weapon against so-called 'lone-wolf' actors.

In terms of the planning of the terrorism, often others were aware of the offender's precise intent. In approaching two thirds of cases, others possessed specific information about the lone actor's preparation prior to the event itself. There was often very little time between the offender choosing to opt for violence and committing an attack.

HEADLINE	03/24 Birmingham jihadi capital of Britain?
SOURCE	http://www.dailymail.co.uk/news/article-4344300/How-DID-Birmingham-jihadi-capital-Britain.html
GIST	<p>The Hyundai 4x4 at the centre of the Westminster terrorist atrocity might have ended its bloody mission at the gates of Parliament, but the vehicle — and the maniac behind the wheel — began the journey more than 100 miles up the M40 . . . in Birmingham.</p> <p>The vehicle was hired from a firm — in Birmingham. The 'driver' was staying in a rented flat — in Birmingham. Police with machine guns carried out a series of raids in the aftermath of the attack — in Birmingham.</p> <p>Birmingham. Birmingham. Birmingham. It's always Birmingham.</p> <p>Under different circumstances, these revelations might be treated as no more than incidental facts in the narrative. After all, the Hyundai had to come from somewhere, the perpetrator had to live somewhere.</p> <p>The recent history of Britain's second city, however, tells us that the Birmingham 'connection' is more significant; more than just a coincidence.</p> <p>How can the shocking statistic — namely, that one in ten convicted Islamic terrorists come from a tiny area of Birmingham in and around the Sparkbrook district — be dismissed as a 'coincidence?'</p> <p>These five highly concentrated Muslim council wards, occupying a few square miles, have produced 26 of the country's 269 known jihadis, according to recent analysis of terrorism in the UK.</p>

The evidence is there, in black and white, in the 1,000-page report published earlier this month by security think-tank, the Henry Jackson Society.

The overall number of Islamic terrorists revealed to have had a Birmingham address down the years is even higher: 39 in total. This figure is more than for the whole of West Yorkshire, Greater Manchester and Lancashire put together.

The address where Khalid Masood, the man responsible for the Westminster outrage, was believed to have been holed up was in Hagley Road, a busy thoroughfare lined with kebab shops, cheap Asian food outlets and boarded-up stores with broken windows.

Officially, Hagley Road falls within the leafy Edgbaston postcode, but it has more in common with nearby Sparkbrook, which runs adjacent to this run-down part of Edgbaston (which famously boasts one of England's regular Test match cricket grounds).

The back-to-back terraces of Sparkbrook, and similar neighbourhoods around the country, have often been cited as examples of thriving multiculturalism. In truth, they have become segregated ghettos with high rates of crime and unemployment, where few British-origin households remain.

Only a generation ago, residents were made up of indigenous locals and families from Ireland, attracted by cheap housing and employment.

In the Sixties, the first migrants from the Indian sub-continent arrived, and so began a process of irreversible change that culminated in mass, uncontrolled immigration under New Labour.

Today, multiculturalism in Sparkbrook means a Muslim from Pakistan living-side-by-side with a Muslim from, say Bangladesh or Kashmir.

University research recently identified Sparkbrook as one of two areas outside London with more than 30 per cent of people not born in the UK. A significant section of Sparkbrook's population do not speak English. There are 22 mosques in Sparkbrook alone.

Khalid Masood, 52, a father of three — originally from Kent — might have been a 'lone wolf' in the sense that he was the only person in the Hyundai, the only person with a knife, but that does not necessarily mean he was acting in isolation.

Masood, a Muslim convert — and irony of ironies, formerly an English teacher who taught in the West Midlands — clearly had 'contacts' in Birmingham. Hence the police raids across the city, and in London and elsewhere. Seven of the eight people arrested on suspicion of preparation of terrorist acts were seized in Birmingham.

Recent events will do little to ease strained relations between the police and local Muslims.

Imran Awar, a criminologist at Birmingham University, says Muslims in Birmingham have felt increasingly demonised, and draws comparisons with treatment of the Irish community here following the Birmingham pub bombings in 1974.

It was typified by the controversy, back in 2008, when West Midlands Police installed CCTV and automatic number plate reading (ANPR) cameras in inner city Birmingham, allegedly to combat vehicle crime and anti-social behaviour. In fact, they were put up as part of a programme by the force's counter-terrorism unit with the consent of the Home Office and M15.

After the truth emerged, police were forced to apologise to Muslims and bags were placed over the cameras.

Many would still argue — and not just with the benefit of hindsight — that the police's surveillance operation was justified.

So why has Birmingham become the terror capital of the UK?

Security experts point to the fact that many Muslims living in Birmingham today can trace their origins to the divided state of Kashmir, which has been the centre of an endless territorial dispute between Pakistan and India.

Throughout the Nineties, Kashmiri militants fighting for an independent Kashmir travelled to Birmingham to raise funds and inspire local Muslims to join the fight. Many of the convicted jihadists from the city used Kashmiri militant groups as 'stepping stones' to join Al Qaeda.

But this is not the only reason for Birmingham becoming synonymous with extremism.

Birmingham, remember, was the setting for the Trojan Horse scandal, when militant Muslims attempted to infiltrate state schools to impose an Islamic agenda.

The controversy resulted in an inquiry in 2014. The council admitted it had shied away from the problem out of a 'fear of being accused of racism'. Others, including the head forced out by hardliners, have accused the authority of turning a blind eye to extremism out of political expediency — because most Muslims vote Labour.

Yet, only recently, Dame Louise Casey, the Government's integration tsar, wrote to the leader of the council questioning whether sufficient lessons have been learnt from the affair.

Her intervention followed the resignation of Waseem Zaffar, the council's cabinet member for 'transparency, openness and equality', who was forced to resign after a pressurising a Roman Catholic school to let a four-year-old girl wear an Islamic veil in class. The school, which caters for Catholics and non-Catholics alike, had a uniform policy that banned headwear.

Mr Zaffar said the policy breached the Equalities Act, a claim dismissed by Dame Louise Casey, who condemned Mr Zaffar's behaviour. Mr Zaffar still plays a prominent role in local Labour politics, however. He is the campaign chief for Labour's candidate to be the first elected West Midlands metropolitan mayor in May.

The previous candidate — veteran Muslim councillor Muhammad Afzal — withdrew from the race following a series of controversies.

He lost support after branding David Cameron an Islamophobe and making inflammatory comments to a Muslim women's group, when he claimed 'domestic violence was happening mainly in the Christian community because they get drunk'.

Councillor Afzal, incidentally, is also the chairman of Birmingham Central Mosque.

Critics have argued that such political leadership — or lack of it — has created a culture where militancy has flourished.

This is why they believe that the 'Birmingham Connection' to the Westminster atrocity is much more than just a coincidence.

HEADLINE	03/23 Pakistan terror groups get rich off crime
SOURCE	http://www.voanews.com/a/report-pakistan-terror-groups-get-rich-crime-money-laundering/3779316.html
GIST	<p>Waves of crime in Pakistan — including extortion, smuggling and kidnapping for ransom — are major sources of terrorist financing for extremist groups in the country, according to a new government report obtained by Pakistani media.</p> <p>The report by the Financial Monitoring Unit (FMU) in Pakistan, titled "National Risk Assessment on Money Laundering and Terrorism Financing 2017," reportedly details how terror groups generate funds through criminal activities, a Pakistani newspaper reported Thursday.</p> <p>"Main sources of income of terrorists in Pakistan include foreign funding, drug trafficking, kidnapping for ransom, extortion from business, vehicle snatching," according to the 45-page confidential report by FMU, which is an intelligence service department within the Ministry of Finance.</p>

The report, which has not been released publicly, says over 200 local and international terrorist organizations generate billions of Pakistani rupees to fund their activities.

"Annual operational budget of terrorist organizations is from 5 million rupees [about \$48,000] to 25 million rupees [about \$240,000]," the report said, according to The News website, which published excerpts.

According to the report, terrorist groups also receive money through the hawala system, an alternative or parallel system that operates outside traditional banking and financial channels. The system largely has been used in money laundering.

The income sources include "hawala/hundi,' cash couriers, [and] dealings in foreign exchange," the report said. "A part of foreign exchange collected abroad may include funds for terrorist financing, and the rupee counterpart disbursed in Pakistan may help terrorist financing."

Some terrorist groups get rich off selling military equipment looted from NATO supplies that pass through Pakistani land before arriving in neighboring Afghanistan, according to the report.

The so-called southern route, which runs through Pakistan, is the most direct and cost-effective way to send supplies to U.S. and NATO forces in Afghanistan, but it is vulnerable to attacks by militants.

A U.S. Treasury Department report on terrorist financing last year said many militant groups in Pakistan, including those that "continue to pose a direct threat to the U.S. interests and allies in the region," fund their activities through proceeds from illegal businesses and charitable organizations.

The Treasury report said the Pakistani-based Lashkar-e-Tayyiba group, which was blamed by law enforcement for attacks in 2008 in Mumbai that killed more than 150 people, including six Americans, receives millions of dollars through funding from several humanitarian organizations within Pakistan and private donations.

HEADLINE	03/23 Al Qaeda quietly gaining Syria territory
SOURCE	http://www.washingtontimes.com/news/2017/mar/23/al-qaeda-quietly-gaining-territory-syria-amid-isis/
GIST	<p>Al Qaeda's affiliates in Syria have begun gaining ground in the central part of the country, taking advantage of the regime's increased focus on the ongoing fight against Islamic State in northern Syria.</p> <p>Fighters from Hay'at Tahrir Al-Sham, a faction of the former Syrian al Qaeda cell now known as Jabhat Fateh al-Sham, have overrun government forces in the central Syrian cities of Qomhana and Ma'an, 30 miles south of anti-government stronghold of Idlib, according to local reports.</p>

The attacks come as forces loyal to Syrian President Bashar Assad has begun diverting his forces from battling rebel fighters in central Syria to territory held by Islamic State, or ISIS or ISIL. The ensuing vacuum has allowed al Qaeda-affiliated groups to push into rebel-held territory near Idlib and Hama.

It remains unclear how far the group's Syrian cells will push unchecked by Damascus into rebel territory. But those efforts in Syria fall in line with al Qaeda's recent resurgence in Yemen, west Africa, Afghanistan and elsewhere.

But Abu Jaber, general commander for Hay'at Tahrir Al-Sham, disavowed any ties between his organization and al Qaeda. The group, under Jaber's command, "is an independent entity and not an extension of previous organizations or factions," he said in a statement issued in February.

Al Qaeda's Yemeni cell, formerly known as al Nusra Front, had allied with rebel forces battling to overthrow the Assad regime after the Obama administration balked at proposed strikes against the regime during the height of the Syrian civil war.

In the aftermath, al Qaeda fighters quickly co-opted the Syrian resistance, infiltrating American-backed groups such as the Free Syrian Army and other moderate rebel groups. With Assad's brutal victory in Aleppo, retaking the rebel redoubt with the support of a blistering air campaign by Russian warplanes, moderate and extremist factions within the anti-Assad forces splintered across the country.

HEADLINE	03/23 Europe on alert; security tightened
SOURCE	http://www.washingtontimes.com/news/2017/mar/23/london-attack-puts-europe-on-alert-over-terror/
GIST	<p>Countries across Europe tightened security Thursday as investigators in London identified a 52-year-old British-born Muslim man as the attacker who carried out Wednesday's rampage on Westminster Bridge and the grounds of Parliament.</p> <p>Authorities said Khalid Masood, who lived in the British city of Birmingham, had a history of criminal convictions and was once investigated — but ultimately cleared Britain's domestic counterintelligence agency MI5 — as a possible Islamic extremist.</p> <p>The Islamic State terrorist group claimed responsibility Thursday for the assault in London, in which Masood mowed down pedestrians with a sport utility vehicle before fatally stabbing a police officer in an attack that injured more than 40 people and left three bystanders dead, including an American tourist from Utah. London police said late Thursday that a 75-year-old man injured in the attack on Westminster Bridge had died of his wounds, the latest victim of the attack. Several of the wounded were still in critical condition.</p>

Investigators were scrambling Thursday night to assess the legitimacy of the Islamic State's claim as well as the extent to which Masood — a man reported to have a wife and young child in Britain — had any direct ties to the terrorist group also known as ISIS and ISIL.

But the assurances of higher security come as European nations continue to struggle to deploy adequate resources to confront what U.S. intelligence officials have for more than a year been characterizing as a rising threat posed by locally radicalized extremists as well as Islamic State fighters and other European-born extremists returning home from jihad in Syria and Iraq. The low-tech methods of recent attacks — employing knives, commercial trucks and cars instead of guns and bombs — poses another security challenge.

Analysts and intelligence officials say some 5,000 Western Europeans traveled to the Middle East nations to wage jihad in recent years, with some 3,700 coming from just four nations: France, Germany, Belgium and the United Kingdom.

France has kept thousands of military troops deployed around its interior since the November 2015 Paris terrorist attacks in which Islamic State loyalists killed 130 people. In December, the French government moved to extend through July a state of emergency that allows the president's office to authorize home searches of suspected extremists without warrants.

Security also remains tight in Germany, where authorities have identified 602 individuals as "Islamist threats," according to the German magazine Der Spiegel, which carried a lead article on its website Thursday that said some 300 of the individuals live in Syria or Iraq, often as fighters for groups such as the Islamic State.

HEADLINE	03/23 Docs train Syria medical students online
SOURCE	http://www.foxnews.com/health/2017/03/23/american-doctors-train-syrian-medical-students-online.html
GIST	<p>The war in Syria is now in its seventh year. According to the United Nations, millions have been displaced and hundreds of thousands have been killed including medical workers. More than 750 medical personnel have been killed since the beginning of the war, increasing the need for doctors and nurses.</p> <p>A team of doctors and professors in the U.S. and abroad are working to train Syrian medical students online. Tarif Bakdash, a doctor and associate professor of pediatric neurology at the University of Mississippi Medical Center is part of that team.</p> <p>"As a Syrian originally," Bakdash said. "I feel like I have an obligation to help the Syrians at this point and as an American I feel I have a duty to bring to the world what is the United States about. Which is again to me a country of love and kindness and compassion."</p>

Bakdash immigrated to the United States from Syria in the 1980's. He volunteers his time on weekends to help develop a curriculum for medical students at Free Aleppo University (FAU). He says the university was founded nearly two years ago by former professors of Aleppo University, which is controlled by the government of Syrian President Bashar al-Assad.

"The idea behind it is because most of the medical students and most of the university students in Aleppo area can't go anymore to the universities because they are controlled by the government," Bakdash said.

"These are kids in the rebel held areas. So basically the interim government decided to start a university."

FAU has gained support in the United States since its founding. Yale University hosted a meeting in May of 2016 to drum up support for the university. Kaveh Khoshnood an associate professor at the Yale School of Public Health, helped organize the meeting.

Khoshnood says the school operates "underground" literally and figuratively since most students study in basements of buildings in "safe" locations. "Just getting together carries a risk of being targeted by the government forces," Khoshnood said. "Their locations are completely secret, we never know and of course we never ask where they are but they know fully well their taking risks but they want to be educated they want to work as doctors and nurses," he said.

Although Yale University doesn't offer classes to FAU students, Khoshnood says he hopes to do more in the near future. Yale University medical students even started a YouCaring campaign to purchase anatomy apps for FAU students. Khoshnood added his colleagues at the State University of New York at Albany already have a platform in place to teach displaced students.

The State University of New York at Albany offers classes to FAU students through its Global Multilingual Online College. Arash and Kamiar Alaei are brothers and co-directors of the school's Global Institute for Health and Human Rights. The Alaei brothers created a platform to help displaced students from around the world continue their education.

Alaei says the courses are free for the nearly 500 students at Free Aleppo University and the platform provides nearly 60% of the pre-clinical courses needed. Professors at FAU teach the remaining classes. He added that the majority of students take the courses on their smartphones since they do not have access to laptop computers.

According to Alaei, most of the students remain in Syria with some reside in Turkey.

HEADLINE | **03/23 Strategic Afghan district falls to Taliban**

SOURCE	http://www.upi.com/Top_News/World-News/2017/03/23/Taliban-overtakes-Sangin-district-in-Helmand-province-Afghanistan/5801490268901/?utm_source=fp&utm_campaign=lh&utm_medium=7
GIST	<p>March 23 (UPI) -- Strategic Sangin district in Afghanistan's embattled Helmand province fell to Taliban forces on Thursday, local military and government officials said.</p> <p>The area was the scene of heavy fighting for years, with more British and U.S. casualties there than in any of Afghanistan's approximately 400 other districts. The international military coalition controlled it starting in 2013, but Taliban forces took control this week.</p> <p>Taliban forces have lately concentrated on retaking the district as part of a larger strategy to dominate the entire province adjacent to Pakistan.</p> <p>The Taliban launched an attack in the town of Sangin two months ago. The town of 30,000, in the center of Helmand province's opium region, was under Taliban control until British troops established a base there in 2006. Taliban forces besieged the area in a nine-month campaign regarded as among the fiercest battles of the long war. By 2007 Sangin was restored to Afghan government control.</p>

HEADLINE	03/23 Egypt: 10 soldiers killed in militant attack
SOURCE	http://www.upi.com/Top_News/World-News/2017/03/23/Ten-Egyptian-soldiers-killed-in-Sinai/5281490278853/?utm_source=fp&utm_campaign=lh&utm_medium=1
GIST	<p>March 23 (UPI) -- Ten Egyptian soldiers died in an attack on an insurgent hideout in the Sinai Peninsula, an army spokesman announced Thursday.</p> <p>"Our forces raided a terrorist outpost in central Sinai, which led to the killing of 15 Takfiris [extremists] and arrest of seven others," spokesman Tamer al-Refai said in a statement. "While pursuing the terrorists, two army vehicles struck roadside bombs, leading to the martyrdom of three army officers and seven other military personnel."</p> <p>He said that 15 militants were killed and seven were arrested in the raid, adding that storehouses of explosives and medical equipment were destroyed, and vehicles, explosives, laptop computers and cellphones were seized. The statement came several days after the Egyptian Army announced that 18 "extremely dangerous terrorists" were killed, and 37 arrested, in clashes in various parts of the peninsula.</p> <p>A number of Islamist extremist groups have used the Egyptian-controlled Sinai Peninsula as a headquarters and staging ground, a situation aggravated by the 2013 ouster of Egyptian President Mohamed Morsi. Hundreds of Egyptian security personnel have been killed in isolated clashes with insurgent groups since 2013. Egyptian authorities say their primary conflict is with the Walayat Sinai group, which has ties to the Islamic State.</p>

HEADLINE	03/23 Belgians thwart shopping area car attack
SOURCE	http://www.nbcnews.com/news/world/driver-sped-antwerp-shopping-area-knives-car-police-n737681
GIST	<p>A French national was arrested after he attempted to drive into a shopping area at high speed with knives and other weapons in his car, officials said on Thursday.</p> <p>French President Francois Hollande said the man detained in the Belgian city of Antwerp "was looking to kill or at the very least create a dramatic incident."</p> <p>The incident came just one day after three people were killed in London when an attacker drove at people walking across a bridge in a 4x4. He was later fatally shot by police.</p> <p>Belgian prosecutors said the man drove into the pedestrianized De Meir shopping street at around 11 a.m. local time (6 a.m. ET).</p> <p>A police spokesman said the driver had entered the street "at high speed due to which pedestrians had to jump away."</p> <p>He added the driver was later arrested and additional police and military personnel had been deployed to the center of Antwerp, but did not give any further details.</p>

SOURCE	http://abcnews.go.com/International/uk-prime-minister-london-attacker-authorities-british-born/story?id=46321816&cid=clicksource_4380645_1_hero_headlines_bsq_hed
GIST	<p>The man police believe is responsible for Wednesday's terrorist attack at London's Westminster Bridge has been identified as U.K. native Khalid Masood.</p> <p>Police said Masood, 52, was known to authorities and has a range of previous convictions for assaults, including grievous bodily harm, possession of offensive weapons and public order offenses. His most recent conviction was in December 2003 for possession of a knife, according to the Metropolitan Police Service in London.</p> <p>Massod was born in Kent in southeast England and detectives believe he was most recently residing in the West Midlands in western-central England. He was also known by a number of aliases, according to police.</p> <p>Masoon has not been convicted of any terrorism offenses, police noted.</p>

	Police said Masoon was not the subject of any current investigations and there was no prior intelligence regarding his intent to launch a terrorist attack.

HEADLINE	03/23 Syria troops besiege ISIS stronghold
SOURCE	http://abcnews.go.com/International/wireStory/syrian-troops-besiege-held-northern-stronghold-46321308?cid=clicksource_76_null_articleroll_hed
GIST	<p>Syrian government forces are besieging the last Islamic State stronghold in the northern province of Aleppo, weeks after launching an offensive to retake the entire province, state media and an opposition monitoring group reported Thursday.</p> <p>The push on Deir Hafer comes as U.S. aircraft ferried Syrian Kurdish fighters and allies behind IS lines to spearhead a major ground assault on the strategic IS-held town of Tabqa in Raqqa province, which borders Aleppo.</p> <p>That airlift marked a deepening U.S. involvement in Syria's conflict ahead of a looming battle for the extremist group's de facto capital, the city of Raqqa.</p> <p>The airlift was part of what Pentagon spokesman Eric Pahon described as a large, high-priority offensive to secure the area around Tabqa and the associated Tabqa Dam.</p> <p>The U.S.-backed Syrian Democratic Forces said in a statement Thursday that its fighters, along with military advisers from the U.S.-led coalition, landed Tuesday night in the near Tabqa with their equipment and vehicles, and have already secured a wide area.</p> <p>Tabqa lies 45 kilometers (28 miles) west of Raqqa. The Islamic State group controls the town as well as the Tabqa Dam on the Euphrates River which supplies electric power to the area and a military airfield nearby.</p>

HEADLINE	03/23 Extradition of FBI 'most wanted' blocked
SOURCE	http://abcnews.go.com/International/wireStory/jordan-planner-2001-blast-relieved-us-extradition-blocked-46325166
GIST	A Hamas activist on the FBI's list of "most wanted terrorists" said she is relieved Jordan's highest court has blocked her extradition to the U.S., where she faces charges in a suicide bombing that killed 15 people, including two Americans, at a crowded Jerusalem pizzeria.

Ahlam al-Tamimi, 37, who chose the target of the 2001 attack and guided the bomber there, told The Associated Press that she "lived in fear" for her life until this week's high court ruling, in part because she had received threats, including from U.S. citizens, on social media.

She said she can't leave her native Jordan for fear of arrest if she travels abroad.

Al-Tamimi has been unapologetic about her role in one of the deadliest of scores of Hamas suicide bombings during the second Palestinian uprising against Israeli rule. She said Palestinians have a right to resist by any means, including with such attacks, against what she portrayed as a brutal military occupation.

"We are an oppressed people defending ourselves," al-Tamimi said in an interview this week in her home in the Jordanian capital, Amman. "We want Israel to leave our land so we can live in quiet."

Asked about her role in the killing of civilians, including children, she said: "I don't target children, but when the bomb goes off, it goes everywhere."

The blast at the Sbarro restaurant in downtown Jerusalem went off on the afternoon of Aug. 9, 2001. The assailant detonated explosives hidden in a guitar case packed with nails. Fifteen people were killed, including seven between the ages of two and 16, and scores of people were wounded.

Al-Tamimi was arrested by Israel several weeks after the bombing and sentenced to 16 life terms. She was released in a 2011 Israel-Hamas prisoner swap.

HEADLINE	03/23 ISIS claims London attack
SOURCE	http://www.cnn.com/2017/03/23/europe/london-attack/index.html
GIST	<p><i>London (CNN)</i> Police investigating the deadliest London terror attack in 12 years have arrested eight people in raids around Britain, as an ISIS-affiliated news agency claimed that the extremist group was behind the outrage.</p> <p>Prime Minister Theresa May revealed the perpetrator was British born and once linked to violent extremism, in a statement to Parliament a day after it was locked down when the assailant breached its perimeter.</p> <p>May said the attacker -- whose rampage claimed three lives and injured 40 -- had been investigated by security services but was regarded as a "peripheral figure." Authorities did not know he was about to mount an assault, she said.</p>

Britain's most senior counterterror police officer said inquiries were continuing in London, Birmingham and elsewhere after the lone attacker plowed a car into crowds of people, killing two people, before stabbing a police officer dead in the grounds of the UK Parliament.

A tweet from ISIS-affiliated news agency Amaq said the attacker was "a soldier" of ISIS inspired by its message. However, ISIS has provided no evidence for any direct links to the assailant, whom it did not name.

HEADLINE	03/23 Expert: 3 threats of jihadism in the West
SOURCE	http://www.homelandsecuritynewswire.com/dr20170323-london-attack-terrorism-expert-explains-three-threats-of-jihadism-in-the-west
GIST	<p>Details about the man who attacked the British Parliament on 22 March, identified by London police as British national Khalid Masood, are still emerging. With four victims confirmed dead, the attack is the worst in London since the July 7, 2005 bombings on the London transport system.</p> <p>A day after the attack, the Islamic State media organization Amaq released a statement claiming responsibility. The statement read: “The attacker yesterday in front of the British Parliament was a soldier of the Islamic state.”</p> <p>The language of the statement can help us understand the nature of not just this attack, but the nature of jihadist attacks in the West. Based on ten years of research on the topic, I have identified three categories into which this attack is likely to fall.</p> <p>Directed attack</p> <p>The first and least probable scenario is that the attack in London was planned and directed by individuals within the IS hierarchy. In such a situation, the attacker would be part of a wider IS network.</p> <p>Those types of attacks, such as the ones conducted by IS in Paris and Brussels (the anniversary of which was also on the same day as the London attack) in 2015 and 2016, respectively, are usually deadlier and more sophisticated than what we saw in London. The crude nature of the killings, in which Masood used a car as a battering ram before rushing police officers with knife, suggests that this act falls into one of the two following categories.</p> <p>Inspired attack</p> <p>This may have been a so-called “inspired” attack. This refers to a terrorist act undertaken by someone with no known ties to IS or other jihadist groups. These individuals see themselves as part of the wider global jihad movement after consuming jihadist propaganda and interacting with like-minded individuals online. They plan the attack alone, with no input from a terrorist organization.</p>

The last such “inspired” incident in London was the killing of British Army soldier Lee Rigby in May 2013. The attackers, Michael Adebolajo and Michael Adebowale, were inspired by al-Qaida and used a similar tactic to that seen in the Parliament attack, ramming their target with a car before stabbing him repeatedly.

Amaq’s announcement is instructive when it states that the attacker was acting “in response to calls to target citizens of coalition nations.” This is likely a reference to the repeated announcements by IS members, most notably the group’s now deceased former spokesperson Abu Mohammad al-Adnani, for Western IS sympathizers to use any means at their disposal to conduct terror operation in their home nations. In addition, IS usually refers to such individuals as its “soldiers” only when the group had no direct role in the attack.

These inspired acts are often referred to as lone-wolf attacks. While the term is widely used, recent research shows that few attacks in Europe are genuinely conducted by lone actors. For example, one study found that out of 38 IS-linked plots in Europe between 2014 and 2016, only six “were based on inspiration only.” However, even then the authors of the study concede that the plotters “usually had contacts in extremist circles, albeit not IS-related.” Such findings suggest that true lone-wolf attacks are in fact much rarer than many assume.

Remote-controlled attack

The final possible category of attack the London incident falls into is “remote-controlled.” This represents something of a hybrid of the two other forms of jihadist terrorism in the West. This occurs when a radicalized Westerner receives encouragement, and often direct instruction, from an IS member over the internet. These individuals, who my colleague Seamus Hughes and I refer to as “virtual entrepreneurs,” in a recent report are often based in IS-held territory and have built up respected reputations within the IS online milieus.

As IS has spread its influence over social media, and its virtual entrepreneurs have made use of a wide range of encrypted messaging apps such as Telegram, Surespot and WhatsApp, this has become one of the main ways the group plans attacks in the West. In the same study cited above, researchers found that 50 percent of the 38 IS-linked plots in Europe between 2014 and 2016 were found to have involved “online instruction from members of IS’ networks.”

This phenomenon is also apparent in the United States.

My colleague and I discovered that out of 38 IS-inspired plots and attacks in the United States between 1 March 2014 and 1 March 2017, eight involved digital communication with virtual entrepreneurs. This includes the attempted shooting in Garland, Texas in May 2015. One of the attackers, Elton Simpson, was receiving encouragement and direction via encrypted chats with Junaid Hussain, a British IS member based in Syria. Virtual entrepreneurs have also been involved in at least six other terrorism-related cases,

including helping Americans intending to travel to join the Islamic State. This brings the total number of U.S. terrorism cases linked to IS virtual entrepreneurs to 14.

Based on what we know so far, and after analyzing recent trends and the latest research, it is likely that the man who killed three people in London was acting either in the name of IS without any direct links, or was in possible contact with a virtual entrepreneur.

Unfortunately, the only certainty is that this will not be the last such attack in the West. As IS loses ground in Iraq and Syria, it will do all it can to retain an ability to strike in the West. While their key aim is to inspire attacks like those in Paris and Brussels, they will be increasingly difficult to conduct. This is due both to its dwindling resources and the increasing readiness of European security agencies who will be learning from recent attacks.

Lone actors, while rare, will continue offer IS a cost-free method of attack. Meanwhile, virtual entrepreneurs will be doing all they can to help their Western contacts plot and execute mass killings from afar.

HEADLINE	03/24 Sydney teen pleads guilty to terror plot
SOURCE	http://abcnews.go.com/International/wireStory/sydney-teenager-pleads-guilty-plotting-terrorist-attack-46342009?cid=clicksource_76_null_articleroll_hed
GIST	<p>A Sydney teenager pleaded guilty on Friday to plotting a terrorist attack on an Australian Veteran's Day ceremony last year.</p> <p>The then 16-year-old was arrested and charged with one count of planning a terrorist attack on April 24, one day before hundreds of thousands of Australians gathered at ceremonies across the country to mark ANZAC Day. The annual holiday commemorates the April 25, 1915, Gallipoli landings in Turkey — the first major military action fought by the Australian and New Zealand Army Corps during World War I.</p> <p>The youth, who cannot be identified because of his age, pleaded guilty in Parramatta Children's Court in western Sydney to planning a terrorist act by trying to source a gun or a bomb-making manual. He will remain in custody until the case returns to court on April 21. He faces a potential sentence of life in prison.</p> <p>Police also said they thwarted a planned attack on an ANZAC Day ceremony in 2015. Police in Melbourne arrested five teenagers on suspicion of plotting an Islamic State group-inspired attack intended to coincide with the city's ANZAC service.</p>

HEADLINE	03/24 Russia forces firefight Chechen militants
SOURCE	http://abcnews.go.com/International/wireStory/russia-militants-soldiers-killed-chechen-firefight-46344095?cid=clicksource_76_null_articleroll_hed
GIST	Russian authorities say six suspected militants and six soldiers were killed during a firefight in the volatile North Caucasus region.

	<p>The National Anti-terrorism Committee said in a statement Friday that armed militants, including two with suicide belts, tried to break into a National Guard base in Chechnya in the early hours of the morning.</p> <p>The National Guard, a powerful new security agency created last year by President Vladimir Putin, said in a statement that the attack took place in heavy fog.</p> <p>The Kremlin has relied on Chechen leader Ramzan Kadyrov to stabilize the situation in the mainly Muslim region in the wake of two bloody separatist wars that followed the fall of the Soviet Union.</p>

HEADLINE	03/24 More arrests in London terror attack
SOURCE	http://abcnews.go.com/International/wireStory/arrests-london-terror-attack-46344205?cid=clicksource_76_null_articleroll_hed
GIST	<p>London's top anti-terror officer says two more "significant arrests" have been made in connection with the Westminster attack, in central and northern England. Nine people are currently in custody, while one has been released on bail.</p> <p>Counter-terror chief Mark Rowley on Friday also identified the latest victim, who died in the hospital on Thursday, as 75-year-old Leslie Rhodes from Streatham, south London.</p> <p>The attacker, identified as Khalid Masood, drove his car into crowds of people on Westminster Bridge on Wednesday afternoon, killing three and wounding some 50, before stabbing a police officer to death at the Houses of Parliament. He was shot dead by police.</p>

HEADLINE	03/23 Dozens killed after Mosul air raid
SOURCE	http://www.reuters.com/article/us-mideast-crisis-iraq-mosul-idUSKBN16U2OF?il=0
GIST	<p>Dozens of residents were buried in collapsed buildings in the Iraqi city of Mosul after an air strike against Islamic State triggered a massive explosion last week and rescuers are still recovering bodies, civil defense agency officials and locals said on Thursday.</p> <p>The exact cause of the collapses was not clear, but a local lawmaker and two local residents said air strikes by the U.S.-led coalition targeting Islamic State militants may have detonated a truck filled with explosives, destroying buildings in a heavily populated area.</p> <p>Civil Defence chief Brigadier Mohammed Al-Jawari told local reporters that rescue teams were retrieving bodies from under the debris in the Mosul Jadida district near Rahma hospital, the site of heavy fighting between Iraqi forces and Islamic State.</p>

Reports of numbers of civilian casualties varied greatly after last Friday's air raid. But Jawari was quoted by al-Mosuliliya channel in a statement saying teams had so far recovered 40 bodies from buildings that collapsed.

"Finding survivors is very difficult because the area is completely destroyed," he told reporters. "It's a very big disaster, indeed we can describe it as a disaster."

HEADLINE	03/23 FBI director warns of 'terrorist diaspora'
SOURCE	http://www.foxnews.com/politics/2017/03/23/fbis-comey-warns-terrorist-diaspora-from-isis-territory.html
GIST	<p>FBI Director James Comey repeated his concerns Thursday over a "terrorist diaspora" that he believes will occur once ISIS territory in Iraq and Syria is "crushed" by coalition forces.</p> <p>Comey said during a speech at a national security summit at the University of Texas at Austin that he expects these individuals to flow outward largely to Western Europe, Southeast Asia, and North Africa.</p> <p>Labeling the impending phenomenon, the "ghost of Christmas future," Comey used his remarks to urge government leaders and intelligence officials in Western Europe to "break down the barriers" in the EU and share intelligence and critical information in an effort to crack down on the terrorism threat. He did not make any references to Wednesday's attack in London.</p> <p>In speaking to trend shifts the FBI has seen domestically with ISIS followers, Comey said that the foreign traveler issue that peaked during the summer of 2015 "hit the floor" in 2016 and has since stayed there.</p> <p>While ISIS's capacity to direct people to travel to the caliphate has dropped, the FBI chief called the ability of terrorists to use social media and the internet to inspire and enable individuals toward violence a "lingering phenomenon."</p> <p>Comey said that the FBI currently has in the area of 1,000 open homegrown terrorism cases in the U.S. trying to determine where people are on the spectrum of "consuming poison and acting on that poison."</p> <p>Speaking to the difficult nature of the current threat environment, the Comey said these consumers of ISIS propaganda are people "of all backgrounds." The director said that FBI's terrorism-related cases have spanned the age range of roughly 15-60 years old, adding that there is no one particular "hot spot" in the U.S. for extremist activity because a lot of the recruitment and inspiration continues to happen online.</p> <p>Comey also acknowledged instances where individuals who had prior contact with the FBI went on to carry out attacks in the U.S. Specifically, he mentioned Orlando Pulse Nightclub attacker Omar Mateen and the fact that the Bureau had already done a months-long investigation on him that "produced nothing to incapacitate him on."</p>

	Comey said that he personally reviewed the case file and called the work a "quality investigation," adding that he believes Mateen radicalized closer to the actual attack.

HEADLINE	03/23 Calif. hit-run suspect held on \$10M bail
SOURCE	http://abc7.com/news/officials-probing-whether-santa-monica-hit-run-was-act-of-terror/1816108/
GIST	<p>DEL AIRE, LOS ANGELES (KABC) -- Bail was set at \$10 million for a suspect accused of mowing down a man in a Santa Monica parking lot after officials expressed concerns the incident could have been an act of terrorism.</p> <p>Absadi Tewelde Kidane, 21, is accused of speeding through the parking lot of the Santa Monica courthouse and running over a pedestrian at a parking meter.</p> <p>He then allegedly sped out of the parking lot, struck another car and fled on foot before he was arrested. In addition to felony hit and run and homicide, he was also booked for driving under the influence.</p> <p>The pedestrian who was killed, Donald Thomas of Hawthorne, 40, was described as a churchgoing father of three.</p> <p>At a court hearing, prosecutors and the judge discussed the possibility that the incident was an act of terrorism.</p>

HEADLINE	03/23 FTC: occupational licenses out of control
SOURCE	http://www.cbsnews.com/news/the-ftc-says-occupational-licenses-are-out-of-control/
GIST	<p>Maureen K. Ohlhausen, the new acting chair of the Federal Trade Commission, thinks it's high time that the FTC start giving more than lip service to its traditional mandate of fostering economic liberty. And the first item in her crosshairs is the burgeoning growth in occupational licenses.</p> <p>Over the past several decades, licensing requirements have multiplied like rabbits, she noted. Only 5 percent of the workforce needed a license in 1950, but somewhere between one-quarter and one-third of all American workers need one today.</p> <p>Licensing is appropriate where health and safety is an issue, she added. That's why every state requires workers in 60 different occupations -- from medical technicians and electricians to bus drivers -- to undergo job training and procure a state license. The FTC has no beef with those. The agency aims to restrict licensing requirements only where they create an unwarranted burden to competition, which drives up prices and kills jobs, she said.</p> <p>For instance, depending on where you live, you might need a license to be an auctioneer, interior designer, makeup artist, hair braider, potato shipper, massage therapist or manicurist.</p> <p>Yet, licensing requirements for many of these occupations are no joke. It takes roughly 30 hours to obtain training to be an entry-level emergency medical technician (EMT), for instance, but if you wanted to be a cosmetologist in Nebraska, your training would require 2,100 hours -- more than a full working year.</p> <p>Such onerous requirements have become an issue to the Department of Defense because of the high unemployment rate for military spouses, Ohlhausen said. With such time-consuming licensing requirements -- which often don't give credit for the time the individual spent doing the same job in another state -- a military spouse could end up having to move long before he or she was able to obtain a license to work.</p> <p>While some licensing requirements may have been put into law with good intentions -- who wouldn't want to avoid a bad hair day -- they add costs for workers and consumers by reducing competition in those industries. Indeed, Ohlhausen suspects many of the requirements were pushed by long-time industry players, who aim to deter new entrants into their fields.</p>

	<p>Ohlhausen said her effort to tamp down the trend to overlicense is focused on talking about the impact to state governors and legislators and supporting them with legal arguments and staff resources when they come up against recalcitrant licensing boards bent on maintaining what the FTC considers an anticompetitive status quo.</p> <p>She recently launched an Economic Liberty Task Force within the FTC to gather and disseminate information on the topic. Although the FTC will continue to pursue its other mandates, including protecting and educating consumers about fraud, Ohlhausen said limiting occupational licensing is one of her top priorities.</p>

HEADLINE	03/23 Book burning fire destroys 10 homes
SOURCE	http://www.cnn.com/2017/03/23/us/florida-book-burning-fire/index.html
GIST	<p>(CNN) At least 10 homes in Nassau County, Florida, were destroyed in a wildfire caused by a man who was burning books Wednesday.</p> <p>Only a few minor injuries to emergency personnel have been reported in what's being called the Garfield Road Fire, according to the Florida Forest Service. But it has burned an estimated 350 to 400 acres near Bryceville, about 20 miles west of Jacksonville.</p> <p>Officials said in a news conference Thursday morning the wildfire was 65% contained and no longer spreading.</p> <p>Firefighters will continue to work in the area but a full containment of the fire is not expected on Thursday.</p> <p>Authorities will be watching strong winds predicted for the afternoon to see how they may affect the fire, Billy Estep, director of Emergency Management in Nassau County, told reporters at the news conference.</p> <p>The fire started Wednesday afternoon when a man was burning paperback books, said Annaleasa Winter of the Florida Forest Service, in a briefing Wednesday night.</p> <p>"It was an illegal burn," she said, adding that it's against the law to burn household garbage in Florida. "It was paper. It got away from him."</p> <p>It's not clear why the man was burning the books.</p>

SOURCE	http://www.nbcnews.com/feature/nbc-out/judge-grants-oregon-resident-right-be-genderless-n736971
GIST	<p>History was quietly made in Oregon this month when a judge granted a Portlander's request to become genderless.</p> <p>Patch, a 27-year-old video game designer, is likely the first legally agender person in the United States.</p> <p>The Multnomah County Court granted Patch a "General Judgment of Name and Sex Change" on March 10. In the same judgment, Patch was also allowed to change names, becoming mononymous — meaning only having one name instead of a given name and a surname.</p> <p>Agender is defined as the absence of gender. Not to be confused with transgender or genderqueer, agender people typically describe feeling that they have no gender identity whatsoever. While sex refers to biological features such as chromosomes, genitalia and hormones, gender is the expression of identity as male, female or somewhere in between. But agender people are not drawn to male or female identity — or any point along the spectrum.</p> <p>A handful of organizations serving transgender, gender-nonconforming and intersex people told NBC News that no U.S. court has ever granted a legally genderless status before.</p>

HEADLINE	03/24 Family of missing teen pleads for info
SOURCE	http://abcnews.go.com/US/police-follow-leads-missing-teen-family-pleads-elizabeth/story?id=46342831

GIST	<p>As police in Texas and Alabama followed-up Thursday on leads to locate Elizabeth Thomas -- the Tennessee high school student allegedly kidnapped by former teacher Tad Cummins -- her family issued a lengthy statement saying they are "desperate" for additional information to find the 15-year-old.</p> <p>She has been missing since March 13.</p> <p>"The last ten days have been the most difficult in the life of the Thomas family," reads the statement. "We humbly ask that you continue to pray as we do our best to cope with the emotional weight of Elizabeth's abduction."</p> <p>The family does not only plead for information that may result in finding Elizabeth, but they are also seeking details about the relationship between Elizabeth and Cummins.</p> <p>"We are desperate for any information that might lead to our daughter," the statement reads. "The information that we need is not only from what people have seen and heard after Elizabeth's disappearance, but also from before. Facts about prior events, especially interaction between Elizabeth and Tad Cummins and statements made by both parties to third parties, may very well contain clues to lead to Elizabeth's return ... Elizabeth must be found. Time is of the essence."</p> <p>The family also urged the public not to place blame on school officials for the relationship or how it was dealt with.</p>

HEADLINE	03/23 Putin critic killed in Ukraine
SOURCE	http://www.cnn.com/2017/03/23/europe/ukraine-former-russian-lawmaker-denis-voronenkov-killed/index.html

GIST	<p>Kiev, Ukraine (CNN)A former Russian lawmaker and Kremlin critic who fled to Ukraine last year was shot dead Thursday in Kiev -- a killing that Ukraine's President called a "Russian state terrorist act."</p> <p>Denis Voronenkov, who'd been a Communist member of Russia's lower legislative house before he left, was fatally shot outside a hotel in broad daylight, and a suspect is in custody, officials said.</p> <p>Voronenkov becomes the latest in a string of Russian critics of President Vladimir Putin and the Russian government who were killed or injured in mysterious circumstances.</p> <p>Ukrainian President Petro Poroshenko called Thursday's killing a "Russian state terrorist act" on Twitter, and described Voronenkov as "one of the key witnesses of the Russian aggression against Ukraine" -- referring to Russia's 2014 annexation of Ukraine's Crimea region and a subsequent war with pro-Russian rebels.</p> <p>Poroshenko's accusation drew a sharp rebuke from Moscow. Any claims that Russia is connected to the killing are "absurd," Putin spokesman Dmitry Peskov said, according to Russian state-run TASS news agency.</p>

HEADLINE	03/23 Crime groups extort Mexico electric co.
SOURCE	http://www.insightcrime.org/news-briefs/extortion-mexico-electric-company-spotlights-state-weaknesses
GIST	<p>Organized crime groups are extorting Mexico's federal electricity company, highlighting the ways in which criminal organizations are exploiting the state's weakness to increase their revenues.</p> <p>Mexico's Federal Electricity Commission (Comisión Federal de Electricidad – CFE) has suffered extortions by organized crime groups in the north and west of the country, reported Zeta Tijuana.</p> <p>According to Gustavo Cuevas, a CFE executive, criminals are allegedly telling local businesses not to pay the energy company, and to pay organized crime groups instead.</p> <p>"They approach a company, a textile factory, and say: from now on you no longer pay for your electricity. You are going to pay me for it," Cuevas told Reforma.</p> <p>At the same time, criminal groups are allegedly threatening CFE employees not to cut power to businesses that are paying criminals rather than the energy company.</p>

"We can't cut [power to these companies], because the CFE superintendents are also threatened," Cuevas explained.

Cuevas also denounced that, while Mexico's Secretary of Defense (SEDENA) and Navy staff should help to protect 125 CFE power plants, organized crime groups have ordered the company's superintendents to remove the security staff assigned to the plants.

"I can assure you that [CFE] personnel have already requested to remove the helicopters used to patrol the high voltage power lines," he said, adding that criminals "have called to say: remove your helicopter or we'll shoot it down."

The extortions suffered by the CFE are a powerful reminder of how criminal groups are exploiting the weaknesses of the Mexican state to strengthen their grip over local communities and increase their profits.

To be sure, CFE is not the first energy company to be targeted by organized crime in Mexico. Fuel theft from Pemex, Mexico's state-owned oil company, has increased dramatically over the past few years. Mexico's Attorney General's Office registered an average of 1.6 incidents of oil theft per day in 2010. By 2015, the number had gone up to 8 per day. The practice has long been a lucrative business for the country's powerful crime groups, most notably the Zetas and Gulf Cartel.

HEADLINE	03/23 Hells Angels associate jailed 10yrs
SOURCE	http://www.theprovince.com/news/local+news/hells+angel+associate+convicted+major+cocaine+conspiracy+gets/13183888/story.html
GIST	<p>A Hells Angels associate who was convicted in a major cocaine conspiracy has been sentenced to 10 years in prison.</p> <p>James Howard, 39, was one of eight men arrested following a reverse sting operation conducted by undercover RCMP officers between January 2011 and August 2012.</p> <p>The sale of 500 kilograms of cocaine was negotiated in what was intended to be the first in a series of continuing transactions.</p> <p>In September, Howard and three other co-accused were convicted following a trial before B.C. Supreme Court Justice Carol Ross. Howard was found guilty of conspiracy to traffic in cocaine and possession for the purpose of trafficking but acquitted of conspiracy to import cocaine.</p> <p>In imposing sentence on Howard on Thursday, the judge said he played a "relatively senior role" in the conspiracy and was motivated by profit.</p> <p>The conspirators paid a total of \$4 million for the first shipment of what they believed was to be 200 kilograms of cocaine, with a further 300 kilograms to be delivered at a later date.</p>

HEADLINE	03/23 Immigration lawyer jailed in asylum scam
SOURCE	http://chicago.cbslocal.com/2017/03/23/suburban-immigration-lawyer-gets-15-months-for-asylum-scam/
GIST	<p>CHICAGO (CBS) — Robert Dekelaita cheated the immigration system like “a well-oiled machine,” the feds say.</p> <p>When he found a client seeking asylum in the United States, typically from Iraq, the suburban attorney would quickly forge that person’s name on an application and pepper the person’s life story with horrific hardships, including kidnappings, bombings and religious persecution — all false. He drew inspiration from news articles he collected.</p> <p>Then, prosecutors say he would employ a team of co-conspirators to help him forge documents, even allegedly bribing an immigration prosecutor, to usher the applicant through the asylum process. He fancied himself “a Robin Hood of refugees,” they said.</p> <p>But Robin Hood was an outlaw. And nearly a year after Dekelaita’s own criminal conviction, U.S. District Judge Matthew Kennelly sentenced him to 15 months in prison Wednesday. The judge noted that, even if Dekelaita chose to break the law out of noble intentions, “you have to be willing to pay the price for it.”</p> <p>Dekelaita is an Assyrian Christian who came to the United States from Iraq when he was 10 years old as his family fled persecution from the Baath regime, according to his lawyers. They argued during his trial that illegal immigrants fearing deportation told their own lies to help the U.S. government build its case against Dekelaita.</p> <p>The feds also say Dekelaita sent a letter to clients after his conviction claiming he “cheated no one and have not told anyone to lie. I have protected my clients as any good attorney should.”</p> <p>But many of Dekelaita’s clients now face deportation because of the fraud, prosecutors said. Others say their lives were ruined because they were forced to live out the lies he created. Another pair testified that Dekelaita sent them a letter congratulating them on winning asylum, only to find out after the appeal deadline that they had actually been denied.</p> <p>A jury convicted Dekelaita on four counts after a weeks-long trial in the spring of 2016. But Kennelly later tossed three of them, leaving only the conspiracy count standing.</p>

HEADLINE	03/23 AG: firm discriminated against Muslims
SOURCE	http://www.seattletimes.com/seattle-news/times-watchdog/aerospace-co-electroimpact-agrees-to-pay-485000-after-ag-finds-shocking-discrimination-against-muslims/
GIST	<p>Electroimpact, a prominent aerospace supplier whose president voiced hatred of Muslims and encouraged his mostly white engineers to marry and procreate, has entered into a consent decree with the state Attorney General's Office that requires the company to pay \$485,000 and takes its controversial leader out of direct hiring.</p> <p>The court-monitored decree, in effect for 42 months, stems from a nearly yearlong investigation, which concluded that the Mukilteo-based company violated state law by discriminating on the basis of religion and marital status.</p>

	<p>The attorney general’s civil-rights unit began investigating Electroimpact after a Seattle Times story last year revealed a workplace culture shaped by President Peter Zieve’s vehement views — expressed in emails to employees that referred to “terrorist savages” and allowing our “wonderful country to be backfilled with rubbish from the desperate and criminal populations of the third world.”</p> <p>Zieve offered financial incentives to workers who married and had children. And he organized a campaign to stop construction of a Mukilteo mosque.</p> <p>In the consent decree, which stops the Attorney General’s Office from moving forward with a lawsuit, Electroimpact denies any wrongdoing.</p> <p>That did not stop Attorney General Bob Ferguson from calling Electroimpact’s behavior “shocking.”</p> <p>“Employees in businesses in our state should not be subject to the type of atmosphere that this gentleman created and fostered,” he said in an interview alongside lawyers from the civil-rights unit.</p> <p>Yet Marsha Chien, the assistant attorney general who led the Electroimpact investigation, said: “We are probably used to discrimination that is not quite so explicit. This one was so explicit and so blatant that it reminds you of discrimination that might have happened in a different era.”</p>

HEADLINE	03/23 Report: 85% Sweden rapes foreign origins
SOURCE	http://www.breitbart.com/london/2017/03/23/report-9-in-10-gang-rapists-in-sweden-have-foreign-origins/
GIST	<p>A new report suggests that in cases of gang rape or sexual assaults involving two or more attackers in Sweden, 85 percent of the attackers come from a foreign origin.</p> <p>The information comes from a Swedish website “Gang Rape Sweden” which has kept tabs on the various instances of group rape that have occurred in the country over a period from 2011 to 2015. The site lists the various rapists’ names, case numbers, and other details which show the national origins, if known, of the attackers.</p> <p>According to the site, “All records and documents available on this website are Swedish public records.”</p> <p>The site claims that in total between 2011 and 2015 there were 125 individuals accused and convicted of participating in group sex attacks. The majority, 41, come from unknown countries outside of Sweden, and they are followed by 23 from Afghanistan and 20 from Sweden itself. The total number of non-Swedes amounts to 105 or around 85 percent.</p>

The site makes a distinction of those accused of true gang rape (participating in sex acts) and those tried along with a rapist for other crimes like failure to disclose the sex attack. Of the “true gang rapes,” they measure 50 such cases.

Details are also given on the site as to the nature of the accusations, with thirteen of the gang rapists accused of having sex with underage children. Among those accused of molesting minors, none of the suspects are Swedish.

Among those convicted of raping a child, many of the attackers were underage themselves, which matches previous reports of young boys and girls being raped in or around asylum accommodations. In one particular attack, a group of boys from Afghanistan took another young asylum seeker into a wooded area in Uppsala where they beat and raped him, filming the attack on their mobile phones.

The Afghani migrants who raped the boy, who is said to have been under the age of 15, were tried and found guilty, but will not be deported back to Afghanistan because Swedish courts have deemed the country “too dangerous” for them to return to.

In the statistics provided by the site, only 30 of those convicted face deportation, as opposed to 73 who will not be sent back to their countries of origin, more than double.

HEADLINE	03/23 Veteran charged in killing; ‘likely terror act’
SOURCE	http://abcnews.go.com/US/veteran-charged-killing-black-man-nyc-act-terrorism/story?id=46326244
GIST	<p>James Harris Jackson, an Army veteran from Maryland accused of killing a black man in what authorities said was an interstate mission to attack black people in New York City, was arraigned today in court on murder charges.</p> <p>Jackson, 28, is accused in the fatal stabbing on Monday of Timothy Caughman, 66, on 9th Avenue in Manhattan. Jackson was formally charged today with murder in the second degree.</p> <p>On Wednesday, NYPD Assistant Chief Bill Aubry said during a news conference that Jackson, who served in Afghanistan, has a deep-seated hatred of black people. He allegedly wrote a manifesto about attacking blacks in New York City, police said.</p> <p>"It is believed that he was specifically intending to target male blacks for assault," Aubry said. "The reason why he picked New York is because it's the media capital of the world and he wanted to make a statement."</p>

	<p>According to the criminal complaint, Jackson allegedly was "regarding the killing as practice prior to going to Times Square to kill additional black men." The complaint also said that Jackson "had stalked numerous potential victims" and "was angered by black men mixing with white women."</p> <p>Assistant District Attorney Joan Iluzzi-Orbon said today the charges were expected to be upgraded once the case goes before a grand jury because of the motivation for the crime.</p> <p>"The defendant was motivated purely by hatred," Iluzzi-Orbon said today. "Additional charges could include murder in the first degree, as this was most likely an act of terrorism."</p>

HEADLINE	03/24 Sacramento: 4 dead; suspect detained
SOURCE	http://abcnews.go.com/US/wireStory/found-dead-sacramento-arrested-san-francisco-46343823?cid=clicksource_4380645_1_hero_headlines_headlines_hed
GIST	<p>Police detained a suspect in San Francisco just hours after finding four bodies, including two children, in a home 80 miles away in Sacramento.</p> <p>The unidentified suspect, who was quickly singled out by investigators, was likely known by the victims, Sacramento police Sgt. Bryce Heinlein said.</p> <p>"Preliminarily this does not appear to be a random act," Heinlein said Thursday.</p> <p>The four victims were discovered when police broke into the Sacramento home after a relative reported that something might be wrong.</p> <p>Police did not immediately identify the victims or provide their genders or ages, and say they have not yet determined a motive for the killings.</p> <p>Kelly Fong Rivas, deputy chief of staff for Sacramento Mayor Darrell Steinberg, said police told officials that two of the victims were children but did not provide other details.</p> <p>It was unclear when the victims were killed, Heinlein said. Police also weren't saying how they were killed.</p>

HEADLINE	03/23 SEA TSA agent pleads guilty voyeurism
SOURCE	http://komonews.com/news/local/sea-tac-tsa-agent-pleads-guilty-to-upskirt-voyeurism-charge
GIST	SEATTLE - A Transportation Security Administration agent accused of taking "upskirt" video of a woman last year at Sea-Tac Airport pleaded guilty Thursday to attempted voyeurism.

	<p>The agent, identified as Nicholas James Fernandez, 29, of Tukwila, now faces a possible sentence of up to 364 days in jail and a \$5,000 fine. He will be formally sentenced on April 14 in King County Superior Court.</p> <p>Fernandez came under suspicion last July after a citizen complained to the media about him, court documents say.</p> <p>A special TSA security agent and a detective then watched Fernandez, who was a lead security agent at one checkpoint. Fernandez took a break, walked to the escalator in baggage claim and got close behind a woman.</p> <p>He put his phone under the woman's dress and turned on the flashlight illumination feature of his phone, court documents say.</p>

HEADLINE	03/23 Israel troops shoot, kill bomb-thrower
SOURCE	http://www.reuters.com/article/us-israel-palestinians-violence-idUSKBN16U2Y9?il=0
GIST	<p>Israeli troops shot dead a Palestinian and wounded three others on Thursday in the occupied West Bank, a Palestinian health official said. The Israeli army said they had attacked a settlement with petrol bombs.</p> <p>The Palestinian health source said the dead man was 17 and that one of the three wounded was in critical condition.</p> <p>An Israeli army spokeswoman said three assailants got out of a car and threw petrol bombs toward the settlement of Beit El, near Ramallah when troops opened fire and confirmed hitting the men. She said the car then fled the scene.</p> <p>There was no immediate account from Palestinian officials of what happened.</p>

HEADLINE	03/23 Police: MS-13 member 'heinous act'
SOURCE	http://www.cbsnews.com/news/ms-13-gang-member-abused-2-year-old-girl-tommy-vladim-alvarado-ventura/
GIST	<p>HEMPSTEAD, N.Y. -- A MS-13 street gang member who had been deported from the U.S. four times stabbed two women and sexually assaulted a 2-year-old girl in a New York City suburb, police said Thursday.</p> <p>Tommy Vladim Alvarado-Ventura, 31, of Hempstead, New York, pleaded not guilty and was ordered held without bail Thursday. His court-appointed attorney declined to comment.</p>

	<p>Alvarado-Ventura is suspected of assaulting the child Tuesday night while the girl's mother was at work, acting Nassau County Police Commissioner Thomas Krumpster said at a news conference.</p> <p>Krumpster said that in his 28 years in law enforcement, the alleged crime is "probably the most heinous criminal act I've ever seen. It really is nauseating."</p> <p>Police say Alvarado-Ventura was deported to El Salvador four times between 2006 and 2011. According to Krumpster, he had a history of prior arrests for offenses including drunken driving, disorderly conduct, assault, false impersonation and contempt of court. Details on those arrests were not immediately released; police said their investigation is ongoing.</p> <p>It was not known when he returned to the United States. He was charged with attempted murder, assault and weapons possession, and he faces life in prison.</p>

HEADLINE	03/23 Chicago cop indicted 16 new charges
SOURCE	http://www.cnn.com/2017/03/23/us/laquan-mcdonald-case-hearing/index.html
GIST	<p>(CNN) Chicago Police Officer Jason Van Dyke had been indicted on 16 new criminal charges on top of the six counts of first-degree murder he faces in the fatal 2014 shooting of teenager Laquan McDonald, prosecutors said Thursday.</p> <p>Van Dyke, the first Chicago officer charged with first-degree murder since 1980, faces an additional 16 counts of aggravated battery with a firearm, with the new charges apparently corresponding to each shot he fired at McDonald.</p> <p>He pleaded not guilty through his attorney, Dan Herbert, during a hearing in Cook County on Thursday. Van Dyke's next court appearance will be April 20.</p> <p>Special Prosecutor Joseph McMahon said a grand jury handed up the indictment last week.</p> <p>Dashcam video of the shooting contradicted nearly everything police said happened the night McDonald died in October 2014. It showed McDonald walking away from police as he held a 4-inch knife, not lunging toward officers, as police had said.</p>

HEADLINE	03/23 DOJ report on immigration arrests
SOURCE	http://www.cnn.com/2017/03/23/politics/justice-statistics-immigration/index.html

GIST	<p>Washington (CNN) Immigration offenses account for half of all federal arrests, according to Justice Department statistics released Thursday, which focus heavily on the role immigration plays in the federal justice system.</p> <p>The analysis of federal justice statistics from 2013-14 highlights how much of federal law enforcement is dedicated to immigration-related offenses, continuing the Trump administration's efforts to place an emphasis on the criminal side of illegal immigration.</p> <p>"These statistics make it clear that immigration-related offenses along the United States border with Mexico account for an enormous portion of the federal government's law enforcement resources and that we must enforce our immigration laws in a way that consistently deters future violations," said Sarah Isgur Flores, a Justice Department spokeswoman.</p> <p>President Donald Trump has made strict enforcement of immigration laws a key focus of his presidency, and has also ordered several new reports designed to highlight crimes committed by undocumented immigrants, unrelated to Thursday's DOJ release.</p> <p>According to the Bureau of Justice Statistics report, half of all federal arrests in 2014 were immigration-related, a total of nearly 82,000.</p> <p>Sixty-one percent of all federal arrests were in the five districts along the US-Mexico border, along with 55% of suspects investigated and 39% of offenders who were given a federal prison sentence.</p> <p>Other highlighted statistics included that 32% of defendants facing charges in district courts were from Mexico, along with 5% from Central America, and 42% of defendants were non-US citizens. Non-citizens were also one-quarter of federally sentenced prisoners in 2014.</p> <p>The report also noted that 17% of immigration offenders who were released in 2012 ended up back in federal prison within three years.</p>

Subject: Ron Fellows Performance Driving School ***New Level 1 date*** August 21-23, 2017

Hello!

Hope all is well! I wanted to let you know that we just opened a level 1 on August 21-23, 2017! We are running our Summer hours, class will run from 7am to 3pm! We do not have accommodations available during this school so we would book rooms for you at the local Holiday Inn Express! You are still welcome to use all the amenities while you are here, and we will provide you with breakfast and lunch each day! We will not be running a automatics during this school, manual transmissions only.

The cost of the 3-day level 1 in a Stingray is \$3895.00 and in a Z06 or Grand Sport is \$5690.00. Please let me know if you have any questions!

Thank you,

Darci Bolen

The following is a compendium of news reports over the past month that may be of interest to our AG offices who are involved in criminal law issues. Neither the National Association of Attorneys General nor the National Attorneys General Training & Research Institute expresses a view as to the accuracy of news accounts, nor as to the position expounded by the authors of the hyperlinked articles.

February 2017

Legislation

New Mexico Attorney General Hector Balderas joined a panel that discussed [Senate Bill 294](#), which would bring together prosecutors, judges, law enforcement officers, and child safety workers to form the [New Mexico Homicide Review Team](#). That team will investigate child abuse-related homicides and develop ways to prevent child abuse.

The **Rapid DNA Act of 2017** ([S. 139/ H.R. 510](#)) has been introduced by **Sen. Orin Hatch** and **Rep. Jim Sesenbrenner**. According to its sponsors, the bill would implement Rapid DNA testing to assist in making decisions about pretrial release or detention; solve and prevent violent crimes; exonerate the innocent; and prevent DNA analysis backlogs.

U.S. Representative Jason Chaffetz has introduced a bill, [H.R. 1061](#), that would require law enforcement officers to obtain a warrant to use a cell site simulator and would penalize the use of such a device without a warrant by up to ten years in prison.

In **Texas**, lawmakers are expected to consider [bills](#) requiring that police officers and ninth graders either take courses together or separately about how to best interact with each other. Other bills address police officers' use of body cameras and would provide bulletproof vests to officers, and still others would raise the age of criminal responsibility from 17 to 18 years.

Policy

The **International Association of Chiefs of Police** has released [Deliberations from the IACP National Forum on Body-Worn Cameras and Violence Against Women](#), a 46-page monograph that explores issues of privacy and safety for victims when police are equipped with body-worn cameras.

“[Familial searching](#)” is used to search DNA databases for family members of an unknown perpetrator who left DNA at a crime scene. It is generally done only after searching for the contributor proves fruitless and has resulted in the apprehension and successful prosecutions of the “Grim Sleeper” and “BTK” serial killers. The **New York State Commission on Forensic Science** is considering whether to allow familial searching as an investigative technique in **New York**.

South Dakota Attorney General Marty Jackley has issued a second official opinion on the implementation of **Marsy’s Law**, a victims’ rights law recently passed by voters in the state. That [opinion](#) concludes that the law does not apply to civil court proceedings, ordinance violations, or—except when a victim clearly invokes his or her rights—the Sexual Assault Response Team.

In the Courts

Two Lawrence, **Massachusetts**, men are among the first to be sentenced under a 2016 state law that criminalizes the sale of **fentanyl**. [Regla Santana and Antonio Rivera](#), who were charged by **Attorney General Maura Healey**, have been sentenced to three to four years in prison. AG Healey wrote the law, which was passed in a year during which nearly 2,000 people in Massachusetts died from opioid-related deaths.

In **Pennsylvania**, a funeral home director has been charged with a long-term, large-scale scam in which she took over \$300,000 from victims for pre-paid funeral services and used it to pay personal expenses and gamble. **Attorney General Josh Shapiro** said the woman, [Lynn Taucher](#), “betrayed dozens of elderly people who placed their trust in her.”

Five **Louisiana** men have been arrested on more than [300 counts of sexual exploitation of children](#) on charges brought by **Attorney General Jeff Landry’s Cyber Crime Unit**. One of the defendants had already been convicted of child pornography charges and continued downloading new images before he reported to prison.

[Todd Jeremy Rettenberger](#) has been sentenced to one to fifteen years in prison for human trafficking in charges brought by **Utah Attorney General Sean Reyes’s SECURE Strike Force**. Rettenberger was [previously convicted](#) of a 1996 robbery and murder, but the Utah Supreme Court concluded that his confession should not have been admitted at his trial and reversed that conviction. Rettenberg then pled guilty to reduced charges that resulted in a sentence of time served in connection with that killing. In 2011,

Rettenberg pled guilty to a sexual exploitation charge; he was on parole for that charge when he was arrested in the human trafficking case.

In **South Dakota**, a federal court has [suppressed](#) evidence obtained by local police who obtained a search warrant to examine an iPhone in an unrelated state case and then shared that evidence with federal authorities. The court ruled that—to paraphrase the Supreme Court’s remarks regarding capital punishment—“cellphones are different” than, for example, boxes of physical evidence seized pursuant to a state search warrant that could have been permissibly examined by the federal team. The district judge relied heavily upon the Supreme Court’s decision in [Riley v. California](#), which held that officers were not generally permitted to search incident to arrest a defendant’s cellphone.

Training

The **Virginia Commonwealth’s Attorneys’ Service Council** will hold its [2017 Prosecuting Economic Crimes](#) from February 26 through March 2, 2017 in Blacksburg, Virginia.

Stetson Law School will offer a free forensic science webinar on March 1, 2017, called “[Crime Scene Essentials](#).” This webinar is offered through a Bureau of Justice Assistance grant and is open to both prosecutors and defense attorneys.

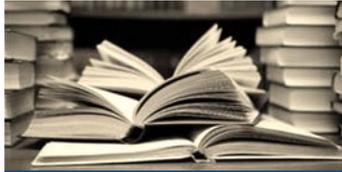

The New Mexico MCLE’s teleconference “[50 Shades of Ethics](#)” will take place on March 7, 2017, at 1:00 PM Mountain time.

From July 19 through 21, 2017, in Washington, D.C., **NAGTRI** will hold its first ever [National Forensic Science Symposium](#).

Other News of Interest

[Michael Mejia](#), a California gang member freed as a result of a push to reduce prison overcrowding, [murdered Whittier Police Officer Keith Boyer](#) and shot his partner, **Patrick Hazell** on February 20, 2017. Boyer and Hazell responded to a car accident in which Mejia rear-ended another vehicle with a car he had stolen from his own cousin, who he is believed to have also murdered. Mejia pulled a gun and shot both police officers when they responded to the accident.

In observance of the U.S. President's Day holiday, we will not publish on Monday, February 20, 2017. Service will resume on Tuesday, February 21, 2017.

POLICING & POLICY

Trump: New Version Of Travel Ban Executive Order Coming Next Week.

[Reuters](#)  (2/16, Rascoe) reports that during his Thursday news conference, President Trump said that he “will issue a new version next week of his executive order banning citizens of seven mostly Muslim countries and all refugees” from traveling to the US some time next week. The President “once again blasted federal courts that blocked the implementation of his travel ban,” but said the new order will address the concerns raised by the Ninth Circuit Court of Appeals. Trump said, “The new order is going to be very much tailored to what I consider to be a very bad decision.” The [Los Angeles Times](#)  (2/16, Dolan, Kaleem) says Trump “did not clarify details of what would be in the new order.”

The [New York Times](#) (2/16, Liptak) reports the Justice Department told the appeals court on Thursday “that it would not seek a rehearing of a decision that shut down President Trump’s targeted travel ban. Instead, the administration will start from scratch.” In a brief, the DOJ said, “Rather than continuing this litigation, the president intends in the near future to rescind the order and replace it with a new, substantially revised executive order to eliminate what the panel erroneously thought were constitutional concerns.” The [Washington Post](#) (2/16, Zapotosky) reports that Washington State Attorney General Bob Ferguson, who sued over the ban, “[wrote on Twitter](#) that the Justice Department filing, in particular, ‘recognizes the obvious – the President’s current Exec Order violates the Constitution.’” The [Los Angeles Times](#) (2/16, Dolan) reports that the Ninth Circuit said late Thursday that it will “take no further action on President Trump’s travel ban while the administration prepares new, more limited restrictions.”

Texas County That Includes Houston Decriminalizes Marijuana.

The [Washington Times](#) (2/16, Blake) reports that officials from Harris County, Texas, which contains Houston, announced a more lenient policy toward first-time offenders carrying fewer than four ounces of marijuana as of March 1. Offenders will be able to attend a four-hour drug education class instead of going to jail or going before a judge. Harris County District Attorney Kim Ogg said Thursday that current marijuana law has resulted in little “tangible public safety benefit” while costing the county about \$25 million annually.

According to [Reuters](#) (2/16, Herskovitz), the county’s new “Misdemeanor Marijuana Diversion Program” will apply “to people 17 and older facing no additional charges other than misdemeanor marijuana possession, county and city law enforcement officials said.” The county is giving “police officers and prosecutors discretion to bring criminal charges.”

Tech Groups Gear Up For Fight Over FISA Surveillance Extension.

[IDG News Service](#) (2/16, Gross) reports that “a controversial provision in U.S. law that gives the National Security Agency broad authority to spy on people overseas expires at the end of the year, and six major tech trade groups are gearing up for a fight over an extension.” Section 702 of the Foreign Intelligence Surveillance Act “expires on Dec. 31, and Congress almost certain to extend it in some form.” According to IDG, “the tech trade groups, including BSA, the Consumer Technology Association, and the Computer and Communications Industry Association, are asking lawmakers to build in new privacy protections for internet users. ‘It is critical that Congress takes a balanced yet focused approach with respect to Section 702,’ the groups said in a letter sent to top lawmakers Wednesday. ‘We urge your committees to ensure that any reauthorization includes meaningful safeguards for internet users’ privacy and civil liberties.’”

Memphis PD Launches Unit To Combat Violent Crime Wave.

The [AP](#) (2/16) reports the Memphis Police Department last month launched a new Violent Crimes Unit “in an effort to reduce increased violent crime in the city,” which saw a record 228 killings in 2015. The VCU, which “will target any pattern of violent crime, such as carjackings and sexual assaults,” consists of “five distinct MPD bureaus: homicide, the gang unit, the Safe

Streets Task Force, Project Safe Neighborhoods and the Investigative Support Unit.” Police Lt. Col. Don Crowe explained MPD’s goal for the VCU is to increase communication resource sharing among units.

China’s Carfentanil Ban Could Help US Fight Opioid Epidemic.

The [AP](#) (2/16, Kinetz) reports the Chinese government “is banning carfentanil and three similar drugs as of March 1, China’s Ministry of Public Security said Thursday, closing a major regulatory loophole in the fight to end America’s opioid epidemic.” The Drug Enforcement Administration “called China’s move a potential ‘game-changer’ that is likely to have a big impact in the U.S.”

The [Wall Street Journal](#) (2/16, Spegele) reports carfentanil is chemically-related to fentanyl and is 10,000 times as potent as morphine. DEA spokesman Russel Baer said that China “has made an important and critical step forward that will have a potentially significant impact on the supply chain of these deadly substances in the United States.”

CRIME & DRUGS

DHS Official Says Mexican Drug Cartels’ Influence Extends Far Inside US.

The [Washington Examiner](#) (2/16, Westwood) reports Paul Beeson, director of DHS’ Joint Task Force – West, told the House Homeland Security Committee “that Mexican cartels are able to exert leverage in dozens of cities across the U.S., and remain a major U.S. national security threat through their efforts to flood the U.S. with illegal drugs.” Beeson said the government “continues to face challenges at the border and within the U.S. due to the expanding ‘reach and influence’ of these cartels.”

The [Washington Examiner](#) (2/16, Kasperowicz) reports Coast Guard Adm. Charles Ray also testified and “warned that drug cartels are a ‘sophisticated and well-funded adversary’ that employ multiple strategies for getting drugs into the United States.” Ray “said a record increase in coca cultivation in Colombia is only adding to the pressures that border officials face.” DHS Homeland Security Investigative Program assistant director Matthew Allen is quoted from the hearing as saying, “Mexico is a major source and transit country for illicit drugs destined for the United States, including marijuana, cocaine, methamphetamine, heroin and, more recently, fentanyl.” Allen adds that, “in the last two decades, Mexico has also become the largest transit country for South American sourced cocaine destined for the United States.”

The [Minneapolis Star Tribune](#) (2/16, Montemayor) reports the recent seizure of 90 pounds of methamphetamine in South Dakota, and the revelation that a local owner of a soccer store was running the Minnesota operation for the cartels shows the “persistent reach of Mexican cartels into Minnesota, where they continue to dispatch alleged associates to distribute large volumes of meth and cocaine around the state.” The Star Tribune says the charges were investigated by HSI and DEA. HSI St. Paul assistant special agent in charge Paul Kunze is quoted as saying, “Minnesota is unique in that we’re both a destination market and a transit market to other regions.” He added that cartels “are also using the region as a transportation point for drugs moving up into Canada and further east in the United States.”

FBI: South Carolina Man Sought To Carry Out Attack Styled After Charleston Church Massacre.

[Reuters](#) [redacted] (2/16, Skinner) report that the FBI this week said it had arrested Benjamin McDowell, a South Carolina man who had hoped to carry out an attack similar to Charleston church shooter Dylann Roof. McDowell was arrested after allegedly illegally purchasing a gun from an undercover FBI agent. "I seen what Dylann Roof did, and in my heart I reckon I got a little bit of hatred. ... I want to do that," McDowell allegedly told the undercover agent last month. McDowell, who is connected to the White Supremacy Extremists hate group, asked the FBI agent to buy the firearm for him, which he could not legally own due to a felony conviction.

The [AP](#) [redacted] (2/16, Collins) reports that the FBI said it had provided McDowell with a .40-caliber Glock and ammunition for \$109. Though McDowell had threatened a synagogue on Facebook, the FBI said, he told the undercover agent he did not have a specific target in mind and might just shoot at a group of black people. "I got the heart to do that s---, but I don't have the good training," McDowell said, according to the undercover operative. "Authorities began investigating McDowell in December" after he threatened the synagogue, the AP says.

Justice Department Says DACA Beneficiary Admitted Ongoing Gang Affiliation.

[Reuters](#) [redacted] (2/16, Levine) reports the Justice Department says in a court filing that Daniel Ramirez Medina, who was issued a work permit under the Deferred Action for Childhood Arrivals program, has "alleged gang ties." The filing says ICE officers "questioned Ramirez about a 'gang tattoo' on his forearm." Ramirez said he "'used to hang out with the Sureno's in California,' but 'fled California to escape from the gangs,' according to the government brief." The brief adds that Ramirez "then told officials that he 'still hangs out with the Paizas in Washington State.'" [NBC News](#) [redacted] (2/17) reports the DOJ filing said that Ramirez denied active involvement in gang activity, saying, "not no more."

[The Guardian \(UK\)](#) [redacted] (2/16) reports Jeffrey Robins, with the Justice Department, "wrote in federal court documents that the homeland security department 'automatically terminated' Ramirez's status when Ice arrested him and launched 'immigration removal proceedings.'"

The [AP](#) [redacted] (2/16, Johnson) reports "one of Ramirez' lawyers, Mark Rosebaum said the federal allegations were false and that authorities misidentified the tattoo." Rosebaum said in a statement, "Mr. Ramirez did not say these things because they are not true. And while utterly implausible and wholly fabricated, these claims still would not be sufficient evidence that Mr. Ramirez is a threat to the public safety or national security." [Bloomberg BNA](#) [redacted] (2/16, Francis) reports the Ramirez case "may be testing the limits" of the DACA program "and the Trump administration's treatment of it."

The [Daily Caller](#) [redacted] (2/16, Pfeiffer) reports Carlos Sada, Mexico's undersecretary for foreign affairs in North America, said he is "concerned" about Ramirez's arrest, adding, "We are concerned because these boys were in the U.S. with adequate legal status...Daniel not only applied for DACA once, but he renewed his status in 2016." [WJLA-TV](#) [redacted] Washington (2/15, Phan) reports "dozens of demonstrators gathered outside the Northwest Detention Center in Tacoma Wednesday night to protest" Ramirez's arrest "and demand his release."

Are you from an agency with 50 to 999 sworn officers? If so, you qualify to join the IACP Midsize Agencies Division. In addition to the opportunities and services you receive as an IACP member, as a division member you will receive additional benefits including a weekly e-newsletter and the opportunity to connect with a network of more than 300 other midsize agency leaders.

TECHNOLOGY

Tech Company Sues Taser International Over Phoenix Body Cam Contract.

The [AP](#)  (2/16) reports police technology company VieVu has filed suit against “Taser International over the loss of the Phoenix police force’s body camera contract.” VieVu reportedly secured a “\$3.6 million contract to outfit the city’s police force with body cameras” last year, but officials “delayed the vote that would have made the deal official and scrapped the agreement altogether in January.”

NATIONAL SECURITY

ADL: US Deaths Linked To Domestic Islamic Extremism The Highest In Decades.

The [Washington Times](#)  (2/16, Noble) reports that last year’s Orlando nightclub shootings “propelled the annual number of deaths linked to domestic extremist-related attacks to their highest level in decades and made Islamist extremism the deadliest ideology for the first time in 30 years.” That Times adds that according to a new report from the Anti-Defamation League, “the preliminary tally of homegrown extremist-related deaths in the U.S. shows that 69 people died in such attacks last year, the most since the 1995 Oklahoma City bombing.” According to the Times, Omar Mateen’s “pledge of allegiance to the Islamic State and al Qaeda during the Pulse nightclub massacre led to classification of the attack, which killed 49 people, as domestic Islamic extremism – setting 2016’s figures far afield from prior years.”

Man Linked To San Bernardino Terrorists Pleads Guilty To Conspiracy Charges.

The [Inland Valley \(CA\) Daily Bulletin](#) (2/16, Rokos) reports that California man Enrique Marquez pleaded guilty Thursday “to conspiring to support terrorists and lying on documents signed during the purchase the rifles used to kill 14 people and wound 22 others” in the San Bernardino terrorist attack. Marquez faces up to 25 years behind bars. The 25-year-old will be sentenced under a plea agreement that will allow him to escape conviction on some of the charges originally filed against him. “As part of the agreement, charges of marriage fraud and misuse of visas and permits will be dropped at sentencing,” the Daily Bulletin says, noting that Marquez was engaged in a sham marriage to a Russian woman. Marquez can also “be fined up to \$250,000 for each of the counts,” the newspaper says. The [AP](#) (2/16) reports that the families of some of those killed by the San Bernardino terrorists expressed discontent at the length of the maximum sentence possible for Marquez. “U.S. Attorney Eileen M. Decker said she understands...but explained that she is bound by the law and there is no evidence that Marquez participated in or had advance knowledge of the San Bernardino killings,” the AP says. [Reuters](#) (2/16, Gorman) reports that Marquez is set to be sentenced on Aug. 21.

ICE Director Meets With Congress Members, Most CHC Members Excluded.

Acting ICE Director Thomas Homan met with members of Congress on Thursday to address ICE’s recent targeted enforcement operations. Coverage focused on the exclusion of members of the Congressional Hispanic Caucus from the meeting, and reaction from Democratic lawmakers who say ICE will increase detention and deportation efforts. [Politico](#) (2/16, Caygle) reports a group of House Democrats say House Judiciary Committee Chairman Bob Goodlatte expelled them from a meeting with acting Immigration and Customs Enforcement Director Thomas Homan, and they “accused Speaker Paul Ryan of the strong-arm move.” Rep. Louis Gutierrez (D-IL) said, “I’m pretty shaken. I’ve been here 25 years and I’ve never been told by the Speaker of the House that I can’t attend a meeting I’ve requested.” Political adds 10 Democrats did attend the meeting, but a “source inside the room” said Chairman Goodlatte “told Democrats not on the list to leave. The Virginia Republican defended his decision, saying in a brief interview afterwards that the arrangement was ‘agreed upon ahead of time’ and noting there were more Democrats than Republicans in the meeting.”

The [Huffington Post](#) (2/16) reports ICE “set the invite list for the meeting and initially excluded the entire Congressional Hispanic Caucus, according to aides from both parties, before agreeing to include a small number of members.” The [Dallas Morning News](#) (2/16) reports, “Those who were allowed in described a combative encounter with promises of many more arrests and deportations to come.” The Morning News says the “hourlong meeting ...covered a range of concerns about recent arrests and deportations around the country, though caucus members said they left the meeting with many questions unanswered.” [The Hill](#) (2/16, Bernal, Lillis) reports ICE spokeswoman Jennifer Elzea said that during the meeting, Mr. Homan “emphasized that ICE does not conduct arrests indiscriminately and does not establish checkpoints; rather, the agency’s deportation officers target pre-identified individuals for arrest at specific locations based on law enforcement leads.” Rep. Lujan Grisham (D-NM) “said Homan told the group that the agency has interpreted new guidance from the White House to mean that every one of the 11 million undocumented immigrants in the country could be removed at any time.”

LAW ENFORCEMENT AT WORK

Texas Officer's Quick Thinking Saves Fast Food Restaurant From Burning Truck.

[USA Today](#) (2/16) reports officer Chris Womack of the Glenn Heights Police Department is being hailed as a hero after saving a Jack in the Box restaurant from a burning vehicle. According to USA Today, Womack's quick use of his squad car to divert a burning pickup truck away from the restaurant prevented the building from catching fire. The article adds, "No injuries were reported and the Glenn Heights Police Department says Officer Womack is sure to be rewarded for his life-saving actions."

POLICING & POLICY

FBI, DOJ Investigating Threats Against Jewish Community Centers.

[CNN](#)   (2/16, Burke) reports that the FBI and Justice Department say they are investigating the recent rash of threatening calls placed to 48 Jewish community centers across the country. The agencies are probing “possible civil rights violations in connection” with the threats, the FBI said in a statement. The calls, which conveyed bomb threats, affected Jewish organizations in 27 states and one Canadian province last month.

Officials Planning Security Upgrades Outside Capitol Complex.

[WRC-TV](#)   Washington (2/15) reports that “officials are planning a series of security upgrades outside the Capitol Complex, including installation of an underground alarm system [and] reinforced windows.” In addition, “US Capitol Police plan to add highly specialized K-9 teams near building entrances “to patrol exterior zones to prescreen visitors and enhance our presence.” The US House Sergeant at Arms “announced some of the enhancements during testimony in front of the US House Committee on Administration.”

Maryland Lawmakers Give State AG Expanded Power To Sue Trump Administration.

The [Baltimore Sun](#)   (2/15) reports that “Maryland lawmakers on Wednesday empowered the attorney general with broad authority to sue the federal government, an unprecedented and swift expansion of power that bypasses the governor.” According to the Sun, “the new capability allows Democratic Attorney General Brian E. Frosh to challenge Republican Donald J. Trump’s administration without consulting Republican Gov. Larry Hogan or the Democrat-led General Assembly.” State lawmakers “are now weighing whether to give Frosh’s office an additional \$1 million a year and five more attorneys to fight the federal government, spurred by what they called the unique threat posed by the Trump administration.”

Illinois Governor Proposes State Police Hiring In Effort To Curb Violence.

[Reuters](#)   (2/15, McLaughlin) reports that Illinois governor Bruce Rauner proposed new adding 170 troopers to the State Police by 2019 “in an effort to quell a steady increase in gun violence spilling over from Chicago’s neighborhoods onto the city’s expressways.” In his budget address, Rauner said, “Those officers will allow us to send more patrols to the Chicago area, to the expressways to counter the violence that has spilled over onto the highways there.” This comes after an apparent decrease of the number of Illinois State Police troopers, which “declined significantly since 2008 when there were 2,105 sworn officers, according to state police data. That number dropped by more than 400 troopers to 1,671 as of last year.”

Phoenix Rejects Sanctuary City Label.

[Reuters](#)   (2/15, Schwartz) reports the Phoenix City Council “rejected a bid to declare the large southwestern U.S. municipality a ‘sanctuary city’ despite vocal cries to protect undocumented immigrants.” The measure was voted down 7-2. Phoenix Mayor Greg Stanton, “who presides over the council, said the legislation would violate a state law signed in 2010 by then-Arizona Governor Jan Brewer that allows police to question people they stop about their immigration status.”

COMMUNITY

Springfield, Massachusetts City Councilors Announce New “Police/Community Relations Committee.”

[WWLP-TV](#)   Springfield, MA (2/15) reports that Springfield city councilors will announce a new 15-member committee designed to improve relations between city residents and their police department. According to a City Council news release sent to 22News, the new committee will be “charged with helping improve and strengthen the relationship between the Springfield Police Department and the Springfield community.”

Are you a Public Information Officer (PIO) looking to expand your career knowledge and the skills you bring to your agency? If so, please join us at the IACP PIO Midyear Conference, co-hosted by the Aurora, Colorado, Police Department, on May 8-10, 2017 in Aurora, CO. From new officers transitioning into the role of PIO to veterans looking to learn from other agencies across the country, the conference will have something for public information officers of all skill levels. To learn more and to register for the 2017 PIO midyear conference, [click here.](#)

CRIME & DRUGS

US Charges 41 Felons In Arkansas In Anti-Violence Program.

The [Arkansas Democrat Gazette](#)   (2/15) reports that federal prosecutors in Little Rock, AR on Tuesday announced “the indictment of 41 convicted felons on federal charges, praising a federal anti-violence program for changing the way local and federal authorities work together.” The indictments “were made under the Violence Reduction Network, a national program with the U.S. Department of Justice, that aims to reduce violent crime by providing participating agencies with training and federal resources.” According to the Gazette, Little Rock and West Memphis “joined the federal anti-violence program in 2015, along with Compton, Calif., Flint, Mich., and Newark, N.J.” The Gazette adds that “all of the 41 people indicted have long histories of drug trafficking, violent felonies or both, said Christopher Thyer, U.S. attorney for the Eastern District of Arkansas, at a news conference Tuesday afternoon.”

Chinese Police Seize \$120 Million Of Fake Cosmetics.

[Reuters](#)   (2/15) reports that Chinese police raided seven underground dens and seized counterfeit cosmetics worth about 827 million yuan (\$120 million). Some of the counterfeit labels include Chanel, Christian Dior, L’Oreal SA’s Lancome and Estée Lauder. Reuters reports, “[China] has been trying to step up a crackdown on fakes, with authorities opening more than 170,000 intellectual property infringement and counterfeit product cases last year and arresting nearly 20,000 suspects.”

FBI Issues Warning About Phone Scam Affecting Texans.

The [Fort Worth \(TX\) Star-Telegram](#)   (2/14) reports that the FBI is warning Texas residents about phone scams in which an FBI phone number displays on the call recipient’s caller ID. FBI Dallas spokeswoman Lauren Hagee said, “Such phone calls are fraudulent” and added that “call recipients should hang up immediately and notify law enforcement.” The callers behind the

bogus calls sometimes users “intimidation tactics to demand payment of money supposedly owed to the government,” the Star-Telegram says.

TECHNOLOGY

New Bill Requires Police To Get Warrants For Stingray Cell Tracking.

[The Verge](#)   (2/15) reports that according USA Today, “A bipartisan group of House and Senate lawmakers today introduced a bill that would require US police agencies to obtain a warrant before deploying cell-site simulation surveillance devices known as ‘stingrays.’” Stingrays are typically used by police to triangulate criminal suspects’ location based on data emitted from their smartphones. Stingrays are controversial because although they can accurately pinpoint a suspect’s location, they can also intercept data from other bystanders in the area. The Verge reports, “Lawmakers are hoping the bill, titled the Geolocation Privacy and Surveillance (GPS) Act, can curb potential abuse of the technology and promote transparency when police agencies use the device.” Jason Chaffetz, chairman of the House Oversight and Government Affairs Committee said, “As we welcome innovative technologies that help fight crime, we must be mindful of the potential for abuse.” Rep. John Conyers, D-Mich, also added, “When individuals are tracked in this way, the government is able to generate a profile of a person’s public movements that includes details about a person’s familial, political, professional, religious, and other intimate associations.”

Skimming Devices Steal Data From ATMs, Gas Pumps, More.

The [Harrisburg \(PA\) Patriot-News](#)   (2/15) reports on the various ways criminals are now using skimming devices to steal credit card or debit card data from ATMs and gas pumps. The Patriot reports, “The stolen data can be used to withdraw bank account funds, make unauthorized purchases, and the information can be sold to other thieves.” Multiple agencies are taking steps to prevent more fraud from happening, including the Pennsylvania Department of Banking and Securities, state police and attorney general’s office, according to Ed Novak, spokesman at the banking and securities agency. As for what customers can do, the PA Department of Banking and Securities advises customers to use ATMs in well-lit, secure locations, ensuring no one is watching you while entering your PIN number, and using credit card instead of debit card to “avoid compromising your PIN and to gain other consumer protections.”

Miami-Dade School District Considers Body Cameras For Police.

The [Miami Herald](#)   (2/15) reports that the Miami-Dade school district is considering whether to equip schools police with body cameras that would record their encounters with students. School Board member Maria Teresa Rojas said the proposed item “would strengthen school police accountability and provide a valuable new type of evidence for them.” She also clarified that the proposal “was not a response to any incidents involving schools police but rather an effort to be proactive as police forces across the country are considering the cameras.”

NATIONAL SECURITY

Fighting Escalates In Eastern Ukraine.

The [Los Angeles Times](#)   (2/15, Ayres) reports that the escalation of fighting elsewhere in Ukraine in recent weeks has reached the industrial city of Mariupol, “a key component in southeast Ukraine’s struggling economy.” Ukraine’s nearly three-year battle against Russian-backed separatists in the east “erupted into the worst fighting in two years in late January,” but “exactly why the fighting intensified recently remains unclear.”

LAW ENFORCEMENT AT WORK

Coast Guard Tracks Russian Spy Ship Off East Coast.

The [Los Angeles Times](#)   (2/15, Rondinone, Mahony, Owens) reports the Coast Guard is tracking the course of a “Russian spy ship moving up the East Coast to within 30 miles of the U.S. Naval Submarine Base in Groton Wednesday.” The Coast Guard “said it is tracking the ship’s course, but would not disclose the location.” In a statement the agency said, “The U.S. Coast Guard is aware of a Russian Federation-flagged vessel transiting international waters off the East coast of the United States, as we are of all vessels approaching the U.S. The ship has not entered U.S. territorial waters, which extend 12 miles out to sea. ... We respect freedom of navigation exercised by all nations beyond the territorial sea of a coastal state consistent with international law. The Coast Guard continues to coordinate with federal agency partners to monitor maritime contacts operating in the vicinity of U.S. shores.”

Subject: IACP's The Lead: Trump Orders DHS To Produce List Of Sanctuary Cities, Law Enforcement Divided Over Crackdown

If you are unable to see the message or images below, [click here to view](#)

Greetings Robert Rausch
Friday, January 27, 2017

POLICING & POLICY

Trump Orders DHS To Produce List Of Sanctuary Cities.

The [Washington Times](#)  (1/26, Dinan) reports Wednesday, President Trump ordered the Homeland Security Department to develop and release “a name-and-shame list of sanctuary cities” as part of “two new executive orders erasing decades of previous immigration enforcement policy.” According to US Immigration and Customs Enforcement there are 279 cities and counties that “refused to cooperate on at least some deportations in 2016.”

Plans Could Boost Private Prisons. The [Arizona Republic](#)  (1/26, Roberts) reports that Trump’s “crackdown” on illegal immigration is “stupendous news for the private prison industry.”

Concern For Connected Vehicle Hackings Prompts Federal Study.

[CIO Magazine](#)  (1/26, Steiner) reports that, following the release of a 2016 memo by the FBI, Department of Transportation, and National Highway Traffic Safety Administration regarding hacking risks in connected vehicles, law enforcement officials are now concerned about the use of laptops and other devices to steal vehicles as well as personal data. CIO recommends that owners with connected vehicles regularly update software, while suggesting that manufacturers increase

security against malware and third-party takeovers. In the event that updates cannot be automatically installed, owners should visit dealers to verify the security of their vehicles, particularly in the event of a recall. Increased steps towards ensuring security, the magazine proposes, will also ensure customer loyalty and protection.

According to [GeekWire](#) (1/26, Stampher), a bipartisan bill prescribing a Highway Traffic Safety Administration study on cyber security in connected vehicles entered consideration in the House of Representatives Wednesday. In partnership with the Federal Trade Commission, the Defense Department, and others, the study would create a standard for isolating vehicle software systems, storing system data, and preventing data breaches. Some legislators called the process “a daunting challenge” as competitors like Microsoft seek to unseat Tesla from its reign in the market by partnering with vehicle makers on “incredibly complicated” platforms that can “handle the data,” Microsoft executive vice president of business development Peggy Johnson said.

Knoxville, Tennessee Police Launch “Predictive Law Enforcement” Effort With ORNL.

The [Knoxville \(TN\) News Sentinel](#) (1/25) reports the Knoxville Police Department announced Wednesday the formation of a special task force to target the drug dealers responsible for the rising rate of drug overdose deaths across the state. “The task force aims to use the Oak Ridge National Laboratory’s computers to process data in order to perform” so-called “predictive law enforcement.”

National Governors Association Wants More Cyber Collaboration Between Federal Government, States.

[FedScoop](#) (1/25, Williams) reports the chairman and vice chairman of the National Governors Association have “called for more collaboration between the federal government and states on cybersecurity.” Chairman Gov. Terry McAuliffe “said governors across the nation are ready to work with the Trump administration and the 115th Congress on issues like cybersecurity and more over the course of 2017.” FedScoop says, “McAuliffe’s initiative as NGA chair centers around helping state governments ‘meet the (cybersecurity) threat.’”

Baltimore Police Search For Solutions To Year’s Deadly Start.

The [Baltimore Sun](#) (1/25, George) reports that “as Baltimore struggles with a deadly start to the year, the mayor and police commissioner on Wednesday called on help from the community, other city agencies, prosecutors and even the president to help slow a pace of one homicide a day.” The Sun notes that 26 people “have been killed in the year’s first 25 days,” and that Baltimore Police Commissioner Kevin Davis “tried to assure residents that the department is doing everything it can, allocating more officers to patrol and redeploying gang and other special units to areas of the city where violence is the worst.” The Sun adds that “according to the most recent police crime statistics, total shootings are up 44 percent compared to this time last year, while homicides are up 50 percent for the period,” and “carjackings, a major problem for police in 2016, are up more than 60 percent.”

CRIME & DRUGS

Marijuana Legalization, Debate Over Field Sobriety Test Leaves Police With Few Options To Arrest High Drivers.

[NPR](#) (1/25, Smith) reports that the legalization of marijuana in several states presents a growing concern to law enforcement: Because there is some debate over the scientific reliability of the standard field sobriety test in determining whether someone is “too high to drive,” in the past police have been able to “fall back on arresting a driver for possession.” Now, with marijuana becoming legal in several states, “officers worry they’ll be faced with more stoned drivers and fewer ways to stop them.” However, the article notes that “as studies continue on standard field sobriety tests, efforts are also underway to design new ones to better weed out drivers who may be high on weed.”

Mexican Authorities Seize More Than 6 Million Cigarettes From Truck In Campeche.

[Noticieros Televisa](#) (1/23) reported Mexico’s Attorney General’s Office (PGR) seized 6.04 million contraband cigarettes from a truck that it stopped in San Francisco de Campeche in checkpoint action.

Pew Survey: Most American Adults Have Been Victims Of Major Data Breach.

[Fast Company](#) (1/26) reports, “A new survey from the Pew Research Center finds that most American adults have been the victims of some kind of ‘major data breach,’ and that many of us don’t trust big organizations to keep our data safe.” Fast Company reviews “some of the more alarming numbers from the report,” including that “51% of respondents said they’re ‘not at all confident’ or ‘not too confident’ in social media sites keeping their information safe – and 49% feel that way about the federal government.”

TECHNOLOGY

Use Of Cellphone Tracking Devices Under Legal Scrutiny In Several States.

The [AP](#) (1/26, Collins) reports legislation addressing the use of cell-site simulators – devices widely referred to by the brand name Stingray – are currently pending in at least eight states, and “[m]ost of them would require police to get warrants.” The article also notes that the House Oversight and Government Reform Committee last month issued a report calling for clearer guidelines on the use of such cellphone tracking devices.

Team Begins IARPA-Backed Project To Help Analysts Assess Quality Of Information.

The [Syracuse \(NY\) Post-Standard](#) (1/26, Moriarty) reports a team from Syracuse University, the University of Arizona, Colorado State University, and SRC Inc. begin work this month on “the 4.5-year project under an \$11.5 million contract from” IARPA to develop digital tools that use crowdsourcing to “aid analysts at the nation’s intelligence agencies, including the CIA, FBI, the National Security Agency, Department of Homeland Security and the Drug Enforcement Administration.” Syracuse professor Jennifer Stromer-Galley, who is leading the research team, said the application the team is building “will guide analysts” to evaluate the credibility of the information they’ve obtained, “list the assumptions used in judging the evidence, and identify the information they do not know and determine whether their conclusions might be different if they had the missing information.”

NATIONAL SECURITY

Florida Airport Shooter Charged With Murder, Not Terrorism.

The [Miami Herald](#) (1/26, Weaver) reports that “Fort Lauderdale airport shooter Esteban Santiago told federal agents after carrying out his deadly rampage that he was ‘hearing voices,’ under ‘government mind control’ and ‘participating in jihadi chat rooms online’ – but, at least for now, he’s not being charged with a terrorist act.” A federal grand jury on Thursday “returned an indictment that includes no accusation that he was supporting a foreign terrorist group like the Islamic State, as he suggested to FBI agents.” The FBI has “found no evidence on his computer, smart phone or elsewhere to support his claims in [the] confession-like statement,” and instead, the grand jury “charged the 26-year-old military veteran from Alaska with killing five people and injuring six others during the Jan. 6 shooting at Fort Lauderdale-Hollywood International Airport – with all of the violent attack captured on surveillance video cameras.”

The [AP](#) (1/26, Anderson) reports that the grand jury indicted Santiago on 22 counts, including 11 counts of “causing death or bodily harm at an international airport.” Prosecutors have not yet said whether they intend to seek capital punishment. “They have made the necessary allegations to seek the death penalty,” said former federal prosecutor David S. Weinstein. The [Wall Street Journal](#) (1/26, Kamp) reports that though the indictment does not contain charges related to terror, nothing about it precludes additional charges being added at a later date. [NPR](#) (1/26) reports that “Santiago is

scheduled to be arraigned on the charges on Jan. 30, according to a press release by the Department of Justice.” The [Tampa Bay \(FL\) Times](#)  (1/26, McMahon) reports that Santiago is expected to plead not guilty.

HEADLINE	01/13 China state media warns US of 'clash'
SOURCE	http://www.independent.co.uk/news/world/asia/rex-tillerson-south-china-sea-state-media-prepare-military-clash-donald-trump-global-times-a7525061.html
GIST	<p>The US should "prepare for a military clash", a state run Chinese tabloid newspaper has warned.</p> <p>Less than 24 hours after US Secretary of State nominee Rex Tillerson appeared to call for a blockade of South China Sea islands, a strongly-worded English editorial in the Global Times accused the former Exxon Mobil chief executive of "rabble-rousing".</p> <p>He "had better bone up on nuclear power strategies if he wants to force a big nuclear power to withdraw from its own territories", the paper, which is known for writing hawkish editorials, said. However, despite being state run, it does not necessarily reflect government policy.</p>

HEADLINE	01/12 Lawsuit over Tacoma PD use of Stingray
SOURCE	http://www.theolympian.com/news/politics-government/article126197059.html
GIST	<p>Public records advocate Arthur West has filed a lawsuit against the city of Tacoma. This time, West says he wants access to more information about the Tacoma Police Department's use of a controversial piece of surveillance equipment called a cell site simulator, commonly known by the brand name Stingray.</p> <p>The device masquerades as a cellphone tower with a strong signal. While police use the Stingray to track their target via his or her cellphone, other nearby devices are powerless to resist the Stingray's call.</p> <p>While the police might be seeking a felon with the Stingray, technology experts say the details of cellphone calls and texts — but not the actual content — can be scooped up by the police's device. Police have said they do not retain data captured by the Stingray.</p> <p>In his December filing, though, West says the police's device interferes with cellphone signals without a license from the Federal Communications Commission, the federal agency that regulates the use of the airwaves.</p> <p>West, an Olympia resident who says he travels frequently to Tacoma, wrote in his filing that the Tacoma Police Department's use of the Stingray prevents him and others from calling 911 in an emergency.</p> <p>He is requesting damages from the city for interfering with his cellphone contract and for invasion of privacy.</p> <p>As with many of his other lawsuits against an array of public agencies, West is seeking damages from the city for withholding records he requested.</p>

TPD has refused to say what the device's precise capabilities are. The agency has cited a nondisclosure agreement with the Federal Bureau of Investigations.

The News Tribune first reported Tacoma's use of the Stingray in 2014. By that time, police had used it dozens of times over six years, mostly for drug cases.

West's most recent lawsuit is not to be confused with a similar one he filed in October 2015, which has since been consolidated with one filed by the Center for Open Policing in Seattle, again regarding Stingray records. The group has sued the city for not releasing an unredacted agreement with the FBI. West's 2015 lawsuit seeks the nondisclosure agreement and a suite of documents related to the purchase of the device.

The FBI would neither confirm nor deny the existence of a nondisclosure agreement with the city of Tacoma in response to a News Tribune records request filed in 2014.

Of West's lawsuit, Tacoma Police Department spokeswoman Loretta Cool said: "We don't comment on pending lawsuits."

A hearing for West's most recent case is scheduled for April.

HEADLINE	01/12 LA County Sheriff launches drones
SOURCE	http://www.scpr.org/news/2017/01/12/68076/sheriff-launches-first-police-drones-in-la-county/
GIST	<p>In the first such move by a police agency in Los Angeles County, the sheriff's department Thursday announced it will begin using an unmanned drone to assist deputies on the ground.</p> <p>Many law enforcement leaders see drones as an important part of policing in the future – particularly in urban areas. In California, 30 police agencies use them. Across the nation, more than 300 departments deploy drones, according to sheriff's Captain Jack Ewell.</p> <p>The LAPD received two drones as a donation from the Seattle Police Department four years ago but has yet to deploy them.</p> <p>The Federal Aviation Administration approved the sheriff's application to use the drone in specifically defined incidents. They include search and rescue operations, explosive ordinance detection, hazardous materials incidents, disaster response, and incidents involving barricaded and armed suspects.</p> <p>Sheriff's officials hope to use the tool in situations where deputies otherwise might be forced to move into harm's way. For instance, if a suspect is barricaded, a deputy usually needs to move close in to figure out</p>

	<p>where the suspect is hiding and the layout of the property. A drone can do that more safely and better than a robot, said Ewell.</p> <p>“It will provide a clearer view, and different angles that you would not get using a robot," he said.</p> <p>The drone, similar to one use by filmmakers, cost the department \$10,000. It can go as high as 400 feet, travel at more than 50 mph and has a battery life of 20 minutes.</p> <p>Civil libertarians have expressed concerns police use of drones threatens personal privacy. They worry drones deployed for one reason could easily be used to look at an entire neighborhood in search of potential law violators.</p>

HEADLINE	01/12 Black separatists renewed sense energy
SOURCE	https://www.splcenter.org/hatewatch/2017/01/12/black-separatist-groups-find-fertile-ground-recruitment-after-election
GIST	<p>The expectation across many black separatist groups is that if the Trump administration continues to alienate minority communities, the more likely members of those communities are to join them.</p> <p>The Nation of Islam (NOI), for example, one of the wealthiest and best-known organizations in black America, is overjoyed by Trump’s election.</p> <p>A week after the election, Louis Farrakhan, who leads NOI, told those gathered for the 2016 State of the Black World Conference, “Mr. Trump plans to put ‘teeth’ behind Make America Great again, and that means pain for Blacks.”</p> <p>Then Farrakhan offered a message to President-elect Trump.</p> <p>“Push it real good. Push it so good that black people say, ‘I’m outta here. I can’t take it no more,’” Farrakhan said.</p> <p>Black Hebrew Israelites are banking on the same result if Trump’s policies continue. Known for their street preaching, these groups believe they are the true descendants of Israel and white people are the devil, fated to become the slaves of “true Israelites” when the world ends. They also preach on anti-LGBT themes.</p> <p>Unsurprisingly, such groups are anticipating that more minorities to turn to their teachings in the next four years and predicting that the Trump will bring about the fall of Babylon, the precursor to judgment day. But the support goes on.</p>

The Israelite Church of God in Jesus Christ (ICGJC), the self-proclaimed sovereign "Nation of Israel," posted a recent recruiting message to social media with the headline: "So... america [sic] don't give a darn about us. trump [sic] is prez. Are yall ready to come home now?? ICGJC."

General Yahanna, whose real name is John Lightborne, leader of the Israelite School of Universal Practical Knowledge called Trump the Devil in a post-election podcast, titled "The Trump Card. But like so many others, Trump was prime fodder for recruitment.

"The time is now to wake up and align yourself with our king," Yahanna said in the announcement. Israel United in Christ (IUIIC) posted a video to Periscope video on November 10 called "LOOK WHAT VOTING GOT US... NOWHERE." The video used Trump's win to reinforce the message that African-Americans are really cannot count on America.

Militant black separatist groups, such as the Black Riders Liberation Party (BRLP), are also recruiting. BRLP was created in jail by juvenile offenders, but rose to public prominence after implementing a police monitoring program entitled, "Watch a Pig."

Today, they are using the election to boost their numbers, posting a picture of themselves in uniforms holding automatic weapons and writing "Y'all Ready? Racist Trump has been 'selected' – Join the militant group with – NO FEAR! – JOIN NOW – to be a new member".

Another militant group, the New Black Panther Party, whose Houston Leader Quanell X publicly endorsed Trump in October 2016, is recommending that African-Americans govern themselves. On the groups Black Power News Cast, published just days after the election, NBPP member Brother Katib told the audience, "We don't live in a country where we you go out in the street and wave a couple picket signs and the cracker gets scared and leaves office."

His recommendation to African-Americans?

"We must let go of America's style of governing, and we must understand that there is only one power, one true power that can free us from this oppression and that power is black power."

A few days later, NBPP published another Black Power News Cast entitled "THE WORST IS HERE," which was a recitation of a chapter in the book "Fall of America" by Elijah Muhammad.

"This is not your house, this the landlords house. The land is our land, it's your land, but we're just renting at the moment. See, it's time for a new house because the worst is here and has come. I say it's time for a revolution. An entire absolute new house, better then the present. I'm talking about a new building. I'm talking about a revolution," the narrator read from the book.

	A splinter group of the New Black Panther Party called the New Black Panther Party for Self Defense told their soldiers to "report for duty" the day after the election. They are currently recruiting new members in at least 7 states, using the slogan "Freedom or Death". The People's Black Panther Party is attempting to recruit in Virginia.

HEADLINE	01/12 Court steps on Wash. oil terminal plan
SOURCE	http://www.thenewstribune.com/latest-news/article126104464.html
GIST	<p>SEATTLE - The Washington Supreme Court threw a major wrench Thursday in plans for a big oil terminal on the coast, saying the proposal must be reviewed under a 1989 state law designed to protect marine life following the Exxon Valdez spill in Alaska.</p> <p>In the latest of a string of victories for tribal and environmental groups challenging fossil fuel projects in the Northwest, the justices unanimously reversed decisions by a state board and the state Court of Appeals, which held the Ocean Resources Management Act did not cover plans by Houston-based Contanda to ship crude out of Grays Harbor.</p> <p>Kristen Boyles, an attorney with the environmental law Earthjustice, which represents groups that challenged the project, called the opinion "vitally important for Washington state coastal protection."</p> <p>"The opinion is clear that extra protective measures apply to these kinds of crude oil projects," Boyles said. "The requirements are such that I don't believe the terminal will be able to go forward. It's dead."</p> <p>Westway Terminal, recently renamed Contanda, wants to expand its existing methanol facility in Hoquiam to receive up to 17.8 million barrels of oil a year, including from the Bakken region of North Dakota and Montana, for shipping to refineries in California and Puget Sound. The plans include the construction of four aboveground storage tanks that would each hold up to 8.4 million gallons, with a trainload of oil arriving every three days.</p> <p>In an emailed statement, Contanda President G.R. "Jerry" Cardillo said the company disagrees with the ruling but will work to make the project happen.</p>

HEADLINE	01/12 Settlement SeaTac minimum wage case
SOURCE	http://mynorthwest.com/510805/8-2-million-settlement-approved-in-seatac-minimum-wage-case/
GIST	SEATTLE (AP) — A federal judge has approved an \$8.2 million court settlement to resolve the claims of thousands of workers who said they were paid less than \$15 per hour after the minimum wage law in SeaTac went into effect.

	<p>The Seattle Times reports Judge Robert Lasnik of the U.S. District Court in Seattle approved the class-action settlement involving Menzies Aviation Wednesday.</p> <p>The plaintiff's lead attorney Duncan Turner says checks to the nearly 2,500 affected workers should be going out by next month.</p> <p>The lawsuits stemmed from an ordinance SeaTac voters approved that required employers of transportation and hospitality workers to pay a minimum wage of \$15 an hour starting Jan. 1, 2014.</p> <p>Alaska Airlines and other plaintiffs had filed a lawsuit saying the ordinance shouldn't apply at the airport — an argument the courts rejected.</p>

HEADLINE	01/12 SPD: arrests not solving heroin crisis
SOURCE	http://mynorthwest.com/509873/why-arrests-wont-help-heroin-crisis/
GIST	<p>It's no secret that Seattle is stuck in the middle of a heroin crisis. That is well known. What Seattle police have come to realize is that arrests are not helping solve the problem.</p> <p>"You got sons and daughters, mothers and fathers being killed by heroin because they become chemically addicted," said Sergeant Sean Whitcomb with the Seattle Police Department.</p> <p>"And the cycle of arrest-and-release does not seem to be working," he told KIRO Radio's Ron and Don. "There are alternatives with law enforcement assisted diversion and drug court ... The approach we have taken is one that is multifaceted.</p> <p>"The destruction and the grief and the misery caused by the heroin epidemic can't be measured and it certainly can't be counted in arrests," Whitcomb said.</p> <p>Such "destruction" and "grief" was apparent last weekend when Seattle police responded to a cluster of heroin overdoses in a small area over one Saturday afternoon.</p> <p>"There was some concern because of the time and proximity of four overdose events," Whitcomb said. "Three were immediately fatal. We learned on Monday that one individual died at the hospital."</p> <p>"What our North Precinct officers saw was this cluster of overdoses — four people within about a square mile," he said. "That leads any reasonable person to conclude that there might be a problem with the heroin being injected. There might be a purity level or some other issue that created a lethal experience."</p>

A problem like fentanyl. It has not been confirmed that fentanyl was involved in any of the recent overdoses, but it is suspected. Fentanyl is a synthetic opioid. It is much stronger than heroin and is sometimes mixed in with batches of the drug.

“The problem with fentanyl for people who are using and for first responders is if you get the wrong amount, you are going to die,” Whitcomb said. “It will shut you down. It is that lethal.”

The recent spike in overdoses caused Seattle police to deploy bike officers to contact known addicts in the area and warn them.

HEADLINE	01/12 Baltimore PD commits to huge changes
SOURCE	http://www.cbsnews.com/news/baltimore-police-commits-to-sweeping-changes-in-deal-with-us/
GIST	<p>BALTIMORE -- The Baltimore police department committed to a sweeping overhaul of its practices Thursday under a court-enforceable agreement with the federal government.</p> <p>The Justice Department agreement, which was approved by the city government and will now be submitted to a judge, mandates changes in the most fundamental aspects of police work. The agreement, known as a consent decree, is the culmination of months of negotiations with the federal government and is meant to correct constitutional violations identified in a scathing report released last year.</p> <p>The filing of the agreement, in the waning days of Attorney General Loretta Lynch’s tenure, is meant as a capstone for an administration that has made civil rights enforcement a key priority and that has pursued similar consent decrees with other large American police forces. Lynch says the consent decree has three main goals: effective and constitutional policing; restoring community trust in law enforcement; and advancing the safety of the public and police officers.</p> <p>“We could not be prouder to partner with the people of Baltimore on this journey towards making their city a community that protects the dignity, rights, and safety of all its people,” Lynch said in a statement.</p> <p>The Justice Department began investigating the Baltimore force following the April 2015 death of Freddie Gray, a young black man who was fatally injured while in the custody of officers. Its report last August found that officers were routinely stopping large numbers of people in poor, black neighborhoods for dubious reasons, and unlawfully arresting residents merely for speaking out in ways police deemed disrespectful.</p> <p>“These were difficult findings to hear – difficult findings to lay out,” Lynch said Thursday. “But no one in this city ever flinched from those findings – no one in this city every backed away, and we were encouraged by the reception that we received.”</p>

The consent decree is meant as a remedy for some of those problems.

It discourages the arrests of citizens for quality of life offenses, requiring a supervisor to sign off on any request to take someone into custody for a minor infraction, and also mandates basic training for making stops and searches.

In addition, it commands officers to use de-escalation techniques to resolve incidents without the use of force where possible, or with “force proportional to the threat,” DOJ Civil Rights Division head Vanita Gupta said Thursday. It requires police to thoroughly investigate sexual assault claims “without gender bias” and send specially trained units to distress calls involving people with mental illness.

The agreement also lays out policies for transporting prisoners, a likely acknowledgment of the death of Gray, who suffered a grievous spinal cord injury in the back of a police van. The consent decree requires officers to ensure that prisoners are protected with seat belts and to check on them periodically to make sure that they’re safe. Transport vans will also require cameras, Democratic Mayor Catherine Pugh said.

The agreement also includes establishing a Community Oversight Task Force to recommend reforms to the city’s current system of civilian oversight. It calls for allegations of police misconduct to be thoroughly investigated and for officers to receive necessary equipment and training, and requires the department to perform a staffing survey to ensure sufficient numbers of officers and supervisors.

Baltimore Police Commissioner Kevin Davis said he believes the agreement will make Baltimore police “better crime fighters” and will promote a more trustful relationship with the community.

“Cops on the street will absolutely benefit from this consent decree,” Davis said.

HEADLINE	01/12 Russia decries ‘threat’ US troops Poland
SOURCE	http://www.cbsnews.com/news/russia-threat-us-troops-tanks-poland-nato-vladimir-putin/
GIST	<p>WARSAW, Poland -- American soldiers rolled into Poland on Thursday, fulfilling a dream Poles have had since the fall of communism in 1989 to have U.S. troops on their soil as a deterrent against Russia.</p> <p>Soldiers in camouflage with tanks and other vehicles crossed into southwestern Poland on Thursday morning from Germany and headed for Zagan, where they will be based. Their arrival will be feted on Saturday in official ceremonies attended by Poland’s prime minister and defense minister.</p> <p>U.S. and other Western nations have carried out exercises on NATO’s eastern flank, but this deployment - which includes around 3,500 U.S. troops - marks the first-ever continuous deployment to the region by a NATO ally. It represents a commitment by President Barack Obama to protect a region that became</p>

	<p>deeply nervous when Russia annexed Crimea from Ukraine in 2014 and then began backing rebels in Ukraine’s east.</p> <p>But despite the celebrations, clouds hung over the historic moment. There are anxieties that the enhanced security could eventually be undermined by the pro-Kremlin views of President-elect Donald Trump.</p> <p>Russia appears provoked by the deployment of American troops on its doorstep.</p> <p>“We perceive it as a threat,” President Vladimir Putin’s spokesman Dmitry Peskov said. “These actions threaten our interests, our security.”</p> <p>“Especially as it concerns a third party building up its military presence near our borders,” Peskov said in a conference call with reporters. “It’s not even a European state.”</p>

HEADLINE	01/12 Majority cops: anti-police bias in protests
SOURCE	http://abcnews.go.com/US/68-percent-cops-protests-police-shootings-show-bias/story?id=44713325
GIST	<p>A new survey indicates that more than two-thirds of police officers believe that protests that typically follow high-profile police shootings are "motivated to a great extent by anti-police bias" -- one of several findings that appear to highlight deep divisions between law enforcement and the citizens they protect.</p> <p>The survey conducted by the National Police Research Platform and published by the Pew Research Center, polled nearly 8,000 police officers from 54 police and sheriff’s departments across the United States.</p> <p>Because of the way the survey was conducted, margins of error varied from question.</p> <p>Some 68 percent of officers say protests after fatal police shootings of black citizens, like the ones that dominated headlines this July following the fatal police shootings of Philando Castile in suburban St. Paul, Minnesota, and Alton Sterling in Baton Rouge, Louisiana, reflect anti-police bias.</p> <p>By contrast, the survey indicates that only 10 percent of the officers believe that protesters were motivated "a great deal" by the desire to hold officers accountable for their actions.</p> <p>Some 86 percent say that high-profile incidents between police and African-Americans have made police work harder, and seven in 10 say they’ve made officers in their department less willing to stop and question “suspicious persons,” the data show.</p>

And, perhaps most notably, while six in 10 Americans see these incidents as signs of broader problems between the police and the black community, according to a separate Pew research study, fewer than a third of police officers agree with their assessment.

The Pew study also highlights apparent racial divisions within the ranks of the police officers themselves. Only about a quarter of white officers, but close to seven-in-ten of their black colleagues, believe that the protests that followed fatal encounters between police and black citizens were sincere attempts to make police more accountable, the survey said.

Furthermore, an overwhelming majority of white officers (92 percent) but less than a third of their black colleagues say that the country has made the changes needed to assure equal rights for black citizens, according to the data.

The survey also has some potentially bad news for advocates of police reform.

More than half of the officers surveyed said that "in some neighborhoods" being aggressive is a more effective approach than demonstrating courtesy and 44 percent agree or strongly agree that "hard, physical tactics" are needed to deal with certain people.

But there are areas of agreement between the police and the public, according to the survey.

Large majorities of both believe anti-police bias is part of why police protests occur. They also appear to agree on the need for body cameras, as well as tracking gun sales federally, and making private gun shows subject to background checks.

HEADLINE	01/12 EPA: Fiat Chrysler emission violation
SOURCE	https://www.yahoo.com/news/exclusive-epa-accuse-fiat-chrysler-excess-diesel-emissions-154301792--finance.html
GIST	<p>(Reuters) - The U.S. Environmental Protection Agency on Thursday accused Fiat Chrysler Automobiles NV of using software that allowed excess diesel emissions in 104,000 U.S. trucks and SUVs sold since 2014, the result of a probe that stemmed from regulators' investigation of rival Volkswagen.</p> <p>The EPA and California Air Resources Board told the automaker it believes its undeclared auxiliary emissions control software allowed vehicles to generate excess pollution in violation of the law.</p> <p>FCA said in a statement on Thursday that it is "disappointed" with the EPA assertions. It also said that its "diesel-powered vehicles meet all applicable regulatory requirements.</p> <p>FCA said will prove to the EPA that its emissions controls are "properly justified and thus are not 'defeat devices' under applicable regulations."</p> <p>Regulators said the company failed to disclose engine management software in 104,000 U.S. 2014-2016 Jeep Grand Cherokees and Dodge Ram 1500 trucks with 3.0-liter diesel engines. The undisclosed software results in increased emissions of nitrogen oxides (NOx) from the vehicles. EPA is still investigating if the software constitutes a "defeat device."</p> <p>"Failing to disclose software that affects emissions in a vehicle's engine is a serious violation of the law, which can result in harmful pollution in the air we breathe," said Cynthia Giles, an EPA official, in a statement.</p>

	California Air Resource Board chair Mary Nichols said, "Once again, a major automaker made the business decision to skirt the rules and got caught."

HEADLINE	01/11 Bellevue pays family \$1M for police crash
SOURCE	http://www.bellevuereporter.com/news/city-of-bellevue-pays-1m-to-family-injured-in-2014-police-cruiser-crash/
GIST	<p>The city of Bellevue agreed to pay approximately \$1 million late last month to a family of five who were struck and injured in a crash involving two police cars in 2014, an accident that permanently impaired one child's sight.</p> <p>Lawyers for the city finalized a settlement agreement in the case on Dec. 29. The parents' settlement records were sealed, but one unrestricted court document revealed that the children — a then-12-year-old boy identified as "K.K." in court documents and two girls aged 7 and 3 — will receive close to \$1 million.</p> <p>The sum is the largest personal-injury settlement the city has paid in over a decade.</p> <p>"We are empathetic to how this multi-injury accident involving police vehicles affected the Kobayashi family. Through this settlement, the city along with the Kobayashi family now have resolution to an incident that happened nearly two-and-a-half years ago without having to endure a lengthy trial with uncertain results," the city's Chief Communications Officer Lenka Wright said in a statement.</p>

HEADLINE	01/12 Officials: 40% of California out of drought
SOURCE	http://abcnews.go.com/US/wireStory/officials-40-percent-california-drought-44732018
GIST	<p>More than 40 percent of California has emerged from a punishing drought that covered the whole state a year ago, federal drought-watchers said Thursday, a stunning transformation caused by an unrelenting series of storms in the North that filled lakes, overflowed rivers and buried mountains in snow.</p> <p>The weekly drought report by government and academic water experts showed 42 percent of the state free from drought. This time last year, 97 percent of the state was in drought.</p> <p>Southern California, also receiving welcome rain from the storms, remains in drought but has experienced a dramatic reduction in the severity. Just 2 percent of the state, a swath between Los Angeles and Santa Barbara, remains in the sharpest category of drought that includes drying wells, reservoirs and streams and widespread crop losses. Forty-three percent of the state was in that direst category this time a year ago.</p> <p>California will remain in a drought emergency until Gov. Jerry Brown lifts or eases the declaration he issued in January 2014, while standing in a bare Sierra Nevada meadow that one of the state's driest stretches on record had robbed of all snow.</p> <p>State officials said this week that Brown will likely wait until the end of California's winter snow and rain season to make a decision on revising the drought declaration.</p> <p>For Northern California, at least, the onslaught of storms that brought the Sierras their heaviest snow in six years and forced voluntary evacuations of thousands of people as rivers surged will likely make it a much clearer call for the governor, water experts said.</p> <p>The past week's storms were enough to double the snowpack in parts of the Sierras, runoff from which provides Californians with much of their year-round water supply. Stations up and down the mountain chain were reporting twice the amount of normal rain and snow for this time of year.</p>

	The state's reservoirs were brimming above average for the first time in six years.

HEADLINE	01/12 Health system feeling impact flu epidemic
SOURCE	http://komonews.com/news/local/emergency-rooms-across-state-inundated-with-flu-patients
GIST	<p>SEATTLE, WA -- Our health system is feeling the impact of the flu epidemic. Health officials say 24 people have died across the state, hospitalizations are up and emergency rooms are at capacity.</p> <p>“The flu can make people really sick, and over the past few weeks there has been a dramatic rise in influenza activity across the state,” said Dr. Kathy Lofy, health officer for Washington State Department of Health. “Most healthy people who get the flu don’t need medical care, however people who are in a high risk group, or are very sick or worried about their illness, should contact their health care provider.”</p> <p>Katie Ryan Strimban is struggling to get well. Thursday afternoon she paid her third visit to UW Medicine Ballard since November. This time she’s concerned a nasty sinus infection is turning into the flu. And that’s why Katie is visiting her primary care physician.</p> <p>But others, according to the Washington State Department of Health, are seeking care at their local emergency rooms and putting a strain on resources meant for extremely ill patients.</p> <p>“I think having a primary care doctor is important for all of us to have,” said Dr. Laura Montour who is a physician at UW Medicine Ballard. “We can be a first line to keep people out of the emergency rooms.”</p> <p>Our state has seen a dramatic rise in flu case in last three weeks. Dr. John Scott who is the Medical Director for Telehealth Services at UW Medicine says most influenza does not require a visit to the emergency department.</p> <p>Dr. Scott recommends the UW Medicine’s Virtual Clinic.</p> <p>With a smartphone you can receive care from doctor via Facetime or video conferencing.</p> <p>Dr. Scott says lots of viruses can feel like the flu and the virtual clinic is an easy way to see the doctor without putting a stain on emergency resources.</p>

HEADLINE	01/12 WSP to honor K9s killed in line of duty
SOURCE	http://www.king5.com/news/local/wsp-creates-memorial-for-k9s-killed-in-line-of-duty/385611441
GIST	The Washington State Patrol is creating a memorial to honor K9’s killed in the line of duty.

	<p>WSP experienced its first line of duty K9 death in April 2016 when K9 Patrick was killed.</p> <p>Many people reached out to K9 Patrick’s partner, Trooper Mike Allan, asking how they could help. After many months of planning and coordination with WSP’s K9 handlers, a permanent K9 memorial will be dedicated near the WSP Fallen Officer Memorial in Shelton, Washington.</p> <p>The granite stone will be permanently etched with K9 Patrick’s name and end of watch date. The memorial will serve a tribute to the service and sacrifice of WSP K9s lost in the line of duty.</p> <p>If you are interested in donating to the WSP K9 Memorial, you can do so through the WSP Memorial Foundation. Donations can be made on the WSPMF website or checks can be mailed to WSPMF, PO Box 7544, Olympia, WA 98507. Please note “K9 Memorial” on your donation.</p>

HEADLINE	01/12 Reduced role homeless camp monitors
SOURCE	http://www.seattletimes.com/seattle-news/northwest/lessened-role-of-homeless-camp-cleanup-monitors-is-questioned-by-human-rights-group/
GIST	<p>The Seattle Human Rights Commission is questioning the diminished role of civil-rights monitors in the oversight of the city’s cleanups of unauthorized homeless camps.</p> <p>The monitors in their new roles, in which they are not on the ground for each sweep, may be too far removed to protect the rights of camp residents, commission co-chair Jeremy Wood said.</p> <p>“We remain concerned that they (monitors) have been placed at such a remove that they will not be able to maintain the same level of independent scrutiny,” he said.</p> <p>Representatives from the city’s Office of Civil Rights have been monitoring the cleanups since August, when Murray announced the temporary program and acknowledged flaws in the city’s approach to cleaning up the camps.</p> <p>A Seattle Times report in August found the cleanup process was hindered by a variety of bureaucratic failures, including missed start times and camper complaints of lost belongings and personal keepsakes. Even as administrators began planning additional improvements, the city’s struggles to carry out the cleanups humanely and at scheduled times continued, according to handwritten notes reviewed by The Times.</p> <p>City officials announced last month that the Department of Finance and Administrative Services, which also coordinates the city’s camp-cleanup efforts, would assume all day-to-day monitoring duties.</p>

A department field coordinator will be present at every cleanup, Director Chris Potter told council members at a Dec. 14 council meeting. That person will have the authority to halt removals not being carried out in accordance with the city's protocols, he said.

The Seattle Human Rights Commission later sent Mayor Ed Murray a letter raising concerns about the shift.

In response, Murray told the group that while the monitors will no longer go to each cleanup, the office will maintain "high-level" oversight, conducting spot checks, reviewing cleanup reports and periodically conducting interviews with camp residents, according to a Jan. 4 letter from the mayor's office. The department will also issue a semi-annual report detailing its findings and recommendations, the letter states.

The Finance and Administrative Services department has been "robust and responsible" in its management of the city's encampment-cleanup efforts, Murray said in his letter.

City Councilmember Lisa Herbold, who expressed concern over the initial move ending the role of the Office of Civil Rights, said she is "thankful" that it will now maintain some oversight of the cleanups.

HEADLINE	01/12 Protestors aim to disrupt inauguration
SOURCE	https://www.yahoo.com/news/protests-aim-disrupt-trump-inauguration-organizers-213134012.html
GIST	<p>WASHINGTON (Reuters) - Thousands of demonstrators are expected to turn out in Washington next week for protests aiming to "shut down" the inauguration of Donald Trump as the next U.S. president, organizers said on Thursday.</p> <p>Protesters will attempt to close down 12 security checkpoints at the U.S. Capitol, where Trump will take the oath of office on Jan. 20, and along the 2.5-mile (4-km) parade route down Pennsylvania Avenue, according to leaders of a group called DisruptJ20.</p> <p>"We want to shut down the inauguration," organizer David Thurston told a news conference. "We want to see a seething rebellion develop in this city and across the country."</p> <p>DisruptJ20, which is working with Black Lives Matter and other protest groups, said it also planned predawn blockades and disruptive demonstrations during inaugural balls in the evening.</p> <p>Some 300 DisruptJ20 volunteers will work to mobilize demonstrators for a series of protests the group has dubbed the "Festival of Resistance."</p>

	<p>"We are not in favor of a peaceful transition of power, and we need to stop it," organizer Legba Carrefour said.</p> <p>The group has three protest permits and "promises other surprises," said spokeswoman Samantha Miller. All told, 27 protest groups have been granted permits, more than four times the average number for past inaugurations, according to the National Park Service.</p> <p>The Women's March, on the day after the inauguration, is expected to attract 200,000 people, said the park service, which issues permits.</p>

HEADLINE	01/12 Officials: FBI director briefed Trump
SOURCE	http://www.cnn.com/2017/01/12/politics/joe-biden-donald-trump-intelligence-report/index.html
GIST	<p>(CNN) Vice President Joe Biden confirmed Thursday that he and President Barack Obama were briefed last week by intelligence officials on unsubstantiated claims that Russia may have compromising information on President-elect Donald Trump.</p> <p>CNN first reported that the nation's top intelligence chiefs provided both the President and President-elect a two-page written synopsis of the claims, which came from a 35-page report compiled by a former British intelligence operative based on Russian sources. Intelligence agencies appended a two-page summary of the unverified allegations to documents prepared for the briefing on Russian meddling in the 2016 US presidential election.</p> <p>Biden's office confirmed that the vice president said he and Obama were briefed about the claims but said that neither Biden nor Obama asked for more information about them. Biden's office also said the vice president told reporters that intelligence leaders felt obligated to tell Obama because they were planning on informing Trump. Biden also said he read the entire 35-page report.</p> <p>Biden's office also confirmed that Obama, according to the vice president, asked, "What does this have to do with anything?"</p> <p>The comments by Biden are the first by any top government official confirming that they were told about the allegations as part of their intelligence briefing.</p> <p>Multiple US officials briefed on the matter told CNN on Thursday that FBI Director James Comey and Trump had a brief one-on-one conversation at last Friday's intelligence briefing.</p> <p>It's during that pull aside that Comey briefed the President-elect on the two-page synopsis of the claims about Trump and Russia. All four intelligence chiefs had decided that Comey would be the one who would handle the sensitive discussion with the President-elect.</p>

	The discussion was described by the sources as cordial.

HEADLINE	01/12 Pot: good, bad, unknown health effects
SOURCE	http://www.cbsnews.com/news/marijuanas-health-effects-good-bad-unknown/
GIST	<p>NEW YORK -- It can almost certainly ease chronic pain and might help some people sleep, but it's also likely to raise the risk of getting schizophrenia and might trigger heart attacks.</p> <p>Those are among the conclusions about marijuana reached by a federal advisory panel in a report released Thursday.</p> <p>The current lack of scientific information "poses a public health risk," said the report, released by the National Academies of Sciences, Engineering and Medicine. Patients, health care professionals and policy makers need more evidence to make sound decisions, it said.</p> <p>It was hard for the researchers to make definitive conclusions, said CBS News' Chief Medical Correspondent Dr. Jon LaPook, because a lot of the literature is based off of self-reporting -- and there was no standardization. For example, there are over 100 different cannabinoid chemicals in cannabis, and many different forms of using it.</p> <p>A federal focus on paying for studies of potential harms has also impeded research into possible health benefits, the report said. The range of marijuana products available for study has also been restricted, although the government is expanding the number of approved suppliers.</p> <p>The report lists nearly 100 conclusions about marijuana and its similarly acting chemical cousins, drawing on studies published since 1999.</p> <p>It found strong evidence, for example, that marijuana can treat chronic pain in adults and that similar compounds ease nausea from chemotherapy, with varying degrees of evidence for treating muscle stiffness and spasms in multiple sclerosis.</p> <p>Limited evidence says marijuana or the other compounds can boost appetite in people with HIV or AIDS, and ease symptoms of post-traumatic stress disorder, the report concluded. But it said there's not enough research to say whether they're effective for treating cancers, irritable bowel syndrome, epilepsy, or certain symptoms of Parkinson's disease, or helping people beat addictions.</p> <p>There may be more evidence soon: a study in Colorado is investigating the use of marijuana to treat PTSD. Turning to potential harms, the committee concluded:</p>

- Strong evidence links marijuana use to the risk of developing schizophrenia and other causes of psychosis, with the highest risk among the most frequent users.
- Some evidence suggests a small increased risk for developing depressive disorders, but there's no evidence either way on whether it affects the course or symptoms of such disorders, or the risk of developing post-traumatic stress disorder.
- There's strong evidence that using marijuana increases the risk of a traffic accident, but no clear indication that it promotes workplace accidents or injuries, or death from a marijuana overdose.
- There's only weak evidence for the idea that it hurts school achievement, raises unemployment rates or harms social functioning.
- For pregnant women who smoke pot, there's strong evidence of reduced birthweight but only weak evidence of any effect on pregnancy complications for the mother, or an infant's need for admission to intensive care. There's not enough evidence to show whether it affects the child later, like sudden infant death syndrome or substance use.
- Some evidence suggests there's no link to lung cancer in marijuana smokers. But there's no evidence, or insufficient evidence, to support or rebut any link to developing cancers of the prostate, cervix, bladder, or esophagus.
- Substantial evidence links pot smoking to worse respiratory symptoms and more frequent episodes of chronic bronchitis.
- There's weak evidence that suggests smoking marijuana can trigger a heart attack, especially for people at high risk of heart disease. But there's no evidence either way on whether chronic use affects a person's risk of a heart attack.
- Some evidence suggests a link between using marijuana and developing a dependence on or abuse of other substances, including alcohol, tobacco and illicit drugs.

HEADLINE	01/13 Toyota adds more vehicles to US recall
SOURCE	http://www.cbsnews.com/news/toyota-adds-543000-vehicles-to-takata-air-bag-recalls-in-us/
GIST	TOKYO -- Toyota Motor Corp. says it is recalling another 543,000 vehicles in the U.S. for defective front passenger air bag inflators made by Japan's Takata Corp. Takata is at the center of a massive recall of inflators that can explode in a crash, spewing metal shrapnel inside vehicles.

	<p>Toyota said Friday that the recall includes various models of sedans and SUVs made between 2006-2012. Among those recalled are the 2008-2009 Scion xB; 2009 and 2012 Corolla and Corolla Matrix, 2007-2009 and 2012 Toyota Yaris, 2012 4Runner and Sienna and various versions of Lexus made between 2006-2012.</p> <p>More than 100 million vehicles involving 17 automakers have been recalled worldwide, including 69 million in the U.S. alone, underscoring the scale of the crisis. Because of the scope of the recalls, the replacements are going to take years</p>

HEADLINE	01/12 Robot nannies look after China's chickens
SOURCE	https://www.bloomberg.com/news/articles/2017-01-12/china-tries-nanny-robots-to-keep-chickens-healthy
GIST	<p>In a nation where food safety is so elusive that even some chicken eggs have been found to be fake, China's consumers have good reason to be skeptical about their groceries. That's forced many food processors to look for novel ways to highlight the wholesomeness of their products. But few have gone to such extremes as poultry powerhouse Charoen Pokphand Group, which is deploying a flock of robots to convince customers its birds are healthy.</p>

About 3 million laying hens raised near Beijing by the Bangkok-based conglomerate get daily checkups from machines dubbed “nanny robots.” The sensor-filled humanoids, perched atop a base with wheels, roll through a massive complex of windowless coops for 12 hours a day, monitoring the fowls’ temperatures and movements. Human colleagues pluck feverish or immobile birds from their cages to protect the rest of the brood and keep sick birds and their eggs from reaching kitchen tables.

CP Group, China’s third-largest poultry producer, is using the 18 automatons to curtail outbreaks of bird flu and food-borne illnesses that plague a mainland industry expected to reach \$138.2 billion in revenue within five years. “Food safety is a major problem in China,” says Xie Yi, a senior vice chairman of CP Group’s China agribusiness unit. “We want to control the whole chain from the farm to the table. Problems sometimes involve human error, so full automation enhances the safety level.”

China is the world’s largest producer of eggs and the second-biggest grower of chickens after the U.S., according to market researcher IBISWorld. The nation’s poultry industry—including chickens, ducks, geese, ostriches, and quail—generated an estimated \$100.7 billion in revenue last year.

The business is highly fragmented, with the five biggest companies accounting for only 9.7 percent of market share, according to IBISWorld. CP Group ranks behind Guangdong Wen’s Foodstuff Group and New Hope Liuhe. Most of the industry consists of hundreds of thousands of family-owned farms, including many selling eggs and slaughtered-while-you-wait meat at roadside markets.

The government’s inability to monitor all those suppliers allows leaks to spring in the food safety pipeline, primarily through poor sanitation, lack of refrigeration, or overuse of antibiotics in animal feed. Bird flu is rampant, with at least two outbreaks at chicken farms reported by China’s agriculture ministry in December 2016 alone.

In the World Health Organization region that includes China, 125 million people get sick and 50,000 die annually from food-borne illness. The Chinese food industry also is rife with scandal, from melamine-laced concoctions sold as milk that killed six people in 2008 to the fake beer and potentially radiation-tainted seafood discovered in 2016.

Fake eggs have plagued Chinese consumers since at least 2005, when the state-run Xinhua News Agency said they were discovered being sold at a street market in Guangzhou. The shells were made of calcium carbonate, while the egg white and yolk were a mixture of sodium alginate, gelatin, and tartrazine.

The threats posed by disease and counterfeiting prompted CP Group to deal with its own chicken-and-egg problems. The nanny robots patrol warehouses at its egg farm in Pinggu, about 50 miles northeast of Beijing, where 2.4 million eggs are produced daily. The gray machines, as tall as three tiers of chicken coops, roll down 417-foot-long rows of cages and conveyor belts. Sensors in their heads, midsections, and

	<p>knees record the birds' temperatures—just like the human health-checking sensor stations now common in Asian airport concourses—and snap six photos a second to identify lack of movement.</p> <p>Workers in a control room step out to grab chickens that have a temperature varying from the normal 41C (106F) or aren't moving. Some of those fowl wind up next door, feeding pools of crocodiles being raised for their skin by CP Group. That's about the extent of human contact for the birds. The robots take six hours to cover one floor of the coop, then recharge for an hour and do it again.</p> <p>"Attending the flocks with robots isn't typical, either in China or the U.S.," says Hongwei Xin, director of the Egg Industry Center at Iowa State University in Ames. But "it could very well become a trendy and valuable tool."</p>

HEADLINE	01/12 Private spies thrust into the limelight
SOURCE	https://www.bloomberg.com/news/articles/2017-01-13/for-spies-inc-1-200-an-hour-buys-dirt-on-the-likes-of-trump
GIST	<p>"Survival," George Smiley said, "is an infinite capacity for suspicion."</p> <p>Only these days, suspicion has become a business in ways Smiley, John le Carre's spymaster extraordinaire, might have never imagined.</p> <p>Long before the world learned this week of memos claiming Russia had compromising material on Donald Trump -- memos believed to have been prepared by a former British intelligence officer -- the business politely known as corporate intelligence had exploded into a multibillion-dollar industry.</p> <p>Today private CIAs and MI6s are deeply entwined in business and politics, but their services don't come cheap. The going rate can run as high as \$1,200 an hour, on par with that of a white-shoe Wall Street lawyer.</p> <p>Worldwide, private spooks, sleuths and assorted security experts are expected to rake in \$19.4 billion in revenue this year, according to the research firm Gartner. That doesn't include intelligence operations inside major corporations like Exxon Mobil Corp., whose chief executive, Rex Tillerson, is Trump's pick for secretary of state.</p> <p>Since Jules Kroll pioneered the modern U.S. corporate intelligence industry in the 1970s, the business has gone global and, predictably, high tech.</p> <p>"It's a totally different landscape today, having gone from the early days of men in fedora hats under lampposts to quite a sophisticated marketplace," said Patrick Grayson, the chief executive officer of corporate intelligence firm GPW Ltd. in London, who opened a London office for Kroll in 1986.</p>

Competition has gotten tougher, too, he said.

Orbis Business Intelligence, the private intelligence firm believed to be at the center of the Trump memos, has suddenly thrust this hush-hush industry into the headlines. Christopher Steele, a former MI6 officer who co-founded the London firm, has been widely named as the author of the memos, which contain unsubstantiated allegations about Trump's personal life and business activities.

When England's Football Association was preparing to bid for the 2018 soccer World Cup, for example, it turned to Steele's Orbis Business Intelligence to find out what rival bidders were up to.

In London, a center of the global private intelligence community, industry figures, including several close to Orbis, were stunned by Steele's -- and their industry's -- sudden notoriety. Telephone calls to Orbis's offices weren't answered; Steele couldn't be reached.

Steele is a respected Russia expert, fluent in the language. He worked for MI6 in the 1990s and 2000s in Moscow and London, according to a person who worked with him there.

He set up Orbis in 2009, with Chris Burrows, a former British Foreign Office official. Their stated aim: to provide clients with "strategic insight, intelligence and investigative services."

Staffed by four analysts and two directors, Orbis is a relatively small player in London and vies with bigger competitors such as Control Risks Group, Hakluyt, Kroll's K2 Intelligence and GPW.

Yet back in 2010, Steele's small firm was hired by the Football Association to learn what rivals such as Russia at FIFA were doing to secure votes and to sweep hotel meeting rooms for bugging devices, Bloomberg News reported in 2011. Using intelligence agents was a common practice among the various bidders. Following a controversial process during which allegations of wrongdoing were made against several members of FIFA's board, Russia was named host, with England's bid eliminated after the first round of voting. A month after the vote, then-Prime Minister David Cameron, described the vote as "murky."

Corporate intelligence isn't cheap, with many in the industry charging anywhere between 600 and 1,000 pounds an hour, according to Grayson. The work includes everything from tracing assets to investigating fraud to handling whistle-blower cases. In the political sphere, the work can also include opposition research, or "oppo," aimed at digging up dirt on rivals.

HEADLINE	01/13 Corruption at US border agency
SOURCE	http://abcnews.go.com/International/wireStory/corruption-us-border-agency-led-lie-detectors-44752659
GIST	<p>When James Tomsheck joined U.S. Customs and Border Protection in 2006 as chief of internal affairs, the nation's largest law enforcement agency was on an unprecedented hiring spree.</p> <p>The Border Patrol, a part of CBP, held job fairs across the country, aired recruitment ads during Dallas Cowboys games and sponsored a NASCAR race car and bull-riding contests. The agency ballooned by nearly 8,000 agents in three years to more than 20,000 in 2009.</p>

But breakneck growth brought unintended consequences that serve as a cautionary tale to President-elect Donald Trump and others who want more agents.

The number of employees arrested for misconduct, such as civil rights violations or off-duty crimes like domestic violence, grew each year between 2007 and 2012, reaching 336, a 44 percent increase. Additionally, more than 100 employees were arrested or charged with corruption during the six-year span, including taking bribes to smuggle drugs or people.

"I came to clearly understand in 2008 that the hiring initiative had gone awry and there were significant problems," Tomsheck said.

Tomsheck helped introduce lie detectors in Secret Service hiring in the 1980s and forcefully argued for the same at CBP. President Barack Obama signed legislation to make polygraphs a CBP hiring requirement, and Tomsheck put the practice in place for all hires in 2012.

But now, CBP's high failure rate among applicants taking lie detectors has left the agency unable to fill jobs, and some members of Congress and union officials believe qualified people are being unfairly subjected to marathon and often-hostile interrogations.

However, a panel of law enforcement experts appointed by Homeland Security Secretary Jeh Johnson to review CBP last year called the polygraph "an important integrity tool" in hiring and recommended employees be periodically tested, as the FBI does. It called corruption "the Achilles' heel of border agencies."

CBP Commissioner Gil Kerlikowske, who leaves office Jan. 20, has a warning for his successors: Be careful in hiring.

HEADLINE	01/12 Multiple protests Trump inauguration
SOURCE	http://www.kiro7.com/news/local/what-to-know-multiple-days-protests-in-seattle-around-inauguration-day/483868261
GIST	<p>With Trump's inauguration just days away, people in Seattle and Olympia plan to continue their opposition with a series of anti-Trump protests and events.</p> <p>KIRO 7 News aggregated those events so you can either attend them or avoid traffic from them.</p> <p>Jan. 14: The Resist Trump Coalition, led by Seattle Councilmember Kshama Sawant, is holding a town hall meeting to build up one of the upcoming Trump protests on Jan. 20.</p>

About the event: The Facebook event for the town hall states: “We don’t have a moment to waste in getting organized against Trump’s racist, misogynistic, anti-immigrant, anti-muslim, anti-lgbtq rhetoric, proposals, and cabinet members.”

Time: 12 p.m.

Place: Seattle City Hall

Jan. 15: Congresswoman Pramila Jayapal will host a rally to protect health care at the Westlake Park.

About the event: A news release from Jayapal states, “This event is part of a national day of action to protect health care from President-elect Donald Trump and Congressional Republicans who have called to repeal the Affordable Care Act, privatize Medicare, make massive cuts to Medicaid, increase prescription drug prices and defund Planned Parenthood.”

Time: 12 p.m. to 1 p.m.

Place: Westlake Park

Jan 15: Nearly 700 people have marked they are interested in a Facebook event called “Olympia! Our first stand: Save health care.”

About the event: Event organizers wrote that they are holding the rally because "it's important to bring the American people together to fight" the proposal.

Time: 12 p.m.

Place: North steps of the legislative building

Jan. 20: On Inauguration Day, a “Resist Trump: Occupy Inauguration – Seattle!” protest is planned for downtown Seattle at Westlake Park.

About the event: It is organized by Sawant’s political party the Socialist Alternative as well as Socialist Students of Seattle. The Facebook event indicates that more than 11,000 people are interested in participating in the demonstration, with 3,900 people confirmed as attending, and another 9,300 people have been invited to the protest. The event specifically cites opposition to building a border wall, stopping the Dakota Access Pipeline, ending rape culture, and supporting Black Lives Matter.

Time: 5 to 8 p.m.

Place: Starts at Westlake Park, protest likely to march in downtown streets. When KIRO 7 News receives specific route information, we will add it here.

Jan. 21: The day after the inauguration, the “Women’s March on Seattle” plans to walk in downtown Seattle.

About the event: The women’s march is organized by four private citizens. As of Tuesday morning, the event has 29,000 people signed on for the Seattle march, with 41,000 more people interested in attending.

	<p>The Seattle women's march is meant to coincide with the larger, national march on Washington DC that same day.</p> <p>Time: 10 a.m. to 4 p.m.</p> <p>Place: Start Location is Judkins Park. The group will march for 3.6 miles until the Seattle Center.</p> <p>Jan. 21: "Women's March on Olympia-Tacoma" and "Women's March on Bellingham" will also coincide with "Women's March on Seattle." Read about the Olympia event here and read about the Bellingham event here.</p>

HEADLINE	01/12 Cuba special refugee policy scrapped
SOURCE	http://www.foxnews.com/politics/2017/01/12/obama-announces-end-to-wet-foot-dry-foot-policy-for-cuban-refugees.html
GIST	<p>President Barack Obama announced Thursday that he was ending a longstanding immigration policy that allowed any Cuban who made it to U.S. soil to stay and become a legal resident.</p> <p>In a statement, Obama said the so-called "wet foot, dry foot" policy was "designed for a different era" of U.S.-Cuba relations.</p> <p>Under the new policy, which takes effect immediately, Cubans who attempt to enter the U.S. illegally without qualifying for humanitarian relief will be sent back to the island.</p> <p>"By taking this step," Obama said, "we are treating Cuban migrants the same way we treat migrants from other countries."</p> <p>Obama added that the Havana government had agreed to accept Cubans ordered to leave the U.S., a concession that was a focus of months of negotiations. A senior administration official told the Associated Press the Cubans gave no assurances about treatment of those sent back to the country, but said political asylum remains an option for those concerned about persecution if they return.</p> <p>Homeland Security Secretary Jeh Johnson said the move "goes a long way to putting our relationship with Cuba on equal terms with our relationships with other neighbors."</p>

HEADLINE	01/12 Govt. to pay \$2B to military for toxic water
SOURCE	http://abcnews.go.com/Politics/wireStory/us-agrees-pay-billions-marines-affected-toxic-water-44743897
GIST	<p>The Obama administration has agreed to provide disability benefits totaling more than \$2 billion to veterans who had been exposed to contaminated drinking water while assigned to Camp Lejeune in North Carolina.</p>

Return to Top	<p>The decision was quietly made public Thursday with a notice in the Federal Register, the government's official journal.</p> <p>Beginning in March, the cash payouts from the Department of Veterans Affairs may supplement VA health care already being provided to eligible veterans stationed at the Marine base for at least 30 days cumulative between Aug. 1, 1953, and Dec. 31, 1987. Veterans will have to submit evidence of their diagnosis and service information.</p> <p>Outgoing VA Secretary Bob McDonald determined that there was "sufficient scientific and medical evidence" to establish a connection between exposure to the contaminated water and eight medical conditions for purposes of awarding disability compensation.</p> <p>The estimated taxpayer cost is \$2.2 billion over a five-year period. The VA estimates that as many as 900,000 service members were potentially exposed to the tainted water.</p>

HEADLINE	01/12 Crippling ice, rainfall to central US
SOURCE	http://abcnews.go.com/US/wireStory/winter-storm-bring-crippling-ice-rainfall-central-us-44739073?cid=clicksource_4380645_1_hero_headlines_headlines_hed
GIST	<p>A winter storm that brought heavy snow and rainfall to northern California was bearing down on the southern Plains on Thursday, and forecasters said crippling ice accumulations and heavy rain could cause widespread power outages and flooding this weekend.</p> <p>The National Weather Service issued an ice storm warning for northwestern Oklahoma beginning Friday morning as well as a winter storm watch for much of the rest of Oklahoma, Kansas and Missouri along with parts of Illinois and Texas. Forecasters said the potential for a significant ice storm is increasing and the region could see up to 1 inch of ice. Storms are also expected Saturday and Sunday.</p> <p>"We could see some fairly significant ice accumulations," said Kevin Brown, a meteorologist with the National Weather Service in Norman, Oklahoma. "Enough ice accumulations to cause a lot of problems with trees and power lines and power interruptions."</p> <p>In northeastern Oklahoma, where the forecast calls for up to an inch of accumulated ice, residents Thursday were snatching up flashlights, batteries and alternative energy sources in anticipation of power disruptions.</p> <p>In Kansas, up to 1 inch of ice was expected to fall in "multiple rounds" of freezing rain between Friday and early Monday in parts of the state, including Wichita, Kansas' largest city. The weather service said the potential impact will be power outages, slick roads and accidents.</p>

	<p>In Missouri, forecasters were calling for up to three-quarters of an inch of freezing rain over the weekend, potentially more in the southwestern part of the state.</p> <p>Concern about the storm prompted Missouri Gov. Eric Greitens to activate the state Emergency Operations Center.</p> <p>"Everyone should be aware that this potential weather event could disrupt travel and cause power outages across the state," Greitens said in a statement.</p>

HEADLINE	01/12 NSA 'intel-sharing' powers expanded
SOURCE	https://www.nytimes.com/2017/01/12/us/politics/nsa-gets-more-latitude-to-share-intercepted-communications.html?_r=0
GIST	<p>WASHINGTON — In its final days, the Obama administration has expanded the power of the National Security Agency to share globally intercepted personal communications with the government's 16 other intelligence agencies before applying privacy protections.</p> <p>The new rules significantly relax longstanding limits on what the N.S.A. may do with the information gathered by its most powerful surveillance operations, which are largely unregulated by American wiretapping laws. These include collecting satellite transmissions, phone calls and emails that cross network switches abroad, and messages between people abroad that cross domestic network switches.</p> <p>The change means that far more officials will be searching through raw data. Essentially, the government is reducing the risk that the N.S.A. will fail to recognize that a piece of information would be valuable to another agency, but increasing the risk that officials will see private information about innocent people.</p> <p>Attorney General Loretta E. Lynch signed the new rules, permitting the N.S.A. to disseminate "raw signals intelligence information," on Jan. 3, after the director of national intelligence, James R. Clapper Jr., signed them on Dec. 15, according to a 23-page, largely declassified copy of the procedures.</p>

HEADLINE	01/12 Cybercrime eyes healthcare vulnerabilities
SOURCE	http://health-system-management.advanceweb.com/healthcare-industry-vulnerabilities-give-rise-to-cyber-crime/

GIST	<p>In November, at least 35 healthcare facilities in the U.S., U.K. and Canada were targeted by cybercriminals executing Business Email Compromise (BEC) campaigns. The organizations, which included hospitals, specialty care providers, walk-in clinics and pharmaceutical companies, were defrauded by attackers who impersonated executives within the organizations.</p> <p>Cybercriminals are drawn to and attack the healthcare industry for many reasons, but primarily because they allocate a bulk of their resources to patient care and innovation, which often leaves information security underfunded. However, by becoming educated about BEC scams and the tools available to mitigate this threat, healthcare organizations can drastically reduce email fraud and associated financial losses.</p>

HEADLINE	01/12 How Russia hacks: tactics, techniques
SOURCE	http://www.ibtimes.co.uk/how-russia-hacks-fireeye-analysis-exposes-main-tactics-used-by-fancy-bear-1600768
GIST	<p>Last December the US Intelligence Community (IC) released a report naming APT28, a suspected Russian hacking group, as being linked to numerous cyberattacks designed to influence the outcome of the 2016 presidential election with a mixture of leaks and misinformation.</p> <p>Highlighting Russian "malicious cyber activity" the IC's analysis reported on this "advanced persistent threat" by confirming it was likely linked to the county's military or intelligence services. The hackers go by many names: Fancy Bear, Pawn Storm, Sofacy, Sednit, Tsar Team and more.</p> <p>The group – after targeting the Democratic National Committee (DNC), the World Anti-Doping Agency (Wada) and the German government – is the focus of a new report from US-based cybersecurity firm FireEye, discussing the key hacking techniques it uses.</p> <p>"We have observed APT28 rely on four key tactics when attempting to compromise intended targets," the report states. These include the use of spearphishing to deploy exploit kits, the spreading of malware, compromising web-facing servers and creating fake internet addresses.</p> <p>Some of the tactics are straightforward, but work. In one hypothetical case, a hacker would craft an exploit document with "enticing lure content" and send it to a carefully chosen victim. Once the document is opened, malware is automatically installed by exploiting a vulnerability in computer software.</p> <p>According to FireEye, APT28 has exploited a number of known security flaws in the past including previously undiscovered "zero day" vulnerabilities in Adobe Flash Player, Java, and Windows.</p>

In a more sophisticated fashion, the hackers register website domains that closely resemble legitimate URLs - such as Office365.com (numeral zero instead of the alphabet 'O'). The hackers then contact targets saying they need to reset passwords, lead the victim to a malicious login page and hijack passwords.

"APT28 employs a suite of malware with features indicative of the group's plans for continued operations, as well as the group's access to resources and skilled developers," the report states.

"[The group] continues to evolve its toolkit [...] in what is almost certainly an effort to protect its operational effectiveness in the face of heightened public exposure and scrutiny."

After information is stolen, FireEye explains, the hacking group will often leak it to "further political narratives". These reportedly include the conflict in Syria, Nato, the European Union refugee crisis and the 2016 Olympics and Paralympics athlete doping scandal.

In agreement with the US government, the security firm believes the hacking group conducts its operations "in support of Russian strategic interests" and is made up of a "sophisticated and prolific set of developers and operators". This is denied by Russian president, Vladimir Putin.

"The recent activity in the US is but one of many instances of Russian government influence operations conducted in support of strategic political objectives, and it will not be the last," the report states. "As the 2017 elections in Europe approach - most notably in Germany, France, and the Netherlands – we are already seeing the makings of similarly concerted efforts."

The research paper adds another layer to the already-impressive body of work released by organisations including ThreatConnect, CrowdStrike, SecureWorks and Fidelis Cybersecurity. The firms, while less open to attributing with utmost certainty, continue to link APT28 with Putin's state.

"We stand by our research that the attack data we were given to analyse mirrors previous attacks of APT28," John Bambenek, threat intelligence manager at Fidelis told IBTimes UK.

"The malware and the tactics we can speak with expertise on. What we cannot answer is what the intent of those actors were and at whose direction they were acting, as we do not have direct intelligence on those subjects nor are we in a position to get them."

Tom Finney, a counter threat researcher from SecureWorks, said: "We've been able to link this activity to Russia because of the wider targeting seen in this campaign. The majority of the activity appears to focus on Russia's military involvement in eastern Ukraine; for example, the email address targeted by the most phishing attempts (nine) was linked to a spokesperson for the Ukrainian prime minister. Other targets included individuals in political, military, and diplomatic positions in former Soviet states, as well as journalists, human rights organisations and regional advocacy groups in Russia."

HEADLINE	01/12 New ATM malware variant at large
SOURCE	http://www.securityweek.com/new-ploutus-atm-malware-variant-large
GIST	<p>A new variant of the Ploutus ATM (automated teller machine) malware was recently observed, capable of interacting with KAL’s Kalignite multivendor ATM platform, FireEye security researchers warn.</p> <p>Dubbed Ploutus-D, the new variant is targeting machines from ATM vendor Diebold, but FireEye says that the list of targets could greatly expand with only a few code changes. The Kalignite Platform runs on 40 different ATM vendors in 80 countries, making the new malware variant a great threat.</p> <p>First discovered in Mexico in 2013, the malware requires for the attacker to have physical access to the ATM and to connect a keyboard to it. In 2014, researchers discovered that the malware could also be used to withdraw cash using SMS messages.</p> <p>In the new attack, an attacker or money mule would need to open the top portion of the ATM, connect a keyboard to the machine, then use an activation code (provided by the actor in charge of the operation) to dispense money from the ATM.</p> <p>“Once deployed to an ATM, Ploutus-D makes it possible for a money mule to obtain thousands of dollars in minutes. While there are some risks of the money mule being caught by cameras, the speed in which the operation is carried out minimizes the mule’s risk,” FireEye security researchers explain.</p>

HEADLINE	01/13 Microsoft launches privacy dashboard
SOURCE	http://www.securityweek.com/microsoft-launches-privacy-dashboard
GIST	<p>Microsoft this week launched a web-based dashboard for users interested in reviewing the data collected by the company, and also announced changes to Windows 10’s privacy features.</p> <p>The newly released web-based privacy dashboard allows users to view and control all of the data Microsoft has collected about their activity. This includes location, search, and browsing details, as well as Cortana Notebook data across multiple Microsoft services.</p> <p>The new dashboard, Microsoft says, comes as a response to user complaints and requests for increased visibility and a better way to manage the data collected by Microsoft’s services.</p> <p>Windows 10’s data gathering practices event determined France to serve the software giant a notice to stop collecting excessive data and tracking browsing without consent from users. The National Data Protection Commission (CNIL) in July gave Microsoft three months to comply with the French Data Protection Act to ensure user data security and confidentiality.</p>

	To take advantage of the dashboard, users simply need to log in with their Microsoft accounts, then head to account.microsoft.com/privacy to review the collected data and clear it if they want to.

HEADLINE	01/12 Phishing scam targets Amazon customers
SOURCE	https://www.scmagazine.com/amazon-customers-targeted-in-phishing-scam/article/631319/
GIST	<p>Sophos researchers pulled the covers off a phishing scam hitting Amazon customers who are looking for deals on electronics that are too good to be true.</p> <p>The scam is run by the supposed Amazon merchant Sc-Elegance and hooks victims by offering products at well below market prices, Sophos reported. Sc-Elegance has been caught using this tactic before on Amazon.</p> <p>The con starts when the victim attempts to check out. A message appears stating the product is no longer available, but then the vendor will email the target saying the item is available and can be purchased by clicking on an imitation Amazon link included in the email. The link leads to a fake, but quite real looking, Amazon payment screen where all of the victim's Amazon login, payment and personal information is asked for.</p> <p>Sophos said a few clues exist pointing out the scam. There are some misspellings and the site's domain is outside of Amazon's.</p>

HEADLINE	01/12 Phone-hacking firm hacked; data stolen
SOURCE	http://thehackernews.com/2017/01/mobile-hacking-cellebrite.html
GIST	<p>The company that sells digital forensics and mobile hacking tools to others has itself been hacked.</p> <p>Israeli firm Cellebrite, the popular company that provides digital forensics tools and software to help law enforcement access mobile phones in investigations, has had 900 GB of its data stolen by an unknown hacker.</p> <p>But the hacker has not yet publicly released anything from the stolen data archive, which includes its customer information, user databases, and a massive amount of technical data regarding its hacking tools and products.</p> <p>Instead, attackers are looking for possible opportunities to sell the access to Cellebrite system and data on a few selected IRC chat rooms, the hacker told Joseph Cox, contributor at Motherboard, who was contacted by the hacker and received a copy of the stolen data.</p>

	<p>Meanwhile, Cellebrite also admitted that it recently experienced <i>"unauthorized access to an external web server,"</i> and said that it is <i>"conducting an investigation to determine the extent of the breach. The impacted server included a legacy database backup of my.Cellebrite, the company's end user license management system."</i></p> <p>The 900 GB of stolen archive also includes login data (usernames and passwords) of Cellebrite customers, which suggests that it has been taken from the web servers related to Cellebrite's site.</p>

HEADLINE	01/12 Hack crew can't sell NSA exploits; quits
SOURCE	http://www.darkreading.com/attacks-breaches/shadow-brokers-calls-it-quits-after-failing-to-get-buyers-for-nsa-exploits/d/d-id/1327888?
GIST	<p>Just days after offering for sale a database of Windows exploits allegedly purloined from an outfit thought to be affiliated with the National Security Agency (NSA), the infamous ShadowBrokers hacking crew has apparently decided to call it quits.</p> <p>As a parting gift, they released an archive of nearly five-dozen Windows hacking tools for free Thursday in an apparent last ditch effort to convince potential buyers of the authenticity of their goods.</p> <p>They also promised to come out of hiding and still release a collection of Linux and Windows exploits in their possession to anyone willing to pay the equivalent of slightly more than \$8 million (10,000 bitcoins at current rates) for it.</p> <p>In a parting note on the group's website, the Shadow Brokers claimed the decision to go dark had to do entirely with money, or rather the fact they hadn't made as much of it as expected from their hacking wares.</p> <p>The language in the note appeared almost deliberately contrived to make it seem as if members of the group are non-native English speakers. "Despite theories, it always being about bitcoins for TheShadowBrokers," the note claimed. "Free dumps and bullshit political talk was being for marketing attention."</p> <p>The farewell note expressed the group's disappointment with their lack of success in finding buyers for attack tools they had tried to auction off last year and admonished people for not believing in the Shadow Brokers.</p>

HEADLINE	01/12 Smartphone, Internet use at record high
SOURCE	http://phys.org/news/2017-01-smartphone-internet-high-survey.html
GIST	<p>More than three-fourths of American adults now use a smartphone, helping to boost internet adoption to a record level, a survey showed Thursday.</p> <p>The Pew Research Center survey found 77 percent owning a smartphone in late 2016, more than double the level of 2011, when 35 percent said they used such devices.</p> <p>The rise was fueled by a "sharp uptick" in smartphone use by those with low incomes and those 50 and older, Pew said.</p> <p>"Smartphones are nearly ubiquitous among younger adults," said Pew researcher Aaron Smith, noting that 92 percent of adults under 29 own one. But he added that now three-fourths of those 50 and older were smartphone users, as were more than four in 10 among people 65 and older.</p> <p>And there has been a big jump in smartphone use among low-income adults: 64 percent of those earning less than \$30,000 per year now own a smart handset.</p> <p>Tablet ownership was 51 percent as of November, which is up from just three percent in 2010, according to Pew.</p>

	<p>The survey also found a rise in the percentage of Americans with high-speed internet at home, after a modest decline between 2013 and 2015. Some 73 percent of Americans indicate that they have broadband service at home.</p> <p>The researchers found a record 88 percent use the internet, but 12 percent are "smartphone dependent," using mobile devices without broadband service at home.</p> <p>Pew found 69 percent of Americans use social media, with Facebook the runaway leader. The largest social network was cited by 68 percent of those surveyed, followed by Instagram (28 percent), Pinterest (26 percent), LinkedIn (25 percent) and Twitter (21 percent).</p>

HEADLINE	01/12 Live video grows to broadcast violence
SOURCE	http://www.wsj.com/articles/live-video-grows-as-platform-to-broadcast-violence-1484226002
GIST	<p>CHICAGO—The widely shared live video of an assault against a teenager held hostage by four young adults last week shows how far social media has become entwined in the world of violent crime, posing challenges for law enforcement and social media companies alike.</p> <p>Last week’s attack—in which four young African-Americans allegedly tied, beat up and cut a white mentally impaired teenager while shouting racial insults—was streamed on Facebook Live in real time. The four, who are all over 18 and being tried as adults, are being held without bail as they await trial.</p> <p>Those tracking crime in major cities say it is increasingly common for violence to either be streamed on services like Facebook Inc. and Twitter Inc. or provoked by an interaction on social-media platforms, which are central to the identities of many young people, including gang members.</p> <p>There have been at least 40 such broadcasts of sensitive, violent or criminal footage on live video over the last 12 months, according to a Wall Street Journal tally of events reported by news media.</p> <p>In late March last year, a Chicago man was unexpectedly shot while live-streaming in front of a convenience store. In April, an Ohio teenager was accused of live-streaming her friend’s rape over Twitter’s Periscope. Last month, two teenagers died in a car crash in Pennsylvania after the driver fired up Facebook Live.</p> <p>Facebook says that videos glorifying violence are against its content guidelines, but largely relies on users to flag objectionable content. The company is in the “research stage” of using artificial intelligence to automatically detect violence in live videos.</p>

Twitter and its Periscope app also rely on users to flag graphic, violent content, which the company says isn't allowed on its services unless it is newsworthy. Last year, Periscope started allowing randomly selected users to judge whether comments flagged by others constitute spam or abuse.

Those who track violence say that social media has long been instrumental in provoking and publicizing conflict offline, where insults or a photo posted on Facebook can lead to a shooting. Live video, however, added a dangerous edge to the interactions.

Angalia Bianca, who works with Cure Violence, a nonprofit that works with gang members in several cities to stop violence before it happens, says it is common for a gang to go into a rival gang territory and stream their presence on Facebook Live.

Nearly a third of the more than 500 conflicts that Cure Violence mediated last year in several Chicago neighborhoods were prompted by an interaction online, according to the organization's records.

A spokesman for the Chicago police department said it was tracking this relatively new phenomenon, including when gang members take to social media to boast after a shooting of a rival gang, but didn't actively monitor social media pages to look for conflict that might lead to violence. Even when crimes are being streamed live, the challenge is verifying it is a serious instance of harmful criminal activity rather than teens kidding around, the spokesman added.

Experts say these videos can quickly go viral and are seen by thousands even before the police are alerted to them. The police officer who came across the victim of last week's attack in Chicago was unaware of the Facebook Live video when he approached the victim, police say.

Forrest Stuart, an assistant professor of sociology at the University of Chicago who studies how gang members use social media, said the popularity of these videos often spurs young people to keep using them to broadcast criminal or violent activity.

HEADLINE	01/12 Facebook: can't remove suicide video
SOURCE	http://www.newsmax.com/US/facebook-suicide-video-take-down/2017/01/12/id/768311/
GIST	<p>A 40-minute video of a 12-year-old girl committing suicide last month is being circulated on social media networks like Facebook — and neither police nor the company can take it down.</p> <p>Katelyn Nicole Davis of Cedartown, Ga. killed herself and streamed it on Live.Me Dec. 30. Now, copies of the video are appearing on Facebook timelines.</p> <p>According to Fox5 Atlanta, there's nothing in the law that makes that illegal.</p>

	<p>"We want it down as much as anyone for the family and it may be harmful to other kids," Polk County Police Chief Kenny Dodd told the station. "We contacted some of the [social media] sites. They asked if they had to take it down and by law they don't. But it's just the common decent thing to do in my opinion."</p> <p>Facebook users can report the video as offensive. The social network, according to the Miami Herald, says this in response to that request:</p> <p>"Thanks for letting us know about this. We've looked over the following post, and although it doesn't go against any of our specific community standards, you did the right thing by letting us know about it. We understand that it may still be offensive or distasteful to you, so we want to help you see less of things such as this in the future."</p>

HEADLINE	01/13 US to lift some sanctions against Sudan
-----------------	--

SOURCE	http://news.trust.org/item/20170112232747-5ibmx/
GIST	<p>WASHINGTON, Jan 12 (Reuters) - The United States is set to announce the easing of some financial sanctions against Sudan on Friday for its recent efforts in helping tackle terrorism, a senior U.S. official said on Thursday.</p> <p>"The limited sanctions relief is an acknowledgement of progress by the government of Sudan," the official told Reuters ahead of the announcement expected from the White House. It was not immediately clear which sanctions would be lifted.</p> <p>The United States first imposed sanctions on Sudan in 1997, including a trade embargo and blocking the government's assets, for human rights violations and terrorism concerns. The United States layered on more sanctions in 2006 for what it said was complicity in the violence in Sudan's Darfur region.</p> <p>There were signs last year of a thawing in relations between the U.S. and Khartoum. On Sept. 20, the State Department welcomed efforts by Sudan to increase counter-terrorism cooperation with the United States.</p> <p>Sudan had taken steps to counter Islamic State and "other terrorist groups and has sought to prevent their movement into and through Sudan," State Department spokesman John Kirby said in a statement at the time.</p> <p>Sudan last year joined a Saudi-led coalition fighting Houthi rebels in Yemen.</p> <p>The U.S. official said the lifting of the sanctions had no bearing on Sudan's listing by the United States as a state sponsor of terrorism. The International Criminal Court has issued a warrant for the arrest of Sudanese President Omar al-Bashir for war crimes and genocide related to Sudan's conflict-torn Darfur region, charges he dismisses.</p>

HEADLINE	01/12 France restricts travel for minors
SOURCE	http://abcnews.go.com/International/wireStory/france-restricts-travel-minors-jihadi-trip-fears-44727843?cid=clicksource_4380645_5_heads_posts_headlines_hed
GIST	<p>France's government has quietly backtracked on a policy that allowed children to leave the country without their parents' permission, after years of complaints from families of radicalized teens who left to join extremist groups.</p> <p>The new rules requiring parental permission go into effect Sunday, five years after the government lifted the restriction with little fanfare, citing a need to streamline bureaucracy.</p> <p>At the time, the war in Syria was picking up and France became Europe's largest source of recruits in the war zone, notably for the Islamic State group. Families said they were blindsided when their teenage sons</p>

and daughters were allowed to pass through border control no questions asked and even leave Europe's passport-free zone for Turkey.

"We have to do everything we can to prevent minors from going into the terrorist zone," lawmaker Patrick Hetzel told France 3.

But critics say the reversal comes far too late.

HEADLINE	01/13 Surge in targeted killings of AQ in Syria
SOURCE	http://hosted.ap.org/dynamic/stories/M/ML_SYRIA_TARGETING_AL_QAIDA?SITE=AP&SECTION=HOME&TEMPLATE=DEFAULT&CTIME=2017-01-13-01-06-13
GIST	<p>BEIRUT (AP) -- The convoy of vehicles was driving on a dirt road in northwestern Syria when the aerial attack by the U.S.-led coalition struck, turning the vehicles into balls of fire and the people inside into unrecognizable charred corpses.</p> <p>Among the eight dead was Khattab al-Qahtani, a senior al-Qaida official from the Persian Gulf region with reported ties to Osama bin Laden, as well as a Syrian al-Qaida commander from the country's east and a militant belonging to the Turkistan Islamic Party, a faction of Chinese jihadis fighting in Syria.</p> <p>The New Year's Day attack was the first in a wave of airstrikes that has targeted al-Qaida's affiliate in Syria at an unprecedented rate, killing more than 50 militants allied with the international terror group since the beginning of the year.</p> <p>In the throes of a brutal civil war now in its sixth year, Syria has one of the largest and most active concentrations of al-Qaida fighters in the world. The U.S.-led coalition has been targeting the extremist group for years, hunting some of its most senior officials, including members of the so-called Khorasan group, which Washington describes as an internal branch of al-Qaida that plans attacks against Western interests.</p> <p>It's not clear what is behind the recent surge in targeted killings.</p> <p>Analysts say that since al-Qaida began recruiting hundreds of fighters in Syria to expand its role in the country's civil war against President Bashar Assad's forces, informers might have infiltrated the group, which has also become more visible, setting up command centers and other outposts around northern Syria, making it easier to target.</p> <p>"Had it not been for their agents they wouldn't have been able to do anything," a local al-Qaida commander told The Associated Press via text message from northern Syria. "They spray a product on top of the vehicle that cannot be seen with the naked eye but can be detected by the drone," he said, speaking on condition of anonymity in line with the group's regulations.</p> <p>The stepped-up attacks could also be linked to a cease-fire brokered by Russia and Turkey that went into effect on Dec. 30, and excludes the Islamic State group and Syria's al-Qaida affiliate, known as the Fatah al-Sham Front. Turkey and Russia back rival sides in the Syrian</p>

conflict and their new push to try to end the war includes talks between the Syrian government and the opposition to be held later this month in Kazakhstan.

The intensified attacks also come at a time when the Islamic State group, an al-Qaida rival, is under intense pressure and losing territory in Iraq and Syria. Iraqi forces are on the offensive in the northern city of Mosul, the main IS stronghold in Iraq, while U.S.-backed Kurdish-led fighters are marching toward the Syrian city of Raqqa, IS's de facto capital.

"Daesh is on the verge of collapse and this is diverting the attention toward al-Qaida," said Dana Jalal, a Sweden-based expert on jihadi groups, referring to IS by its Arabic acronym. "The new Russian-Turkish alliance is also leading to fresh intelligence information."

Jalal said Turkey is now sharing intelligence about the al-Qaida affiliate with Russia, as well as the U.S.-led coalition. Turkey has been a main point for foreign fighters to cross into Syria and borders the country's northern Idlib province, where thousands of Fatah al-Sham fighters are based.

There was no comment by the Pentagon on the surge in attacks this year, but the U.S. has announced numerous successful strikes in recent months.

HEADLINE	01/13 Iraq forces reach 2nd Mosul bridge
SOURCE	http://www.reuters.com/article/us-mideast-crisis-iraq-mosul-idUSKBN14X0P1
GIST	<p>Iraqi special forces pushed forward to reach a second bridge that links eastern Mosul to the city's west, which is still fully controlled by Islamic State, a military statement said on Friday.</p> <p>Troops further north meanwhile battled to try to seize the strategic Mosul University area, capture of which would help parallel advances towards bridges over the Tigris river, a Reuters correspondent nearby said.</p> <p>Elite counter-terrorism service (CTS) units reached the southern 2nd Bridge, also called Freedom Bridge, one of five running across the river that bisects Mosul from north to south, the military statement reported by state TV said.</p> <p>Iraqi forces have now reached two of the bridges, after fighting their way to the southernmost 4th Bridge several days ago.</p> <p>All the bridges have been hit by U.S. coalition air strikes in an effort to hamper Islamic State militants' movement across the city. U.S. and Iraqi military officials say Islamic State has caused further damage to at least two of them to try to hamper any Iraqi advance across the river.</p> <p>Iraqi forces are now in control of most of eastern Mosul. Assaults on the west, which Islamic State still fully holds, will be able to begin once they have secured the east bank of the Tigris.</p>

HEADLINE	01/12 UN: Boko Haram 'inhuman campaign'
SOURCE	http://time.com/4633936/boko-haram-nigeria-chad-crisis/?xid=homepage
GIST	<p>(UNITED NATIONS) — The humanitarian crisis triggered by Boko Haram's "violent and inhuman campaign" is worsening, with 10.7 million people in need of aid in northeast Nigeria and parts of Cameroon, Chad and Niger, the U.N. humanitarian chief said Thursday.</p> <p>Stephen O'Brien told the U.N. Security Council that although Boko Haram has lost much of the territory it once controlled as a result of military campaigns in the region, its raids and suicide bombings targeting civilians are still causing widespread death and destruction in those four countries which comprise the Lake Chad Basin.</p> <p>Over the past 12 months, he said, the crisis has grown "in dramatic fashion," with the number of people needing humanitarian help, rising from about nine million in July.</p> <p>Britain's U.N. Ambassador Matthew Rycroft urged the Security Council to visit the Lake Chad Basin region in the coming weeks to shine a spotlight on the depth of the crisis, stressing that it is not only humanitarian but also about politics, development and "countering terrorism."</p> <p>"What started as a protection crisis," O'Brien said, "has become also a major food and nutrition crisis — today one of the largest humanitarian crises in the world."</p> <p>He said a year ago, three million people across the Lake Chad Basin were "severely food insecure," meaning they had very little to eat and needed assistance. "Today there are 7.1 million," despite the response of the U.N. and its partners, he said.</p> <p>In addition, some 2.4 million people are displaced, including 1.4 million children, O'Brien said. And in northeast Nigeria alone "over 7,000 women and girls have been subjected to Boko Haram-related violence."</p>

HEADLINE	01/12 Deadly bomb blast in Damascus
SOURCE	http://www.bbc.com/news/world-middle-east-38603624
GIST	<p>A suspected suicide bomber has killed at least seven people in a high security area of the Syrian capital, Damascus, state TV has said.</p> <p>Police said the attack happened in the Kafr Sousa neighbourhood where some of the country's key security installations are located.</p> <p>Footage showed destroyed cars and the security forces deploying in force in the aftermath of the bombing. It is feared the number of dead is likely to rise.</p> <p>Several people are critically wounded, the Syrian Observatory for Human Rights monitoring group said.</p> <p>The Kafr Sousa area lies south of Damascus and is home to several senior ministers and top officials, but sources told the AFP news agency that the blast took place away from where they live.</p>

HEADLINE	01/12 Syria ceasefire 'signs of collapsing'
SOURCE	http://abcnews.go.com/International/wireStory/activists-dead-airstrike-northern-syria-44727913
GIST	<p>The U.N. envoy for Syria said Thursday that a cease-fire was "largely holding with some exceptions," as opposition activists reported a mounting number of government airstrikes, including a raid in the northern Aleppo province that killed at least six civilians.</p> <p>Speaking to reporters in Geneva, Staffan de Mistura said he was concerned that fighting northwest of Damascus that has cut off the capital's clean water supply would further escalate and derail proposed negotiations between the government and the opposition in Astana, Kazakhstan, later this month.</p> <p>The talks are sponsored by Russia and Turkey, which support opposing sides of the Syrian civil war. But the status of the meeting, planned for Jan. 23, is not clear. Rebels say the government's continued campaign for the Barada Valley, the capital's main source of water, has cast the talks in doubt.</p> <p>The U.N. says the capital has suffered from a water shortage affecting 5.5 million consumers since December 22.</p> <p>The leader of one of Syria's largest rebel factions, the ultraconservative Ahrar al-Sham, said in remarks aired Thursday that the violence in the valley and daily airstrikes on rebel-held areas "are signs of a collapsing truce."</p>

HEADLINE	01/12 Survey: most Americans are broke
SOURCE	http://www.cbsnews.com/news/most-americans-cant-afford-a-500-emergency-expense/
GIST	<p>While the jobless rate is down and wages are up, most Americans nevertheless remain one misstep away from a financial crisis.</p> <p>Fifty-seven percent of Americans don't have enough cash to cover a \$500 unexpected expense, according to a new survey from Bankrate, which interviewed 1,003 adults earlier this month. While that may appear dire, it reflects a slight improvement from 2016, when 63 percent of U.S. residents said they wouldn't be able to handle such an expense. The improvement reflects the stronger U.S. economy, but is still far from ideal, Bankrate.com said.</p> <p>The findings shed light on how many households continue to struggle with their basic finances more than seven years after the official end to the recession. Despite steady job growth during the Obama</p>

administration, wages have been slow to recover, with the typical American household still earning 2.4 percent below what they brought home in 1999, when income peaked. At the same time, costs for essentials such as housing and child care have surged faster than the rate of inflation, placing stress on household budgets.

Unfortunately, unexpected expenses are far from uncommon, Bankrate.com found. About half of adults said they or a family member incurred a major expense in the last year.

“It’s not a matter of if, but when an unexpected expense will pop up,” Jill Cornfield, a Bankrate.com analyst, said in a statement. “If you have a car, a house or apartment, a pet, or a kid – if you’re a member of the human race – something that costs money is bound to go wrong.”

About four out of 10 Americans said they had enough in savings to cover a surprise \$500 expense. Another 21 percent said they would rely on a credit card, while 20 percent said they’d cut back on other expenses. Another 11 percent said they’d turn to family or friends for the money.

Americans who earn more than \$75,000 per year -- about a third more than the typical U.S. household earns -- report more savings on hand, although almost half said they wouldn’t be able to cover a \$500 surprise expense. Millennials represent the generation most equipped to handle an emergency cost, with 47 percent saying they have enough in savings to cover one.

The findings echo research published last year by the Federal Reserve, which polled more than 5,600 Americans on their household finances. Forty-six percent of respondents said they would be challenged to come up with \$400 to cover an emergency expense, and would likely borrow or sell something to afford it.

When the Fed asked what types of emergency expenses Americans had actually faced in the last year, more than one out of five cited a major unexpected medical expense. The average expense: \$2,782, or almost seven times higher than the Fed’s hypothetical \$400 surprise bill.

HEADLINE	01/12 Buy burger in Chehalis; get tires in Texas
SOURCE	http://komonews.com/news/local/some-customers-buy-a-burger-in-chehalis-get-charged-for-tires-in-texas
GIST	<p>CHEHALIS, Wash -- Sonic Drive-In customers were excited about the new store opening in Chehalis last September until some of them recently got their bank statements. They all of a sudden were getting bank charges from a different company out of state, and some were suspecting fraud.</p> <p>Sonic customer Maritza Percival said she "didn't realize anything had gone wrong until a few weeks ago when I was debited back to my account something from a tire place in Texas."</p>

That tire place is Tires to You. "I've never been to Texas," said Sonic customer Timothy Phillips. He got the same strange charge after visiting the Sonic Drive-In when it opened and got suspicious.

"I was worried that maybe they had an employee that stole my card or something," Phillips said. Added Percival, "It's kind of scary because they were blaming the employees there. They take your card with them."

Sonic customer Josh Clevenger got the same Texas charges and had his card canceled for fear of identity theft., "Just ordered it shut off and ordered a new one and so if there's any more mistakes I won't be affected by it," he said

But Sonic says it wasn't an employee. It was a computer error. For seven days Sonic had mixed up its account with the Texas tire company. Sonic is in the process of refunding and making sure customers were only charged for what they got.

And issued this statement: "SONIC and the franchisee who owns and operates the drive-in apologize for any inconvenience this has caused and look forward to continuing to serve the community of Chehalis." But customer Crystal Phillips isn't satisfied. "It's not OK, and it's not just something that can be swept under the rug."

It has been the topic of much discussion on the Facebook page 'Lewis County Sirens' with more than a dozen victims posting concerns., "It's crazy. I wouldn't have suspected this from a large food company like this," Crystal Phillips said.

Some of the customers say the computer glitch caused them to get overdraft charges. Sonic says it is still looking into whether those customers will be reimbursed.

HEADLINE	01/13 Friday the 13th unlucky?
SOURCE	http://www.kiro7.com/news/local/friday-the-13th-what-is-so-unlucky-about-13/484026386
GIST	<p>It's Friday the 13th. Does that thought send shivers down your spine? Do you think of bad luck, bizarre happenings, aluminum (see below)? If so, don't worry.</p> <p>You're not alone.</p> <p>The fear of Friday the 13, or just the number 13, is a common one. So common, in fact, there's a name for it.</p> <p>History is silent on how the number has come to be seen as unlucky, but there is a rather unnerving amount (more than 13) of historical events that have likely led to the misfortune under which 13 suffers.</p>

Here are a few.

When it was unlucky

- Pope John Paul II was shot and nearly died on May 13, 1981.
- There were 13 people at the Last Supper, and, in case you missed the first connection, it's believed that Judas Iscariot — the disciple who betrayed Jesus Christ — was the 13th man to take his place at the table.
- Jesus was crucified on a Friday.
- A 13-year-old boy in England was struck by lightning on Friday the 13th at 1:13 p.m. (in military time, 13:13).
- On Oct. 13, 1307, there was a mass arrest and execution of members of the Knights Templar. The Knights Templar or the Poor Fellow-Soldiers of Christ were anything but. Members were among the wealthiest and most powerful of Christian military orders. They are credited by many with establishing one of the earliest finance systems.
- In not so Jolly Ol' England, Friday was the traditional day for public hangings. Insult to injury — there were 13 steps up to the gallows, generally.

When it was lucky

- The bus number 13 in London was never damaged during the blitz of the Second World War.
- Apollo 13 was a 1970 NASA Moon mission famous for being a "successful failure." The accident that crippled the spacecraft happened on April 13.
- It was on the jersey of Miami Dolphins Hall of Famer Dan Marino.
- It was on the jersey of Los Angeles Lakers, and Philadelphia 76ers Hall of Famer Wilt Chamberlain.
- A baker's dozen means you get 13 of something — or one more than a standard dozen. The down side is it is sometimes called a "Devil's dozen." (think donuts)
- The visions of the Virgin of Fátima were said to have appeared on the 13th day of every month for six months in 1917

Where 13 is not used

- There's no 13th floor in many high-rise buildings.
- There is often no 13th floor in a hospital, and airports generally don't have a Gate 13.
- In triathlons, the number 13 is not used.
- The number was not used in Formula One from 1977 to 2013.
- While there are 19 counties in Norway they are numbered 1-20 because there is no number 13 county.

13 in general

- Aluminum has the atomic number 13.

	<ul style="list-style-type: none"> • 13 is the sixth prime number. • It is the smallest emirp or a prime number that is a different prime when its reversed - 31. • Fear of the number 13 is called Triskaidekaphobia. • Fear of Friday the 13th is Paraskevidekatriaphobia or, sometimes, Friggatriskaidekaphobia. • Fear of the number 17 – the number of letters in Triskaidekaphobia – is Heptadecaphobia. • The Aztecs considered thirteen a sacred number. It was the number that represented time. It stood for completion. • In Tarot, 13 is the card of “Death.” The card stands for transformation – ending something and starting something new. • There are 13 stripes on the American flag. • There are 13 stars in the Great Seal of the United States.

HEADLINE	01/12 Report: deportations hit 10yr-low
SOURCE	http://www.breitbart.com/texas/2017/01/12/deportations-hit-10-year-low-obama-prepares-exit/
GIST	<p>Deportation of illegal immigrants hit a 10-year low during President Obama’s last full fiscal year in office. The U.S. Department of Homeland Security also appeared to be cutting back on information provided about all three of its law enforcement agencies.</p> <p>The administration waited until the last Friday of the year to release its final FY 2016 report on Immigration and Customs Enforcement removal operations.</p>

“It’s no wonder that they waited for a day when hardly a soul was paying attention; the numbers for ICE are abysmal, even worse than 2015,” Center for Immigration Studies Director of Policy Studies Jessica Vaughn reported this week. If there were an award for government reports that aim to obfuscate and spin, I would nominate this one.”

Vaughn wrote that the annual reports have historically provided basic statistics from all three of the department’s law enforcement agencies. This year, the report sneaked out by DHS officials on the last working day of the month normally, in two versions, was scaled back to provide only a fraction of the information normally disclosed. The reported is compiled by the Office of Immigration Statistics (OIS) which has a new director, Marc Rosenblum.

Vaughn listed the following as key findings from the annual report:

- Deportations credited to ICE in 2016 increased by 2 percent. All of the increase came from cases of aliens arrested by the Border Patrol, not interior enforcement.
- Interior deportations fell from 69,478 in 2015 to 65,322 in 2016, out of a population of illegal aliens now estimated at 12 million.
- Deportations of criminal aliens fell from 63,127 in 2015 to 60,318 in 2016, out of an estimated population of two million.
- The total number of deportations under the Obama administration is not easily comparable to prior administrations because of the number of border cases included, but it certainly is not record-breaking, as Obama has claimed.
- DHS maintains that CBP arrests have always been a large share of ICE deportations, but in fact this is a new development under the Obama Administration. In prior administrations, only a third of deportations credited to ICE were border cases; now about two-thirds are.

HEADLINE	01/12 US Mint: Lady Liberty a woman of color
SOURCE	http://www.nbcnews.com/news/nbcblk/first-time-lady-liberty-will-be-depicted-woman-color-u-n706391
GIST	<p>For the first time in American history, Lady Liberty will be portrayed as a woman of color on United States currency.</p> <p>In celebration of the U.S. Mint and Treasury's 225th anniversary, the new \$100 coin was unveiled on Thursday featuring Lady Liberty as a black woman.</p> <p>Since the passage of the Coinage Act in 1792, all coins are required to feature an "impression emblematic of liberty," in either words or images. Until the new coin designed by Justin Kunz was unveiled, Lady Liberty had always been depicted as a white woman.</p>

	<p>"As we as a nation continue to evolve, so does liberty's representation," said Elisa Basnight, U.S. Mint chief of staff, at a ceremony unveiling the new coin. "We live in a nation that affords us the opportunity to dream big and try to accomplish the seemingly impossible."</p> <p>The new 24-karat gold coin, which is set to be released in April and is meant primarily for collectors, is one of a series of new, diverse commemorative coins the Mint will unveil in the coming years.</p> <p>Future depictions of Lady Liberty, according to the Mint, will also feature designs to represent Asian Americans, Hispanic Americans, Indian Americans, and others "to reflect the cultural and ethnic diversity of the United States."</p>

HEADLINE	01/13 Concern: missing Pakistan activists
SOURCE	http://abcnews.go.com/International/wireStory/us-concerned-disappearance-pakistani-activists-44752491
GIST	<p>The United States has expressed concern over the disappearance of five Pakistani anti-Taliban activists and bloggers who mysteriously went missing last week, incidents that have triggered an outcry from human right groups.</p> <p>Dozens of activists rallied in the port city of Karachi for the second time late on Thursday, demanding the five men be accounted for. In Washington, State Department spokesman Mark Toner said the U.S. is taking the disappearances "very seriously" and will "continue to monitor the situation in Pakistan."</p> <p>Toner also welcomed a statement by Pakistan's interior ministry, which asked police to step up efforts to find the missing. Among the five are university professor Salman Haider, known for criticizing the Taliban and the government over its alleged inaction against militants, and Shiite activist Samar Abbas, who heads the Civil Progressive Alliance Pakistan.</p> <p>No militant group has so far claimed abducting the activists and no government department or intelligence agency has said it detained or arrested any one of the five.</p> <p>Activist Syed Talib Abbas said on Friday that none of the missing men have been found so far.</p>

HEADLINE	01/12 El Salvador has a rare murder-free day
SOURCE	http://abcnews.go.com/International/wireStory/el-salvador-rare-murder-free-day-1st-years-44740870
GIST	<p>El Salvador, one of the world's deadliest countries, has recorded a rare day without a single homicide.</p> <p>National Civil Police commissioner Howard Cotto said at a news conference Thursday that no murders were reported the previous day in the gang-plagued Central American nation.</p>

	<p>The last time the country went a full day without any killings was Jan. 22, 2015, according to records kept by The Associated Press. It also happened once in 2013 and on two days the year before that.</p> <p>The nation of about 6 million people averaged 14.4 murders a day last year.</p> <p>Killings peaked at 104 per 100,000 residents in 2015, the highest rate for any nation not in open war that year.</p> <p>Homicides fell by about 20 percent in 2016, but it was still one of the most violent countries with 81.2 murders per 100,000 residents.</p>

HEADLINE	01/12 Possible charges in drone crash
SOURCE	http://www.cnn.com/2017/01/12/us/space-needle-drone-crash/

GIST	<p>(CNN)The city of Seattle could file charges against a drone owner after the device crashed on top Seattle's iconic Space Needle.</p> <p>Seattle police continue to investigate the incident, but a source close to the investigation confirms authorities identified the owner through the drone's serial number.</p> <p>The drone crashed on top of the Space Needle on New Year's Eve, but it was turned over to police on January 10. Police tell CNN that Space Needle management went to the Federal Aviation Administration to report the incident, but were informed they first needed to make a report with local authorities.</p> <p>The FAA said the incident is under investigation.</p> <p>The city attorney's office tells CNN while the city does not have any drone ordinances, it could charge the owner with reckless endangerment.</p> <p>That charge, a gross misdemeanor, carries a penalty of up to 364 days in jail and up to a \$5,000 fine.</p>

HEADLINE	01/12 Arizona trooper ambushed at traffic scene
SOURCE	http://www.cbsnews.com/news/arizona-state-trooper-shot-while-responding-to-roll-over/
GIST	<p>PHOENIX - A Department of Public Safety trooper was shot while responding to a single-vehicle rollover with possible shots fired on westbound interstate 10 near Tonopah on Thursday morning, reports CBS affiliate KPHO.</p> <p>DPS Capt. Damon Cecil said the trooper, a 27-year-veteran of the agency, was ambushed by the suspect when he got out of his vehicle at the scene of the rollover.</p> <p>“A physical fight between our trooper and that suspect then ensued, at which time the suspect was shot and killed,” Cecil said. “Right now that’s all we have. This is a fluid investigation.”</p> <p>A civilian later got on the trooper’s radio and told DPS dispatchers that the trooper had been shot and that another motorist shot the suspect, the station reports.</p> <p>“To the civilian on the DPS trooper’s radio, if you can hear me, I need you to let me know where the suspect is that got in an altercation with our trooper,” the dispatcher could be heard saying on the scanner.</p> <p>“The suspect is uh, occasionally breathing or stirring. He’s been shot by a passer-by,” the man with the wounded trooper’s radio calmly responded. “He’s laying right next to the officer.”</p> <p>Police have not confirmed how the suspect was shot and killed.</p>

HEADLINE	01/12 Va. man sentenced 8mo. school hacking
SOURCE	http://abcnews.go.com/US/wireStory/virginia-man-sentenced-ohio-high-school-hacking-case-44734651
GIST	<p>A Virginia man who pleaded guilty to helping hack an online account to draw attention to a 2012 high school rape case in Ohio has been sentenced to eight months in prison.</p> <p>Noah McHugh was sentenced on Monday in federal court in Lexington, Kentucky, after pleading guilty to one count of computer fraud. McHugh had admitted helping Deric Lostutter, known online as "KYAnonymous", access fan website for Steubenville High School athletics. Lostutter pleaded guilty in November and faces up to 10 years in prison.</p> <p>The hack drew additional media coverage to rape charges against two football players from the Ohio school. The players were convicted in 2013 of raping a West Virginia girl at a party.</p>

HEADLINE	01/12 Bandit hits Everett espresso stands
SOURCE	http://komonews.com/news/local/bandit-hits-everett-espresso-stands
GIST	<p>EVERETT, Wash. -- A series of coffee stand robberies in Everett has baristas taking more precautions. and police believe all those incidents could be connected.</p> <p>"Definitely (cautious) and a little skeptical about walk-ups. It's a little stressful," said Holly Pruitt who is the assistant manager at Diedrich Espresso.</p> <p>Two of the Diedrich Espresso coffee stands in Everett were hit in a week and so was the 13 Buffalos Coffee Company stand, at 2726 Rucker Ave.</p> <p>Everett police think it's the same person based on the descriptions from victims. He's been described as a white man who's 25 to 35 years old. He's slender, about 6 feet tall and has brown hair. The victims said he also has some facial hair. During the robberies, the man wore a light-brown hooded sweatshirt, blue jeans, and boots.</p> <p>The robberies happened at all hours and in each case the man implied he had a weapon but never showed one.</p> <p>Arlington police are also investigating a coffee stand robbery. They've released a surveillance photo of a man who was last seen Jan. 7 running from Candy Girl Espresso, in the 21000 block of 67th Avenue Northeast. City of Arlington spokeswoman Kristin Banfield says there's a "strong possibility" the case is connected to the Everett robberies.</p>

	Marysville Police also believe the same suspect may be connected to a coffee stand robbery there. According to Commander Robb Lamoureux, the Grove Street Espresso stand was robbed on January 3rd by a suspect who matched the description of the Everett robbery suspect.

HEADLINE	01/12 Spokane PD: arrest in random shootings
SOURCE	http://www.khq.com/story/34246702/spokane-police-make-arrest-in-apparent-random-shootings
GIST	<p>SPOKANE, Wash. - Spokane Police say they have arrested the man they believe is responsible for two completely random shootings earlier this week, one of which resulted in a teenager being shot in the head.</p> <p>The first shooting happened on January 8 near 7th and Thierman Road. The victim told responding deputies he was randomly shot at by a person in a car. The victim said the shooting was completely unprovoked, and he was able to give deputies a good suspect description.</p> <p>A short time later, Spokane Police responded to another shooting call near Sprague and Perry. A 16-year-old boy was found with an apparent gunshot wound to the back of his head. The boy was taken to the hospital in critical condition. The victim is still in "very critical condition" according to detectives.</p> <p>There were no witnesses to that shooting, but detectives were able to locate surveillance video of the shooting which showed the suspect's vehicle. Detectives determined there was no confrontation prior to the shooting.</p> <p>Detectives were able to determine the two shootings were related. Due to the randomness of the shootings, Spokane Police assigned all Major Crimes Detectives to the case and began looking for the suspect's vehicle, a 2006-2009 Kia Rio with Idaho plates.</p> <p>A detective looking through all Kia Kio's in Idaho's database and found a hit when they located one registered to Brice W. Bailey in Coeur d'Alene. Bailey showed a registered address in Spokane near Monroe and Maxwell. Police went to the home and found the suspect's Kia and the victim from the first shooting was able to positively identify Brice Bailey as the man who shot at him.</p> <p>Bailey was already wanted on a DOC warrant and was not supposed to be carrying firearms.</p> <p>Detectives obtained a search warrant and apprehended Bailey on January 11, 2017 without incident.</p>

HEADLINE	01/12 Man charged in Bellevue mosque threat
SOURCE	http://www.seattletimes.com/seattle-news/crime/man-charged-with-hate-crime-for-allegedly-threatening-to-kill-members-of-bellevue-mosque/

GIST	<p>A 36-year-old Auburn man was charged this week with malicious harassment, a hate crime, for allegedly threatening to kill members of a Bellevue mosque and declaring “there is no place in America for Muslims,” according to King County prosecutors.</p> <p>Kamal Samater — who Bellevue police say self-identifies as Muslim — was arrested Jan. 6 in the parking lot of the Islamic Center of Eastside, also known as Bellevue Masjid, in the 14000 block of Main Street. Members of the mosque were preparing and serving food as part of a service when the incident occurred just after 1:30 p.m.</p> <p>Jailed in lieu of \$250,000 bail, Samater was also charged with felony harassment, accused of threatening to kill the first man he encountered in the mosque’s parking lot, court and jail records show.</p>

HEADLINE	01/12 Online video of Orlando cop killer
SOURCE	http://www.foxnews.com/us/2017/01/12/chilling-facebook-video-suspected-orlando-cop-killer-includes-murder-talk.html
GIST	<p>The wanted fugitive suspected of murdering two people in Orlando, including a police officer, appeared in an ominous Facebook Live video before the shootings -- as his then-girlfriend joked about killing police and herself.</p> <p>The Nov. 4 video showed Markeith Loyd -- who was on the loose Thursday -- in a car at a traffic stop with his pregnant girlfriend, Sade Dixon.</p>

	<p>"Go ahead and kill him, babe, so we can get home faster," she was heard saying, referring to the officer.</p> <p>Later, as Loyd sped down the road, she shouted, "You not about to kill me and the baby."</p> <p>Just over a month later, police said Loyd did indeed kill the girlfriend, reportedly after she broke up with him. On Monday, they said he shot and killed Master Sgt. Debra Clayton after she demanded he stop outside a Walmart. As the manhunt intensified that day, a motorcycle crash killed Sheriff's Deputy First Class Norman Lewis.</p> <p>Cops this week have arrested three people accused of helping Loyd, 41, after the manhunt began, Fox 35 reported.</p>

HEADLINE	01/12 Cartels exploit border wall fears
SOURCE	http://www.foxnews.com/politics/2017/01/12/cartels-smugglers-exploit-border-wall-fears-ahead-trump-presidency.html
GIST	<p>MCALLEN, Texas – Mexican drug cartels and human traffickers are cashing in ahead of Donald Trump’s inauguration by exploiting anxiety over his vow to build a border wall and crack down on illegal immigration – fueling the latest surge across the U.S.-Mexico line, according to local law enforcement.</p> <p>The president-elect reiterated his pledge at a press conference Wednesday to build a "wall" – which he claims will curb illegal immigration, reduce gun violence and stop drugs from being smuggled into the country.</p> <p>For now, however, the Obama administration's leniency, combined with concerns about Trump's crackdown, is seen as contributing to a spike in crossings from California to Texas.</p> <p>“There’s definitely a percentage of folks who believed that they can beat the clock,” said Jose Villareal, chief of operations for the Border Patrol’s Rio Grande Valley sector.</p> <p>On a recent ride-along in south Texas, Cameron County Sheriff's Office Lt. Robert Rodriguez told FoxNews.com he has noted an increase in the flow of border crossers since Trump’s White House win.</p> <p>“I can feel the anxiety,” Rodriguez said. “You can cut it with a knife.”</p> <p>In November, U.S. Border Patrol apprehended 47,214 migrants along the southwest U.S. border – an increase of 44 percent compared with a year earlier. November was the Border Patrol’s busiest month since June 2014. In the past six months, agents have caught nearly a quarter-million migrants -- about 1,300 a day -- trying to cross illegally.</p>

	<p>“Smugglers are telling them that they need to come across now while there’s a chance,” Art Del Cueto, a Border Patrol agent in Tucson, Ariz., recently told Fox News.</p> <p>In response, the U.S. Customs and Border Protection dispatched 150 more agents to police the southwestern border. They also opened two temporary facilities to detain thousands of people trying to come over illegally.</p>

HEADLINE	01/12 Peru: violent protests over new toll
SOURCE	http://abcnews.go.com/International/wireStory/violent-protests-perus-capital-highway-toll-44742810
GIST	<p>Hundreds of Peruvians threw homemade explosives and rocks while police fired tear gas during a protest Thursday over a new road toll into Lima.</p> <p>It was the second time in under a week that residents of the poor Puente Piedra district outside the capital fought with police on the Pan-American Highway, which is their only route into Lima.</p> <p>The district's mayor and leftist lawmakers are supporting the protesters' demands to eliminate the toll, which is \$1.50 to both enter and to leave Lima. But Lima Mayor Luis Castaneda says city's hands are tied because the toll is part of a project approved by his predecessor to build and maintain roads.</p> <p>Protesters are angry because the \$3 daily cost for driving to and from Lima is a burden in a country where the minimum wage is about \$250 month. Not all the demonstrators have cars, but the toll has also driven up the cost of riding on buses and mototaxis.</p> <p>A protest last week also erupted into violence during which demonstrators burned toll booths, and officials responded by temporarily suspending collection of the toll.</p>

HEADLINE	12/08 State Dept. updates Mexico travel warning
----------	---

SOURCE	http://www.ibtimes.com/mexico-safe-tourists-us-state-department-updates-travel-warning-citing-violence-2457523
GIST	<p>The State Department warned U.S. citizens Thursday about the risks of travel in Mexico in light of organized crime activity in certain parts of the country, citing homicides, kidnappings, carjackings and robberies in several Mexican states.</p> <p>The updated travel warning said the risk of violence was less in resort areas and tourist destinations than in border areas or along trafficking routes.</p> <p>Mexico enlisted its military, seen as less corrupt than police organizations, to fight organized crime a decade ago but has failed to improve the country's security substantially, the Mexico Daily News said Tuesday. The situation is complicated by vigilante groups that instead of fighting organized crime have been committing crimes of their own.</p> <p>Homicides increased 900 percent this year compared to 2015, and organized crime has spread to areas previously untouched by the violence, the report said.</p> <p>“Gun battles between rival criminal organizations or with Mexican authorities have taken place on streets and in public places during broad daylight,” the State Department said. “The Mexican government dedicates substantial resources to protect visitors to major tourist destinations and has engaged in an extensive effort to counter criminal organizations that engage in narcotics trafficking and other unlawful activities throughout Mexico.</p> <p>“There is no evidence that criminal organizations have targeted U.S. citizens based on their nationality.” The warning barred U.S. government personnel from patronizing casinos, sports books or other gaming establishments in Coahuila, Durango, Zacatecas, Aguascalientes, San Luis Potosi, Nuevo Leon, Tamaulipas, Jalisco, Colima and Nayarit states, and recommended nonessential travel be deferred.</p>

HEADLINE	12/08 Social workers fleeing troubled system
SOURCE	http://features.crosscut.com/foster-care-crisis-social-workers
GIST	<p>Tanya Copenhaver followed in her father's and grandmother's footsteps by becoming a social worker for Washington state's Children's Administration, a difficult but fulfilling calling she never expected to give up.</p> <p>During 15 years of working in the foster care system, on a job considered among the hardest in the state, she worked her way up to supervisor. But even with a master's degree and a management position, the single mom struggled to pay rent and daycare. She and her daughter ate at her mother's house to save money.</p>

Last year, Copenhaver finally left the vocation she cherished to take a post at a Pierce County hospital – with a 30 percent pay raise.

“I loved my job,” Copenhaver said. “Even after 15 years I didn’t feel burnt out, and I still have a passion for the work. But I left because I couldn’t support myself and my daughter on my salary as a supervisor.”

Copenhaver’s decision has been mirrored by many state social workers, who say they were driven away by lousy pay, a toxic workplace climate and excessive workloads, InvestigateWest discovered in a lengthy investigation for KCTS 9 and Crosscut.

Turnover among Children’s Administration social workers runs at 20 percent a year statewide and has been as high as 30 percent in King County, the state says. That drains the agency of collective knowledge, distracts managers with constant hiring and training, and hampers its ability to help vulnerable foster children and their families. And all of that ends up costing the state – and therefore the taxpayers.

The churn has a huge and potentially devastating impact on kids’ futures. According to one prominent study from Wisconsin, a child whose case is overseen by one worker has a 75 percent chance of being placed in a permanent and stable home within a year. Those odds drop to 18 percent when a child goes through two caseworkers in a year, and they plummet to a low of 0.1 percent with six or seven case managers. Yet some foster parents told InvestigateWest that kids they’ve cared for have gotten a new caseworker every month in some cases.

“They’re cycling through workers so quickly, it’s terrible for the workers, the management, and the kids and foster parents who are having to deal with a new person,” said Lauren Hubbard, a Seattle foster mom. “We changed workers with our adopted daughter four times within a month.”

Caseloads are often two or three times the recommended level, leaving workers too busy to support foster parents, which contributed to a loss of nearly one in five foster homes between 2008 and 2015. That only adds to the system’s woes, as social workers are then forced to babysit children in their offices all day and even stay up all night watching them in hotels.

The state’s inadequate funding of foster care and low salaries for social workers are contributing to the high turnover.

The Children’s Administration has only now clawed its way back to its budget’s pre-recession levels eight years ago. In constant dollars, which takes inflation into account, the budget is still less, at \$1.18 billion, including \$661.9 million of state funding.

During the recession, the administration lost about 16 percent of its workforce, or 467 employees, which exacerbated the problems, as those who remained had to cover for those who left. Meanwhile, the number

of children entering foster care has increased amid the opioid crisis, after reaching historic lows around 2012.

Salaries for child-welfare social workers – many of whom have master’s degrees – start at \$34,284 a year, or \$16.42 an hour, and top out at \$58,548, or \$28.04 an hour. And the top salary is more than \$20,000 less than the same position at a place like Western State Hospital, said Sean Dannen, the general government strategic campaign coordinator for the Washington Federation of State Employees.

Workers in high-cost areas like King County are paid the same as those in less expensive parts of the state. They also have the same workloads as counterparts in the rest of the state, even though the Puget Sound region’s infamous traffic jams can keep them out much longer for their mandated home visits.

Social workers interviewed by InvestigateWest – most of whom requested anonymity due to fear of retaliation by the state for speaking out – tell of a toxic and punitive environment, with an increasing number of investigations into their actions. One said it has become a rite of passage to be under investigation in King County. There’s a systemic lack of appreciation, they say, and the job itself is traumatic enough without the added stress of the department’s negativity and the constant fear of being investigated.

HEADLINE	12/08 Imagine a world without giraffes
SOURCE	http://www.cnn.com/2016/12/08/world/sutter-giraffe-extinction/index.html
GIST	<p>(CNN)It's the tallest land-based mammal in the world. Its construction-crane neck, toothpick legs, knocked knees and two-story stature make it an awkwardly lovable favorite of children's book authors and cartoonists. This animal brings an odd sort of wonder to the savannahs of Africa.</p> <p>But perhaps it's best for us to start imagining a world without the humble giraffe.</p> <p>The International Union for Conservation of Nature on Thursday up-listed this goofy creature -- known for its craning neck, which helps it reach tree-top leaves its competitors can't -- to its "vulnerable" status, meaning the animal is at high risk for extinction.</p> <p>It moves up from the category called "least concern."</p> <p>The reason: a sharp 36% to 40% decline in giraffe populations in recent decades. In 1985, the group said, there were as many as 163,452 giraffes. Now the estimate is 97,562.</p> <p>This puts the giraffe in good company. The elephant, the orangutan, certain bees, coral -- so many of the Earth's mind-blowingly cool creatures face extinction risk these days. If poaching rates continue, some fear African elephants will be extinct in 20 years.</p>

	<p>Having trouble imagining that world?</p> <p>"The best way to envision the sixth mass extinction is to look outside and then just imagine that three out of every four of the species that were common out there are gone," he said. "That would be a very impoverished landscape."</p> <p>It certainly would.</p>

HEADLINE	12/08 US life expectancy declines
SOURCE	http://www.usatoday.com/story/news/nation/2016/12/08/has-us-life-expectancy-maxed-out-first-decline-since-1993/95134818/
GIST	<p>U.S. life expectancy dipped by about a month last year from 2014, to 78.8 years, according to a report from the National Center for Health Statistics. It's the first decline in more than two decades. And after years of gains, U.S. life expectancy has been essentially flat for a few years, which means an inauspicious trend could be in the works.</p> <p>The decline "could be a blip, but even if it's flat, we have a real problem," Jonathan Skinner, a professor at the Dartmouth Institute for Health Policy & Clinical Practice, told USA TODAY. Skinner noted that the U.S. is spending 18% of GDP on health care.</p> <p>"If we're not getting continued improvement in life expectancy, then perhaps we should redirect some of that towards raising workers' take-home pay ... and improving educational opportunities," Skinner said.</p> <p>Gender matters. For males, life expectancy fell to 76.3 years from 76.5 years. For women, life expectancy decreased to 81.2, down about 0.1 year from 2014.</p> <p>The culprits for our declining years were increases in mortality from heart disease, chronic lower respiratory diseases, unintentional injuries, stroke, Alzheimer's disease, diabetes, kidney disease, and suicide. Not surprisingly, that group plus cancer and the flu make up the top 10 causes of death in the U.S.</p> <p>"My major concern is that we know the exact cause of the fall in life expectancy — mortality is rising across a wide variety of illnesses," Skinner said. "It's not entirely easy to figure out what to do about it."</p> <p>Heart disease and cancer are the runaway top killers. The death rate from heart disease increased almost 1%. The death rate from cancer actually fell 1.7%.</p>

SOURCE	http://www.hawaiinewsnow.com/story/34007854/tsunami-watch-issued-for-all-islands-after-80-magnitude-quake-near-solomon-islands
GIST	<p>HONOLULU (HawaiiNewsNow) - A Tsunami Watch has been issued for all Hawaiian islands after a large earthquake struck near the Solomon Islands, according to the Pacific Tsunami Warning Center.</p> <p>The quake, which struck around 7:38 a.m. HST, measured at a preliminary magnitude of 8.0, the U.S. Geological Survey said. The epicenter was approximately 40 miles west-southwest of Kirakira.</p> <p>If tsunami waves impact Hawaii, the estimated earliest arrival of the first tsunami wave would be 2:56 p.m. HST.</p> <p>Details are limited at this time, but the PTWC is investigating the threat to Hawaii.</p> <p>A Tsunami Watch usually means an earthquake may have created a tsunami, but data is still being verified. It is issued as a precaution and generally indicates that a tsunami may later impact a watch area, according to the PTWC. It may be changed to a warning, advisory or even cancellation based on further analysis.</p>

HEADLINE	12/08 Police spy-tools evolve faster than law
SOURCE	https://www.bloomberg.com/features/2016-baltimore-surveillance-project/
GIST	<p>In late October, a group of Maryland legislators met with police officials, attorneys, privacy advocates, and policy analysts to discuss creating a legal framework to govern aerial surveillance programs such as the one the Baltimore Police Department had been using to track vehicles and individuals through the city since January.</p> <p>“What, if anything, are other states doing to address this issue?” Joseph Vallerio, the committee’s chairman, asked the panel.</p> <p>“Nothing,” replied David Rocah, an attorney with the ACLU. “Because no one has ever done this before.”</p> <p>The Baltimore surveillance program broke new ground by bringing wide-area persistent surveillance—a technology that the military has been developing for a decade—to municipal law enforcement. The police department kept the program secret from the public, as well as from the city’s mayor and other local officials, until it was detailed in August by Bloomberg Businessweek. Privacy advocates, defense attorneys, and some local legislators called for the program to be suspended immediately, until the technology could be evaluated in public hearings.</p> <p>But in the three months since the public discussion began, the police have continued to use the surveillance plane to monitor large events, such as the Baltimore Marathon, and essential questions remain</p>

unanswered. The police continue to classify the program as an ongoing trial, but the private company that operates it for the police—Persistent Surveillance Systems—doesn't have a permanent contract and no specific regulations govern its operations.

Several local lawmakers have stressed the need for more oversight of the program at a time when the technology is spreading to private industry. But in the case of Baltimore, the administrative structure of the police department has complicated those efforts. Unlike most other major cities, the city of Baltimore doesn't regulate its own police; when the department was founded in the mid-19th century, it was established as a state agency, which means its oversight falls to the Maryland General Assembly.

The state legislature is in session for only three months each year, and it had adjourned before the surveillance program was revealed.

David Moon, a Maryland delegate from the Washington, D.C., suburb of Takoma Park, says he and other legislators met during the summer to try to craft legislation that would require more public transparency when police departments use StingRay devices, which are cell phone tower simulators used to track individuals via their mobile phone signals. Now, he says, the legislators want to write the law so that it also applies to aerial surveillance programs. But any such measures would have to wait until the General Assembly's 2017 session begins in January.

"One of the things we've realized in all of this is that the law—either in terms of the courts or the legislature—doesn't seem to keep up with the technology," says Moon. "We're caught in a situation where law enforcement can put new technologies into use and they just ask for permission later—and only if the media or the courts start to question what they're doing."

The Baltimore project depends on a small airplane that circles the city for up to 10 hours a day. An attached bank of cameras instantly creates a 32-square-mile photographic map, which is updated once per second. The police can fast-forward or rewind the images, tracking vehicles or individuals as they move inside the city, for hours at a time. The footage is archived and can be reviewed days or months later. Or years later—in theory, the only limit is storage capacity.

Privacy advocates balked at the notion that the police could, if they desired, compile what amounts to a permanent visual record of the city. Ross McNutt, the founder and chief executive officer of Persistent Surveillance Systems, tried to allay those concerns, saying his company's policy was to erase the imagery after 45 days. Maryland public defenders weren't calmed.

"For our innocent clients, we missed opportunities to subpoena exonerating footage collected by the spy plane," wrote Kelly Swanston, a public defender, in an op-ed in the Baltimore Sun. "For our clients who were mistreated by officers, or whose versions of the truth differed from an officer's report, we failed to corroborate the truth because we did not know that a plane had captured footage of the city."

The Baltimore Office of Public Defenders sent a letter to Police Commissioner Kevin Davis three days after the Bloomberg Businessweek article was published online, asking for clarification about the program’s policy for retaining data. Davis responded on Sept. 20 that Persistent Surveillance Systems had retained all the images since the program’s launch in January, “regardless of whether the images were provided to BPD for use in investigations.”

Andrew Vetter, chief of staff for the city’s police commissioner, told state lawmakers that because the trial surveillance program hadn’t yet been permanently adopted, the city hadn’t drafted an official data retention policy and wasn’t beholden to informal guidelines. Police spokesman T.J. Smith said the department would decide whether to adopt the program permanently only after a thorough analysis of the project was completed by the Police Foundation, a national research organization based in Washington, D.C.

The ACLU’s Jay Stanley, a senior policy analyst, points out that the field of wide-area surveillance is a growing one, and other cities could soon confront the same questions Baltimore is now facing. McNutt has said his company has no interest in increasing his company’s camera resolution beyond one pixel per person, which prevents individuals from being identified based on the images alone.

But one company’s informal promises shouldn’t be counted on as an industry standard.

HEADLINE	12/08 FBI is sued over Clinton email warrant
SOURCE	http://www.foxnews.com/us/2016/12/08/l-based-lawyer-sues-fbi-over-clinton-email-warrant.html
GIST	<p>A Los Angeles-based lawyer who gained notoriety by reclaiming Jewish-owned art looted by the Nazis has filed a lawsuit in New York against the FBI seeking information on the warrant that led to its seizure of Anthony Weiner's computer in the Hillary Clinton email case.</p> <p>E. Randol Schoenberg, a former president of the Los Angeles Museum of the Holocaust, told the Jewish Journal that his interest was drawn by a New York Times story on the FBI's warrant that was announced in the waning days of the election.</p> <p>“I thought, ‘What does that mean?’” Schoenberg, 50, told the Jewish Journal. “Normally you have to show probable cause. That’s what it says in the Fourth Amendment.”</p> <p>Schoenberg didn't see the search warrant mentioned in the media after that Times story. He decided to file a Freedom of Information Request on Nov. 9 for information on the warrant. The FBI acknowledged his request two days later.</p> <p>Federal law gives government agencies 20 days to respond to such requests.</p>

	After not receiving any more information, Schoenberg contacted a lawyer based in Manhattan who specializes in FOIA requests and filed his suit.

HEADLINE	12/08 Turkey leader renounces foreign currency
SOURCE	http://abcnews.go.com/International/wireStory/turkeys-president-renounces-us-dollar-bid-boost-lira-44059290
GIST	<p>Turkey's leader has renounced foreign currencies in favor of the ailing lira currency in keeping with his appeal to Turkish citizens to do the same, his spokesman said Thursday, as a new measure was unveiled to help struggling businesses.</p> <p>President Recep Tayyip Erdogan "exchanged all of the foreign currency in his accounts into Turkish liras," spokesman Ibrahim Kalin said.</p> <p>Last week, Erdogan had earlier urged his citizens to give up the dollar and euros at a time the economy is teetering. Erdogan called on Turkish citizens to convert savings held in foreign currencies into gold and Turkish lira to help boost the ailing currency, which recently dropped above 3.5 lira per dollar, the weakest exchange rate in more than a decade.</p> <p>Turkish citizens often hold their money in dollars, euros and gold to mitigate the risk of a rapid devaluation of their currency. Many Turkish businesses have their debts denominated in dollars.</p> <p>In the wake of Erdogan's call, small business owners have posted pictures of themselves on social media advertising free goods ranging from bread to small carpets for those who can prove the exchange of a significant dollar amount into Turkish lira.</p>

HEADLINE	12/09 Fukushima radiation reaches West Coast
SOURCE	http://www.usatoday.com/story/news/nation-now/2016/12/09/fukushima-radiation-has-reached-united-states-shores/95188478/
GIST	<p>For the first time, seaborne radiation from Japan's Fukushima nuclear disaster has been detected on the West Coast of the United States.</p> <p>Cesium-134, the so-called fingerprint of Fukushima, was measured in seawater samples taken from Tillamook Bay and Gold Beach in Oregon, according to researchers from the Woods Hole Oceanographic Institution.</p> <p>Because of its short half-life, cesium-134 can only have come from Fukushima.</p> <p>For the first time, cesium-134 has also been detected in a Canadian salmon, according to the Fukushima InFORM project, led by University of Victoria chemical oceanographer Jay Cullen.</p> <p>In both cases, levels are extremely low, the researchers said, and don't pose a danger to humans or the environment.</p> <p>Massive amounts of contaminated water were released from the crippled nuclear plant following a 9.0 magnitude earthquake and tsunami in March 2011. More radiation was released to the air, then fell to the sea.</p> <p>Woods Hole chemical oceanographer Ken Buesseler runs a crowd-funded, citizen science seawater sampling project that has tracked the radiation plume as it slowly makes its way across the Pacific Ocean.</p> <p>The Oregon samples, marking the first time cesium-134 has been detected on U.S. shores, were taken in January and February of 2016 and later analyzed. They each measured 0.3 becquerels per cubic meter of cesium-134.</p> <p>Buesseler's team previously had found the isotope in a sample of seawater taken from a dock on Vancouver Island, B.C., marking its landfall in North America.</p>

HEADLINE	12/08 Alaska Airlines cancels more local flights
SOURCE	http://komonews.com/news/local/alaska-airlines-ready-for-weather-troubles-as-sea-tac-gears-up-for-busy-winter
GIST	SEA-TAC AIRPORT, Wash. - Alaska Airlines pre-cancelled 22 flights in and out of Sea-Tac Airport as a precautionary measure on Thursday.

The airline cancelled another 60 flights from Portland International Airport due to wintry weather conditions.

Alaska admits it's had some operational issues this week, after [dozens of flights were cancelled](#) on Monday and Tuesday because [half its de-icing fleet was broken](#).

"We are ready, we have a whole team behind me of deicing trucks and deicing fluid to get us through," said Alaska Spokesperson Bobbie Egan.

But, the underlying reason Alaska is having those problems is also a blessing in disguise. Then popular airline has just 24 gates and 70 morning departures and arrivals.

There are quick turn around times with little margin for error or weather issues. Any delays cause a bigger, ripple effect.

"In prior years we would have a busy morning and then we would have some peaks and valleys and it wasn't so busy," said Egan. "Now we are constantly busy throughout the day, so we don't have that time to catch up, so that's why we need to get it right."

So, on severe weather days, Alaska will hold flights at departing airports until they can be spaced into Sea-Tac. It will also pre-cancel flights as it did on Thursday.

HEADLINE	12/08 Aleppo: tidal wave becomes a flood
SOURCE	http://www.cnn.com/2016/12/08/middleeast/aleppo-syria-assad-refugees/index.html
GIST	<p>Aleppo, Syria (CNN)As the Syrian army continues to fight its way through the old city of Aleppo, the tide of those fleeing for their lives has become a raging flood, an avalanche.</p> <p>Exhausted by the treacherous path and having endured days of airstrikes and hunger, the crossing at Maysaloon welcomed those desperate to escape.</p> <p>While the rebels struggle to hold on to war-ravaged eastern Aleppo, the relief of those who have made it to the west of the city is palpable.</p> <p>On Thursday, CNN's crew was at the Maysaloon crossing in the Agheour area as the stream of people continued to gather pace. Rebel forces controlled the Agheour area for at least 3½ years before it was retaken by Syrian government forces Tuesday. The amount of people coming out of eastern Aleppo has gone up exponentially.</p>

More and more people are continuing to make their way over the crossing, some dragging their belongings, others holding children, many of them just relieved to be out of eastern Aleppo. Many of them are feeling weak and frail. There are some who look wounded. One man who was brought out said he had been shot.

Everyone looked traumatized. They hadn't changed their clothes in days and just looked happy to be out, relieved to be out of harm's way.

At another crossing in Nakaran, the CNN crew witnessed a scene that looked apocalyptic. As the children passed through and came toward us the toll which it had taken upon them became evident. They looked malnourished, their faces were dirty, they wore clothes which looked so old. They are so hungry.

HEADLINE	12/08 Remembering an American hero
SOURCE	http://time.com/4594658/john-glenn-dead/?xid=homepage
GIST	<p>There weren't a lot of silly pictures taken of John Glenn—mostly because Glenn just didn't do silly. He did happy, of course. You don't get the crinkles he had around his sea blue eyes simply because you've got the fair, thin skin of the redhead that he was. But if the happy was there, the silly wasn't.</p> <p>Still, in 1959, when Glenn was announced as one of the original seven NASA astronauts, he knew that he'd have to abide a lot of regrettable silliness—usually at the hands of the space agency and media photographers, who would demand all manner of dreamed-up poses of the deeply American family men the astronauts were intended to be doing deeply American family things.</p> <p>So the staged picnics and happy rough-housing were all set up and shot and then, for Glenn, came the silliest image of all—of the professional fighter pilot and amateur trumpet player, lying on his couch on a lazy afternoon, practicing his playing while his wife Annie relaxes with him. As if a wife could relax while a husband blared a horn in her ear. As if Glenn would even want to put the poor woman through such a thing.</p> <p>But never mind. Glenn was a military man who never, ever received an assignment from a commanding officer without answering yes, sir and then going on to fulfill that assignment with utter professionalism. And if the commander in his new line of work sometimes was a public affairs officer, well, he'd get the yes, sir treatment too.</p> <p>Glenn, who died on Thursday at 95, was just one of seven men selected by NASA to both calm and thrill a frightened country—a country that, in the 1950s, was at nuclear dagger-points with the Soviet Union and was, by a lot of measures, losing that contest. The Soviets had the rockets—including the bruising R7 ICBM—that could be used to put a satellite in space (which they did before we did) and put an animal in space (which they did before we did, too) and to put a man in space. And oh boy, did they do that before us, launching Yuri Gagarin in April of 1961—with his Hollywood looks and cover-boy smile—on a full one-orbit lap around the Earth.</p> <p>But the real purpose of R7 and the other ordnance was to rain nuclear hellfire on Chicago and New York and Pittsburgh and Des Moines and if Gagarin's smile was sincere, it masked something closer to a leer from his country. So the seven Americans with the crisp Yankee names like Deke and Gus and Al and Gordo, with the military crewcuts that telegraphed seriousness and the mischievous smiles that telegraphed fast cars and hard drinking (important parts of the flyboy's brief) were brought in to buck the nation up.</p>

And yet it was Glenn—the least mischievous, indeed the entirely unmischievous—who became the greatest among those ostensible equals. He was the only Marine, the only man who didn't drink, the one who flew 149 combat missions in Korea and, on one occasion when his Panther fighter took two blasts of anti-aircraft fire that ripped more than 200 holes in its fuselage, radioed to his squadron commander nonchalantly, "I'm going to ease out of here," before peeling off and bringing his crippled plane to a safe landing.

But the crinkle around the eyes was there, and the genuine pleasure in the company of people was there—the kind that had him greeting the same Boy Scout troops all the other astronauts greeted and addressing the same country fairs all of the other astronauts addressed, and yet doing it in a way that suggested that, well sir, there was nothing he'd rather be doing on a beautiful day like this one. The other six, for all their efforts, could never touch that.

It was thus no surprise that while the astronauts who were selected by the NASA brass to fly the first three Mercury missions—Glenn, Gus Grissom and Al Shepard—were chosen entirely on the basis of their skill, the one who was chosen to fly the third of those missions, would need to have something more. The first two flights would be sub-orbitals—popgun lob shots into the lower reaches of space and then straight back down into the Atlantic Ocean just 17 minutes after liftoff. The third flight would be the first orbital flight—and the man who flew that would be the man who, on behalf of his nation, had finally caught the Soviets.

It would be Shepard who would get the first mission and Grissom who would get the second, and becoming the first two Americans in space would be no small thing. But it would be Glenn who got the plum assignment, Glenn who, on February 20, 1962, at the age of 40, circled the Earth three times and came back to a welcome that would make the likes of Lindbergh and Earhart look like a mere stunt flyers.

But the mission wasn't easy and in case anyone doubted the steel behind the Glenn smile, it included a moment not unlike the one he'd faced in his crippled Panther. That moment occurred when a warning light went on indicating that the heat shield on the bottom of his Mercury spacecraft had come loose, meaning the ship and its passenger would incinerate in the 3,000° F inferno of reentry. So Mission Control recommended that Glenn not jettison his retrorockets after he fired them at the beginning of the reentry, because they were strapped into place below the heat shield and might just help hold it in place.

"We are recommending that you leave the retropackage on through the entire reentry," Scott Carpenter, the Mercury astronaut who was serving as the capsule communicator, radioed up to Glenn. The capcom knew of the problem with the heat shield. The astronaut didn't.

"What is the reason for this? Do you have any reason?" Glenn asked.

"Not at this time," came the response. "This is the judgment of Cape Flight."

And Glenn, who knew enough to know that Cape Flight would never recommend such an irregular procedure, much less conceal the reason for it from the pilot, unless something might be grievously wrong with his spacecraft, responded with two words:

“Ah, roger.”

The call from Carpenter was an order. Questioning it further would not do a single thing to change the circumstances. So Glenn continued with his mission, held onto his retropackage, flew his ship home and the moment his spacecraft with its perfectly serviceable heat shield hissed into the Atlantic, he became an American giant.

For his troubles, John Glenn would be officially grounded by NASA. Like Gagarin, whose Soviet superiors also removed him from the flight rotation, he was considered too valuable an American asset to risk on a second mission.

...Glenn found another way to be of use to his country, running for public office and serving four terms as U.S. Senator from Ohio, from 1974 to 1998. And yet, to his own surprise as much as his nation’s, only a few months before his Senate career ended, he would indeed go to space again, a septuagenarian astronaut tapped by then President Bill Clinton to fly aboard a space shuttle as a payload specialist. Glenn would serve as part crew member and part experimental subject, testing the parallels between the effects of aging and the effects of zero-gravity on the human body, which are surprisingly similar.

If that mission was part national feel-goodism, what of it? So was the entire early space program. And if it was in part merely a way to pay Glenn back for having been denied a return trip to space for so long, well, it was a consolation prize he richly deserved.

Glenn lived his very long post-NASA life with both dignity and humility—not an easy thing for a man who had fought and won in the fiercely competitive world of the astronaut corps.

“Godspeed, John Glenn,” Scott Carpenter said through the Cape Canaveral microphone when the engines of Glenn’s rocket lit that day in 1962. Godspeed, Americans say again in 2016.

HEADLINE	12/09 Gunbattle in Kashmir ends; 2 killed
SOURCE	http://abcnews.go.com/International/wireStory/police-gunbattle-kashmir-ends-suspected-rebels-killed-44081201
GIST	A 42-hour gunbattle ended in Indian-controlled Kashmir on Friday after two suspected rebels were killed in the fighting, which triggered massive anti-India protests in the disputed region.

A police officer said soldiers recovered the bodies of the two suspected militants from the debris of a destroyed house in southern Arwani village.

The officer, speaking on condition of anonymity in keeping with department policy, said both of the bodies were charred beyond recognition and authorities were conducting DNA tests to ascertain their identities.

The officer said they recovered three weapons from the site.

Villagers said the house was razed to the ground as soldiers blew it up with explosives.

Police and soldiers had cordoned off Arwani on Tuesday evening, triggering a gunbattle with trapped militants in the village.

On Thursday, a young man was killed and dozens of others were injured when government forces fired bullets, shotgun pellets and tear gas to disperse rock-throwing protesters who tried to help the trapped rebels escape.

Police said the man died after being hit by a stray bullet.

Massive protests against Indian rule again erupted in Arwani and neighboring villages on Friday as thousands of Kashmiris chanted pro-militant and pro-freedom slogans.

Mobile and internet services in some areas of southern Kashmir remained suspended for a second day as authorities sought to stop activists from mobilizing anti-India protesters.

Kashmir is experiencing its largest protests against Indian rule in recent years.

HEADLINE	12/09 Egypt: explosion kills 6 police in Cairo
SOURCE	http://abcnews.go.com/International/wireStory/egypts-state-run-media-cairo-blast-kills-police-44081978
GIST	<p>An explosion on a main Cairo thoroughfare killed six police and wounded another three on Friday, in what appeared to be the deadliest attack on security forces in several months.</p> <p>The state-run MENA news agency said the explosion took place near a mosque on Pyramids road, the main avenue leading from the city center out to the Giza pyramids, which is often used by tour buses. It says the blast targeted security forces, without elaborating on what caused the explosion.</p>

	Insurgents have carried out a number of attacks in Egypt since the 2013 military ouster of an elected Islamist president. The violence has been concentrated in the northern Sinai Peninsula, but there have also been several attacks on the mainland, including in the capital.

HEADLINE	12/09 Warehouse not on fire inspection lists
SOURCE	http://abcnews.go.com/US/wireStory/firefighter-warehouse-missing-fire-inspection-records-44081774
GIST	<p>The illegally occupied Oakland warehouse where dozens of partygoers perished in a blaze does not appear in a database fire inspectors use to schedule inspections and may never have been checked for fire hazards, a firefighter with knowledge of the situation told The Associated Press.</p> <p>Oakland fire officials are supposed to annually inspect commercial buildings for fire safety, with only single-family homes and duplexes exempted, according to a city website. Officials typically pull addresses from a database to request the yearly checks, said the firefighter Thursday, who feared retribution for disclosing the information and spoke only on condition of anonymity.</p> <p>"Commercial inspections are conducted as time permits during a fire station's 24-hour shift and are not routinely scheduled on an appointment basis," the city's website explains.</p> <p>The fire department and Mayor Libby Schaaf each said Thursday they could not yet say when — or if — a fire inspector examined the warehouse.</p> <p>Fire department spokeswoman Rebecca Kozak said Thursday she didn't know whether the warehouse's address was in the database of buildings to be checked.</p> <p>Kozak said she was processing 40 to 50 public records request from news media and that confusion over the warehouse's address is slowing the process.</p>

HEADLINE	12/09 Oakland artists fear crackdown after fire
SOURCE	http://abcnews.go.com/US/wireStory/oakland-artists-fear-crackdown-ghost-ship-fire-44081810
GIST	<p>The Ghost Ship is now gone. But there's The Salt Lick, the ominously named Deathtrap and other converted warehouses where artists are holding emergency meetings behind locked metal doors.</p> <p>Oakland has long been hospitable to an underground art scene that flourished in its abandoned industrial warehouses and helped put this gritty city on the world's art map. But now its art and music underground is panicking and bracing for a crackdown.</p>

Painters, musicians and struggling artists of all types came to live and work, to perform and dance late into the night and to be surrounded by creativity.

They tolerated the exposed wiring, spotty electricity and other dangers or inconveniences of often unregulated warehouses, as a trade-off for affordable housing and studio space in one of the country's priciest housing markets.

Those now living in buildings with numerous code violations fear their lifestyles and ultimately the San Francisco Bay Area's vibrant art scene are endangered because of the safety issues exposed by the fire that killed 36 people at a dance party in the warehouse known as the Ghost Ship. Authorities are investigating whether a refrigerator or other appliances caused the fire.

"Everyone is really worried right now. This has ignited a lot of fear," said Mara Barenbaum, 32, a singer and musician who spent seven years in an artist collective.

She has held strategy sessions with other artists and helped write an open letter urging the city to protect "the vital artistic fabric of Oakland" by making buildings safe and not throwing artists out on the street.

HEADLINE	12/08 Offshore quake not on Cascadia fault
SOURCE	http://www.seattletimes.com/seattle-news/science/offshore-quake-not-on-more-dangerous-cascadia-subduction-zone/
GIST	<p>The magnitude 6.5 earthquake off the coast of Northern California Thursday morning occurred on a fault called the Mendocino Transform, not the more dangerous Cascadia Subduction Zone.</p> <p>But seismologists are keeping a close watch on the tectonically complex area, especially in light of two smaller quakes off the Oregon coast last week.</p> <p>“They’re probably unrelated,” said John Vidale, director of the Pacific Northwest Seismic Network. “We’ll just keep an eye out.”</p> <p>The Thursday quake, which struck at 6:50 a.m., originated about 100 miles west of Ferndale, near an area called the Mendocino Triple Junction, where three tectonic plates meet. It’s also near the terminuses of both the Cascadia Subduction Zone and the San Andreas Fault.</p>

	<p>The quake, which probably moved the seafloor about 3 to 6 feet, could have bumped up the stress on the Cascadia Subduction Zone slightly, Vidale said. But there's little chance it would be enough to trigger a more powerful subduction zone quake.</p> <p>"The odds probably have gone up for a little while, but just a little," Vidale said. "It's probably not enough that we will see any earthquakes as a result."</p>

HEADLINE	12/08 Inquest set for police shooting in Pasco
SOURCE	http://abcnews.go.com/International/wireStory/inquest-set-washington-state-police-shooting-mexican-44067090
GIST	<p>A coroner's inquest to shed more light into the police killing of a Mexican shot numerous times last year by three officers in the Washington state city of Pasco has been scheduled to start on Monday, officials said.</p> <p>Jury selection will begin to choose 12 jurors from a pool of 75 residents from rural Franklin County, where Pasco was the site of weeks of peaceful protests by Latinos after the Feb. 10, 2015, killing of Antonio Zambrano-Montes, County Coroner Dan Blasdel said Wednesday.</p>

	<p>Coroner's inquests are judicial proceedings to present evidence about deaths, and juries can reach conclusions and make recommendations to prosecutors. The jury's conclusions are not binding, but the public setting of the quasi-judicial proceeding could provide more details about the killing of the 35-year-old farmworker.</p> <p>"It's a means to uncover the facts of the death for the general public," Blasdel has said.</p> <p>No charges were filed against Pasco police officers Ryan Flanagan, Adam Wright and Adrian Alaniz after they shot Zambrano-Montes, who authorities said was high on methamphetamine and throwing rocks at vehicles and police just before he was killed.</p>

HEADLINE	12/08 State sues Monsanto over PCB pollution
SOURCE	http://abcnews.go.com/US/wireStory/washington-state-suing-agrochemical-giant-pcb-pollution-44072471
GIST	<p>Washington says it's the first U.S. state to sue the agrochemical giant Monsanto over pollution from PCBs. Gov. Jay Inslee and Attorney General Bob Ferguson announced the lawsuit at a news conference Thursday afternoon.</p> <p>The chemicals, polychlorinated biphenyls, were used in many industrial and commercial applications, including in paint, coolants, sealants and hydraulic fluids. PCB contamination impairs rivers, lakes and bays around the country.</p> <p>The lawsuit, which seeks potentially hundreds of millions of dollars in cleanup costs, was filed in King County Superior Court and says Monsanto long knew about the toxic dangers PCBs posed.</p> <p>Monsanto was the sole producer of PCBs between 1935 and 1979, when Congress banned them.</p> <p>The cities of Seattle and Spokane, as well as Portland, Oregon, and some California cities have also sued Monsanto over PCB pollution. In response to those lawsuits, Monsanto said PCBs were lawful when they were produced and "served an important fire protection and safety purpose."</p>

HEADLINE	12/08 Michigan 40-car pileup; 3 killed
SOURCE	http://www.livingstondaily.com/story/news/2016/12/08/30-car-pileup-reported--96-near-fowlerville/95138030/
GIST	<p>Three people were killed and 11 injured in a pileup involving up to 40 cars on Interstate 96 in Handy Township, near the Livingston-Ingham county line on Thursday.</p>

The pileup began when snow blanketed the area around 9:50 a.m., causing whiteout conditions. The snow then froze, creating treacherous traveling conditions.

“We have not yet identified the victims,” Lt. Eric Sanborn of the Livingston County Sheriff’s Office said at a 3 p.m. press conference at the county’s EMS building.

“It was very chaotic for them to get to all of the victims to assess the situation,” he added. “The accident is believed to be weather related. Alcohol does not appear to be a factor at this time.”

Sanborn could not confirm what started the chain reaction that led to the pileup, which occurred west of the Fowlerville exit and near Wallace Road.

However, he noted, the people who died were two drivers and a passenger in two separate vehicles. Those vehicles were near the beginning of the pileup, but are not believed to be what started the pileup.

HEADLINE	12/09 Dutch hospitals report data breach daily
SOURCE	https://www.deepdotweb.com/2016/12/09/dutch-hospitals-report-data-breach-almost-every-day/
GIST	<p>Dutch hospitals reported 304 separate incidents of patient data loss since January 1. According to the Authority for Personal Data (AP), the hospitals rarely encrypted the data. They also reported that the majority of the data loss occurred due to human error.</p> <p>Many data losses occurred after employees misplaced essential USB drives and other storage mediums. For example, a doctor from Antoni van Leeuwenhoekziekenhuis lost a hard drive with 800 patient records. Hackers have also accessed electronic healthcare records (EHR) through compromised email addresses.</p> <p>Women in Cyber Security (WICS), a network of women in the computer security industry, recently conducted research into how hospitals deal with security. Old, unused, and outdated credentials were constantly overlooked. This was also the case for the State Department, according to the most recent audit.</p> <p>The AP reported 4,700 data breaches in 2016; and one quarter of the breaches came from the healthcare sector. Since January 1, all organizations were required to immediately alert proper authorities upon on a serious data breach.</p> <p>“Details on the nature of the reports will not be given because of the potential traceability to individual hospitals,” a reporter said.</p>

	More than 300 different hospitals reported data loss this year. The AP spokesperson said hospitals were on high alert throughout the year. The privacy watchdog program created a “willingness to report.” That being said, EHR hacks have been at an all time high this year.

HEADLINE	12/08 Amazon.com scam hits shoppers
SOURCE	http://www.wsbtv.com/news/trending-now/amazoncom-scam-hits-shoppers-before-holidays_/474415466
GIST	<p>Holiday shoppers who use Amazon.com to buy presents for loved ones will want to pay attention to the latest scam that’s targeting consumers’ personal information.</p> <p>The scammer sends an email to a customer that appears to be from Amazon.com, stating that a recent order cannot be shipped. The email claims there has been a problem with processing and informs the customer that they won’t be able to access their account or place orders with Amazon until they confirm their information.</p> <p>A "click here" link inside email leads the customer to an authentic-looking Amazon web page to confirm the name, address and credit card information on the account. After the person enters the information and clicks on the "save and continue" button, it takes the customer to Amazon’s actual website.</p> <p>So how do you know an Amazon.com email is real or fake?</p> <p>The scam email subject line will say, "Your Amazon.com order cannot be shipped." If the "from" line in the email contains an Internet Service Provider other than @amazon.com, then the email is not from Amazon.</p>

HEADLINE	12/08 Websites check if personal info stolen
SOURCE	http://www.cbronline.com/news/cybersecurity/protection/pwned-best-hacking-websites-check-personal-information-stolen/
GIST	<p>It seems that not a day goes by without another cyber attack being discovered, or a data breach being made public by an apologetic multinational. The dark web is now a booming marketplace for the criminally minded, selling a myriad of personal information from email addresses and passwords, to credit card numbers. Attacks on Adobe, LinkedIn and MySpace are just some of the high-profile breaches which have resulted in the leak of millions of email addresses, passwords and other data to marketplaces online.</p> <p>With so many companies breached and so much data available in the dark ether, the questions you should be asking yourself is: Have I already been hacked?</p>

If you do not know the answer to this question, then you need to act now. There are a number of online services available which allow you to check if your personal information has been involved in a breach – vital tools which can help protect your digital footprint.

Here, CBR gives you the best sites to check if your personal information is safe.

[Have I been pwned?](#)

Cost: Free

Troy Hunt created Have I Been Pwned as a free resource which allows anyone to quickly check if an online account has been compromised or ‘pwned’ in a data breach. Inspired by the massive data breach which hit Adobe, Mr Hunt created the site after post-breach analysis revealed the same accounts being exposed over and over again.

The site gives users a simple interface – just enter in the address of the online account you want to check and then wait for results.

All the data on the site comes from website breaches that have been made publicly available – which some may say limits the service somewhat. The free service also only provides results for a single user-provided email address or username at a time. However, using the domain search feature – which searches for pwned accounts across entire domains – multiple breached accounts can be retrieved after verification.

[Has My Identity Been Stolen?](#)

Cost: Free

Owned by the MergerMarket Group and counting ex-senior policemen among its executive team, Has My Identity Been Stolen is a free service which allows you to check if your identity has been stolen. The service scans the internet and deep web, with a database compiled from data which has been ‘been in criminal hands and made available on the internet.’

Interestingly, Has My Identity Been Stolen prefers not to use spyders to gather results, instead employing a global network of human sources who have access to the Dark Web. Encouragingly, the service works towards the goal of preventing and reducing stolen data and personal information, capturing compromised IDs before the criminals can sell them.

The online service uses an easy interface which gives you two options – check by postcode or check by email. Once a verification code has been sent to the requested email, a search results box will tell you one of three answers:

- No records found based on search criteria to suggest identity fraud at the present time.
- At present we only have your email address. The record was discovered on dd/mm/yyyy. This has been transacted and means that you could be a target for Phishing and Spam emails in order to build your identity profile for use or future sale.

	<ul style="list-style-type: none"> • A number of records found, suggesting possible Identity fraud. The record was discovered on dd/mm/yyyy. <p>Although limited in its monitoring of only 100 dark sites, features such as searching by post code, make this a great site to visit.</p>

HEADLINE	12/08 Georgia 'mad as hell' DHS hack attempt
SOURCE	http://www.wsbtv.com/news/local/atlanta/secretary-of-state-wants-answers-from-dhs-after-apparent-breach-attempt/474347363
GIST	<p>ATLANTA - The Georgia Secretary of State is demanding answers from the Department of Homeland Security after an unsuccessful breach to the department's firewall.</p> <p>Secretary of State Brian Kemp talked exclusively with Channel 2 investigative reporter Aaron Diamant on Thursday, saying he was "mad as hell" after what he called a massive cyberattack on the agency's network Nov. 15, traced back to a United States Department of Homeland Security IP address.</p> <p>"It's outrageous to think about our own federal government is doing this to us," Kemp told Diamant.</p> <p>Kemp's office maintains Georgia's voter registration and elections data, plus corporate and professional license records.</p> <p>Kemp told Diamant that the network's firewall held up and there was no breach. But after the agency's security vendor sounded the alarm, Kemp fired off a terse letter Thursday to DHS Secretary Jeh Johnson.</p> <p>"We're demanding answers to some of these questions, you know? Are they doing this to other states? Was it authorized or not? Who ordered this? Why is it being done and why weren't we notified?" Kemp said.</p> <p>But until DHS responds, Kemp said he is not yet convinced this wasn't a politically motivated attack ordered by DHS leaders or a single rogue staffer.</p> <p>"We're waiting on answers, you know? Hopefully we'll get them, hopefully they'll be transparent, and they'll be some good answers that we can digest. But right now, we just don't know," Kemp said.</p> <p>Kemp assured Diamant that the cyberattack, government or otherwise, was not successful.</p>

HEADLINE	12/08 Turkish hackers offer prizes for attacks
SOURCE	https://www.hackread.com/turkish-hackers-hacking-tools-for-ddosing/

GIST	<p>Hackers are leaving no stone unturned in creating troubles through their social engineering antics. This time, however, they have devised a completely new and innovative technique for attacking websites.</p> <p>Reportedly, a group of Turkish hackers has created a DDoS platform luring unsuspecting individuals to join the platform and conduct DDoS attacks. The winning players receive points and they can redeem their points by winning an unlocked version of the notorious Sledgehammer hacking tool.</p> <p>This DDoS platform is dubbed as Surface Defense. The creators of this platform ask players (who mostly are other hackers) to attack any of the political websites that is listed on their list through Balyoz or Sledgehammer, which is a DDoS tool. To participate, players need to download the collaboration software of Surface Defense and get registered after which they can run this program locally on a PC. To disrupt online services, traffic is routed via Tor.</p> <p>For every ten minutes spent on the attacked website by bombarding it with fake traffic, one point will be given to the attacker. This point will then be traded with the standalone version of Sledgehammer that can be fully customized by them and sold to other hackers too.</p> <p>To maintain healthy competition among the participants, a live scoreboard is shown on the forum so that everyone is aware of the earned points. Some of the users have already made hundreds of points.</p>

HEADLINE	12/08 Piracy spikes threatening pay TV
SOURCE	http://www.infosecurity-magazine.com/news/piracy-spikes-threatening-paytv/

GIST	<p>There are more than 2.7 million advertisements on e-commerce websites, including Amazon, eBay and Alibaba for illicit streaming devices—indicating that content theft by pirates has become a full-fledged business and a formidable competitor to established pay TV operators.</p> <p>According to Irdeto, it's a true cross-channel effort, with advertisements found on social networks, including Facebook, Twitter and other prominent social media platforms. Pirates are becoming more business savvy and expanding their product marketing of illicit streaming devices. Citing data from SimilarWeb, the Irdeto report shows that the growth in global traffic resulted in more than 16.5 million visits per month to the top 100 pirate IPTV supplier websites. The US and UK led all countries with more than 3.7 million and one million site visits per month, respectively.</p> <p>The report also shows that a typical pirate supplier offers an average of 174 channels, with some pirate suppliers offering more than 1,000 channels. This content comes in at an average subscription cost of \$194.40 per year or a staggeringly low \$16.20 per month—much lower than the average US cable cost of \$103.10 per month. In some cases, despite the illegal nature of the offering, these low costs and the compelling content provided sway consumers to choose a pirate device over legal cable, satellite or OTT services.</p> <p>Typically, consumer choice comes down to content, value and convenience when selecting a service. Pirates exploit those three needs by offering services and devices that rival their legal counterparts. Without the costs of legally acquiring the rights and content, pirates are able to take valuable market share in the process.</p> <p>Also, while some consumers are aware that they are purchasing pirated content, others do not realize that the subscriptions they are purchasing are pirate operations. As pirates have grown and refined their business practices, Irdeto has seen an increase in pirates creating professional websites, technology and services, fooling some consumers into thinking they are purchasing a legal service. In addition, the top 100 pirate IPTV suppliers add credibility to their offerings by providing legitimate-looking devices powered by Android, Linux, Kodi and Roku.</p>

HEADLINE	12/07 Massive stealthy malvertising campaign
SOURCE	http://www.securityweek.com/massive-stealthy-malvertising-campaign-uncovered
GIST	<p>A stealthy malvertising campaign has been flying under the radar for the last few months, targeting millions of readers visiting popular and mainstream news sites. The campaign is notable for stealth bordering on paranoia from the threat group, probably AdGholas.</p> <p>In July 2016, Proofpoint published an analysis of a massive AdGholas malvertising campaign that it described as "using a sophisticated combination of techniques including sophisticated filtering and</p>

steganography." It added that AdGholas had ceased operation following exposure, but "the scale and sophistication of this operation demonstrate the continued evolution and effectiveness of malvertising."

Now it appears that AdGholas simply changed tactics, and within a couple of months launched a new campaign described in an ESET research paper published yesterday. In a detailed analysis, ESET doesn't name the threat actors and calls the exploit kit (EK) involved Stegano. Further background information has been provided by Malwarebytes naming the actors as AdGholas, and the EK as Astrum. Stegano and Astrum are just different names for the same EK.

What sets this campaign apart from other and earlier campaigns is the extent of its stealth. When the ad data is first delivered, the campaign uses server-side logic on the potential victim's returned computer data to decide whether to deliver a malicious banner or a clean banner. If it delivers the malicious version, the code is hidden by steganography: specifically within the parameters controlling the transparency of each pixel. The result is only a minor change to the color tone of the image, invisible to the naked eye.

The scary part of this campaign is that it requires no user interaction at any stage. If the user visits an affected news site with a vulnerable browser and vulnerable Flash (and is in one of the targeted geographical areas) then malware execution could be entirely automatic and unseen. If any of those requirements are not met, then the malicious banner simply remains dormant and its malicious code invisible.

The two banners known to ESET are both for apparent security products: Browser Defence (notice the spelling) and Broxu. The spelling fits with the targeted regions. Malwarebytes separately comments, "The interesting aspect about this malvertising campaign is that the US was not one of the targets. Instead we saw Canada, the UK, Australia, Spain, Italy, and Switzerland as the most active geolocations." Of these, Canada and the UK were the most targeted.

HEADLINE	12/08 'August' targeting retail customer service
SOURCE	https://www.scmagazine.com/phishing-malware-august-lures-customer-service-staff/article/577875/
GIST	<p>A new malware-laden phishing campaign, dubbed August, has been detected targeting customer service and managerial staff at retailers, according to a new report from Proofpoint.</p> <p>The clever ploy spreads through an email arriving in the inboxes of targeted individuals with subject lines referring to supposed purchases via the company's website. Recipients are specifically selected who are appropriate reps to deal with customer issues. The message further dupes recipients by saying more detailed information is contained in the attached document. Such subject lines as: "Help: Items vanish from the cart before checkout," and "Support: Products disappear from the cart during checkout," are used in the campaign.</p>

	<p>Should a recipient click on the link, the August malware is loaded with Word macros and PowerShell. It has capabilities to commandeer credentials and siphon off sensitive documents from the infected computer.</p> <p>The researchers said the campaign is the work of TA530, an individual or gang which they previously cited for other highly personalized targeted campaigns. The macro, too, works similarly to a previous iteration where sandbox evasion strategies are employed to load the Ursnif banking trojan, evading detection by security researchers. Of particular note in this instance, however, a Powershell command is used to "'filelessly' load the payload from a byte array hosted on a remote site," the researchers said.</p> <p>The Proofpoint researchers conclude that while this new campaign is currently targeting retail sites, its credential-stealing capabilities could easily be adapted for wider distribution.</p>

HEADLINE	12/08 Ransomware hits Vegas, rust-belt hardest
SOURCE	http://www.darkreading.com/endpoint/las-vegas-rust-belt-hit-hardest-by-ransomware-----/d/d-id/1327664?
GIST	<p>Turns out you're most likely to get shaken down by ransomware in the Las Vegas/Henderson area, which in the US has the largest number of overall ransomware detections, the most detections per individual machine, and the most detections per population, according to a new study by Malwarebytes.</p> <p>Six of the top 10 cities for ransomware detections are in the Rust Belt, including Buffalo, Cleveland, Columbus, Ohio, Detroit, Fort Wayne, Ind., and Toledo.</p>

Nima Samadi, data science analyst for Malwarebytes, says the study is based on research from July 1 through October 15, 2016. Malwarebytes detected more than 400,000 ransomware incidents in more than 200 countries, with the US experiencing the largest number of incidents - at 26% overall.

Malwarebytes' data is specifically based on detected ransomware incidents, some of which may have resulted in actual infections and others, not.

"We can theorize on why the Las Vegas area was such a hotbed for ransomware," says Samadi. "Even if they are on business, people tend to be in vacation mode, so their guard is let down, plus they are accessing the Internet on unsecured Wi-Fi networks."

Malwarebytes CEO Marcin Kleczynski says that computer users in Rust Belt states may not be as readily exposed to security education and techniques, plus those states have been hit hard by job losses and the collapse of the manufacturing base.

"People without jobs or opportunities are more prone to financial scams," he adds.

Kleczynski also points out that while high-profile cases such as last week's ransomware attack on the San Francisco Municipal Transportation Agency make the news, the more prevalent threat is from scammers sending out indiscriminate email blasts. The high-profile cases tend to be in big cities, but the Malwarebytes study found that 86% of detections occurred in cities with fewer than 250,000 residents.

HEADLINE	12/08 Phishing services reap twice the profits
SOURCE	http://www.darkreading.com/endpoint/phishing-services-reap-twice-the-profit-for-attackers/d/d-id/1327673?
GIST	<p>Everything else has gone to the cloud, so why not faux emails and their malicious payloads?</p> <p>That's the upshot of a study released this week that points to cloud-based, "phishing-as-a-service" (PhaaS), as a more lucrative technique for cybercriminals. It's a way for attackers to reduce the cost to acquire target email addresses and send out malicious content intended to generate more clicks – and it more than doubles the profit of conventional phishing attacks.</p> <p>"Compromised Web servers used in PhaaS platforms significantly lower the costs of a phishing campaign and help the cybercriminals hide their tracks," security vendor Imperva said in its new report. According to Imperva, after compiling costs for phishing pages, a spam server, a list of 100,000 email addresses, and access to compromised servers, the total cost of a phishing scam comes to about \$28 with the cloud-based approach.</p>

	<p>Phishing remains a perennially effective way to cadge logons and passwords from hapless users, In recent months, phishing emails have become a way to infect desktops and servers with ransomware, which infosec professionals continually cite as their biggest ongoing concern and defense priority.</p> <p>PhaaS is re-defining the market and can reduce costs of a standard phishing campaign to a quarter of current prices, Imperva adds. Reduced labor costs means higher profit margins, Imperva adds, and even allows novices to run multiple, simultaneous campaigns. "We can therefore predict a rising demand for PhaaS markets, since it lowers both the cost and the technology barriers," the report said.</p>

HEADLINE	12/07 Holiday gift exchange scam on Facebook
SOURCE	http://www.cbsnews.com/news/beware-of-these-holiday-gift-exchange-scams-on-facebook/
GIST	<p>Tis the season... to get scammed on Facebook.</p> <p>Two scams called the “Secret Sister Gift Exchange” and the “Secret Wine Bottle Exchange” are spreading across Facebook like wildfire, and unfortunately, users are falling for it.</p> <p>It sounds like a fun Secret Santa-like gift exchange, but it’s actually a pyramid scheme in disguise. And worse, it’s illegal, the Better Business Bureau (BBB) says.</p> <p>“While gift exchanges grow in popularity during the holiday season, BBB advises consumers to use caution when choosing one in which to participate,” the organization said in a statement. “According to the U.S. Postal Inspection Service’s gambling and pyramid scheme laws, gift chains like this are illegal and participants could be subject to penalties for mail fraud.”</p> <p>The scam “exchanges” always follow the same pattern: A Facebook users posts a status, tagging dozens of friends, asking a minimum of 6 people to participate. Friends of the user who wish to participate are then instructed to buy one bottle of wine — or other gift — valued at \$15 or more and send it to one secret wine lover. In return, participants are told that they will receive from 6 to 36 wine bottles.</p> <p>Well, chances are you won’t even get one bottle back. But there is something the scammers get: Your money and your home address.</p> <p>“This is a typical pyramid scheme,” the BBB says. “This is on Facebook instead of the old way of using letters because social media allows it to spread a lot faster.”</p>

Terror Conditions

HEADLINE	12/06 Terror Threat Snapshot: December
SOURCE	https://homeland.house.gov/press/chairman-mccaul-releases-december-terror-threat-snapshot-2/
GIST	<p>WASHINGTON, D.C. – The December Terror Threat Snapshot was released today by Homeland Security Committee Chairman Michael McCaul (R-TX). The “snapshot” is a monthly Committee assessment of the growing threat America, the West, and the world face from ISIS and other Islamist terrorists.</p> <p>Key takeaways in this month’s Terror Threat Snapshot:</p> <ul style="list-style-type: none"> • Since 9/11, the nation has seen 227 homegrown jihadist cases with a recent surge of 115 cases in 2015 and 2016 alone. ISIS’ shift in messaging—from joining the jihad in Syria and Iraq to carrying out attacks in fighters’ home countries—is likely to accelerate this trend. • Throughout the year, ISIS conducted 62 attacks, wounding 732 and killing 215 in places like the United States, France, and Belgium. The threat to Europe and the United States will persist in 2017, particularly as jihadists flee from Mosul and Raqqa. • The Iran nuclear deal—coupled with instability in Iraq, Syria, and Yemen—has reenergized Tehran’s hardliners and placed the regime in a stronger position to achieve regional hegemony. Iranian aggression, particularly in the Persian Gulf, has become routine and remains largely unopposed. If left unchecked, Tehran will continue to threaten United States’ interests at home and abroad. • The Obama Administration transferred 48 prisoners from Guantanamo Bay in 2016. The Director of National Intelligence assesses that at least 30 percent of all former Guantanamo Bay prisoners are known or suspected to have returned to terrorism following their release. As of early December 2016, 59 prisoners remain in detention.

HEADLINE	12/08 ISIS-inspired holiday season attacks
SOURCE	http://www.foreigndesksnews.com/world/middle-east/isis-inspired-jihadis-call-holiday-season-attacks/
GIST	<p>Islamic State-inspired jihadis are encouraging would-be jihadis to carry out knife attacks on the West during the upcoming holiday season.</p> <p>The Foreign Desk has obtained access to an English-language encrypted Telegram chatroom where jihadis are posting videos, guides and tutorials, ranging from knife attack infographics to bomb assembly and oddly enough, full-length tutorials on Krav Maga, an Israeli themed martial arts and self-defense technique.</p> <p>“Christmas, Hanukah and New Years Day is very soon InshaAllah. So lets prepare a gift for the filthy pigs / apes,” reads one post, below a screenshot of a pressure cooker bomb-making tutorial.</p> <p>Entitled “LM” or lone mujahid, the chat room aims to be a resource for terrorist wannabees who are looking to carry out so called ‘lone-wolf’ jihad.</p>

A pointing finger beneath the photo brings attention to suggested attack gear including a shoe bomb, suicide vests and dynamite.

There are video tutorials on how to make “ricin powder” and “explosive belt manufacturing,” and even ideas for alternative materials to use when listed items aren’t readily available. Use “nuts nails bolts etc” as an alternative to ball bearings, a post reads.

An entry from last month shows a photograph with individual headshots of the 9/11 hijackers with an empty square at the end and the caption: “Here will always be an opening for the next Lone Mujahid Hence the Blank Space in the bottom right of the picture!”

Introducing Krav Maga, the group lauds the Israeli IDF-taught martial art system as “devised by jews for the purpose of ending a fight as quick as possible.”

“K.M. is really beneficial for the Lone Mujahid is that majority of the techniques and moves are very deadly unlike most self defense styles and also deal with disarming weapons like gun knife and sticks to fighting with knives and guns.”

Additional “Hagana” (self-defense) videos are introduced with the disclaimer “videos contain music,” as ISIS put out a notice **banning music**, particularly the Western variety, at the time the Caliphate was formed in 2014.

Another infographic, with current statistics about suicide attacks, says, “Don't you think it's about time you add your score to the leader board ??.”

Alongside video of a female suicide bomber in Libya, the channel taunts viewers, “Shame on brothers who are watching doing nothing while our Sisters are ready to sacrifice for the SAKE OF ALLAH.”

Fearing deletion by Telegram Support, the group urges others in a “Special Request!” to save and spread the propaganda material before it’s taken down.

HEADLINE	12/09 Germany arrests teens over attack plot
SOURCE	http://www.foxnews.com/world/2016/12/09/germany-teens-arrested-over-suspected-extremist-attack-plan.html
GIST	<p>BERLIN – Prosecutors say two teenagers have been arrested in Germany on suspicion that they were planning an Islamic extremist attack.</p> <p>State prosecutors in Karlsruhe said the two Germans, ages 15 and 17, were arrested on Thursday. Prosecutors said the two were suspected of trying to procure firearms for a possible attack on an unidentified public facility in the Aschaffenburg area, southeast of Frankfurt.</p>

	<p>Police seized Islamic extremist propaganda, flags of the Islamic State group and cellphones. They found no firearms.</p> <p>Prosecutors said Friday there was no evidence the suspects would have been able to carry out their plan, but they were arrested on suspicion of conspiring to commit an attack. Police said they'll now investigate how serious the plan was and added that there are indications the two are mentally ill.</p>

HEADLINE	12/08 US intel blamed for missing rise of ISIS
SOURCE	http://www.washingtontimes.com/news/2016/dec/8/obama-says-us-intelligence-missed-the-rise-of-the-/
GIST	As President Obama prepares to leave office without having destroyed the Islamic State, he’s selling the notion that U.S. intelligence agencies failed to warn him promptly about the rise of the terrorist group more than two years ago, an assertion raising howls of incredulity in some quarters.

The White House pushed that version of events Thursday, pointing to an assessment by Director of National Intelligence James R. Clapper in September 2014 that U.S. intelligence agencies “underestimated” the Islamic State, also known by the acronyms ISIL and ISIS.

“Those are the facts,” said White House press secretary Josh Earnest.

Mr. Obama told CNN in an interview that aired late Wednesday, “The ability of ISIL to not just mass inside of Syria, but then to initiate major land offensives that took Mosul [in Iraq], for example, that was not on my intelligence radar screen.”

But some critics are pointing to claims that the administration ignored warning signs from intelligence sources and allies such as Kurdish leaders about the Islamic State’s growing strength after 2011, when Mr. Obama withdrew all U.S. troops from Iraq.

Sherkoh Abbas, chairman of the Kurdistan National Assembly of Syria, said in 2014, “We approached the State Department about ISIS before ISIS was in the headlines, and we were ignored.”

In September 2014, Fox News reported that Mr. Obama had been told about the rise of the terrorist group in his classified daily intelligence briefings throughout the previous year.

In February 2014, Lt. Gen. Michael Flynn, then director of the Defense Intelligence Agency, briefed the Senate Armed Services Committee on the emerging threat of the Islamic State.

The group “probably will attempt to take territory in Iraq and Syria to exhibit its strength in 2014, as demonstrated recently in Ramadi and Fallujah, and the group’s ability to concurrently maintain multiple safe havens in Syria,” Gen. Flynn testified. “Since the departure of U.S. forces at the end of 2011, [Islamic State] has exploited the permissive security environment to increase its operations and presence in many locations and also has expanded into Syria and Lebanon to inflame tensions throughout the region.”

Jay Sekulow, general counsel at the American Center of Law and Justice and a frequent Obama critic, called the president’s latest assertions “unbelievable.”

HEADLINE	12/08 Fusion center network in OSU incident
SOURCE	http://abcnews.go.com/US/suspected-terror-attack-osu-launched-nationwide-dragnet-information/story?id=44056937
GIST	Brian Quinn was having a routine morning chat with a highway patrolman on Nov. 28 when one of his staffers interrupted: “Gentlemen, you need to know of a developing situation.”

“There’s been a police shooting on the [Ohio State University] campus involving a car versus a crowd,” the staffer told Quinn, who runs the Ohio Strategic Analysis and Information Center in Columbus.

It was the start of a nationwide dragnet for information.

“We don’t know where the shoe may be falling next,” said Mike Hartzler, another senior homeland security official in Ohio.

It’s a tough question to answer quickly, especially with new technologies allowing criminals and terrorists to increasingly operate in secret. So local authorities have developed a network of “fusion centers” in states and cities across the country, all looking to help each other compile, vet and swap information related to threats in their areas.

“There’s no nation on this planet that has this capability right now,” said Mike Sena, president of the National Fusion Center Association, which represents and promotes the 78 fusion centers across the country. But what does this capability really look like, and why is such information-sharing so important?

The OSU incident offers a glimpse.

At 9:53 a.m. on Nov. 28, OSU police officer Alan Horujko fatally shot the man who had just driven a car into several people and slashed bystanders with a knife.

Soon after – while law enforcement officers from 28 different agencies were still trying to secure the area and help victims – authorities picked up a driver’s license with the name of a possible suspect: Abdul Razaq Ali Artan.

The name was sent to Quinn’s fusion center. Within minutes, a young female analyst uncovered what may be one of the most important pieces of evidence in the case.

“I think I found something. Take a look at this,” Quinn recalled the analyst calmly telling him.

She had somehow found Artan’s Facebook page, even though it was under the name “Abdi Razaq.” She could see he left behind a digital diatribe against U.S. foreign policy, declaring in his final post, “If you want us Muslims to stop carrying [out] lone wolf attacks, then make peace with [ISIS].”

The analyst forwarded the Facebook page to other fusion centers in Ohio and pushed it to federal partners, including the Joint Terrorism Task Force, or JTTF, in Columbus, where FBI agents, city police officers and others sit side-by-side to investigate federal terrorism cases.

Hartzler, director of the Greater Cincinnati Fusion Center, responded to the analyst’s email with a simple message: “Great work.”

His own analysts in Cincinnati had jumped in to help their counterparts 100 miles away.

In years past, when fusion centers weren't as readily able to help in the middle of a crisis, finding a Facebook account like that "would have been done hours later," according to Quinn. "Nowadays we're able to get that information while officers are still on the scene."

Shortly after 11 a.m., reports online and then on cable news erroneously began to say Artan used a machete to slash some of his victims. In fact, Artan had used a butcher knife. That may seem like a minor difference, but law enforcement officials worried the false reporting could have serious consequences.

In those minutes and hours after an attack, authorities scramble to determine whether there may be a bigger plot, and they look to see if similar attacks are underway elsewhere.

So "whether it's a knife or a machete or a sword or a gun all matter to those who are investigating," according to Rick Zwyer, executive director of homeland security for the state of Ohio.

In addition, if investigators on the ground falsely hear there was a machete used, they may waste precious time looking for a weapon that never existed, officials said.

State and local officials relied on a fusion-center database known as "SitRoom" to correct the rumors and "misinformation," as Quinn put it. They also used the database to provide situational updates, including the latest on whether other people were involved in the attack and the status of those who were injured.

"The details do matter," Zwyer insisted.

By early Monday afternoon, authorities had pieced together a preliminary picture of the attack and the suspect.

"The people who should have been talking to each other were talking to each other," said Deputy Chief Michael Woods, the head of the Columbus Police Department's Homeland Security Division, who had raced to the scene at OSU.

At 11:29 a.m., the FBI issued a "situational news notification" to personnel throughout the agency, indicating that the FBI's Counterterrorism Division in Washington was getting more involved in the case.

The JTTF in Columbus would begin to take on a more prominent role, too. After all, JTTFs are investigators who "deal with the classified side of things," while fusion centers act more like researchers and messengers, according to one JTTF member outside of Columbus.

When an attacker might be on the move, the “JTTF isn’t where you want to send real-time info about what car the suspect is driving” or where the suspect may be heading next, the JTTF member said. “That’s more of the fusion center role.”

Around 1 p.m., a staffer at one of the Ohio fusion centers typed Artan’s full name into the “SitRoom” database, hoping agencies in other cities and states would see it and check their own records for leads. Not a single fusion center, however, responded with more information.

Artan had flown under the radar. He didn’t come up in FBI files either, and authorities were becoming increasingly convinced that he didn’t have any accomplices.

Federal officials began to shift their concerns to something else: copycats.

At 3 p.m. on Nov. 29 – the day after Artan’s assault – senior U.S. officials held a half-hour conference call with thousands of federal, state and local law enforcement personnel across the country, updating them on the investigation and stressing vigilance.

Artan was undoubtedly inspired by Al Qaeda and ISIS propaganda, FBI Deputy Assistant Director Steve Hersem told those on the line, according to one official who was listening to the call.

“This is another unfortunate example of what we’ve been talking about for the past year and a half,” said FBI Assistant Director Kerry Sleeper, the head of the FBI’s Office of Partner Engagement, according to a second official on the call.

“Make sure that any suspicious activity threats are reported immediately” to JTTFs or fusion centers, and make sure “you are appropriately monitoring social media” for calls to violence, the FBI officials stressed to those listening, sources said.

According to one source, Sleeper concluded with this thought: “Unfortunately with the holidays coming, we’re probably going to be talking again in the near future.”

HEADLINE	12/08 Chaos at UN distribution center in Mosul
SOURCE	https://www.yahoo.com/news/chaos-desperation-first-un-aid-distribution-inside-mosul-183927382.html
GIST	<p>MOSUL, Iraq (Reuters) - Iraqi police fired shots in the air and threatened to whip crowds with a hose as residents tried to overrun the first distribution of aid by UN agencies inside Mosul on Thursday, a scene of the desperation in areas retaken from Islamic State.</p> <p>The distribution aimed to reach 45,000 people in total at several locations but showed the challenges for humanitarian organizations seeking to alleviate acute shortages of water, food and fuel.</p>

As word of the aid spread, residents of the Zuhour neighborhood flocked to a boys' primary school chosen as a distribution point -- men queuing to one side of the main entrance and women on the other. The men queued in relative order, but the women crushed against the door and tempers flared.

"We can't push them back because they are women," said one of the policemen controlling the crowd. Another brandished a section of hose, threatening to hit anyone who tried to push through. Eventually, the organizers began to let people in small groups, but could not control the flow as hundreds surged forward against just a handful of men pushing to close the gate.

They burst through, and began climbing over the walls and pushing in through the exit until the police, firing shots in the air and wielding long sticks, managed to regain control.

Aid agencies have struggled to respond to the humanitarian crisis in Mosul, where residents have largely remained in their homes despite the fighting.

The sound of small arms fire was audible from several kilometers away, where Iraqi forces are fighting to dislodge the militants from the eastern side of the Tigris River that bisects Mosul. Even in areas recaptured by government forces, mortars fired by insurgents still kill and maim residents.

HEADLINE	12/08 Iraq troops pull out of Mosul hospital
SOURCE	http://www.reuters.com/article/us-mideast-crisis-iraq-idUSKBN13X1EI
GIST	<p>Iraqi troops who briefly seized a Mosul hospital believed to be used as an Islamic State base were forced to withdraw from the site, but managed to establish a base for army tanks nearby after days of fierce back-and-forth fighting, residents said.</p> <p>The rapid advance into the Wahda neighborhood where the hospital is located marked a change of tactic after a month of fighting in east Mosul in which the army has sought to capture and clear neighborhoods block by block.</p> <p>The ferocity of the fighting reflects the importance of the army's push from southeast Mosul towards the center, their deepest advance in a grueling seven-week offensive to crush Islamic State in Iraq's largest northern city.</p> <p>The soldiers seized Salam hospital, less than a mile (just over 1 km) from the Tigris river running through central Mosul, on Tuesday but pulled back the next day after they were attacked by six suicide car bombs and "heavy enemy fire", according to a statement by the U.S.-led coalition supporting Iraqi forces.</p>

	Coalition warplanes, at Iraq's request, also struck a building inside the hospital complex from which the militants were firing machine guns and rocket-propelled grenades, it said.

HEADLINE	12/08 Effort to stem homegrown extremism
SOURCE	http://hosted.ap.org/dynamic/stories/U/US_FIGHTING_EXTREMISM_BOSTON?SITE=AP&SECTION=HOME&TEMPLATE=DEFAULT&CTIME=2016-12-08-14-17-03
GIST	<p>BOSTON (AP) -- A federally backed effort to stem the rise of homegrown extremists is underway in Massachusetts, nearly three years after the White House announced the initiative on the first anniversary of the Boston Marathon bombings that killed three people and injured hundreds.</p> <p>The state last week selected three organizations to use \$210,000 in federal money earmarked for the pilot effort, The Associated Press learned through a request of public records. The organizations propose initiatives meant to keep youths from being drawn to the violent messages of extremist groups.</p> <p>United Somali Youth - which operates out of New England's largest mosque, the Islamic Society of Boston Cultural Center - was awarded \$105,000 to help Somali, African and Middle Eastern youths build critical life skills through afterschool programs, counseling, college readiness assistance and other efforts.</p> <p>Empower Peace, which was founded by a communications and marketing executive, was given \$42,000 to teach high schoolers statewide how to develop social media campaigns promoting tolerance and combating bigotry so that they can produce them at their schools.</p> <p>And the 20-year-old Somali Development Center has been given \$63,000 to better integrate Somali immigrants and refugees into the broader community.</p> <p>Abdirahman Yusuf, the center's executive director, said the Boston-area Somali community hasn't had to grapple with terrorist recruitment like those in other parts of the country but needs to take preventative steps.</p> <p>"With events like Columbus, Ohio, it's important for our community to have a dialogue," he said, referring to last month's car and knife attack at Ohio State University by a Somali-born student that is being investigated as possible terrorism. "This is a relevant issue."</p>

HEADLINE	12/08 Official: 50K ISIS militants killed to date
SOURCE	http://www.newsmax.com/Newsfront/ISIS-Fighters-Killed/2016/12/08/id/762944/
GIST	A senior military official for the first time says the U.S.-led coalition has killed 50,000 Islamic State militants in the last two years in Iraq and Syria.

	<p>The official said it was a conservative estimate, but it's a bit more than what others have stated before. U.S. leaders have expressed reluctance to disclose specific numbers, and note that ISIS has been able to replace fighters rapidly, particularly early on.</p> <p>In August, Lt. Gen. Sean MacFarland said about 45,000 combatants have been taken off the battlefields.</p> <p>The official says coalition airstrikes could be more aggressive in places like Mosul, where Iraqi troops are battling to retake the city, but civilian casualties are a risk. The official wasn't authorized to discuss the matter publicly so spoke on condition of anonymity.</p>

HEADLINE	12/08 Russia's robot war against ISIS
SOURCE	https://www.thesun.co.uk/news/2356121/russian-special-forces-take-out-isis-terror-boss-with-the-help-of-machine-gun-toting-robot/
GIST	<p>THIS is the dramatic moment Russian special forces ‘take out’ a powerful ISIS boss during a highly-coordinated raid using a weaponised robot.</p> <p>Footage shows troops close in on the secret compound sheltering Rustan Aselderov – known as Abu Muhammad – and four of his brutal henchmen at the weekend.</p> <p>Soldiers are seen unloading their weapons on the building before launching two explosive devices inside. A small weaponised robotic vehicle is then seen moving in to finish the job. The robot’s mounted machine gun blasts holes through the side of the property as soldiers secure the area.</p> <p>The video has been seen by thousands online with most praising the troops for their bravery.</p> <p>Russia's FSB security service said Sunday it had killed an "emir" of ISIS in a raid in the volatile Caucasus region. The FSB said in a statement that "among the neutralised bandits was the head of the Caucasus region's branch of the Islamic State Rustam Aselderov, and four of his close associates."</p> <p>The FSB said that 35-year-old Aselderov was involved in blasts in the southern Russian city of Volgograd which killed 34 in 2013. He was fighting for another insurgent group at the time. It also linked him to twin car blasts in Dagestan in 2012 that killed 14 and injured at least 120.</p> <p>The FSB said he also organised a foiled attack that was to take place on Moscow's Red Square on New Year's Eve 2010 involving two female suicide bombers.</p> <p>The warlord pledged allegiance to ISIS leader Abu Bakr al-Baghdadi in December 2014, the first major militant to do so in the Caucasus.</p>

	<p>ISIS named Aselderov, also known as Sheikh al-Qadari, the governor of a new Caucasus province.</p> <p>The FSB said a joint operation with the interior ministry had cornered Aselderov and his fighters in a private house in the city of Makhachkala, where they found "automatic weapons and a large amount of ammunition and explosives."</p> <p>The Russian North Caucasus is one of the major sources of foreign jihadists fighting in Syria and Iraq.</p>

HEADLINE	12/09 Bomb blasts kill 10 northeast Nigeria
SOURCE	http://hosted.ap.org/dynamic/stories/A/AF_NIGERIA_BOKO_HARAM?SITE=AP&SECTION=HOME&TEMPLATE=DEFAULT&CTIME=2016-12-09-07-20-34
GIST	YOLA, Nigeria (AP) -- Police say two explosions have ripped through a market in northeast Nigeria's Madagali town, and a survivor says they killed at least 10 people.

Boko Haram Islamic extremists are blamed for the attack Friday morning on the edge of the group's Sambisa Forest stronghold, which Nigeria's military has been bombing ahead of ground assaults.

Since the military has dislodged the extremists from towns and villages this year, the insurgents have been attacking soft targets.

HEADLINE	12/08 EU report: 1,500 fighters have returned
SOURCE	https://www.thesun.co.uk/news/2358068/isis-news-latest-europe-terrorists-attacks/
GIST	<p>MORE than 1,500 jihadists fighting with ISIS in Syria and Iraq have returned to Europe with orders to “carry out attacks”, an EU report warned.</p> <p>An estimated 5,000 European ISIS fanatics went to Syria and Iraq and 15 to 20 per cent of them died on the battlefield.</p> <p>Around 30 to 35 per cent have returned with “specific missions”, while the other half remained in the battle theatre – which amounted to between 2,000 and 2,500 Europeans.</p> <p>This means as many as 1,750 may have returned, based on the percentages listed in the report which EU counter-terrorism coordinator Gilles de Kerchove will present to EU interior ministers on Friday.</p> <p>The report said there were two types of ‘foreign terrorist fighters’ returning.</p> <p>“There are largely two categories of returnees: those in the majority who will drift back and those who will be sent back on specific missions, which are of most concern.”</p> <p>The report even claimed some European women and children born or raised in the so-called caliphate declared by ISIS in Iraq and Syria could pose a security threat as they may have been radicalised.</p> <p>Without giving figures, it said some returnees have been convicted and serving prison sentences, while others are being monitored and some are free in their communities.</p> <p>It recalled that foreign fighters who have returned to Europe have staged both foiled and successful attacks, including the slaughter in Paris in November last year and this year’s bombings in Brussels in March.</p> <p>Both sets of attacks were claimed by ISIS, which is also known by its Arabic acronym Daesh.</p> <p>“There is also a significant foreign terrorist fighter contingent with Daesh in Libya which might attempt to use their nationality or family connections to return to Europe,” the report said.</p>

	It said returnees were keeping in touch with Daesh in the Middle East via social media and increasingly turning from mainstream Twitter to the encrypted one-to-one messaging service Telegram.

HEADLINE	12/08 Diplomats foresee Iran, ISIS rise
SOURCE	http://www.cbsnews.com/news/as-aleppo-falls-diplomats-foresee-iran-and-isis-rise/
GIST	<p>Aleppo's fall will not end the brutal Syrian war, but now diplomats are haggling over "which direction it falls," according to a Western diplomat. That is, will it be a bloodbath? Or can Secretary of State John Kerry negotiate a pathway out for the civilians trapped alongside the besieged U.S.-backed rebels in the eastern portion of the city? And could there be a way to call the surrender of that city something other than "defeat" for the rebels?</p> <p>"We are witnessing talks that are trying to manage Syrian and Russian victory," a European diplomat said on the condition of anonymity due to sensitivity of the ongoing diplomacy.</p> <p>Kerry spoke with Russian Foreign Minister Sergey Lavrov Wednesday and again Thursday about one potential arrangement. Technical advisers are set to meet this weekend in Geneva on the matter, while Kerry convenes with a number of high-ranking diplomats in Paris this weekend.</p> <p>Expectations are low, but the cost of failure is quite high.</p>

“A cessation of hostilities is urgently needed to protect the civilians from Iran and the regime,” former Syrian diplomat Bassam Barabandi told CBS News. He has worked closely with the US-backed political opposition.

Without a pause in violence and a pathway out of the siege, thousands of civilians holed up alongside the estimated 9,000 or so Free Syrian Army fighters will face near-certain slaughter at the hands of the notoriously brutal Iranian proxy forces fighting on behalf of the militarily-weak Assad regime. The Shiite militias supported by Tehran are feared even more than Hezbollah, Iran’s Revolutionary Guard -- or even than Assad’s own troops.

Western and Arab diplomats tell me they are keenly aware that a defeat of the moderate rebels leaves the “bleeding edge” of Sunni extremism – ISIS- and al Qaeda-backed groups seeking to control Syria – up against the “bleeding edge” of extremist Shiite militias hired by Iran. The concern is that this violent churn will draw more fighters to extremist groups rather than to the moderate rebels who have been nominally supported by the U.S. Kerry has made similar arguments to Moscow in the past.

A further worry for the Syrian opposition is that the Assad regime’s victory will solidify Iran’s hold on Syria, which is the crown jewel of Tehran’s sphere of influence in the Middle East. Despite Donald Trump’s outreach to Assad’s sponsors in Moscow, the Syrian opposition is now hoping that the Trump administration will view Syria as worthy of action, in order to push back against Iran. The Syrian opposition is in contact with the incoming administration.

“The statements from the elected president Trump and his cabinet toward Syria are promising: he makes it crystal clear his coming administration will defeat ISIS and Iran,” Barabandi said. “Both are enemies of Syrian people, and both helped the regime.”

A clearly frustrated Western diplomat sheepishly admitted that both the U.S. and Europe had focused too much on pressuring Moscow and too little on squeezing Iran to stop the violence in Syria. The diplomat attributed that hesitation to American concern over disrupting the nuclear deal with Iran, and European concern about squandering investment opportunities resulting from that agreement. Iran sanctions are “more third-rail” than Syria sanctions because of the commercial interests, this diplomat said.

HEADLINE	12/08 MI6: terrorism immediate threat to UK
SOURCE	http://www.bbc.com/news/uk-38250432
GIST	<p>The scale of the terrorism threat to the UK is "unprecedented", the head of MI6 has said.</p> <p>Alex Younger said UK intelligence and security services had disrupted 12 terrorist plots since June 2013.</p> <p>He said many of the threats came from ungoverned spaces in the Middle East - namely Iraq and Syria.</p> <p>Mr Younger also warned that "hybrid warfare", which included cyber-attacks and subverting democracy, was becoming an "increasingly dangerous phenomenon".</p> <p>"The risks at stake are profound and represent a fundamental threat to our sovereignty," he said. "They should be a concern to all those who share democratic values."</p> <p>In his first public speech since taking up the post of "C", he warned of the impact of Russia's alliance with President Bashar al-Assad in Syria in casting all opponents of President Assad as terrorists.</p> <p>"I believe the Russian conduct in Syria - allied with that of Assad's discredited regime - will, if they do not change course, provide a tragic example of the perils of forfeiting legitimacy," he said.</p> <p>The Islamic State group had exploited the situation in Syria to fortify its stronghold in the region and wage a war on the West, he told journalists at MI6 headquarters in London.</p> <p>He added that IS, also known as Isil or Daesh, had a "highly organised external attack planning structure" which was plotting attacks against the UK and its allies "without ever having to leave Syria".</p>

Suspicious, Unusual

HEADLINE	12/08 Students sickened by carbon monoxide
SOURCE	http://komonews.com/news/local/poulsbo-middle-school-students-sickened-by-possible-carbon-monoxide
GIST	<p>POULSBO, Wash. - Emergency crews have responded to Poulsbo Middle School after receiving reports that some students have become ill with suspected carbon monoxide poisoning.</p> <p>Jody Matson of the Poulsbo Fire Department said a nurse called for the emergency response after several students began displaying symptoms of carbon monoxide exposure.</p> <p>Matson said less than a dozen students in two classrooms had become sick. About 30 students are being evaluated as a precaution.</p> <p>It's likely that none of the students will need to be hospitalized, she said. But several ambulances responded to the school in case they might be needed.</p> <p>The affected students were in a shop classroom and an art classroom.</p>

HEADLINE	12/08 Lawmakers file bill to split Wash. state
SOURCE	http://q13fox.com/2016/12/08/lawmakers-file-bill-to-split-washington-in-half-create-new-state-in-east-called-liberty/
GIST	<p>SPOKANE, Wash. -- Some conservative Eastern Washington lawmakers want to split the state in two, creating a new state east of the Cascade Range known as "Liberty."</p> <p>The idea is contained in House Joint Memorial 400, sponsored by Republican state Reps. Matt Shea and Bob McCaslin of Spokane Valley and David Taylor of Moxee.</p> <p>The Spokesman-Review says the idea of splitting from liberal Western Washington has been proposed numerous times in past decades.</p> <p>Spokane City Council President Ben Stuckart calls it a terrible idea.</p> <p>The Legislature can't split the state in half. The bill asks the president and Congress to do that.</p> <p>Congress hasn't created a new state out of an existing state since the Civil War, when West Virginia wanted to stay with the Union and was carved out of Virginia.</p>

HEADLINE	12/08 Seattle police chase ends in deadly crash
-----------------	--

SOURCE	http://q13fox.com/2016/12/08/one-man-dead-after-police-chase-on-lake-city-way/
GIST	<p>SEATTLE – One man is dead and another is in the hospital after a police chase ended in a crash on Lake City Way early Thursday morning, police said.</p> <p>Police were still trying to untangle what, exactly, happened.</p> <p>Officers who responded to a domestic violence call at around 4 a.m. heard shots fired once they got in the area. They soon saw a silver Honda speed away, and pursued it.</p> <p>The Honda hit a railing on Lake City Way, and one man was ejected. He was pronounced dead on arrival.</p> <p>The other man was sent to Harborview Medical Center. He was found crawling out of the car’s trunk, police said.</p> <p>The car hit a power pole and several parked cars.</p> <p>Police weren’t sure if the shots fired were related to the domestic-violence call.</p>

HEADLINE	12/07 Spy agencies targeted phones on planes
SOURCE	https://www.yahoo.com/tech/us-uk-spies-targeted-airline-passengers-mobiles-report-063219247.html
GIST	<p>Paris (AFP) - American and British spy agencies have tried to intercept data from passengers' mobile phones on commercial airlines including Air France, media reports say, citing documents from US whistleblower Edward Snowden.</p> <p>The French flag-carrier was an early target of the US National Security Agency and its British counterpart GCHQ as it was seen as a terrorist mark and it carried out tests in 2007 on allowing the use of mobile phones on its aircraft.</p> <p>"The use of mobile phones with internet connections in the sky gave rise to the creation of specific programs at the NSA and GCHQ," said Le Monde, which has access to Snowden's archive in partnership with news website The Intercept.</p> <p>While it is not normally possible to make phone calls on planes, some carriers allow passengers to connect to a cabin wifi, allowing them to use internet-based functions on their handsets.</p> <p>In 2012, at least 27 airlines allowed passengers to use mobile phones on board, including British Airways, Aeroflot, Etihad, Cathay Pacific, Lufthansa and Singapore Airlines.</p>

But Air France was "such a symbol of the surveillance of communications on board airlines that the British spy agency used a drawing of one of their planes to illustrate how the interception worked."

Asked about the British and American surveillance claims, Air France told Le Monde: "We are visibly not the only ones to have been targeted and we know absolutely nothing about these practices."

According to the report, internal documents from the two agencies describe the results of the "impressive" programs -- codenamed "Thieving Magpie" and "Homing Pigeon" -- which allowed data to be collected "almost in real time".

In order to spy on a telephone, all that was needed was that the aircraft be cruising at an altitude above 10,000 feet, the report said.

Secret aerial stations on the ground could intercept the signal as it transited through a satellite.

"The simple fact that the telephone was switched on was enough to give away its position, the interception could then be cross-referenced with the list of known passengers on the flight, the flight number, and the airline code to determine the name of the smartphone user," the report said.

The mobile phone's function could also be disrupted, it said, forcing the user to input their access codes and thereby allowing the British spy agency to intercept the information.

HEADLINE	12/08 Japan tags dementia sufferers w/barcode
SOURCE	https://www.yahoo.com/news/lost-found-japan-tags-dementia-sufferers-barcodes-093502777.html
GIST	<p>A Japanese city has introduced a novel way to keep track of senior citizens with dementia who are prone to getting lost -- tagging their fingers and toes with scan-able barcodes.</p> <p>A company in Iruma, north of Tokyo, developed tiny nail stickers, each of which carries a unique identity number to help concerned families find missing loved ones, according to the city's social welfare office.</p> <p>The adhesive QR-coded seals for nails -- part of a free service launched this month and a first in Japan -- measure just one centimetre (0.4 inches) in size.</p> <p>"Being able to attach the seals on nails is a great advantage," a city worker told AFP. "There are already ID stickers for clothes or shoes but dementia patients are not always wearing those items."</p> <p>If an elderly person becomes disorientated, police will find the local city hall, its telephone number and the wearer's ID all embedded in the QR code.</p>

	<p>The chips remain attached for an average of two weeks -- even if they get wet -- the official said, citing recent trials.</p> <p>Japan is grappling with a rapidly ageing population with senior citizens expected to make up a whopping 40 percent of the population around 2060.</p>

HEADLINE	12/09 WADA: 1,000 Russia athletes in doping
SOURCE	http://www.usatoday.com/story/sports/olympics/2016/12/09/more-than-1000-russian-athletes-involved-doping-mclaren-report-says/95187710/
GIST	<p>A second investigation commissioned by the World Anti-Doping Agency has revealed that more than 1,000 athletes were involved in a state-run doping system in Russia.</p> <p>The findings come in the second part of an investigation by Canadian lawyer Richard McLaren, who announced the results of his inquiry in London on Friday.</p> <p>His second report – which comes after WADA extended his mandate in July – confirmed the findings of the first report while revealing more about a system of covering up tests that was refined over time.</p> <p>“The results of the forensic and laboratory analysis initiated by my team established the conspiracy that was perpetrated between 2011 and 2015,” McLaren said. “It is impossible to know how deep and how far back a conspiracy goes. For years, international sports competitions have unknowingly been hijacked by the Russians. Coaches and athletes have been playing on an uneven field. Sports fans and spectators have been deceived.”</p> <p>Most notably, he said more than 1,000 Russian Olympians and Paralympians – in summer and winter sports – were identified “as being involved in or benefiting from manipulation to conceal positive doping tests.”</p>

HEADLINE	12/08 Dallas pension system suspends access
SOURCE	http://www.dallasnews.com/news/dallas-city-hall/2016/12/08/dallas-police-fire-pension-board-ends-run-bank-stops-154m-withdrawals
GIST	<p>The Dallas Police and Fire Pension System's Board of Trustees suspended lump-sum withdrawals from the pension fund Thursday, staving off a possible restraining order and stopping \$154 million in withdrawal requests.</p> <p>The system was set to pay out the weekly requests Friday. Pension officials said allowing the withdrawals would leave them without the liquid reserves required to sustain the \$2.1 billion fund.</p>

	<p>"Our situation is currently critical, and we took action," board chairman Sam Friar said.</p> <p>Pension officials and many police and firefighters have blamed Dallas Mayor Mike Rawlings for forcing the latest run on the bank. Dozens of retirees rushed to request withdrawals after Rawlings filed a lawsuit Monday to stop the withdrawals.</p> <p>By then, more than \$500 million had already gushed from the fund since the board proposed benefit cuts in August.</p> <p>Rawlings told a crowd gathered Thursday afternoon at a Dallas Regional Chamber that "the bleeding has stopped. We can turn this ship around."</p> <p>The crowd responded with cheers after the mayor's announcement of the board's decision. At the pension board meeting, the mood was more somber.</p> <p>Council member Philip Kingston, a board trustee, said the mayor "unquestionably" forced the pension board's hand. He said Thursday was "the worst day I've had in public office."</p> <p>"Unfortunately, financially, this had to happen," he said.</p> <p>Kingston said the tough decision will be worth it if it means the pension, which is hurtling toward insolvency within the next decade or so, can be saved.</p>

HEADLINE	12/09 NASA's black women in 'computer pool'
SOURCE	http://www.cnn.com/2016/12/09/us/hidden-figures-nasa-trnd/index.html
GIST	<p>By the time NASA was preparing to send John Glenn to space for the historic Mercury-Atlas 6 mission computers were used to calculate launch conditions.</p> <p>It wasn't long before then that the space agency and its predecessor, the National Advisory Committee for Aeronautics, used "computers in skirts" to do all the number-crunching.</p> <p>That's right: humans, namely women, comprised the workforce known as the "Computer Pool" before the arrival of electronic data processors, aka, computers in the 1960s. Black women played a crucial role in the pool, providing mathematical data for NASA's first successful space missions, including Glenn's pioneering orbital spaceflight.</p> <p>Their work barely earned a mention in pop culture space tributes until this year, thanks to a best-selling novel and a forthcoming film that's getting major Oscar buzz.</p>

"Hidden Figures," starring Taraji P. Henson, Octavia Spencer, Janelle Monáe, tells the story of three women from the pool. The film is based on Margot Lee Shetterly's bestselling book by the same name, which spans several decades and characters at Langley.

Henson stars as Katherine Johnson, the 2015 National Medal of Freedom recipient who calculated the trajectory for America's first trip to space with Alan Shepherd's 1961 mission; Spencer as Johnson's supervisor, Dorothy Vaughan; and Monáe as Mary Jackson, who rose from mathematician to engineer to the mentor for women and minorities.

A pivotal scene in the film features Glenn. Johnson's work was held in such high regard in its time that Glenn, who died on Thursday, was aware of it. Computers were so new that even people at NASA were skeptical of them, and Glenn requested that Johnson personally confirm its calculations before his trip three times around Earth.

A day and a half later she proved the computer right.

Considered more patient and detail-oriented than men (and they could be paid less), the first women were hired in 1935 to do the integral but time-consuming work of reading, calculating and plotting test data to free up engineers for research projects.

Following an executive order prohibiting racial discrimination in the defense industry, Langley Memorial Aeronautical Laboratory, NACA's main research center, began recruiting black people with college degrees in the 1940s for the computer pool. For years the women occupied a segregated wing, "West Area Computing," and used separate facilities. But there was no denying the value of their contribution.

In interviews ever since, Johnson has resisted taking full credit for the work. As she said in a 2010 interview, "We always worked as a team. It's never just one person."

HEADLINE	12/09 Alabama inmate ‘reacts’ during execution
SOURCE	http://www.nbcnews.com/storyline/lethal-injection/alabama-inmate-coughs-heaves-13-minutes-execution-n693906
GIST	<p>ATMORE, Ala. — A man who killed an Alabama convenience store clerk more than two decades ago was put to death Thursday night, in an execution that required two consciousness tests as the inmate heaved and coughed 13 minutes into the lethal injection.</p> <p>Ronald Bert Smith Jr., 45, was pronounced dead at 11:05 p.m., about 30 minutes after the procedure began at the state prison in southwest Alabama.</p> <p>Smith was convicted of capital murder in the Nov. 8, 1994, fatal shooting of Huntsville store clerk Casey Wilson. A jury voted 7-5 to recommend a sentence of life imprisonment, but a judge overrode that recommendation and sentenced Smith to death.</p> <p>Smith heaved and coughed repeatedly, clenching his fists and raising his head at the beginning of the execution. A prison guard performed two consciousness checks before the final two lethal drugs were administered. During the first one, Smith moved his arm. He slightly raised his right arm again after the second consciousness test.</p> <p>The meaning of those movements will likely be debated. One of Smith's attorneys whispered to another attorney, "He's reacting," and pointed out the inmate's repeated movements.</p> <p>The state prison commissioner said he did not see any reaction to the consciousness tests.</p>

HEADLINE	12/08 India: pilots lied being low on fuel
SOURCE	https://www.bloomberg.com/news/articles/2016-12-08/impish-pilots-crying-wolf-over-fuel-raises-india-air-safety-risk
GIST	<p>Pilots of at least three Indian flights, including one operated by market leader IndiGo, lied to air traffic controllers about being short on fuel to get priority landing at an airport, according to an investigation by the country’s aviation safety regulator.</p>

	<p>The incident occurred on Nov. 30, when pilots of an IndiGo plane radioed traffic controllers at Kolkata airport the jet was running out of fuel and it should be allowed to land, bypassing more than half a dozen aircraft waiting in queue. An Air India Ltd. aircraft, ahead of IndiGo, also claimed the same after listening to the conversation, while another plane operated by SpiceJet Ltd. also followed suit, the investigation showed.</p> <p>None of the aircraft ran the risk of an empty tank, and all of them had enough jet fuel to fly to an alternative airport and attempt at least two landings, or to circle around Kolkata for half an hour, a senior official at the Directorate General of Civil Aviation told reporters in New Delhi, asking not to be identified citing rules.</p> <p>Airport congestion is increasingly becoming a serious issue in India -- the fastest growing major aviation market in the world -- as carriers struggle to maintain their on-time performance, a key selling point to low-cost customers. The average time an aircraft spends circling before it can land in Mumbai during peak hours is about 45 minutes to an hour, versus 25 minutes for Singapore and zero for Qatar, according to Dubai-based Martin Consulting LLC.</p> <p>The pilots of the three aircraft were being “naughty,” and posed a serious threat to preparations when an actual incident of fuel shortage occurs, the official said. The IndiGo aircraft was carrying Mamata Banerjee, the chief minister of West Bengal state, whose political party raised the issue in parliament, saying her life was threatened. The pilots of all three flights have been suspended.</p>

HEADLINE	12/09 Japan doubles Fukushima cleanup cost
SOURCE	http://abcnews.go.com/Technology/wireStory/japan-doubles-cost-estimate-fukushima-cleanup-44080823
GIST	<p>A cost estimate to clean up Japan's wrecked Fukushima nuclear plant has doubled to nearly 22 trillion yen (\$190 billion), with decommissioning costs expected to continue to rise, according to a government panel Friday.</p> <p>The estimate raises the decommissioning part of the total costs to 8 trillion yen (\$70 billion) from the current 2 trillion (\$17.5 billion) because of surging labor and construction costs. Panel officials said the numbers could still grow as experts learn more about the damage to the plant's reactors and determine fuel removal methods.</p> <p>Costs for compensation, decontamination of the area and waste storage have also grown significantly. The plant suffered multiple meltdowns following the March 2011 earthquake and tsunami. Officials said its decommissioning will take several decades.</p>

HEADLINE	12/08 Everett lab fined for 38 monkey deaths
-----------------	---

SOURCE	http://www.seattletimes.com/seattle-news/science/usda-fines-everett-lab-185000-for-38-monkey-deaths/
GIST	<p>The USDA has fined an Everett animal-research laboratory \$185,000 and suspended its license for at least a month, after 38 monkeys died — many during shipment from Asia to Everett and a facility in Houston.</p> <p>A decision and order spelling out the fine against SNBL USA, which sells lab animals and conducts medical testing on primates and other species, was filed Dec. 2 with the U.S. secretary of agriculture.</p> <p>SNBL’s license to operate as a dealer under the federal Animal Welfare Act will be suspended beginning Dec. 22, the document says. Under the order, the license can be reinstated after 30 days if inspections show the company is properly caring for its animals.</p> <p>Between the time the USDA’s original complaint was filed in September and the settlement this month, agency inspectors documented the deaths of two additional monkeys at the Everett lab.</p> <p>The November inspection report was sent to The Seattle Times by Stop Animal Exploitation Now, an activist group that seeks to “liberate” animals from laboratories, and People for the Ethical Treatment of Animals (PETA).</p> <p>PETA criticized the fine as “a drop in the bucket” for a company like SNBL, which is a subsidiary of Japan-based Shin Nippon Biomedical Laboratories. “SNBL is a dirty player in an ugly business and PETA urges federal agencies ... to cancel all contracts with the company so that our taxes aren’t supporting this misery,” said a statement from Kathy Guillermo, PETA’s senior vice president of laboratory investigations.</p>

HEADLINE	12/07 Issaquah well tests positive for PFOS
SOURCE	http://www.kiro7.com/news/local/pfos-found-in-testing-well-near-eastside-fire-and-rescue/474093932
GIST	<p>The city of Issaquah is trying to find out how the contaminant PFOS, perfluorooctane sulfonate, is getting into the groundwater.</p> <p>A new report points to the property where Eastside Fire and Rescue's headquarters is located as a likely source.</p> <p>Eastside Fire and Rescue says it is working as quickly as possible to address the concern but thinks there are likely other sources in the community as well.</p> <p>PFOS was once an ingredient in firefighting foam used on petroleum fires. It was the industry standard but was phased out more than a decade ago.</p>

	<p>The presence of PFOS 31 times above the EPA's advisory benchmark made the city temporarily shut down one of its wells and then add an extensive filtration system.</p> <p>The water has been monitored and is safe.</p> <p>The city hired Geosyntec Consultants to investigate the source and the company issued a report to the city. The results will be shared with the City Council on Dec. 19.</p> <p>KIRO-7 obtained that 158 page report from the city of Issaquah. According to the study by Geosyntec Consultants, the level of PFOS found in a testing well not far from Eastside Fire and Rescue headquarters had a level of PFOS that was 31 times higher than the EPA advisory limit. According to the report, it was 2,200 parts per trillion when the advisory amount from the EPA is 70 parts per trillion.</p>

HEADLINE	12/09 Corruption Index: most corrupt nations
SOURCE	http://www.ibtimes.co.uk/what-are-most-corrupt-countries-world-1595572
GIST	<p>Every year, an estimated \$1trn is paid in bribes, with around \$2.6trn stolen annually through corruption. Although definitive statistics are impossible because of the nature of the crime, it is believed that around 68% of countries worldwide have a serious problem with corruption.</p> <p>Here are the most corrupt countries, according to the latest Corruption Perceptions Index.</p>

1st: North Korea and Somalia (joint)

Earlier this year, the BBC reported huge cases of corruption and voter intimidation in the parliamentary elections in Somalia, with some candidates offering bribes of up to £1m to secure votes.

Although North Korea suffers large-scale corruption, South Korea has its problems too. In November, a scandal emerged surrounding the South Korean president Park Gun-hye, who is accused by prosecutors of being involved in a scheme to pressure major companies to donate millions of dollars to funds controlled by a close friend.

2nd: Afghanistan

In Afghanistan, one of the world's poorest countries, millions of dollars that should have gone on reconstruction have been reportedly misused or stolen, undermining efforts to sustain peace. In 2010, nearly \$1bn disappeared from Kabul Bank, after businessmen and politicians carried out a Ponzi scheme in which deposits were stolen instead of invested.

3rd: Sudan

After decades of war and political instability, Sudan faces high levels of corruption, which exist in pretty much every section of its economy.

4th: Angola and South Sudan (joint)

In Angola, a country rich with oil and diamonds, nearly three-quarters of the population (70%) live on \$2 a day or less and around one in six children die before the age of five. According to Transparency International, however, not everyone is suffering – the president's daughter is a billionaire, having made her fortune from the diamond and telecoms business.

5th: Iraq and Libya (joint)

In May, a Transparency International survey found nearly one in three citizens who tried to access basic public services in the Middle East and North Africa paid a bribe. Of around 11,000 adults across nine countries and territories, 61% of people thought that the level of corruption had gone up in the last year.

6th: Haiti, Guinea-Bissau and Venezuela (joint)

In Venezuela, government funds are mismanaged, stolen or spent on companies linked to power. In one case, a journalist working with Transparencia Venezuela found least 400 tonnes of medicines had been left to expire in storage between 2010 and 2014, instead of being distributed to medical facilities in a country that lacks basic medical equipment.

7th: Eritrea, Syria, Turkmenistan and Yemen (joint)

In Syria, corruption has helped finance violent extremist groups and aided them with recruitment. Earlier this year, French officials placed Syrian President Bashar al-Assad's uncle – Rifaat al-Assad – under

investigation for corruption and money laundering, alleging he acquired wealth and a property empire in France through embezzlement and corrupt schemes.

8th: Uzbekistan

One of the most corrupt countries in the world is Uzbekistan, where the crime penetrates all levels of the business and society. Bribes impact court decisions, extortion is common among the police and the enforcement of anti-corruption laws is weak.

9th: Burundi, Cambodia and Zimbabwe (joint)

Corruption and human rights abuses have been evident in Burundi since President Pierre Nkurunziza's decision to run for a third term in July, which sparked violence including assassinations, arrests, torture of government critics and escalating attacks by anti-government forces. The government has shut down nearly all private media and increased surveillance of citizens.

10th: Chad, Democratic Republic of Congo, Myanmar (joint)

Myanmar, or Burma, experienced more than 40 years of military rule, but it is experiencing political and economic reforms. However, the military is still influential in politics, the media are still restricted and corruption is still a major challenge.

HEADLINE	12/08 Suspect Georgia officers shooting dead
SOURCE	http://abcnews.go.com/US/wireStory/reward-info-officer-shooting-raised-50000-44058357
GIST	<p>A man suspected of fatally shooting a Georgia police officer and wounding another is dead, authorities said Thursday after a SWAT team stormed a home where a tipster had told police the suspect was hiding.</p> <p>The manhunt for 32-year-old Minquell Lembrick ended a day after a gunman killed Americus police Officer Nicholas Smarr and critically wounded Officer Jody Smith of Georgia Southwestern State University. Both officers were shot as they responded to a domestic disturbance call in Americus, a rural city 130 miles south of Atlanta. The shooting happened near campus, prompting university officials to place the school on lockdown.</p> <p>Police identified Lembrick as a suspect in the shootings and offered a \$70,000 reward for information leading to his capture. The SWAT team was dispatched to the house in Americus after authorities received a tip, said Georgia Bureau of Investigation spokeswoman Nelly Miles.</p> <p>SWAT officers emerged from the home a short time after entering, and police said the manhunt was over.</p> <p>"It's confirmed that the suspect is dead," Americus police spokeswoman Phyllis Banks told The Associated Press.</p>

	She gave no further details, including whether police shot Lembrick or found him dead. Americus Police Chief Mark Scott planned a news conference Thursday afternoon.

HEADLINE	12/08 Pirates prey on Venezuela fishermen
SOURCE	http://abcnews.go.com/International/wireStory/pirates-preying-venezuelan-fishermen-industry-unravels-44051935
GIST	<p>Pirates are terrorizing the coastal state of Sucre (Venezuela), once home to the world’s fourth-largest tuna fleet and a thriving fishing industry.</p> <p>That trade has collapsed, along with virtually every industry across Venezuela. Gangs of out-of-work fishermen prey upon those who still venture out into the open sea, stealing their catch and motors, tying them up, throwing them overboard, and sometimes shooting them. The robberies have taken place daily this year, and dozens of fishermen have died.</p> <p>"People can't make a living fishing anymore, so they're using their boats for the options that remain: smuggling gas, running drugs and piracy," said Jose Antonio Garcia, leader of the state's largest union.</p> <p>Venezuela's once booming oil economy is on its knees under socialist President Nicolas Maduro. In the low-lying western ranching region, cattle are dying for lack of feed. The mineral-rich states to the east no longer produce metal. In the agricultural heartlands, farmers wait in food lines to buy the crops they once</p>

grew before fertilizer ran out. Across the petroleum belt, rigs and refineries are silent, and this month has seen the rise of gas lines in a country with the world's largest oil reserves.

Here on the coast, the catch is down to less than a third of the 120,000 tons of tuna Venezuela produced in 2004. In June, Sucre was the epicenter of food riots that swept through the country. Punta de Araya families got through the summer by eating "dog soup," a broth made from seawater and the small fish that are usually thrown back.

HEADLINE	12/08 Georgia: 2nd officer dies after being shot
SOURCE	http://www.foxnews.com/us/2016/12/08/second-georgia-officer-dies-injuries-after-shooting-suspect-found-dead.html
GIST	<p>A second Georgia police officer died Thursday, a day after being shot alongside a fellow officer who was a lifelong friend, and the hunt for the suspected gunman ended when a SWAT team found the fugitive dead -- apparently by his own hand -- inside a home where he was hiding.</p> <p>Officer Jody Smith initially clung to life after being gravely wounded Wednesday when the university campus officer went to help his friend, Americus Officer Nicholas Smarr, respond to a 911 call of a domestic dispute at an apartment in rural Americus, about 130 miles south of Atlanta.</p> <p>Both men were shot. Smarr was killed and Smith was airlifted in critical condition to a hospital in Macon. The university that employed Smith announced Thursday evening that he had died.</p> <p>"Officer Smith showed extreme bravery in the line of duty as he responded to a call for backup," Georgia Southwestern University President Charles Patterson said in a statement.</p> <p>News of Smith's death came a few hours after the hunt for the suspected gunman ended.</p> <p>Police offered a \$70,000 reward for information leading to the capture of 32-year-old Minquell Lembrick. A telephone tip Thursday morning sent them to a home where a tipster said the suspect was hiding, Georgia Bureau of Investigation spokeswoman Nelly Miles said.</p> <p>SWAT officers emerged from the home shortly after entering. Americus Police Chief Mark Scott told a news conference they found Lembrick's body inside. He said the first officers on scene heard a gunshot inside before the SWAT team arrived.</p> <p>Lembrick died from "what appeared to be a self-inflicted gunshot wound," Scott said, adding the man was positively identified as Lembrick.</p>

HEADLINE	12/09 Actor arrested after TSA freak-out
SOURCE	http://www.wfaa.com/news/crime/actor-judge-reinhold-released-from-jail-after-love-field-arrest/366476199
GIST	<p>DALLAS - A seemingly humbled 'Judge' Reinhold was released from jail early Friday after being arrested for disorderly conduct at Love Field.</p> <p>Reinhold was arrested Thursday afternoon at Dallas Love Field for disorderly conduct. Dallas police say they were called to the airport at 1:15 p.m. after Reinhold refused to submit to a screening.</p> <p>According to a source at Dallas Love Field, Reinhold became belligerent when chosen for a second TSA screening. The source said he took his shirt off and used explicit language.</p> <p>Reinhold was charged with disorderly conduct and booked into the Lew Sterrett Justice Center. As he was escorted by police into the jail, he talked to media.</p> <p>"Thanks for the exposure guys," he said. "Glad you're here."</p>

HEADLINE	12/09 Germany: arrest for explosion at mosque
SOURCE	http://abcnews.go.com/International/wireStory/suspect-arrested-explosion-mosque-germany-44081988
GIST	<p>German authorities have arrested a man suspected of setting off homemade explosive devices outside a mosque and a conference center in Dresden in September.</p> <p>Prosecutors said the 29-year-old man from Dresden was arrested on Thursday. They said Friday that authorities also seized objects that could be used to make explosives, and that DNA evidence linked the suspect to the blasts.</p> <p>The entrance of the Fatih Camii mosque was damaged in the explosion on Sept. 26. An imam with his wife and two sons were inside at the time, but weren't hurt.</p> <p>The second device exploded shortly afterward on a terrace between a hotel and a conference center.</p> <p>The explosions came a few days before events marking Germany's national day in Dresden, where the anti-Islam PEGIDA movement is based.</p>

HEADLINE	12/09 Killing at rehab center 1st violent incident
SOURCE	http://abcnews.go.com/US/wireStory/killing-youth-rehab-center-1st-violent-incident-44081983

GIST	<p>The youth treatment center where police say a teenager brutally killed a staff member while trying to escape is a working cattle ranch in southern Utah that hasn't previously had any major violations with the state or violent incidents.</p> <p>Police and officials at the Turn-About Ranch near the tiny town of Escalante, Utah, aren't saying what behavioral problems led the 17-year-old suspect from Arizona to the treatment center, but the website says they don't take kids who have shown aggressive, psychotic or suicidal behavior.</p> <p>The center, does however, offer help to kids with anger issues. The center accepts boys and girls ages 13-17 for some 20 different diagnoses ranging from sleep disorder and diabetes to bipolar and personality disorder.</p> <p>The ranch is in good standing with the state licensing office and hasn't had any major violations, said Department of Human Services spokeswoman Allie Jurkatis. She said it has been licensed for a number of years, but couldn't say exactly how long. The ranch's website says it's been in operation for 25 years.</p> <p>Jurkatis said officials are investigating this week's incident to see if there were any violations, while also looking to see what the agency can learn from this to prevent future incidents.</p> <p>The teenager is in police custody, but has not yet been charged, said Garfield County Sheriff James Perkins. He says the teen will likely be charged with murder and could be prosecuted as an adult because he is almost 18. His name has not been released because of his age.</p>

HEADLINE	12/08 Court reinstates DUI convictions 2 drivers
SOURCE	http://www.seattletimes.com/seattle-news/crime/state-highest-court-reinstates-dui-convictions-of-2-drivers-not-warned-about-pot/
GIST	<p>OLYMPIA — The state Supreme Court has unanimously reinstated the drunken-driving convictions of two people who argued that the results of their breath tests should have been thrown out.</p> <p>Judith Murray and Darren Robison were each convicted of DUI for failing alcohol breath tests in Snohomish County, but had their district-court convictions overturned by higher courts. The Court of Appeals found that before the drivers agreed to submit to a breath test, state troopers failed to warn them about the consequences of having certain concentrations of marijuana compounds in their blood.</p> <p>The Supreme Court said Thursday that made little sense. The breath test is unable to measure THC concentrations, and the justices said it was therefore reasonable for the troopers to omit reference to marijuana from the warnings Murray and Robison received.</p> <p>THC, or tetrahydrocannabinol, is the main psychoactive compound in cannabis.</p>

HEADLINE	12/08 Car-stealing 'mystery device' uncovered
SOURCE	http://www.foxnews.com/auto/2016/12/08/car-stealing-mystery-device-uncovered.html
GIST	<p>The National Insurance Crime Bureau (NICB) has gotten hold of a “mystery device” that thieves have been spotted on security cameras using to electronically open and start cars.</p> <p>The organization says that it obtained it through an outside security expert who purchased it overseas. It describes it as a “relay attack” unit that was originally designed for manufacturers to test the security of their wireless systems, but it and others like it have made their way into criminal hands, and handmade versions have also been discovered.</p> <p>It is actually two devices working together. The first intercepts the signal from a nearby proximity key fob, either being carried by someone or left in a car, and transfers it to the other, which can then be used to open the lock and start the vehicle.</p> <p>The NICB tested it, with approval, in several situations that included car dealerships, a car auction and on its own employee’s vehicles. It tried it on 35 different vehicles from a variety of brands and was able to open 19 and start and drive away in 18 of those. After the ignitions were turned off, the device was able to restart 12 of the 18 cars. It didn’t provide a detailed list of makes and models that were affected by the device, but did point out that the four 2017 Chevrolet models it tried were immune.</p> <p>Since it leaves no trace of the method of entry or ignition, the NICB is warning drivers to be wary of anyone around when using these types of keys, and not leaving them behind in the car. It also points out that if you give access to your key fob to someone, including a parking valet, they can potentially use a unit like this to skim the codes and then enter or steal the car later on.</p>

HEADLINE	12/08 Man arrested for rifle on college campus
SOURCE	http://www.king5.com/news/crime/man-with-gun-in-guitar-case-on-seattle-central-college-campus-arrested/366499479
GIST	<p>A former Seattle Central College student was arrested late Wednesday for bringing a firearm on campus.</p> <p>A school spokesperson confirms the 34 year-old man was arrested in the north end of the Broadway Edison building Wednesday afternoon around 4:30 p.m. He was allegedly carrying an assault rifle inside a guitar case. The spokesperson says he made no threats, but police trespassed him from the school.</p>

According to Seattle Police, a witness contacted campus security and was aware that he sometimes stores and carries a rifle inside a guitar case. The man lives in a homeless encampment in South Seattle, and was booked for possessing a dangerous weapon in a school facility, and a felony warrant.

The college president sent a letter out to staff and students with some of the details, reminding students that no firearms are allowed on campus with the exception of weapons carried by police and military personnel who are performing their duties.

HEADLINE	12/08 State Dept. updates Mexico travel warning
----------	---

SOURCE	http://www.ibtimes.com/mexico-safe-tourists-us-state-department-updates-travel-warning-citing-violence-2457523
GIST	<p>The State Department warned U.S. citizens Thursday about the risks of travel in Mexico in light of organized crime activity in certain parts of the country, citing homicides, kidnappings, carjackings and robberies in several Mexican states.</p> <p>The updated travel warning said the risk of violence was less in resort areas and tourist destinations than in border areas or along trafficking routes.</p> <p>Mexico enlisted its military, seen as less corrupt than police organizations, to fight organized crime a decade ago but has failed to improve the country's security substantially, the Mexico Daily News said Tuesday. The situation is complicated by vigilante groups that instead of fighting organized crime have been committing crimes of their own.</p> <p>Homicides increased 900 percent this year compared to 2015, and organized crime has spread to areas previously untouched by the violence, the report said.</p> <p>“Gun battles between rival criminal organizations or with Mexican authorities have taken place on streets and in public places during broad daylight,” the State Department said. “The Mexican government dedicates substantial resources to protect visitors to major tourist destinations and has engaged in an extensive effort to counter criminal organizations that engage in narcotics trafficking and other unlawful activities throughout Mexico.</p> <p>“There is no evidence that criminal organizations have targeted U.S. citizens based on their nationality.” The warning barred U.S. government personnel from patronizing casinos, sports books or other gaming establishments in Coahuila, Durango, Zacatecas, Aguascalientes, San Luis Potosi, Nuevo Leon, Tamaulipas, Jalisco, Colima and Nayarit states, and recommended nonessential travel be deferred.</p>

HEADLINE	12/08 Social workers fleeing troubled system
SOURCE	http://features.crosscut.com/foster-care-crisis-social-workers
GIST	<p>Tanya Copenhaver followed in her father's and grandmother's footsteps by becoming a social worker for Washington state's Children's Administration, a difficult but fulfilling calling she never expected to give up.</p> <p>During 15 years of working in the foster care system, on a job considered among the hardest in the state, she worked her way up to supervisor. But even with a master's degree and a management position, the single mom struggled to pay rent and daycare. She and her daughter ate at her mother's house to save money.</p>

Last year, Copenhaver finally left the vocation she cherished to take a post at a Pierce County hospital – with a 30 percent pay raise.

“I loved my job,” Copenhaver said. “Even after 15 years I didn’t feel burnt out, and I still have a passion for the work. But I left because I couldn’t support myself and my daughter on my salary as a supervisor.”

Copenhaver’s decision has been mirrored by many state social workers, who say they were driven away by lousy pay, a toxic workplace climate and excessive workloads, InvestigateWest discovered in a lengthy investigation for KCTS 9 and Crosscut.

Turnover among Children’s Administration social workers runs at 20 percent a year statewide and has been as high as 30 percent in King County, the state says. That drains the agency of collective knowledge, distracts managers with constant hiring and training, and hampers its ability to help vulnerable foster children and their families. And all of that ends up costing the state – and therefore the taxpayers.

The churn has a huge and potentially devastating impact on kids’ futures. According to one prominent study from Wisconsin, a child whose case is overseen by one worker has a 75 percent chance of being placed in a permanent and stable home within a year. Those odds drop to 18 percent when a child goes through two caseworkers in a year, and they plummet to a low of 0.1 percent with six or seven case managers. Yet some foster parents told InvestigateWest that kids they’ve cared for have gotten a new caseworker every month in some cases.

“They’re cycling through workers so quickly, it’s terrible for the workers, the management, and the kids and foster parents who are having to deal with a new person,” said Lauren Hubbard, a Seattle foster mom. “We changed workers with our adopted daughter four times within a month.”

Caseloads are often two or three times the recommended level, leaving workers too busy to support foster parents, which contributed to a loss of nearly one in five foster homes between 2008 and 2015. That only adds to the system’s woes, as social workers are then forced to babysit children in their offices all day and even stay up all night watching them in hotels.

The state’s inadequate funding of foster care and low salaries for social workers are contributing to the high turnover.

The Children’s Administration has only now clawed its way back to its budget’s pre-recession levels eight years ago. In constant dollars, which takes inflation into account, the budget is still less, at \$1.18 billion, including \$661.9 million of state funding.

During the recession, the administration lost about 16 percent of its workforce, or 467 employees, which exacerbated the problems, as those who remained had to cover for those who left. Meanwhile, the number

of children entering foster care has increased amid the opioid crisis, after reaching historic lows around 2012.

Salaries for child-welfare social workers – many of whom have master’s degrees – start at \$34,284 a year, or \$16.42 an hour, and top out at \$58,548, or \$28.04 an hour. And the top salary is more than \$20,000 less than the same position at a place like Western State Hospital, said Sean Dannen, the general government strategic campaign coordinator for the Washington Federation of State Employees.

Workers in high-cost areas like King County are paid the same as those in less expensive parts of the state. They also have the same workloads as counterparts in the rest of the state, even though the Puget Sound region’s infamous traffic jams can keep them out much longer for their mandated home visits.

Social workers interviewed by InvestigateWest – most of whom requested anonymity due to fear of retaliation by the state for speaking out – tell of a toxic and punitive environment, with an increasing number of investigations into their actions. One said it has become a rite of passage to be under investigation in King County. There’s a systemic lack of appreciation, they say, and the job itself is traumatic enough without the added stress of the department’s negativity and the constant fear of being investigated.

HEADLINE	12/08 Imagine a world without giraffes
SOURCE	http://www.cnn.com/2016/12/08/world/sutter-giraffe-extinction/index.html
GIST	<p>(CNN)It's the tallest land-based mammal in the world. Its construction-crane neck, toothpick legs, knocked knees and two-story stature make it an awkwardly lovable favorite of children's book authors and cartoonists. This animal brings an odd sort of wonder to the savannahs of Africa.</p> <p>But perhaps it's best for us to start imagining a world without the humble giraffe.</p> <p>The International Union for Conservation of Nature on Thursday up-listed this goofy creature -- known for its craning neck, which helps it reach tree-top leaves its competitors can't -- to its "vulnerable" status, meaning the animal is at high risk for extinction.</p> <p>It moves up from the category called "least concern."</p> <p>The reason: a sharp 36% to 40% decline in giraffe populations in recent decades. In 1985, the group said, there were as many as 163,452 giraffes. Now the estimate is 97,562.</p> <p>This puts the giraffe in good company. The elephant, the orangutan, certain bees, coral -- so many of the Earth's mind-blowingly cool creatures face extinction risk these days. If poaching rates continue, some fear African elephants will be extinct in 20 years.</p>

	<p>Having trouble imagining that world?</p> <p>"The best way to envision the sixth mass extinction is to look outside and then just imagine that three out of every four of the species that were common out there are gone," he said. "That would be a very impoverished landscape."</p> <p>It certainly would.</p>

HEADLINE	12/08 US life expectancy declines
SOURCE	http://www.usatoday.com/story/news/nation/2016/12/08/has-us-life-expectancy-maxed-out-first-decline-since-1993/95134818/
GIST	<p>U.S. life expectancy dipped by about a month last year from 2014, to 78.8 years, according to a report from the National Center for Health Statistics. It's the first decline in more than two decades. And after years of gains, U.S. life expectancy has been essentially flat for a few years, which means an inauspicious trend could be in the works.</p> <p>The decline "could be a blip, but even if it's flat, we have a real problem," Jonathan Skinner, a professor at the Dartmouth Institute for Health Policy & Clinical Practice, told USA TODAY. Skinner noted that the U.S. is spending 18% of GDP on health care.</p> <p>"If we're not getting continued improvement in life expectancy, then perhaps we should redirect some of that towards raising workers' take-home pay ... and improving educational opportunities," Skinner said.</p> <p>Gender matters. For males, life expectancy fell to 76.3 years from 76.5 years. For women, life expectancy decreased to 81.2, down about 0.1 year from 2014.</p> <p>The culprits for our declining years were increases in mortality from heart disease, chronic lower respiratory diseases, unintentional injuries, stroke, Alzheimer's disease, diabetes, kidney disease, and suicide. Not surprisingly, that group plus cancer and the flu make up the top 10 causes of death in the U.S.</p> <p>"My major concern is that we know the exact cause of the fall in life expectancy — mortality is rising across a wide variety of illnesses," Skinner said. "It's not entirely easy to figure out what to do about it."</p> <p>Heart disease and cancer are the runaway top killers. The death rate from heart disease increased almost 1%. The death rate from cancer actually fell 1.7%.</p>

HEADLINE	12/08 Large earthquake near Solomon Islands
-----------------	--

SOURCE	http://www.hawaiinewsnow.com/story/34007854/tsunami-watch-issued-for-all-islands-after-80-magnitude-quake-near-solomon-islands
GIST	<p>HONOLULU (HawaiiNewsNow) - A Tsunami Watch has been issued for all Hawaiian islands after a large earthquake struck near the Solomon Islands, according to the Pacific Tsunami Warning Center.</p> <p>The quake, which struck around 7:38 a.m. HST, measured at a preliminary magnitude of 8.0, the U.S. Geological Survey said. The epicenter was approximately 40 miles west-southwest of Kirakira.</p> <p>If tsunami waves impact Hawaii, the estimated earliest arrival of the first tsunami wave would be 2:56 p.m. HST.</p> <p>Details are limited at this time, but the PTWC is investigating the threat to Hawaii.</p> <p>A Tsunami Watch usually means an earthquake may have created a tsunami, but data is still being verified. It is issued as a precaution and generally indicates that a tsunami may later impact a watch area, according to the PTWC. It may be changed to a warning, advisory or even cancellation based on further analysis.</p>

HEADLINE	12/08 Police spy-tools evolve faster than law
SOURCE	https://www.bloomberg.com/features/2016-baltimore-surveillance-project/
GIST	<p>In late October, a group of Maryland legislators met with police officials, attorneys, privacy advocates, and policy analysts to discuss creating a legal framework to govern aerial surveillance programs such as the one the Baltimore Police Department had been using to track vehicles and individuals through the city since January.</p> <p>“What, if anything, are other states doing to address this issue?” Joseph Vallerio, the committee’s chairman, asked the panel.</p> <p>“Nothing,” replied David Rocah, an attorney with the ACLU. “Because no one has ever done this before.”</p> <p>The Baltimore surveillance program broke new ground by bringing wide-area persistent surveillance—a technology that the military has been developing for a decade—to municipal law enforcement. The police department kept the program secret from the public, as well as from the city’s mayor and other local officials, until it was detailed in August by Bloomberg Businessweek. Privacy advocates, defense attorneys, and some local legislators called for the program to be suspended immediately, until the technology could be evaluated in public hearings.</p> <p>But in the three months since the public discussion began, the police have continued to use the surveillance plane to monitor large events, such as the Baltimore Marathon, and essential questions remain</p>

unanswered. The police continue to classify the program as an ongoing trial, but the private company that operates it for the police—Persistent Surveillance Systems—doesn't have a permanent contract and no specific regulations govern its operations.

Several local lawmakers have stressed the need for more oversight of the program at a time when the technology is spreading to private industry. But in the case of Baltimore, the administrative structure of the police department has complicated those efforts. Unlike most other major cities, the city of Baltimore doesn't regulate its own police; when the department was founded in the mid-19th century, it was established as a state agency, which means its oversight falls to the Maryland General Assembly.

The state legislature is in session for only three months each year, and it had adjourned before the surveillance program was revealed.

David Moon, a Maryland delegate from the Washington, D.C., suburb of Takoma Park, says he and other legislators met during the summer to try to craft legislation that would require more public transparency when police departments use StingRay devices, which are cell phone tower simulators used to track individuals via their mobile phone signals. Now, he says, the legislators want to write the law so that it also applies to aerial surveillance programs. But any such measures would have to wait until the General Assembly's 2017 session begins in January.

"One of the things we've realized in all of this is that the law—either in terms of the courts or the legislature—doesn't seem to keep up with the technology," says Moon. "We're caught in a situation where law enforcement can put new technologies into use and they just ask for permission later—and only if the media or the courts start to question what they're doing."

The Baltimore project depends on a small airplane that circles the city for up to 10 hours a day. An attached bank of cameras instantly creates a 32-square-mile photographic map, which is updated once per second. The police can fast-forward or rewind the images, tracking vehicles or individuals as they move inside the city, for hours at a time. The footage is archived and can be reviewed days or months later. Or years later—in theory, the only limit is storage capacity.

Privacy advocates balked at the notion that the police could, if they desired, compile what amounts to a permanent visual record of the city. Ross McNutt, the founder and chief executive officer of Persistent Surveillance Systems, tried to allay those concerns, saying his company's policy was to erase the imagery after 45 days. Maryland public defenders weren't calmed.

"For our innocent clients, we missed opportunities to subpoena exonerating footage collected by the spy plane," wrote Kelly Swanston, a public defender, in an op-ed in the Baltimore Sun. "For our clients who were mistreated by officers, or whose versions of the truth differed from an officer's report, we failed to corroborate the truth because we did not know that a plane had captured footage of the city."

The Baltimore Office of Public Defenders sent a letter to Police Commissioner Kevin Davis three days after the Bloomberg Businessweek article was published online, asking for clarification about the program's policy for retaining data. Davis responded on Sept. 20 that Persistent Surveillance Systems had retained all the images since the program's launch in January, "regardless of whether the images were provided to BPD for use in investigations."

Andrew Vetter, chief of staff for the city's police commissioner, told state lawmakers that because the trial surveillance program hadn't yet been permanently adopted, the city hadn't drafted an official data retention policy and wasn't beholden to informal guidelines. Police spokesman T.J. Smith said the department would decide whether to adopt the program permanently only after a thorough analysis of the project was completed by the Police Foundation, a national research organization based in Washington, D.C.

The ACLU's Jay Stanley, a senior policy analyst, points out that the field of wide-area surveillance is a growing one, and other cities could soon confront the same questions Baltimore is now facing. McNutt has said his company has no interest in increasing his company's camera resolution beyond one pixel per person, which prevents individuals from being identified based on the images alone.

But one company's informal promises shouldn't be counted on as an industry standard.

HEADLINE	12/08 FBI is sued over Clinton email warrant
SOURCE	http://www.foxnews.com/us/2016/12/08/l-based-lawyer-sues-fbi-over-clinton-email-warrant.html
GIST	<p>A Los Angeles-based lawyer who gained notoriety by reclaiming Jewish-owned art looted by the Nazis has filed a lawsuit in New York against the FBI seeking information on the warrant that led to its seizure of Anthony Weiner's computer in the Hillary Clinton email case.</p> <p>E. Randol Schoenberg, a former president of the Los Angeles Museum of the Holocaust, told the Jewish Journal that his interest was drawn by a New York Times story on the FBI's warrant that was announced in the waning days of the election.</p> <p>"I thought, 'What does that mean?'" Schoenberg, 50, told the Jewish Journal. "Normally you have to show probable cause. That's what it says in the Fourth Amendment."</p> <p>Schoenberg didn't see the search warrant mentioned in the media after that Times story. He decided to file a Freedom of Information Request on Nov. 9 for information on the warrant. The FBI acknowledged his request two days later.</p> <p>Federal law gives government agencies 20 days to respond to such requests.</p>

	After not receiving any more information, Schoenberg contacted a lawyer based in Manhattan who specializes in FOIA requests and filed his suit.

HEADLINE	12/08 Turkey leader renounces foreign currency
SOURCE	http://abcnews.go.com/International/wireStory/turkeys-president-renounces-us-dollar-bid-boost-lira-44059290
GIST	<p>Turkey's leader has renounced foreign currencies in favor of the ailing lira currency in keeping with his appeal to Turkish citizens to do the same, his spokesman said Thursday, as a new measure was unveiled to help struggling businesses.</p> <p>President Recep Tayyip Erdogan "exchanged all of the foreign currency in his accounts into Turkish liras," spokesman Ibrahim Kalin said.</p> <p>Last week, Erdogan had earlier urged his citizens to give up the dollar and euros at a time the economy is teetering. Erdogan called on Turkish citizens to convert savings held in foreign currencies into gold and Turkish lira to help boost the ailing currency, which recently dropped above 3.5 lira per dollar, the weakest exchange rate in more than a decade.</p> <p>Turkish citizens often hold their money in dollars, euros and gold to mitigate the risk of a rapid devaluation of their currency. Many Turkish businesses have their debts denominated in dollars.</p> <p>In the wake of Erdogan's call, small business owners have posted pictures of themselves on social media advertising free goods ranging from bread to small carpets for those who can prove the exchange of a significant dollar amount into Turkish lira.</p>

HEADLINE	12/09 Fukushima radiation reaches West Coast
SOURCE	http://www.usatoday.com/story/news/nation-now/2016/12/09/fukushima-radiation-has-reached-united-states-shores/95188478/
GIST	<p>For the first time, seaborne radiation from Japan's Fukushima nuclear disaster has been detected on the West Coast of the United States.</p> <p>Cesium-134, the so-called fingerprint of Fukushima, was measured in seawater samples taken from Tillamook Bay and Gold Beach in Oregon, according to researchers from the Woods Hole Oceanographic Institution.</p> <p>Because of its short half-life, cesium-134 can only have come from Fukushima.</p> <p>For the first time, cesium-134 has also been detected in a Canadian salmon, according to the Fukushima InFORM project, led by University of Victoria chemical oceanographer Jay Cullen.</p> <p>In both cases, levels are extremely low, the researchers said, and don't pose a danger to humans or the environment.</p> <p>Massive amounts of contaminated water were released from the crippled nuclear plant following a 9.0 magnitude earthquake and tsunami in March 2011. More radiation was released to the air, then fell to the sea.</p> <p>Woods Hole chemical oceanographer Ken Buesseler runs a crowd-funded, citizen science seawater sampling project that has tracked the radiation plume as it slowly makes its way across the Pacific Ocean.</p> <p>The Oregon samples, marking the first time cesium-134 has been detected on U.S. shores, were taken in January and February of 2016 and later analyzed. They each measured 0.3 becquerels per cubic meter of cesium-134.</p> <p>Buesseler's team previously had found the isotope in a sample of seawater taken from a dock on Vancouver Island, B.C., marking its landfall in North America.</p>

HEADLINE	12/08 Alaska Airlines cancels more local flights
SOURCE	http://komonews.com/news/local/alaska-airlines-ready-for-weather-troubles-as-sea-tac-gears-up-for-busy-winter
GIST	SEA-TAC AIRPORT, Wash. - Alaska Airlines pre-cancelled 22 flights in and out of Sea-Tac Airport as a precautionary measure on Thursday.

The airline cancelled another 60 flights from Portland International Airport due to wintry weather conditions.

Alaska admits it's had some operational issues this week, after [dozens of flights were cancelled](#) on Monday and Tuesday because [half its de-icing fleet was broken](#).

"We are ready, we have a whole team behind me of deicing trucks and deicing fluid to get us through," said Alaska Spokesperson Bobbie Egan.

But, the underlying reason Alaska is having those problems is also a blessing in disguise. Then popular airline has just 24 gates and 70 morning departures and arrivals.

There are quick turn around times with little margin for error or weather issues. Any delays cause a bigger, ripple effect.

"In prior years we would have a busy morning and then we would have some peaks and valleys and it wasn't so busy," said Egan. "Now we are constantly busy throughout the day, so we don't have that time to catch up, so that's why we need to get it right."

So, on severe weather days, Alaska will hold flights at departing airports until they can be spaced into Sea-Tac. It will also pre-cancel flights as it did on Thursday.

HEADLINE	12/08 Aleppo: tidal wave becomes a flood
SOURCE	http://www.cnn.com/2016/12/08/middleeast/aleppo-syria-assad-refugees/index.html
GIST	<p>Aleppo, Syria (CNN)As the Syrian army continues to fight its way through the old city of Aleppo, the tide of those fleeing for their lives has become a raging flood, an avalanche.</p> <p>Exhausted by the treacherous path and having endured days of airstrikes and hunger, the crossing at Maysaloon welcomed those desperate to escape.</p> <p>While the rebels struggle to hold on to war-ravaged eastern Aleppo, the relief of those who have made it to the west of the city is palpable.</p> <p>On Thursday, CNN's crew was at the Maysaloon crossing in the Agheour area as the stream of people continued to gather pace. Rebel forces controlled the Agheour area for at least 3½ years before it was retaken by Syrian government forces Tuesday. The amount of people coming out of eastern Aleppo has gone up exponentially.</p>

More and more people are continuing to make their way over the crossing, some dragging their belongings, others holding children, many of them just relieved to be out of eastern Aleppo. Many of them are feeling weak and frail. There are some who look wounded. One man who was brought out said he had been shot.

Everyone looked traumatized. They hadn't changed their clothes in days and just looked happy to be out, relieved to be out of harm's way.

At another crossing in Nakin, the CNN crew witnessed a scene that looked apocalyptic. As the children passed through and came toward us the toll which it had taken upon them became evident. They looked malnourished, their faces were dirty, they wore clothes which looked so old. They are so hungry.

HEADLINE	12/08 Polar vortex redux? Next week possibly
SOURCE	http://www.reuters.com/article/us-usa-weather-idUSKBN13X2OS
GIST	<p>Forecasters are sending chills down some spines with a prediction that much of the northern half of the United States could see frigid weather next week similar to life-threatening lows the polar vortex brought to parts of the country in 2014.</p> <p>Anticipation of a freezing blast began to build this week when weather maps and forecast models showed similarities between next week's system and one that developed in January 2014.</p> <p>"Upper-level atmosphere configuration very similar in scale & magnitude as infamous Jan 2014 #PolarVortex popularized by me and @afreedma," meteorologist Ryan Maue said on Twitter on Tuesday alongside maps comparing the two weather systems.</p> <p>The southward shift in the polar vortex in 2014 brought the Midwest some of its coldest weather in two decades. Icy conditions snarled travel and thousands of flights were canceled or delayed.</p> <p>Frigid temperatures combined with gusting winds to create life-threatening wind chills as low as 60 degrees Fahrenheit below zero (minus 51 Celsius) that killed at least nine people.</p> <p>The coldest weather next week is expected in the Midwest and Northeastern starting around Tuesday, according to forecasts that show temperatures in the single digits in some cities.</p> <p>"The air mass on the way for the middle of December is likely to be substantially colder when compared to that of this past week and this weekend," AccuWeather meteorologist Paul Pastelok wrote on Thursday.</p> <p>Temperatures from the Northern and Central plains to wide swathes of the Midwest are likely to drop by between 5 and 20 degrees Fahrenheit compared to temperatures this week, according to AccuWeather.</p>

	It is unclear how far south the cold air will be felt, according to Pastelok.

HEADLINE	12/08 Remembering an American hero
SOURCE	http://time.com/4594658/john-glenn-dead/?xid=homepage
GIST	<p>There weren't a lot of silly pictures taken of John Glenn—mostly because Glenn just didn't do silly. He did happy, of course. You don't get the crinkles he had around his sea blue eyes simply because you've got the fair, thin skin of the redhead that he was. But if the happy was there, the silly wasn't.</p> <p>Still, in 1959, when Glenn was announced as one of the original seven NASA astronauts, he knew that he'd have to abide a lot of regrettable silliness—usually at the hands of the space agency and media photographers, who would demand all manner of dreamed-up poses of the deeply American family men the astronauts were intended to be doing deeply American family things.</p> <p>So the staged picnics and happy rough-housing were all set up and shot and then, for Glenn, came the silliest image of all—of the professional fighter pilot and amateur trumpet player, lying on his couch on a lazy afternoon, practicing his playing while his wife Annie relaxes with him. As if a wife could relax while a husband blared a horn in her ear. As if Glenn would even want to put the poor woman through such a thing.</p> <p>But never mind. Glenn was a military man who never, ever received an assignment from a commanding officer without answering yes, sir and then going on to fulfill that assignment with utter professionalism. And if the commander in his new line of work sometimes was a public affairs officer, well, he'd get the yes, sir treatment too.</p> <p>Glenn, who died on Thursday at 95, was just one of seven men selected by NASA to both calm and thrill a frightened country—a country that, in the 1950s, was at nuclear dagger-points with the Soviet Union and was, by a lot of measures, losing that contest. The Soviets had the rockets—including the bruising R7 ICBM—that could be used to put a satellite in space (which they did before we did) and put an animal in space (which they did before we did, too) and to put a man in space. And oh boy, did they do that before us, launching Yuri Gagarin in April of 1961—with his Hollywood looks and cover-boy smile—on a full one-orbit lap around the Earth.</p> <p>But the real purpose of R7 and the other ordnance was to rain nuclear hellfire on Chicago and New York and Pittsburgh and Des Moines and if Gagarin's smile was sincere, it masked something closer to a leer from his country. So the seven Americans with the crisp Yankee names like Deke and Gus and Al and Gordo, with the military crewcuts that telegraphed seriousness and the mischievous smiles that telegraphed fast cars and hard drinking (important parts of the flyboy's brief) were brought in to buck the nation up.</p>

And yet it was Glenn—the least mischievous, indeed the entirely unmischievous—who became the greatest among those ostensible equals. He was the only Marine, the only man who didn't drink, the one who flew 149 combat missions in Korea and, on one occasion when his Panther fighter took two blasts of anti-aircraft fire that ripped more than 200 holes in its fuselage, radioed to his squadron commander nonchalantly, "I'm going to ease out of here," before peeling off and bringing his crippled plane to a safe landing.

But the crinkle around the eyes was there, and the genuine pleasure in the company of people was there—the kind that had him greeting the same Boy Scout troops all the other astronauts greeted and addressing the same country fairs all of the other astronauts addressed, and yet doing it in a way that suggested that, well sir, there was nothing he'd rather be doing on a beautiful day like this one. The other six, for all their efforts, could never touch that.

It was thus no surprise that while the astronauts who were selected by the NASA brass to fly the first three Mercury missions—Glenn, Gus Grissom and Al Shepard—were chosen entirely on the basis of their skill, the one who was chosen to fly the third of those missions, would need to have something more. The first two flights would be sub-orbitals—popgun lob shots into the lower reaches of space and then straight back down into the Atlantic Ocean just 17 minutes after liftoff. The third flight would be the first orbital flight—and the man who flew that would be the man who, on behalf of his nation, had finally caught the Soviets.

It would be Shepard who would get the first mission and Grissom who would get the second, and becoming the first two Americans in space would be no small thing. But it would be Glenn who got the plum assignment, Glenn who, on February 20, 1962, at the age of 40, circled the Earth three times and came back to a welcome that would make the likes of Lindbergh and Earhart look like a mere stunt flyers.

But the mission wasn't easy and in case anyone doubted the steel behind the Glenn smile, it included a moment not unlike the one he'd faced in his crippled Panther. That moment occurred when a warning light went on indicating that the heat shield on the bottom of his Mercury spacecraft had come loose, meaning the ship and its passenger would incinerate in the 3,000° F inferno of reentry. So Mission Control recommended that Glenn not jettison his retrorockets after he fired them at the beginning of the reentry, because they were strapped into place below the heat shield and might just help hold it in place.

"We are recommending that you leave the retropackage on through the entire reentry," Scott Carpenter, the Mercury astronaut who was serving as the capsule communicator, radioed up to Glenn. The capcom knew of the problem with the heat shield. The astronaut didn't.

"What is the reason for this? Do you have any reason?" Glenn asked.

"Not at this time," came the response. "This is the judgment of Cape Flight."

And Glenn, who knew enough to know that Cape Flight would never recommend such an irregular procedure, much less conceal the reason for it from the pilot, unless something might be grievously wrong with his spacecraft, responded with two words:

“Ah, roger.”

The call from Carpenter was an order. Questioning it further would not do a single thing to change the circumstances. So Glenn continued with his mission, held onto his retropackage, flew his ship home and the moment his spacecraft with its perfectly serviceable heat shield hissed into the Atlantic, he became an American giant.

For his troubles, John Glenn would be officially grounded by NASA. Like Gagarin, whose Soviet superiors also removed him from the flight rotation, he was considered too valuable an American asset to risk on a second mission.

...Glenn found another way to be of use to his country, running for public office and serving four terms as U.S. Senator from Ohio, from 1974 to 1998. And yet, to his own surprise as much as his nation’s, only a few months before his Senate career ended, he would indeed go to space again, a septuagenarian astronaut tapped by then President Bill Clinton to fly aboard a space shuttle as a payload specialist. Glenn would serve as part crew member and part experimental subject, testing the parallels between the effects of aging and the effects of zero-gravity on the human body, which are surprisingly similar.

If that mission was part national feel-goodism, what of it? So was the entire early space program. And if it was in part merely a way to pay Glenn back for having been denied a return trip to space for so long, well, it was a consolation prize he richly deserved.

Glenn lived his very long post-NASA life with both dignity and humility—not an easy thing for a man who had fought and won in the fiercely competitive world of the astronaut corps.

“Godspeed, John Glenn,” Scott Carpenter said through the Cape Canaveral microphone when the engines of Glenn’s rocket lit that day in 1962. Godspeed, Americans say again in 2016.

HEADLINE	12/09 Gunbattle in Kashmir ends; 2 killed
SOURCE	http://abcnews.go.com/International/wireStory/police-gunbattle-kashmir-ends-suspected-rebels-killed-44081201
GIST	A 42-hour gunbattle ended in Indian-controlled Kashmir on Friday after two suspected rebels were killed in the fighting, which triggered massive anti-India protests in the disputed region.

A police officer said soldiers recovered the bodies of the two suspected militants from the debris of a destroyed house in southern Arwani village.

The officer, speaking on condition of anonymity in keeping with department policy, said both of the bodies were charred beyond recognition and authorities were conducting DNA tests to ascertain their identities.

The officer said they recovered three weapons from the site.

Villagers said the house was razed to the ground as soldiers blew it up with explosives.

Police and soldiers had cordoned off Arwani on Tuesday evening, triggering a gunbattle with trapped militants in the village.

On Thursday, a young man was killed and dozens of others were injured when government forces fired bullets, shotgun pellets and tear gas to disperse rock-throwing protesters who tried to help the trapped rebels escape.

Police said the man died after being hit by a stray bullet.

Massive protests against Indian rule again erupted in Arwani and neighboring villages on Friday as thousands of Kashmiris chanted pro-militant and pro-freedom slogans.

Mobile and internet services in some areas of southern Kashmir remained suspended for a second day as authorities sought to stop activists from mobilizing anti-India protesters.

Kashmir is experiencing its largest protests against Indian rule in recent years.

HEADLINE	12/09 Egypt: explosion kills 6 police in Cairo
SOURCE	http://abcnews.go.com/International/wireStory/egypts-state-run-media-cairo-blast-kills-police-44081978
GIST	<p>An explosion on a main Cairo thoroughfare killed six police and wounded another three on Friday, in what appeared to be the deadliest attack on security forces in several months.</p> <p>The state-run MENA news agency said the explosion took place near a mosque on Pyramids road, the main avenue leading from the city center out to the Giza pyramids, which is often used by tour buses. It says the blast targeted security forces, without elaborating on what caused the explosion.</p>

	Insurgents have carried out a number of attacks in Egypt since the 2013 military ouster of an elected Islamist president. The violence has been concentrated in the northern Sinai Peninsula, but there have also been several attacks on the mainland, including in the capital.

HEADLINE	12/09 Warehouse not on fire inspection lists
SOURCE	http://abcnews.go.com/US/wireStory/firefighter-warehouse-missing-fire-inspection-records-44081774
GIST	<p>The illegally occupied Oakland warehouse where dozens of partygoers perished in a blaze does not appear in a database fire inspectors use to schedule inspections and may never have been checked for fire hazards, a firefighter with knowledge of the situation told The Associated Press.</p> <p>Oakland fire officials are supposed to annually inspect commercial buildings for fire safety, with only single-family homes and duplexes exempted, according to a city website. Officials typically pull addresses from a database to request the yearly checks, said the firefighter Thursday, who feared retribution for disclosing the information and spoke only on condition of anonymity.</p> <p>"Commercial inspections are conducted as time permits during a fire station's 24-hour shift and are not routinely scheduled on an appointment basis," the city's website explains.</p> <p>The fire department and Mayor Libby Schaaf each said Thursday they could not yet say when — or if — a fire inspector examined the warehouse.</p> <p>Fire department spokeswoman Rebecca Kozak said Thursday she didn't know whether the warehouse's address was in the database of buildings to be checked.</p> <p>Kozak said she was processing 40 to 50 public records request from news media and that confusion over the warehouse's address is slowing the process.</p>

HEADLINE	12/09 Oakland artists fear crackdown after fire
SOURCE	http://abcnews.go.com/US/wireStory/oakland-artists-fear-crackdown-ghost-ship-fire-44081810
GIST	<p>The Ghost Ship is now gone. But there's The Salt Lick, the ominously named Deathtrap and other converted warehouses where artists are holding emergency meetings behind locked metal doors.</p> <p>Oakland has long been hospitable to an underground art scene that flourished in its abandoned industrial warehouses and helped put this gritty city on the world's art map. But now its art and music underground is panicking and bracing for a crackdown.</p>

	<p>Painters, musicians and struggling artists of all types came to live and work, to perform and dance late into the night and to be surrounded by creativity.</p> <p>They tolerated the exposed wiring, spotty electricity and other dangers or inconveniences of often unregulated warehouses, as a trade-off for affordable housing and studio space in one of the country's priciest housing markets.</p> <p>Those now living in buildings with numerous code violations fear their lifestyles and ultimately the San Francisco Bay Area's vibrant art scene are endangered because of the safety issues exposed by the fire that killed 36 people at a dance party in the warehouse known as the Ghost Ship. Authorities are investigating whether a refrigerator or other appliances caused the fire.</p> <p>"Everyone is really worried right now. This has ignited a lot of fear," said Mara Barenbaum, 32, a singer and musician who spent seven years in an artist collective.</p> <p>She has held strategy sessions with other artists and helped write an open letter urging the city to protect "the vital artistic fabric of Oakland" by making buildings safe and not throwing artists out on the street.</p>

HEADLINE	12/08 Offshore quake not on Cascadia fault
SOURCE	http://www.seattletimes.com/seattle-news/science/offshore-quake-not-on-more-dangerous-cascadia-subduction-zone/
GIST	<p>The magnitude 6.5 earthquake off the coast of Northern California Thursday morning occurred on a fault called the Mendocino Transform, not the more dangerous Cascadia Subduction Zone.</p> <p>But seismologists are keeping a close watch on the tectonically complex area, especially in light of two smaller quakes off the Oregon coast last week.</p> <p>“They’re probably unrelated,” said John Vidale, director of the Pacific Northwest Seismic Network. “We’ll just keep an eye out.”</p> <p>The Thursday quake, which struck at 6:50 a.m., originated about 100 miles west of Ferndale, near an area called the Mendocino Triple Junction, where three tectonic plates meet. It’s also near the terminuses of both the Cascadia Subduction Zone and the San Andreas Fault.</p>

	<p>The quake, which probably moved the seafloor about 3 to 6 feet, could have bumped up the stress on the Cascadia Subduction Zone slightly, Vidale said. But there's little chance it would be enough to trigger a more powerful subduction zone quake.</p> <p>"The odds probably have gone up for a little while, but just a little," Vidale said. "It's probably not enough that we will see any earthquakes as a result."</p>

HEADLINE	12/08 Inquest set for police shooting in Pasco
SOURCE	http://abcnews.go.com/International/wireStory/inquest-set-washington-state-police-shooting-mexican-44067090
GIST	<p>A coroner's inquest to shed more light into the police killing of a Mexican shot numerous times last year by three officers in the Washington state city of Pasco has been scheduled to start on Monday, officials said.</p> <p>Jury selection will begin to choose 12 jurors from a pool of 75 residents from rural Franklin County, where Pasco was the site of weeks of peaceful protests by Latinos after the Feb. 10, 2015, killing of Antonio Zambrano-Montes, County Coroner Dan Blasdel said Wednesday.</p>

	<p>Coroner's inquests are judicial proceedings to present evidence about deaths, and juries can reach conclusions and make recommendations to prosecutors. The jury's conclusions are not binding, but the public setting of the quasi-judicial proceeding could provide more details about the killing of the 35-year-old farmworker.</p> <p>"It's a means to uncover the facts of the death for the general public," Blasdel has said.</p> <p>No charges were filed against Pasco police officers Ryan Flanagan, Adam Wright and Adrian Alaniz after they shot Zambrano-Montes, who authorities said was high on methamphetamine and throwing rocks at vehicles and police just before he was killed.</p>

HEADLINE	12/08 State sues Monsanto over PCB pollution
SOURCE	http://abcnews.go.com/US/wireStory/washington-state-suing-agrochemical-giant-pcb-pollution-44072471
GIST	<p>Washington says it's the first U.S. state to sue the agrochemical giant Monsanto over pollution from PCBs. Gov. Jay Inslee and Attorney General Bob Ferguson announced the lawsuit at a news conference Thursday afternoon.</p> <p>The chemicals, polychlorinated biphenyls, were used in many industrial and commercial applications, including in paint, coolants, sealants and hydraulic fluids. PCB contamination impairs rivers, lakes and bays around the country.</p> <p>The lawsuit, which seeks potentially hundreds of millions of dollars in cleanup costs, was filed in King County Superior Court and says Monsanto long knew about the toxic dangers PCBs posed.</p> <p>Monsanto was the sole producer of PCBs between 1935 and 1979, when Congress banned them.</p> <p>The cities of Seattle and Spokane, as well as Portland, Oregon, and some California cities have also sued Monsanto over PCB pollution. In response to those lawsuits, Monsanto said PCBs were lawful when they were produced and "served an important fire protection and safety purpose."</p>

HEADLINE	12/08 Michigan 40-car pileup; 3 killed
SOURCE	http://www.livingstondaily.com/story/news/2016/12/08/30-car-pileup-reported--96-near-fowlerville/95138030/
GIST	<p>Three people were killed and 11 injured in a pileup involving up to 40 cars on Interstate 96 in Handy Township, near the Livingston-Ingham county line on Thursday.</p>

The pileup began when snow blanketed the area around 9:50 a.m., causing whiteout conditions. The snow then froze, creating treacherous traveling conditions.

“We have not yet identified the victims,” Lt. Eric Sanborn of the Livingston County Sheriff’s Office said at a 3 p.m. press conference at the county’s EMS building.

“It was very chaotic for them to get to all of the victims to assess the situation,” he added. “The accident is believed to be weather related. Alcohol does not appear to be a factor at this time.”

Sanborn could not confirm what started the chain reaction that led to the pileup, which occurred west of the Fowlerville exit and near Wallace Road.

However, he noted, the people who died were two drivers and a passenger in two separate vehicles. Those vehicles were near the beginning of the pileup, but are not believed to be what started the pileup.

HEADLINE	12/09 Dutch hospitals report data breach daily
SOURCE	https://www.deepdotweb.com/2016/12/09/dutch-hospitals-report-data-breach-almost-every-day/
GIST	<p>Dutch hospitals reported 304 separate incidents of patient data loss since January 1. According to the Authority for Personal Data (AP), the hospitals rarely encrypted the data. They also reported that the majority of the data loss occurred due to human error.</p> <p>Many data losses occurred after employees misplaced essential USB drives and other storage mediums. For example, a doctor from Antoni van Leeuwenhoekziekenhuis lost a hard drive with 800 patient records. Hackers have also accessed electronic healthcare records (EHR) through compromised email addresses.</p> <p>Women in Cyber Security (WICS), a network of women in the computer security industry, recently conducted research into how hospitals deal with security. Old, unused, and outdated credentials were constantly overlooked. This was also the case for the State Department, according to the most recent audit.</p> <p>The AP reported 4,700 data breaches in 2016; and one quarter of the breaches came from the healthcare sector. Since January 1, all organizations were required to immediately alert proper authorities upon on a serious data breach.</p> <p>“Details on the nature of the reports will not be given because of the potential traceability to individual hospitals,” a reporter said.</p>

	More than 300 different hospitals reported data loss this year. The AP spokesperson said hospitals were on high alert throughout the year. The privacy watchdog program created a “willingness to report.” That being said, EHR hacks have been at an all time high this year.

HEADLINE	12/08 Amazon.com scam hits shoppers
SOURCE	http://www.wsbtv.com/news/trending-now/amazoncom-scam-hits-shoppers-before-holidays_/474415466
GIST	<p>Holiday shoppers who use Amazon.com to buy presents for loved ones will want to pay attention to the latest scam that’s targeting consumers’ personal information.</p> <p>The scammer sends an email to a customer that appears to be from Amazon.com, stating that a recent order cannot be shipped. The email claims there has been a problem with processing and informs the customer that they won’t be able to access their account or place orders with Amazon until they confirm their information.</p> <p>A "click here" link inside email leads the customer to an authentic-looking Amazon web page to confirm the name, address and credit card information on the account. After the person enters the information and clicks on the "save and continue" button, it takes the customer to Amazon’s actual website.</p> <p>So how do you know an Amazon.com email is real or fake?</p> <p>The scam email subject line will say, "Your Amazon.com order cannot be shipped." If the "from" line in the email contains an Internet Service Provider other than @amazon.com, then the email is not from Amazon.</p>

HEADLINE	12/08 Websites check if personal info stolen
SOURCE	http://www.cbronline.com/news/cybersecurity/protection/pwned-best-hacking-websites-check-personal-information-stolen/
GIST	<p>It seems that not a day goes by without another cyber attack being discovered, or a data breach being made public by an apologetic multinational. The dark web is now a booming marketplace for the criminally minded, selling a myriad of personal information from email addresses and passwords, to credit card numbers. Attacks on Adobe, LinkedIn and MySpace are just some of the high-profile breaches which have resulted in the leak of millions of email addresses, passwords and other data to marketplaces online.</p> <p>With so many companies breached and so much data available in the dark ether, the questions you should be asking yourself is: Have I already been hacked?</p>

If you do not know the answer to this question, then you need to act now. There are a number of online services available which allow you to check if your personal information has been involved in a breach – vital tools which can help protect your digital footprint.

Here, CBR gives you the best sites to check if your personal information is safe.

[Have I been pwned?](#)

Cost: Free

Troy Hunt created Have I Been Pwned as a free resource which allows anyone to quickly check if an online account has been compromised or ‘pwned’ in a data breach. Inspired by the massive data breach which hit Adobe, Mr Hunt created the site after post-breach analysis revealed the same accounts being exposed over and over again.

The site gives users a simple interface – just enter in the address of the online account you want to check and then wait for results.

All the data on the site comes from website breaches that have been made publicly available – which some may say limits the service somewhat. The free service also only provides results for a single user-provided email address or username at a time. However, using the domain search feature – which searches for pwned accounts across entire domains – multiple breached accounts can be retrieved after verification.

[Has My Identity Been Stolen?](#)

Cost: Free

Owned by the MergerMarket Group and counting ex-senior policemen among its executive team, Has My Identity Been Stolen is a free service which allows you to check if your identity has been stolen. The service scans the internet and deep web, with a database compiled from data which has been ‘been in criminal hands and made available on the internet.’

Interestingly, Has My Identity Been Stolen prefers not to use spyders to gather results, instead employing a global network of human sources who have access to the Dark Web. Encouragingly, the service works towards the goal of preventing and reducing stolen data and personal information, capturing compromised IDs before the criminals can sell them.

The online service uses an easy interface which gives you two options – check by postcode or check by email. Once a verification code has been sent to the requested email, a search results box will tell you one of three answers:

- No records found based on search criteria to suggest identity fraud at the present time.
- At present we only have your email address. The record was discovered on dd/mm/yyyy. This has been transacted and means that you could be a target for Phishing and Spam emails in order to build your identity profile for use or future sale.

	<ul style="list-style-type: none"> • A number of records found, suggesting possible Identity fraud. The record was discovered on dd/mm/yyyy. <p>Although limited in its monitoring of only 100 dark sites, features such as searching by post code, make this a great site to visit.</p>

HEADLINE	12/08 Georgia 'mad as hell' DHS hack attempt
SOURCE	http://www.wsbtv.com/news/local/atlanta/secretary-of-state-wants-answers-from-dhs-after-apparent-breach-attempt/474347363
GIST	<p>ATLANTA - The Georgia Secretary of State is demanding answers from the Department of Homeland Security after an unsuccessful breach to the department's firewall.</p> <p>Secretary of State Brian Kemp talked exclusively with Channel 2 investigative reporter Aaron Diamant on Thursday, saying he was "mad as hell" after what he called a massive cyberattack on the agency's network Nov. 15, traced back to a United States Department of Homeland Security IP address.</p> <p>"It's outrageous to think about our own federal government is doing this to us," Kemp told Diamant.</p> <p>Kemp's office maintains Georgia's voter registration and elections data, plus corporate and professional license records.</p> <p>Kemp told Diamant that the network's firewall held up and there was no breach. But after the agency's security vendor sounded the alarm, Kemp fired off a terse letter Thursday to DHS Secretary Jeh Johnson.</p> <p>"We're demanding answers to some of these questions, you know? Are they doing this to other states? Was it authorized or not? Who ordered this? Why is it being done and why weren't we notified?" Kemp said.</p> <p>But until DHS responds, Kemp said he is not yet convinced this wasn't a politically motivated attack ordered by DHS leaders or a single rogue staffer.</p> <p>"We're waiting on answers, you know? Hopefully we'll get them, hopefully they'll be transparent, and they'll be some good answers that we can digest. But right now, we just don't know," Kemp said.</p> <p>Kemp assured Diamant that the cyberattack, government or otherwise, was not successful.</p>

HEADLINE	12/08 Turkish hackers offer prizes for attacks
SOURCE	https://www.hackread.com/turkish-hackers-hacking-tools-for-ddosing/

GIST	<p>Hackers are leaving no stone unturned in creating troubles through their social engineering antics. This time, however, they have devised a completely new and innovative technique for attacking websites.</p> <p>Reportedly, a group of Turkish hackers has created a DDoS platform luring unsuspecting individuals to join the platform and conduct DDoS attacks. The winning players receive points and they can redeem their points by winning an unlocked version of the notorious Sledgehammer hacking tool.</p> <p>This DDoS platform is dubbed as Surface Defense. The creators of this platform ask players (who mostly are other hackers) to attack any of the political websites that is listed on their list through Balyoz or Sledgehammer, which is a DDoS tool. To participate, players need to download the collaboration software of Surface Defense and get registered after which they can run this program locally on a PC. To disrupt online services, traffic is routed via Tor.</p> <p>For every ten minutes spent on the attacked website by bombarding it with fake traffic, one point will be given to the attacker. This point will then be traded with the standalone version of Sledgehammer that can be fully customized by them and sold to other hackers too.</p> <p>To maintain healthy competition among the participants, a live scoreboard is shown on the forum so that everyone is aware of the earned points. Some of the users have already made hundreds of points.</p>

HEADLINE	12/08 Piracy spikes threatening pay TV
SOURCE	http://www.infosecurity-magazine.com/news/piracy-spikes-threatening-paytv/

GIST	<p>There are more than 2.7 million advertisements on e-commerce websites, including Amazon, eBay and Alibaba for illicit streaming devices—indicating that content theft by pirates has become a full-fledged business and a formidable competitor to established pay TV operators.</p> <p>According to Irdeto, it's a true cross-channel effort, with advertisements found on social networks, including Facebook, Twitter and other prominent social media platforms. Pirates are becoming more business savvy and expanding their product marketing of illicit streaming devices. Citing data from SimilarWeb, the Irdeto report shows that the growth in global traffic resulted in more than 16.5 million visits per month to the top 100 pirate IPTV supplier websites. The US and UK led all countries with more than 3.7 million and one million site visits per month, respectively.</p> <p>The report also shows that a typical pirate supplier offers an average of 174 channels, with some pirate suppliers offering more than 1,000 channels. This content comes in at an average subscription cost of \$194.40 per year or a staggeringly low \$16.20 per month—much lower than the average US cable cost of \$103.10 per month. In some cases, despite the illegal nature of the offering, these low costs and the compelling content provided sway consumers to choose a pirate device over legal cable, satellite or OTT services.</p> <p>Typically, consumer choice comes down to content, value and convenience when selecting a service. Pirates exploit those three needs by offering services and devices that rival their legal counterparts. Without the costs of legally acquiring the rights and content, pirates are able to take valuable market share in the process.</p> <p>Also, while some consumers are aware that they are purchasing pirated content, others do not realize that the subscriptions they are purchasing are pirate operations. As pirates have grown and refined their business practices, Irdeto has seen an increase in pirates creating professional websites, technology and services, fooling some consumers into thinking they are purchasing a legal service. In addition, the top 100 pirate IPTV suppliers add credibility to their offerings by providing legitimate-looking devices powered by Android, Linux, Kodi and Roku.</p>

HEADLINE	12/07 Massive stealthy malvertising campaign
SOURCE	http://www.securityweek.com/massive-stealthy-malvertising-campaign-uncovered
GIST	<p>A stealthy malvertising campaign has been flying under the radar for the last few months, targeting millions of readers visiting popular and mainstream news sites. The campaign is notable for stealth bordering on paranoia from the threat group, probably AdGholas.</p> <p>In July 2016, Proofpoint published an analysis of a massive AdGholas malvertising campaign that it described as "using a sophisticated combination of techniques including sophisticated filtering and</p>

steganography." It added that AdGholas had ceased operation following exposure, but "the scale and sophistication of this operation demonstrate the continued evolution and effectiveness of malvertising."

Now it appears that AdGholas simply changed tactics, and within a couple of months launched a new campaign described in an ESET research paper published yesterday. In a detailed analysis, ESET doesn't name the threat actors and calls the exploit kit (EK) involved Stegano. Further background information has been provided by Malwarebytes naming the actors as AdGholas, and the EK as Astrum. Stegano and Astrum are just different names for the same EK.

What sets this campaign apart from other and earlier campaigns is the extent of its stealth. When the ad data is first delivered, the campaign uses server-side logic on the potential victim's returned computer data to decide whether to deliver a malicious banner or a clean banner. If it delivers the malicious version, the code is hidden by steganography: specifically within the parameters controlling the transparency of each pixel. The result is only a minor change to the color tone of the image, invisible to the naked eye.

The scary part of this campaign is that it requires no user interaction at any stage. If the user visits an affected news site with a vulnerable browser and vulnerable Flash (and is in one of the targeted geographical areas) then malware execution could be entirely automatic and unseen. If any of those requirements are not met, then the malicious banner simply remains dormant and its malicious code invisible.

The two banners known to ESET are both for apparent security products: Browser Defence (notice the spelling) and Broxu. The spelling fits with the targeted regions. Malwarebytes separately comments, "The interesting aspect about this malvertising campaign is that the US was not one of the targets. Instead we saw Canada, the UK, Australia, Spain, Italy, and Switzerland as the most active geolocations." Of these, Canada and the UK were the most targeted.

HEADLINE	12/08 'August' targeting retail customer service
SOURCE	https://www.scmagazine.com/phishing-malware-august-lures-customer-service-staff/article/577875/
GIST	<p>A new malware-laden phishing campaign, dubbed August, has been detected targeting customer service and managerial staff at retailers, according to a new report from Proofpoint.</p> <p>The clever ploy spreads through an email arriving in the inboxes of targeted individuals with subject lines referring to supposed purchases via the company's website. Recipients are specifically selected who are appropriate reps to deal with customer issues. The message further dupes recipients by saying more detailed information is contained in the attached document. Such subject lines as: "Help: Items vanish from the cart before checkout," and "Support: Products disappear from the cart during checkout," are used in the campaign.</p>

	<p>Should a recipient click on the link, the August malware is loaded with Word macros and PowerShell. It has capabilities to commandeer credentials and siphon off sensitive documents from the infected computer.</p> <p>The researchers said the campaign is the work of TA530, an individual or gang which they previously cited for other highly personalized targeted campaigns. The macro, too, works similarly to a previous iteration where sandbox evasion strategies are employed to load the Ursnif banking trojan, evading detection by security researchers. Of particular note in this instance, however, a Powershell command is used to "'filelessly' load the payload from a byte array hosted on a remote site," the researchers said.</p> <p>The Proofpoint researchers conclude that while this new campaign is currently targeting retail sites, its credential-stealing capabilities could easily be adapted for wider distribution.</p>

HEADLINE	12/08 Ransomware hits Vegas, rust-belt hardest
SOURCE	http://www.darkreading.com/endpoint/las-vegas-rust-belt-hit-hardest-by-ransomware-----/d/d-id/1327664?
GIST	<p>Turns out you're most likely to get shaken down by ransomware in the Las Vegas/Henderson area, which in the US has the largest number of overall ransomware detections, the most detections per individual machine, and the most detections per population, according to a new study by Malwarebytes.</p> <p>Six of the top 10 cities for ransomware detections are in the Rust Belt, including Buffalo, Cleveland, Columbus, Ohio, Detroit, Fort Wayne, Ind., and Toledo.</p>

Nima Samadi, data science analyst for Malwarebytes, says the study is based on research from July 1 through October 15, 2016. Malwarebytes detected more than 400,000 ransomware incidents in more than 200 countries, with the US experiencing the largest number of incidents - at 26% overall.

Malwarebytes' data is specifically based on detected ransomware incidents, some of which may have resulted in actual infections and others, not.

"We can theorize on why the Las Vegas area was such a hotbed for ransomware," says Samadi. "Even if they are on business, people tend to be in vacation mode, so their guard is let down, plus they are accessing the Internet on unsecured Wi-Fi networks."

Malwarebytes CEO Marcin Kleczynski says that computer users in Rust Belt states may not be as readily exposed to security education and techniques, plus those states have been hit hard by job losses and the collapse of the manufacturing base.

"People without jobs or opportunities are more prone to financial scams," he adds.

Kleczynski also points out that while high-profile cases such as last week's ransomware attack on the San Francisco Municipal Transportation Agency make the news, the more prevalent threat is from scammers sending out indiscriminate email blasts. The high-profile cases tend to be in big cities, but the Malwarebytes study found that 86% of detections occurred in cities with fewer than 250,000 residents.

HEADLINE	12/08 Phishing services reap twice the profits
SOURCE	http://www.darkreading.com/endpoint/phishing-services-reap-twice-the-profit-for-attackers/d/d-id/1327673?
GIST	<p>Everything else has gone to the cloud, so why not faux emails and their malicious payloads?</p> <p>That's the upshot of a study released this week that points to cloud-based, "phishing-as-a-service" (PhaaS), as a more lucrative technique for cybercriminals. It's a way for attackers to reduce the cost to acquire target email addresses and send out malicious content intended to generate more clicks – and it more than doubles the profit of conventional phishing attacks.</p> <p>"Compromised Web servers used in PhaaS platforms significantly lower the costs of a phishing campaign and help the cybercriminals hide their tracks," security vendor Imperva said in its new report. According to Imperva, after compiling costs for phishing pages, a spam server, a list of 100,000 email addresses, and access to compromised servers, the total cost of a phishing scam comes to about \$28 with the cloud-based approach.</p>

	<p>Phishing remains a perennially effective way to cadge logons and passwords from hapless users, In recent months, phishing emails have become a way to infect desktops and servers with ransomware, which infosec professionals continually cite as their biggest ongoing concern and defense priority.</p> <p>PhaaS is re-defining the market and can reduce costs of a standard phishing campaign to a quarter of current prices, Imperva adds. Reduced labor costs means higher profit margins, Imperva adds, and even allows novices to run multiple, simultaneous campaigns. "We can therefore predict a rising demand for PhaaS markets, since it lowers both the cost and the technology barriers," the report said.</p>

HEADLINE	12/07 Holiday gift exchange scam on Facebook
SOURCE	http://www.cbsnews.com/news/beware-of-these-holiday-gift-exchange-scams-on-facebook/
GIST	<p>Tis the season... to get scammed on Facebook.</p> <p>Two scams called the “Secret Sister Gift Exchange” and the “Secret Wine Bottle Exchange” are spreading across Facebook like wildfire, and unfortunately, users are falling for it.</p> <p>It sounds like a fun Secret Santa-like gift exchange, but it’s actually a pyramid scheme in disguise. And worse, it’s illegal, the Better Business Bureau (BBB) says.</p> <p>“While gift exchanges grow in popularity during the holiday season, BBB advises consumers to use caution when choosing one in which to participate,” the organization said in a statement. “According to the U.S. Postal Inspection Service’s gambling and pyramid scheme laws, gift chains like this are illegal and participants could be subject to penalties for mail fraud.”</p> <p>The scam “exchanges” always follow the same pattern: A Facebook users posts a status, tagging dozens of friends, asking a minimum of 6 people to participate. Friends of the user who wish to participate are then instructed to buy one bottle of wine — or other gift — valued at \$15 or more and send it to one secret wine lover. In return, participants are told that they will receive from 6 to 36 wine bottles.</p> <p>Well, chances are you won’t even get one bottle back. But there is something the scammers get: Your money and your home address.</p> <p>“This is a typical pyramid scheme,” the BBB says. “This is on Facebook instead of the old way of using letters because social media allows it to spread a lot faster.”</p>

Terror Conditions

HEADLINE	12/06 Terror Threat Snapshot: December
SOURCE	https://homeland.house.gov/press/chairman-mccaul-releases-december-terror-threat-snapshot-2/
GIST	<p>WASHINGTON, D.C. – The December Terror Threat Snapshot was released today by Homeland Security Committee Chairman Michael McCaul (R-TX). The “snapshot” is a monthly Committee assessment of the growing threat America, the West, and the world face from ISIS and other Islamist terrorists.</p> <p>Key takeaways in this month’s Terror Threat Snapshot:</p> <ul style="list-style-type: none"> • Since 9/11, the nation has seen 227 homegrown jihadist cases with a recent surge of 115 cases in 2015 and 2016 alone. ISIS’ shift in messaging—from joining the jihad in Syria and Iraq to carrying out attacks in fighters’ home countries—is likely to accelerate this trend. • Throughout the year, ISIS conducted 62 attacks, wounding 732 and killing 215 in places like the United States, France, and Belgium. The threat to Europe and the United States will persist in 2017, particularly as jihadists flee from Mosul and Raqqa. • The Iran nuclear deal—coupled with instability in Iraq, Syria, and Yemen—has reenergized Tehran’s hardliners and placed the regime in a stronger position to achieve regional hegemony. Iranian aggression, particularly in the Persian Gulf, has become routine and remains largely unopposed. If left unchecked, Tehran will continue to threaten United States’ interests at home and abroad. • The Obama Administration transferred 48 prisoners from Guantanamo Bay in 2016. The Director of National Intelligence assesses that at least 30 percent of all former Guantanamo Bay prisoners are known or suspected to have returned to terrorism following their release. As of early December 2016, 59 prisoners remain in detention.

HEADLINE	12/08 ISIS-inspired holiday season attacks
SOURCE	http://www.foreigndesksnews.com/world/middle-east/isis-inspired-jihadis-call-holiday-season-attacks/
GIST	<p>Islamic State-inspired jihadis are encouraging would-be jihadis to carry out knife attacks on the West during the upcoming holiday season.</p> <p>The Foreign Desk has obtained access to an English-language encrypted Telegram chatroom where jihadis are posting videos, guides and tutorials, ranging from knife attack infographics to bomb assembly and oddly enough, full-length tutorials on Krav Maga, an Israeli themed martial arts and self-defense technique.</p> <p>“Christmas, Hanukah and New Years Day is very soon InshaAllah. So lets prepare a gift for the filthy pigs / apes,” reads one post, below a screenshot of a pressure cooker bomb-making tutorial.</p> <p>Entitled “LM” or lone mujahid, the chat room aims to be a resource for terrorist wannabees who are looking to carry out so called ‘lone-wolf’ jihad.</p>

A pointing finger beneath the photo brings attention to suggested attack gear including a shoe bomb, suicide vests and dynamite.

There are video tutorials on how to make “ricin powder” and “explosive belt manufacturing,” and even ideas for alternative materials to use when listed items aren’t readily available. Use “nuts nails bolts etc” as an alternative to ball bearings, a post reads.

An entry from last month shows a photograph with individual headshots of the 9/11 hijackers with an empty square at the end and the caption: “Here will always be an opening for the next Lone Mujahid Hence the Blank Space in the bottom right of the picture!”

Introducing Krav Maga, the group lauds the Israeli IDF-taught martial art system as “devised by jews for the purpose of ending a fight as quick as possible.”

“K.M. is really beneficial for the Lone Mujahid is that majority of the techniques and moves are very deadly unlike most self defense styles and also deal with disarming weapons like gun knife and sticks to fighting with knives and guns.”

Additional “Hagana” (self-defense) videos are introduced with the disclaimer “videos contain music,” as ISIS put out a notice **banning music**, particularly the Western variety, at the time the Caliphate was formed in 2014.

Another infographic, with current statistics about suicide attacks, says, “Don't you think it's about time you add your score to the leader board ??.”

Alongside video of a female suicide bomber in Libya, the channel taunts viewers, “Shame on brothers who are watching doing nothing while our Sisters are ready to sacrifice for the SAKE OF ALLAH.”

Fearing deletion by Telegram Support, the group urges others in a “Special Request!” to save and spread the propaganda material before it’s taken down.

HEADLINE	12/09 Germany arrests teens over attack plot
SOURCE	http://www.foxnews.com/world/2016/12/09/germany-teens-arrested-over-suspected-extremist-attack-plan.html
GIST	<p>BERLIN – Prosecutors say two teenagers have been arrested in Germany on suspicion that they were planning an Islamic extremist attack.</p> <p>State prosecutors in Karlsruhe said the two Germans, ages 15 and 17, were arrested on Thursday. Prosecutors said the two were suspected of trying to procure firearms for a possible attack on an unidentified public facility in the Aschaffenburg area, southeast of Frankfurt.</p>

	<p>Police seized Islamic extremist propaganda, flags of the Islamic State group and cellphones. They found no firearms.</p> <p>Prosecutors said Friday there was no evidence the suspects would have been able to carry out their plan, but they were arrested on suspicion of conspiring to commit an attack. Police said they'll now investigate how serious the plan was and added that there are indications the two are mentally ill.</p>

HEADLINE	12/08 US intel blamed for missing rise of ISIS
SOURCE	http://www.washingtontimes.com/news/2016/dec/8/obama-says-us-intelligence-missed-the-rise-of-the-/
GIST	As President Obama prepares to leave office without having destroyed the Islamic State, he’s selling the notion that U.S. intelligence agencies failed to warn him promptly about the rise of the terrorist group more than two years ago, an assertion raising howls of incredulity in some quarters.

The White House pushed that version of events Thursday, pointing to an assessment by Director of National Intelligence James R. Clapper in September 2014 that U.S. intelligence agencies “underestimated” the Islamic State, also known by the acronyms ISIL and ISIS.

“Those are the facts,” said White House press secretary Josh Earnest.

Mr. Obama told CNN in an interview that aired late Wednesday, “The ability of ISIL to not just mass inside of Syria, but then to initiate major land offensives that took Mosul [in Iraq], for example, that was not on my intelligence radar screen.”

But some critics are pointing to claims that the administration ignored warning signs from intelligence sources and allies such as Kurdish leaders about the Islamic State’s growing strength after 2011, when Mr. Obama withdrew all U.S. troops from Iraq.

Sherkoh Abbas, chairman of the Kurdistan National Assembly of Syria, said in 2014, “We approached the State Department about ISIS before ISIS was in the headlines, and we were ignored.”

In September 2014, Fox News reported that Mr. Obama had been told about the rise of the terrorist group in his classified daily intelligence briefings throughout the previous year.

In February 2014, Lt. Gen. Michael Flynn, then director of the Defense Intelligence Agency, briefed the Senate Armed Services Committee on the emerging threat of the Islamic State.

The group “probably will attempt to take territory in Iraq and Syria to exhibit its strength in 2014, as demonstrated recently in Ramadi and Fallujah, and the group’s ability to concurrently maintain multiple safe havens in Syria,” Gen. Flynn testified. “Since the departure of U.S. forces at the end of 2011, [Islamic State] has exploited the permissive security environment to increase its operations and presence in many locations and also has expanded into Syria and Lebanon to inflame tensions throughout the region.”

Jay Sekulow, general counsel at the American Center of Law and Justice and a frequent Obama critic, called the president’s latest assertions “unbelievable.”

HEADLINE	12/08 Fusion center network in OSU incident
SOURCE	http://abcnews.go.com/US/suspected-terror-attack-osu-launched-nationwide-dragnet-information/story?id=44056937
GIST	Brian Quinn was having a routine morning chat with a highway patrolman on Nov. 28 when one of his staffers interrupted: “Gentlemen, you need to know of a developing situation.”

“There’s been a police shooting on the [Ohio State University] campus involving a car versus a crowd,” the staffer told Quinn, who runs the Ohio Strategic Analysis and Information Center in Columbus.

It was the start of a nationwide dragnet for information.

“We don’t know where the shoe may be falling next,” said Mike Hartzler, another senior homeland security official in Ohio.

It’s a tough question to answer quickly, especially with new technologies allowing criminals and terrorists to increasingly operate in secret. So local authorities have developed a network of “fusion centers” in states and cities across the country, all looking to help each other compile, vet and swap information related to threats in their areas.

“There’s no nation on this planet that has this capability right now,” said Mike Sena, president of the National Fusion Center Association, which represents and promotes the 78 fusion centers across the country. But what does this capability really look like, and why is such information-sharing so important?

The OSU incident offers a glimpse.

At 9:53 a.m. on Nov. 28, OSU police officer Alan Horujko fatally shot the man who had just driven a car into several people and slashed bystanders with a knife.

Soon after – while law enforcement officers from 28 different agencies were still trying to secure the area and help victims – authorities picked up a driver’s license with the name of a possible suspect: Abdul Razaq Ali Artan.

The name was sent to Quinn’s fusion center. Within minutes, a young female analyst uncovered what may be one of the most important pieces of evidence in the case.

“I think I found something. Take a look at this,” Quinn recalled the analyst calmly telling him.

She had somehow found Artan’s Facebook page, even though it was under the name “Abdi Razaq.” She could see he left behind a digital diatribe against U.S. foreign policy, declaring in his final post, “If you want us Muslims to stop carrying [out] lone wolf attacks, then make peace with [ISIS].”

The analyst forwarded the Facebook page to other fusion centers in Ohio and pushed it to federal partners, including the Joint Terrorism Task Force, or JTTF, in Columbus, where FBI agents, city police officers and others sit side-by-side to investigate federal terrorism cases.

Hartzler, director of the Greater Cincinnati Fusion Center, responded to the analyst’s email with a simple message: “Great work.”

His own analysts in Cincinnati had jumped in to help their counterparts 100 miles away.

In years past, when fusion centers weren't as readily able to help in the middle of a crisis, finding a Facebook account like that "would have been done hours later," according to Quinn. "Nowadays we're able to get that information while officers are still on the scene."

Shortly after 11 a.m., reports online and then on cable news erroneously began to say Artan used a machete to slash some of his victims. In fact, Artan had used a butcher knife. That may seem like a minor difference, but law enforcement officials worried the false reporting could have serious consequences.

In those minutes and hours after an attack, authorities scramble to determine whether there may be a bigger plot, and they look to see if similar attacks are underway elsewhere.

So "whether it's a knife or a machete or a sword or a gun all matter to those who are investigating," according to Rick Zwyer, executive director of homeland security for the state of Ohio.

In addition, if investigators on the ground falsely hear there was a machete used, they may waste precious time looking for a weapon that never existed, officials said.

State and local officials relied on a fusion-center database known as "SitRoom" to correct the rumors and "misinformation," as Quinn put it. They also used the database to provide situational updates, including the latest on whether other people were involved in the attack and the status of those who were injured.

"The details do matter," Zwyer insisted.

By early Monday afternoon, authorities had pieced together a preliminary picture of the attack and the suspect.

"The people who should have been talking to each other were talking to each other," said Deputy Chief Michael Woods, the head of the Columbus Police Department's Homeland Security Division, who had raced to the scene at OSU.

At 11:29 a.m., the FBI issued a "situational news notification" to personnel throughout the agency, indicating that the FBI's Counterterrorism Division in Washington was getting more involved in the case.

The JTTF in Columbus would begin to take on a more prominent role, too. After all, JTTFs are investigators who "deal with the classified side of things," while fusion centers act more like researchers and messengers, according to one JTTF member outside of Columbus.

When an attacker might be on the move, the “JTTF isn’t where you want to send real-time info about what car the suspect is driving” or where the suspect may be heading next, the JTTF member said. “That’s more of the fusion center role.”

Around 1 p.m., a staffer at one of the Ohio fusion centers typed Artan’s full name into the “SitRoom” database, hoping agencies in other cities and states would see it and check their own records for leads. Not a single fusion center, however, responded with more information.

Artan had flown under the radar. He didn’t come up in FBI files either, and authorities were becoming increasingly convinced that he didn’t have any accomplices.

Federal officials began to shift their concerns to something else: copycats.

At 3 p.m. on Nov. 29 – the day after Artan’s assault – senior U.S. officials held a half-hour conference call with thousands of federal, state and local law enforcement personnel across the country, updating them on the investigation and stressing vigilance.

Artan was undoubtedly inspired by Al Qaeda and ISIS propaganda, FBI Deputy Assistant Director Steve Hersem told those on the line, according to one official who was listening to the call.

“This is another unfortunate example of what we’ve been talking about for the past year and a half,” said FBI Assistant Director Kerry Sleeper, the head of the FBI’s Office of Partner Engagement, according to a second official on the call.

“Make sure that any suspicious activity threats are reported immediately” to JTTFs or fusion centers, and make sure “you are appropriately monitoring social media” for calls to violence, the FBI officials stressed to those listening, sources said.

According to one source, Sleeper concluded with this thought: “Unfortunately with the holidays coming, we’re probably going to be talking again in the near future.”

HEADLINE	12/08 Chaos at UN distribution center in Mosul
SOURCE	https://www.yahoo.com/news/chaos-desperation-first-un-aid-distribution-inside-mosul-183927382.html
GIST	<p>MOSUL, Iraq (Reuters) - Iraqi police fired shots in the air and threatened to whip crowds with a hose as residents tried to overrun the first distribution of aid by UN agencies inside Mosul on Thursday, a scene of the desperation in areas retaken from Islamic State.</p> <p>The distribution aimed to reach 45,000 people in total at several locations but showed the challenges for humanitarian organizations seeking to alleviate acute shortages of water, food and fuel.</p>

As word of the aid spread, residents of the Zuhour neighborhood flocked to a boys' primary school chosen as a distribution point -- men queuing to one side of the main entrance and women on the other. The men queued in relative order, but the women crushed against the door and tempers flared.

"We can't push them back because they are women," said one of the policemen controlling the crowd. Another brandished a section of hose, threatening to hit anyone who tried to push through. Eventually, the organizers began to let people in small groups, but could not control the flow as hundreds surged forward against just a handful of men pushing to close the gate.

They burst through, and began climbing over the walls and pushing in through the exit until the police, firing shots in the air and wielding long sticks, managed to regain control.

Aid agencies have struggled to respond to the humanitarian crisis in Mosul, where residents have largely remained in their homes despite the fighting.

The sound of small arms fire was audible from several kilometers away, where Iraqi forces are fighting to dislodge the militants from the eastern side of the Tigris River that bisects Mosul. Even in areas recaptured by government forces, mortars fired by insurgents still kill and maim residents.

HEADLINE	12/08 Iraq troops pull out of Mosul hospital
SOURCE	http://www.reuters.com/article/us-mideast-crisis-iraq-idUSKBN13X1EI
GIST	<p>Iraqi troops who briefly seized a Mosul hospital believed to be used as an Islamic State base were forced to withdraw from the site, but managed to establish a base for army tanks nearby after days of fierce back-and-forth fighting, residents said.</p> <p>The rapid advance into the Wahda neighborhood where the hospital is located marked a change of tactic after a month of fighting in east Mosul in which the army has sought to capture and clear neighborhoods block by block.</p> <p>The ferocity of the fighting reflects the importance of the army's push from southeast Mosul towards the center, their deepest advance in a grueling seven-week offensive to crush Islamic State in Iraq's largest northern city.</p> <p>The soldiers seized Salam hospital, less than a mile (just over 1 km) from the Tigris river running through central Mosul, on Tuesday but pulled back the next day after they were attacked by six suicide car bombs and "heavy enemy fire", according to a statement by the U.S.-led coalition supporting Iraqi forces.</p>

	Coalition warplanes, at Iraq's request, also struck a building inside the hospital complex from which the militants were firing machine guns and rocket-propelled grenades, it said.

HEADLINE	12/08 Effort to stem homegrown extremism
SOURCE	http://hosted.ap.org/dynamic/stories/U/US_FIGHTING_EXTREMISM_BOSTON?SITE=AP&SECTION=HOME&TEMPLATE=DEFAULT&CTIME=2016-12-08-14-17-03
GIST	<p>BOSTON (AP) -- A federally backed effort to stem the rise of homegrown extremists is underway in Massachusetts, nearly three years after the White House announced the initiative on the first anniversary of the Boston Marathon bombings that killed three people and injured hundreds.</p> <p>The state last week selected three organizations to use \$210,000 in federal money earmarked for the pilot effort, The Associated Press learned through a request of public records. The organizations propose initiatives meant to keep youths from being drawn to the violent messages of extremist groups.</p> <p>United Somali Youth - which operates out of New England's largest mosque, the Islamic Society of Boston Cultural Center - was awarded \$105,000 to help Somali, African and Middle Eastern youths build critical life skills through afterschool programs, counseling, college readiness assistance and other efforts.</p> <p>Empower Peace, which was founded by a communications and marketing executive, was given \$42,000 to teach high schoolers statewide how to develop social media campaigns promoting tolerance and combating bigotry so that they can produce them at their schools.</p> <p>And the 20-year-old Somali Development Center has been given \$63,000 to better integrate Somali immigrants and refugees into the broader community.</p> <p>Abdirahman Yusuf, the center's executive director, said the Boston-area Somali community hasn't had to grapple with terrorist recruitment like those in other parts of the country but needs to take preventative steps.</p> <p>"With events like Columbus, Ohio, it's important for our community to have a dialogue," he said, referring to last month's car and knife attack at Ohio State University by a Somali-born student that is being investigated as possible terrorism. "This is a relevant issue."</p>

HEADLINE	12/08 Official: 50K ISIS militants killed to date
SOURCE	http://www.newsmax.com/Newsfront/ISIS-Fighters-Killed/2016/12/08/id/762944/
GIST	A senior military official for the first time says the U.S.-led coalition has killed 50,000 Islamic State militants in the last two years in Iraq and Syria.

	<p>The official said it was a conservative estimate, but it's a bit more than what others have stated before. U.S. leaders have expressed reluctance to disclose specific numbers, and note that ISIS has been able to replace fighters rapidly, particularly early on.</p> <p>In August, Lt. Gen. Sean MacFarland said about 45,000 combatants have been taken off the battlefields.</p> <p>The official says coalition airstrikes could be more aggressive in places like Mosul, where Iraqi troops are battling to retake the city, but civilian casualties are a risk. The official wasn't authorized to discuss the matter publicly so spoke on condition of anonymity.</p>

HEADLINE	12/08 Russia's robot war against ISIS
SOURCE	https://www.thesun.co.uk/news/2356121/russian-special-forces-take-out-isis-terror-boss-with-the-help-of-machine-gun-toting-robot/
GIST	<p>THIS is the dramatic moment Russian special forces ‘take out’ a powerful ISIS boss during a highly-coordinated raid using a weaponised robot.</p> <p>Footage shows troops close in on the secret compound sheltering Rustan Aselderov – known as Abu Muhammad – and four of his brutal henchmen at the weekend.</p> <p>Soldiers are seen unloading their weapons on the building before launching two explosive devices inside. A small weaponised robotic vehicle is then seen moving in to finish the job. The robot’s mounted machine gun blasts holes through the side of the property as soldiers secure the area.</p> <p>The video has been seen by thousands online with most praising the troops for their bravery.</p> <p>Russia's FSB security service said Sunday it had killed an "emir" of ISIS in a raid in the volatile Caucasus region. The FSB said in a statement that "among the neutralised bandits was the head of the Caucasus region's branch of the Islamic State Rustam Aselderov, and four of his close associates."</p> <p>The FSB said that 35-year-old Aselderov was involved in blasts in the southern Russian city of Volgograd which killed 34 in 2013. He was fighting for another insurgent group at the time. It also linked him to twin car blasts in Dagestan in 2012 that killed 14 and injured at least 120.</p> <p>The FSB said he also organised a foiled attack that was to take place on Moscow's Red Square on New Year's Eve 2010 involving two female suicide bombers.</p> <p>The warlord pledged allegiance to ISIS leader Abu Bakr al-Baghdadi in December 2014, the first major militant to do so in the Caucasus.</p>

	<p>ISIS named Aselderov, also known as Sheikh al-Qadari, the governor of a new Caucasus province.</p> <p>The FSB said a joint operation with the interior ministry had cornered Aselderov and his fighters in a private house in the city of Makhachkala, where they found "automatic weapons and a large amount of ammunition and explosives."</p> <p>The Russian North Caucasus is one of the major sources of foreign jihadists fighting in Syria and Iraq.</p>

HEADLINE	12/08 Israel fires raise eco-terrorism concerns
SOURCE	http://weartv.com/news/nation-world/middle-east-wildfires-give-rise-to-eco-terrorism-concerns
GIST	<p>WASHINGTON (Sinclair Broadcast Group) — In Israel, police have arrested nearly 40 people after a number of suspected arsons that turned out to be among Israel’s worst wildfires in modern history.</p> <p>Arson investigators are combing Israel’s country-side seeking clues into the cause of nearly 40 fires that forced thousands of residents to flee their homes near Haifa, Jerusalem and Galilee.</p> <p>Israeli Prime Minister Benjamin Netanyahu called these fires an act of terror -- what experts call "eco-terrorism."</p> <p>“Certainly, somebody hit upon that idea,” says Paul Salem of the Middle-East Institute in Washington D.C. “Once the first fire was set ablaze, there were a number of copycat attacks apparently.”</p> <p>Experts are concerned that after dozens of shooting attacks in Europe and the U.S. in recent years and last month’s knife attack in Ohio, the west can be open to acts of eco-terrorism by jihadists either connected to -- or inspired by -- rogue groups like ISIS.</p> <p>“That wave also is set to continue, even while ISIS is suffering setbacks in its territory in Iraq and Syria,” says Salem.</p> <p>As ISIS loses ground in Iraq and Syria, that means it’s losing its caliphate. Experts say ISIS is quite possibly becoming more desperate to send its message westward by any means necessary.</p>

HEADLINE	12/09 Bomb blasts kill 10 northeast Nigeria
SOURCE	http://hosted.ap.org/dynamic/stories/A/AF_NIGERIA_BOKO_HARAM?SITE=AP&SECTION=HOME&TEMPLATE=DEFAULT&CTIME=2016-12-09-07-20-34
GIST	YOLA, Nigeria (AP) -- Police say two explosions have ripped through a market in northeast Nigeria's Madagali town, and a survivor says they killed at least 10 people.

Boko Haram Islamic extremists are blamed for the attack Friday morning on the edge of the group's Sambisa Forest stronghold, which Nigeria's military has been bombing ahead of ground assaults.

Since the military has dislodged the extremists from towns and villages this year, the insurgents have been attacking soft targets.

HEADLINE	12/08 EU report: 1,500 fighters have returned
SOURCE	https://www.thesun.co.uk/news/2358068/isis-news-latest-europe-terrorists-attacks/
GIST	<p>MORE than 1,500 jihadists fighting with ISIS in Syria and Iraq have returned to Europe with orders to “carry out attacks”, an EU report warned.</p> <p>An estimated 5,000 European ISIS fanatics went to Syria and Iraq and 15 to 20 per cent of them died on the battlefield.</p> <p>Around 30 to 35 per cent have returned with “specific missions”, while the other half remained in the battle theatre – which amounted to between 2,000 and 2,500 Europeans.</p> <p>This means as many as 1,750 may have returned, based on the percentages listed in the report which EU counter-terrorism coordinator Gilles de Kerchove will present to EU interior ministers on Friday.</p> <p>The report said there were two types of ‘foreign terrorist fighters’ returning.</p> <p>“There are largely two categories of returnees: those in the majority who will drift back and those who will be sent back on specific missions, which are of most concern.”</p> <p>The report even claimed some European women and children born or raised in the so-called caliphate declared by ISIS in Iraq and Syria could pose a security threat as they may have been radicalised.</p> <p>Without giving figures, it said some returnees have been convicted and serving prison sentences, while others are being monitored and some are free in their communities.</p> <p>It recalled that foreign fighters who have returned to Europe have staged both foiled and successful attacks, including the slaughter in Paris in November last year and this year’s bombings in Brussels in March.</p> <p>Both sets of attacks were claimed by ISIS, which is also known by its Arabic acronym Daesh.</p> <p>“There is also a significant foreign terrorist fighter contingent with Daesh in Libya which might attempt to use their nationality or family connections to return to Europe,” the report said.</p>

	It said returnees were keeping in touch with Daesh in the Middle East via social media and increasingly turning from mainstream Twitter to the encrypted one-to-one messaging service Telegram.

HEADLINE	12/08 Diplomats foresee Iran, ISIS rise
SOURCE	http://www.cbsnews.com/news/as-aleppo-falls-diplomats-foresee-iran-and-isis-rise/
GIST	<p>Aleppo's fall will not end the brutal Syrian war, but now diplomats are haggling over "which direction it falls," according to a Western diplomat. That is, will it be a bloodbath? Or can Secretary of State John Kerry negotiate a pathway out for the civilians trapped alongside the besieged U.S.-backed rebels in the eastern portion of the city? And could there be a way to call the surrender of that city something other than "defeat" for the rebels?</p> <p>"We are witnessing talks that are trying to manage Syrian and Russian victory," a European diplomat said on the condition of anonymity due to sensitivity of the ongoing diplomacy.</p> <p>Kerry spoke with Russian Foreign Minister Sergey Lavrov Wednesday and again Thursday about one potential arrangement. Technical advisers are set to meet this weekend in Geneva on the matter, while Kerry convenes with a number of high-ranking diplomats in Paris this weekend.</p> <p>Expectations are low, but the cost of failure is quite high.</p>

“A cessation of hostilities is urgently needed to protect the civilians from Iran and the regime,” former Syrian diplomat Bassam Barabandi told CBS News. He has worked closely with the US-backed political opposition.

Without a pause in violence and a pathway out of the siege, thousands of civilians holed up alongside the estimated 9,000 or so Free Syrian Army fighters will face near-certain slaughter at the hands of the notoriously brutal Iranian proxy forces fighting on behalf of the militarily-weak Assad regime. The Shiite militias supported by Tehran are feared even more than Hezbollah, Iran’s Revolutionary Guard -- or even than Assad’s own troops.

Western and Arab diplomats tell me they are keenly aware that a defeat of the moderate rebels leaves the “bleeding edge” of Sunni extremism – ISIS- and al Qaeda-backed groups seeking to control Syria – up against the “bleeding edge” of extremist Shiite militias hired by Iran. The concern is that this violent churn will draw more fighters to extremist groups rather than to the moderate rebels who have been nominally supported by the U.S. Kerry has made similar arguments to Moscow in the past.

A further worry for the Syrian opposition is that the Assad regime’s victory will solidify Iran’s hold on Syria, which is the crown jewel of Tehran’s sphere of influence in the Middle East. Despite Donald Trump’s outreach to Assad’s sponsors in Moscow, the Syrian opposition is now hoping that the Trump administration will view Syria as worthy of action, in order to push back against Iran. The Syrian opposition is in contact with the incoming administration.

“The statements from the elected president Trump and his cabinet toward Syria are promising: he makes it crystal clear his coming administration will defeat ISIS and Iran,” Barabandi said. “Both are enemies of Syrian people, and both helped the regime.”

A clearly frustrated Western diplomat sheepishly admitted that both the U.S. and Europe had focused too much on pressuring Moscow and too little on squeezing Iran to stop the violence in Syria. The diplomat attributed that hesitation to American concern over disrupting the nuclear deal with Iran, and European concern about squandering investment opportunities resulting from that agreement. Iran sanctions are “more third-rail” than Syria sanctions because of the commercial interests, this diplomat said.

HEADLINE	12/07 Spy agencies targeted phones on planes
SOURCE	https://www.yahoo.com/tech/us-uk-spies-targeted-airline-passengers-mobiles-report-063219247.html
GIST	<p>Paris (AFP) - American and British spy agencies have tried to intercept data from passengers' mobile phones on commercial airlines including Air France, media reports say, citing documents from US whistleblower Edward Snowden.</p> <p>The French flag-carrier was an early target of the US National Security Agency and its British counterpart GCHQ as it was seen as a terrorist mark and it carried out tests in 2007 on allowing the use of mobile phones on its aircraft.</p> <p>"The use of mobile phones with internet connections in the sky gave rise to the creation of specific programs at the NSA and GCHQ," said Le Monde, which has access to Snowden's archive in partnership with news website The Intercept.</p> <p>While it is not normally possible to make phone calls on planes, some carriers allow passengers to connect to a cabin wifi, allowing them to use internet-based functions on their handsets.</p> <p>In 2012, at least 27 airlines allowed passengers to use mobile phones on board, including British Airways, Aeroflot, Etihad, Cathay Pacific, Lufthansa and Singapore Airlines.</p>

But Air France was "such a symbol of the surveillance of communications on board airlines that the British spy agency used a drawing of one of their planes to illustrate how the interception worked."

Asked about the British and American surveillance claims, Air France told Le Monde: "We are visibly not the only ones to have been targeted and we know absolutely nothing about these practices."

According to the report, internal documents from the two agencies describe the results of the "impressive" programs -- codenamed "Thieving Magpie" and "Homing Pigeon" -- which allowed data to be collected "almost in real time".

In order to spy on a telephone, all that was needed was that the aircraft be cruising at an altitude above 10,000 feet, the report said.

Secret aerial stations on the ground could intercept the signal as it transited through a satellite.

"The simple fact that the telephone was switched on was enough to give away its position, the interception could then be cross-referenced with the list of known passengers on the flight, the flight number, and the airline code to determine the name of the smartphone user," the report said.

The mobile phone's function could also be disrupted, it said, forcing the user to input their access codes and thereby allowing the British spy agency to intercept the information.

HEADLINE	12/08 Japan tags dementia sufferers w/barcode
SOURCE	https://www.yahoo.com/news/lost-found-japan-tags-dementia-sufferers-barcodes-093502777.html
GIST	<p>A Japanese city has introduced a novel way to keep track of senior citizens with dementia who are prone to getting lost -- tagging their fingers and toes with scan-able barcodes.</p> <p>A company in Iruma, north of Tokyo, developed tiny nail stickers, each of which carries a unique identity number to help concerned families find missing loved ones, according to the city's social welfare office.</p> <p>The adhesive QR-coded seals for nails -- part of a free service launched this month and a first in Japan -- measure just one centimetre (0.4 inches) in size.</p> <p>"Being able to attach the seals on nails is a great advantage," a city worker told AFP. "There are already ID stickers for clothes or shoes but dementia patients are not always wearing those items."</p> <p>If an elderly person becomes disorientated, police will find the local city hall, its telephone number and the wearer's ID all embedded in the QR code.</p>

	<p>The chips remain attached for an average of two weeks -- even if they get wet -- the official said, citing recent trials.</p> <p>Japan is grappling with a rapidly ageing population with senior citizens expected to make up a whopping 40 percent of the population around 2060.</p>

HEADLINE	12/09 WADA: 1,000 Russia athletes in doping
SOURCE	http://www.usatoday.com/story/sports/olympics/2016/12/09/more-than-1000-russian-athletes-involved-doping-mclaren-report-says/95187710/
GIST	<p>A second investigation commissioned by the World Anti-Doping Agency has revealed that more than 1,000 athletes were involved in a state-run doping system in Russia.</p> <p>The findings come in the second part of an investigation by Canadian lawyer Richard McLaren, who announced the results of his inquiry in London on Friday.</p> <p>His second report – which comes after WADA extended his mandate in July – confirmed the findings of the first report while revealing more about a system of covering up tests that was refined over time.</p> <p>“The results of the forensic and laboratory analysis initiated by my team established the conspiracy that was perpetrated between 2011 and 2015,” McLaren said. “It is impossible to know how deep and how far back a conspiracy goes. For years, international sports competitions have unknowingly been hijacked by the Russians. Coaches and athletes have been playing on an uneven field. Sports fans and spectators have been deceived.”</p> <p>Most notably, he said more than 1,000 Russian Olympians and Paralympians – in summer and winter sports – were identified “as being involved in or benefiting from manipulation to conceal positive doping tests.”</p>

HEADLINE	12/08 Dallas pension system suspends access
SOURCE	http://www.dallasnews.com/news/dallas-city-hall/2016/12/08/dallas-police-fire-pension-board-ends-run-bank-stops-154m-withdrawals
GIST	<p>The Dallas Police and Fire Pension System's Board of Trustees suspended lump-sum withdrawals from the pension fund Thursday, staving off a possible restraining order and stopping \$154 million in withdrawal requests.</p> <p>The system was set to pay out the weekly requests Friday. Pension officials said allowing the withdrawals would leave them without the liquid reserves required to sustain the \$2.1 billion fund.</p>

"Our situation is currently critical, and we took action," board chairman Sam Friar said.

Pension officials and many police and firefighters have blamed Dallas Mayor Mike Rawlings for forcing the latest run on the bank. Dozens of retirees rushed to request withdrawals after Rawlings filed a lawsuit Monday to stop the withdrawals.

By then, more than \$500 million had already gushed from the fund since the board proposed benefit cuts in August.

Rawlings told a crowd gathered Thursday afternoon at a Dallas Regional Chamber that "the bleeding has stopped. We can turn this ship around."

The crowd responded with cheers after the mayor's announcement of the board's decision. At the pension board meeting, the mood was more somber.

Council member Philip Kingston, a board trustee, said the mayor "unquestionably" forced the pension board's hand. He said Thursday was "the worst day I've had in public office."

"Unfortunately, financially, this had to happen," he said.

Kingston said the tough decision will be worth it if it means the pension, which is hurtling toward insolvency within the next decade or so, can be saved.

HEADLINE	12/09 NASA's black women in 'computer pool'
SOURCE	http://www.cnn.com/2016/12/09/us/hidden-figures-nasa-trnd/index.html
GIST	<p>By the time NASA was preparing to send John Glenn to space for the historic Mercury-Atlas 6 mission computers were used to calculate launch conditions.</p> <p>It wasn't long before then that the space agency and its predecessor, the National Advisory Committee for Aeronautics, used "computers in skirts" to do all the number-crunching.</p> <p>That's right: humans, namely women, comprised the workforce known as the "Computer Pool" before the arrival of electronic data processors, aka, computers in the 1960s. Black women played a crucial role in the pool, providing mathematical data for NASA's first successful space missions, including Glenn's pioneering orbital spaceflight.</p> <p>Their work barely earned a mention in pop culture space tributes until this year, thanks to a best-selling novel and a forthcoming film that's getting major Oscar buzz.</p>

"Hidden Figures," starring Taraji P. Henson, Octavia Spencer, Janelle Monáe, tells the story of three women from the pool. The film is based on Margot Lee Shetterly's bestselling book by the same name, which spans several decades and characters at Langley.

Henson stars as Katherine Johnson, the 2015 National Medal of Freedom recipient who calculated the trajectory for America's first trip to space with Alan Shepherd's 1961 mission; Spencer as Johnson's supervisor, Dorothy Vaughan; and Monáe as Mary Jackson, who rose from mathematician to engineer to the mentor for women and minorities.

A pivotal scene in the film features Glenn. Johnson's work was held in such high regard in its time that Glenn, who died on Thursday, was aware of it. Computers were so new that even people at NASA were skeptical of them, and Glenn requested that Johnson personally confirm its calculations before his trip three times around Earth.

A day and a half later she proved the computer right.

Considered more patient and detail-oriented than men (and they could be paid less), the first women were hired in 1935 to do the integral but time-consuming work of reading, calculating and plotting test data to free up engineers for research projects.

Following an executive order prohibiting racial discrimination in the defense industry, Langley Memorial Aeronautical Laboratory, NACA's main research center, began recruiting black people with college degrees in the 1940s for the computer pool. For years the women occupied a segregated wing, "West Area Computing," and used separate facilities. But there was no denying the value of their contribution.

In interviews ever since, Johnson has resisted taking full credit for the work. As she said in a 2010 interview, "We always worked as a team. It's never just one person."

HEADLINE	12/09 Alabama inmate ‘reacts’ during execution
SOURCE	http://www.nbcnews.com/storyline/lethal-injection/alabama-inmate-coughs-heaves-13-minutes-execution-n693906
GIST	<p>ATMORE, Ala. — A man who killed an Alabama convenience store clerk more than two decades ago was put to death Thursday night, in an execution that required two consciousness tests as the inmate heaved and coughed 13 minutes into the lethal injection.</p> <p>Ronald Bert Smith Jr., 45, was pronounced dead at 11:05 p.m., about 30 minutes after the procedure began at the state prison in southwest Alabama.</p> <p>Smith was convicted of capital murder in the Nov. 8, 1994, fatal shooting of Huntsville store clerk Casey Wilson. A jury voted 7-5 to recommend a sentence of life imprisonment, but a judge overrode that recommendation and sentenced Smith to death.</p> <p>Smith heaved and coughed repeatedly, clenching his fists and raising his head at the beginning of the execution. A prison guard performed two consciousness checks before the final two lethal drugs were administered. During the first one, Smith moved his arm. He slightly raised his right arm again after the second consciousness test.</p> <p>The meaning of those movements will likely be debated. One of Smith's attorneys whispered to another attorney, "He's reacting," and pointed out the inmate's repeated movements.</p> <p>The state prison commissioner said he did not see any reaction to the consciousness tests.</p>

HEADLINE	12/08 India: pilots lied being low on fuel
SOURCE	https://www.bloomberg.com/news/articles/2016-12-08/impish-pilots-crying-wolf-over-fuel-raises-india-air-safety-risk
GIST	<p>Pilots of at least three Indian flights, including one operated by market leader IndiGo, lied to air traffic controllers about being short on fuel to get priority landing at an airport, according to an investigation by the country’s aviation safety regulator.</p>

	<p>The incident occurred on Nov. 30, when pilots of an IndiGo plane radioed traffic controllers at Kolkata airport the jet was running out of fuel and it should be allowed to land, bypassing more than half a dozen aircraft waiting in queue. An Air India Ltd. aircraft, ahead of IndiGo, also claimed the same after listening to the conversation, while another plane operated by SpiceJet Ltd. also followed suit, the investigation showed.</p> <p>None of the aircraft ran the risk of an empty tank, and all of them had enough jet fuel to fly to an alternative airport and attempt at least two landings, or to circle around Kolkata for half an hour, a senior official at the Directorate General of Civil Aviation told reporters in New Delhi, asking not to be identified citing rules.</p> <p>Airport congestion is increasingly becoming a serious issue in India -- the fastest growing major aviation market in the world -- as carriers struggle to maintain their on-time performance, a key selling point to low-cost customers. The average time an aircraft spends circling before it can land in Mumbai during peak hours is about 45 minutes to an hour, versus 25 minutes for Singapore and zero for Qatar, according to Dubai-based Martin Consulting LLC.</p> <p>The pilots of the three aircraft were being “naughty,” and posed a serious threat to preparations when an actual incident of fuel shortage occurs, the official said. The IndiGo aircraft was carrying Mamata Banerjee, the chief minister of West Bengal state, whose political party raised the issue in parliament, saying her life was threatened. The pilots of all three flights have been suspended.</p>

HEADLINE	12/09 Japan doubles Fukushima cleanup cost
SOURCE	http://abcnews.go.com/Technology/wireStory/japan-doubles-cost-estimate-fukushima-cleanup-44080823
GIST	<p>A cost estimate to clean up Japan's wrecked Fukushima nuclear plant has doubled to nearly 22 trillion yen (\$190 billion), with decommissioning costs expected to continue to rise, according to a government panel Friday.</p> <p>The estimate raises the decommissioning part of the total costs to 8 trillion yen (\$70 billion) from the current 2 trillion (\$17.5 billion) because of surging labor and construction costs. Panel officials said the numbers could still grow as experts learn more about the damage to the plant's reactors and determine fuel removal methods.</p> <p>Costs for compensation, decontamination of the area and waste storage have also grown significantly. The plant suffered multiple meltdowns following the March 2011 earthquake and tsunami. Officials said its decommissioning will take several decades.</p>

HEADLINE	12/08 Everett lab fined for 38 monkey deaths
-----------------	---

SOURCE	http://www.seattletimes.com/seattle-news/science/usda-fines-everett-lab-185000-for-38-monkey-deaths/
GIST	<p>The USDA has fined an Everett animal-research laboratory \$185,000 and suspended its license for at least a month, after 38 monkeys died — many during shipment from Asia to Everett and a facility in Houston.</p> <p>A decision and order spelling out the fine against SNBL USA, which sells lab animals and conducts medical testing on primates and other species, was filed Dec. 2 with the U.S. secretary of agriculture.</p> <p>SNBL’s license to operate as a dealer under the federal Animal Welfare Act will be suspended beginning Dec. 22, the document says. Under the order, the license can be reinstated after 30 days if inspections show the company is properly caring for its animals.</p> <p>Between the time the USDA’s original complaint was filed in September and the settlement this month, agency inspectors documented the deaths of two additional monkeys at the Everett lab.</p> <p>The November inspection report was sent to The Seattle Times by Stop Animal Exploitation Now, an activist group that seeks to “liberate” animals from laboratories, and People for the Ethical Treatment of Animals (PETA).</p> <p>PETA criticized the fine as “a drop in the bucket” for a company like SNBL, which is a subsidiary of Japan-based Shin Nippon Biomedical Laboratories. “SNBL is a dirty player in an ugly business and PETA urges federal agencies ... to cancel all contracts with the company so that our taxes aren’t supporting this misery,” said a statement from Kathy Guillermo, PETA’s senior vice president of laboratory investigations.</p>

HEADLINE	12/07 Issaquah well tests positive for PFOS
SOURCE	http://www.kiro7.com/news/local/pfos-found-in-testing-well-near-eastside-fire-and-rescue/474093932
GIST	<p>The city of Issaquah is trying to find out how the contaminant PFOS, perfluorooctane sulfonate, is getting into the groundwater.</p> <p>A new report points to the property where Eastside Fire and Rescue's headquarters is located as a likely source.</p> <p>Eastside Fire and Rescue says it is working as quickly as possible to address the concern but thinks there are likely other sources in the community as well.</p> <p>PFOS was once an ingredient in firefighting foam used on petroleum fires. It was the industry standard but was phased out more than a decade ago.</p>

Return to Top	<p>The presence of PFOS 31 times above the EPA's advisory benchmark made the city temporarily shut down one of its wells and then add an extensive filtration system.</p> <p>The water has been monitored and is safe.</p> <p>The city hired Geosyntec Consultants to investigate the source and the company issued a report to the city. The results will be shared with the City Council on Dec. 19.</p> <p>KIRO-7 obtained that 158 page report from the city of Issaquah. According to the study by Geosyntec Consultants, the level of PFOS found in a testing well not far from Eastside Fire and Rescue headquarters had a level of PFOS that was 31 times higher than the EPA advisory limit. According to the report, it was 2,200 parts per trillion when the advisory amount from the EPA is 70 parts per trillion.</p>

HEADLINE	12/09 Corruption Index: most corrupt nations
SOURCE	http://www.ibtimes.co.uk/what-are-most-corrupt-countries-world-1595572
GIST	<p>Every year, an estimated \$1trn is paid in bribes, with around \$2.6trn stolen annually through corruption. Although definitive statistics are impossible because of the nature of the crime, it is believed that around 68% of countries worldwide have a serious problem with corruption.</p> <p>Here are the most corrupt countries, according to the latest Corruption Perceptions Index.</p>

1st: North Korea and Somalia (joint)

Earlier this year, the BBC reported huge cases of corruption and voter intimidation in the parliamentary elections in Somalia, with some candidates offering bribes of up to £1m to secure votes.

Although North Korea suffers large-scale corruption, South Korea has its problems too. In November, a scandal emerged surrounding the South Korean president Park Gun-hye, who is accused by prosecutors of being involved in a scheme to pressure major companies to donate millions of dollars to funds controlled by a close friend.

2nd: Afghanistan

In Afghanistan, one of the world's poorest countries, millions of dollars that should have gone on reconstruction have been reportedly misused or stolen, undermining efforts to sustain peace. In 2010, nearly \$1bn disappeared from Kabul Bank, after businessmen and politicians carried out a Ponzi scheme in which deposits were stolen instead of invested.

3rd: Sudan

After decades of war and political instability, Sudan faces high levels of corruption, which exist in pretty much every section of its economy.

4th: Angola and South Sudan (joint)

In Angola, a country rich with oil and diamonds, nearly three-quarters of the population (70%) live on \$2 a day or less and around one in six children die before the age of five. According to Transparency International, however, not everyone is suffering – the president's daughter is a billionaire, having made her fortune from the diamond and telecoms business.

5th: Iraq and Libya (joint)

In May, a Transparency International survey found nearly one in three citizens who tried to access basic public services in the Middle East and North Africa paid a bribe. Of around 11,000 adults across nine countries and territories, 61% of people thought that the level of corruption had gone up in the last year.

6th: Haiti, Guinea-Bissau and Venezuela (joint)

In Venezuela, government funds are mismanaged, stolen or spent on companies linked to power. In one case, a journalist working with Transparencia Venezuela found least 400 tonnes of medicines had been left to expire in storage between 2010 and 2014, instead of being distributed to medical facilities in a country that lacks basic medical equipment.

7th: Eritrea, Syria, Turkmenistan and Yemen (joint)

In Syria, corruption has helped finance violent extremist groups and aided them with recruitment. Earlier this year, French officials placed Syrian President Bashar al-Assad's uncle – Rifaat al-Assad – under

investigation for corruption and money laundering, alleging he acquired wealth and a property empire in France through embezzlement and corrupt schemes.

8th: Uzbekistan

One of the most corrupt countries in the world is Uzbekistan, where the crime penetrates all levels of the business and society. Bribes impact court decisions, extortion is common among the police and the enforcement of anti-corruption laws is weak.

9th: Burundi, Cambodia and Zimbabwe (joint)

Corruption and human rights abuses have been evident in Burundi since President Pierre Nkurunziza's decision to run for a third term in July, which sparked violence including assassinations, arrests, torture of government critics and escalating attacks by anti-government forces. The government has shut down nearly all private media and increased surveillance of citizens.

10th: Chad, Democratic Republic of Congo, Myanmar (joint)

Myanmar, or Burma, experienced more than 40 years of military rule, but it is experiencing political and economic reforms. However, the military is still influential in politics, the media are still restricted and corruption is still a major challenge.

HEADLINE	12/08 Suspect Georgia officers shooting dead
SOURCE	http://abcnews.go.com/US/wireStory/reward-info-officer-shooting-raised-50000-44058357
GIST	<p>A man suspected of fatally shooting a Georgia police officer and wounding another is dead, authorities said Thursday after a SWAT team stormed a home where a tipster had told police the suspect was hiding.</p> <p>The manhunt for 32-year-old Minquell Lembrick ended a day after a gunman killed Americus police Officer Nicholas Smarr and critically wounded Officer Jody Smith of Georgia Southwestern State University. Both officers were shot as they responded to a domestic disturbance call in Americus, a rural city 130 miles south of Atlanta. The shooting happened near campus, prompting university officials to place the school on lockdown.</p> <p>Police identified Lembrick as a suspect in the shootings and offered a \$70,000 reward for information leading to his capture. The SWAT team was dispatched to the house in Americus after authorities received a tip, said Georgia Bureau of Investigation spokeswoman Nelly Miles.</p> <p>SWAT officers emerged from the home a short time after entering, and police said the manhunt was over.</p> <p>"It's confirmed that the suspect is dead," Americus police spokeswoman Phyllis Banks told The Associated Press.</p>

	She gave no further details, including whether police shot Lembrick or found him dead. Americus Police Chief Mark Scott planned a news conference Thursday afternoon.

HEADLINE	12/08 Pirates prey on Venezuela fishermen
SOURCE	http://abcnews.go.com/International/wireStory/pirates-preying-venezuelan-fishermen-industry-unravels-44051935
GIST	<p>Pirates are terrorizing the coastal state of Sucre (Venezuela), once home to the world’s fourth-largest tuna fleet and a thriving fishing industry.</p> <p>That trade has collapsed, along with virtually every industry across Venezuela. Gangs of out-of-work fishermen prey upon those who still venture out into the open sea, stealing their catch and motors, tying them up, throwing them overboard, and sometimes shooting them. The robberies have taken place daily this year, and dozens of fishermen have died.</p> <p>"People can't make a living fishing anymore, so they're using their boats for the options that remain: smuggling gas, running drugs and piracy," said Jose Antonio Garcia, leader of the state's largest union.</p> <p>Venezuela's once booming oil economy is on its knees under socialist President Nicolas Maduro. In the low-lying western ranching region, cattle are dying for lack of feed. The mineral-rich states to the east no longer produce metal. In the agricultural heartlands, farmers wait in food lines to buy the crops they once</p>

grew before fertilizer ran out. Across the petroleum belt, rigs and refineries are silent, and this month has seen the rise of gas lines in a country with the world's largest oil reserves.

Here on the coast, the catch is down to less than a third of the 120,000 tons of tuna Venezuela produced in 2004. In June, Sucre was the epicenter of food riots that swept through the country. Punta de Araya families got through the summer by eating "dog soup," a broth made from seawater and the small fish that are usually thrown back.

HEADLINE	12/08 Georgia: 2nd officer dies after being shot
SOURCE	http://www.foxnews.com/us/2016/12/08/second-georgia-officer-dies-injuries-after-shooting-suspect-found-dead.html
GIST	<p>A second Georgia police officer died Thursday, a day after being shot alongside a fellow officer who was a lifelong friend, and the hunt for the suspected gunman ended when a SWAT team found the fugitive dead -- apparently by his own hand -- inside a home where he was hiding.</p> <p>Officer Jody Smith initially clung to life after being gravely wounded Wednesday when the university campus officer went to help his friend, Americus Officer Nicholas Smarr, respond to a 911 call of a domestic dispute at an apartment in rural Americus, about 130 miles south of Atlanta.</p> <p>Both men were shot. Smarr was killed and Smith was airlifted in critical condition to a hospital in Macon. The university that employed Smith announced Thursday evening that he had died.</p> <p>"Officer Smith showed extreme bravery in the line of duty as he responded to a call for backup," Georgia Southwestern University President Charles Patterson said in a statement.</p> <p>News of Smith's death came a few hours after the hunt for the suspected gunman ended.</p> <p>Police offered a \$70,000 reward for information leading to the capture of 32-year-old Minquell Lembrick. A telephone tip Thursday morning sent them to a home where a tipster said the suspect was hiding, Georgia Bureau of Investigation spokeswoman Nelly Miles said.</p> <p>SWAT officers emerged from the home shortly after entering. Americus Police Chief Mark Scott told a news conference they found Lembrick's body inside. He said the first officers on scene heard a gunshot inside before the SWAT team arrived.</p> <p>Lembrick died from "what appeared to be a self-inflicted gunshot wound," Scott said, adding the man was positively identified as Lembrick.</p>

HEADLINE	12/09 Germany: arrest for explosion at mosque
SOURCE	http://abcnews.go.com/International/wireStory/suspect-arrested-explosion-mosque-germany-44081988
GIST	<p>German authorities have arrested a man suspected of setting off homemade explosive devices outside a mosque and a conference center in Dresden in September.</p> <p>Prosecutors said the 29-year-old man from Dresden was arrested on Thursday. They said Friday that authorities also seized objects that could be used to make explosives, and that DNA evidence linked the suspect to the blasts.</p> <p>The entrance of the Fatih Camii mosque was damaged in the explosion on Sept. 26. An imam with his wife and two sons were inside at the time, but weren't hurt.</p> <p>The second device exploded shortly afterward on a terrace between a hotel and a conference center.</p> <p>The explosions came a few days before events marking Germany's national day in Dresden, where the anti-Islam PEGIDA movement is based.</p>

HEADLINE	12/09 Killing at rehab center 1st violent incident
SOURCE	http://abcnews.go.com/US/wireStory/killing-youth-rehab-center-1st-violent-incident-44081983

GIST	<p>The youth treatment center where police say a teenager brutally killed a staff member while trying to escape is a working cattle ranch in southern Utah that hasn't previously had any major violations with the state or violent incidents.</p> <p>Police and officials at the Turn-About Ranch near the tiny town of Escalante, Utah, aren't saying what behavioral problems led the 17-year-old suspect from Arizona to the treatment center, but the website says they don't take kids who have shown aggressive, psychotic or suicidal behavior.</p> <p>The center, does however, offer help to kids with anger issues. The center accepts boys and girls ages 13-17 for some 20 different diagnoses ranging from sleep disorder and diabetes to bipolar and personality disorder.</p> <p>The ranch is in good standing with the state licensing office and hasn't had any major violations, said Department of Human Services spokeswoman Allie Jurkatis. She said it has been licensed for a number of years, but couldn't say exactly how long. The ranch's website says it's been in operation for 25 years.</p> <p>Jurkatis said officials are investigating this week's incident to see if there were any violations, while also looking to see what the agency can learn from this to prevent future incidents.</p> <p>The teenager is in police custody, but has not yet been charged, said Garfield County Sheriff James Perkins. He says the teen will likely be charged with murder and could be prosecuted as an adult because he is almost 18. His name has not been released because of his age.</p>

HEADLINE	12/08 Court reinstates DUI convictions 2 drivers
SOURCE	http://www.seattletimes.com/seattle-news/crime/state-highest-court-reinstates-dui-convictions-of-2-drivers-not-warned-about-pot/
GIST	<p>OLYMPIA — The state Supreme Court has unanimously reinstated the drunken-driving convictions of two people who argued that the results of their breath tests should have been thrown out.</p> <p>Judith Murray and Darren Robison were each convicted of DUI for failing alcohol breath tests in Snohomish County, but had their district-court convictions overturned by higher courts. The Court of Appeals found that before the drivers agreed to submit to a breath test, state troopers failed to warn them about the consequences of having certain concentrations of marijuana compounds in their blood.</p> <p>The Supreme Court said Thursday that made little sense. The breath test is unable to measure THC concentrations, and the justices said it was therefore reasonable for the troopers to omit reference to marijuana from the warnings Murray and Robison received.</p> <p>THC, or tetrahydrocannabinol, is the main psychoactive compound in cannabis.</p>

HEADLINE	12/08 Car-stealing 'mystery device' uncovered
SOURCE	http://www.foxnews.com/auto/2016/12/08/car-stealing-mystery-device-uncovered.html
GIST	<p>The National Insurance Crime Bureau (NICB) has gotten hold of a “mystery device” that thieves have been spotted on security cameras using to electronically open and start cars.</p> <p>The organization says that it obtained it through an outside security expert who purchased it overseas. It describes it as a “relay attack” unit that was originally designed for manufacturers to test the security of their wireless systems, but it and others like it have made their way into criminal hands, and handmade versions have also been discovered.</p> <p>It is actually two devices working together. The first intercepts the signal from a nearby proximity key fob, either being carried by someone or left in a car, and transfers it to the other, which can then be used to open the lock and start the vehicle.</p> <p>The NICB tested it, with approval, in several situations that included car dealerships, a car auction and on its own employee’s vehicles. It tried it on 35 different vehicles from a variety of brands and was able to open 19 and start and drive away in 18 of those. After the ignitions were turned off, the device was able to restart 12 of the 18 cars. It didn’t provide a detailed list of makes and models that were affected by the device, but did point out that the four 2017 Chevrolet models it tried were immune.</p> <p>Since it leaves no trace of the method of entry or ignition, the NICB is warning drivers to be wary of anyone around when using these types of keys, and not leaving them behind in the car. It also points out that if you give access to your key fob to someone, including a parking valet, they can potentially use a unit like this to skim the codes and then enter or steal the car later on.</p>

HEADLINE	12/08 Man arrested for rifle on college campus
SOURCE	http://www.king5.com/news/crime/man-with-gun-in-guitar-case-on-seattle-central-college-campus-arrested/366499479
GIST	<p>A former Seattle Central College student was arrested late Wednesday for bringing a firearm on campus.</p> <p>A school spokesperson confirms the 34 year-old man was arrested in the north end of the Broadway Edison building Wednesday afternoon around 4:30 p.m. He was allegedly carrying an assault rifle inside a guitar case. The spokesperson says he made no threats, but police trespassed him from the school.</p>

According to Seattle Police, a witness contacted campus security and was aware that he sometimes stores and carries a rifle inside a guitar case. The man lives in a homeless encampment in South Seattle, and was booked for possessing a dangerous weapon in a school facility, and a felony warrant.

The college president sent a letter out to staff and students with some of the details, reminding students that no firearms are allowed on campus with the exception of weapons carried by police and military personnel who are performing their duties.

A Divided Seventh Circuit Declines to Resolve Questions About the Constitutionality of Using Cellphone-Spying Technology in Order to Track a Suspect

December 2016

[Jim Chapman](#), Attorney, Public Agency Training Council

In *United States v. Patrick*, ___ F.3d ___, 2016 WL 6892507 (7th Cir. Nov. 23, 2016), a divided panel of the United States Court of Appeals for the Seventh Circuit held that the fact that the police used a cell-site simulator in order to determine Defendant Damian Patrick's location in order to arrest him did not warrant application of the exclusionary rule. Specifically, the Seventh Circuit affirmed the District Court's denial of Patrick's motion to suppress but declined to resolve the larger constitutional issue of whether using a cell-site simulator-such as Stingray-constitutes a search under the Fourth Amendment. The relevant facts are as follows.

The Milwaukee, Wisconsin, police arrested Patrick while he was in a car on a public street. Patrick was serving a term of parole that followed his release from state prison. Patrick had not complied with the conditions of his parole, and so, a state court judge issued a warrant for Patrick's arrest. In order to locate Patrick, the Milwaukee police obtained a second warrant that authorized them to locate Patrick using cell-phone data. Patrick's cell phone revealed his location and allowed the police to find him.

When the police found him, Patrick was armed. Because he was a felon (and, therefore, could not legally possess a firearm), Patrick was charged in federal court with being a felon in possession of a firearm in violation of 18 U.S.C. § 922(g)(1). Thereafter, the District Court denied Patrick's motion to suppress the evidence that he possessed a gun. Accordingly, Patrick pled guilty to the charge and was sentenced to a 57-month term of imprisonment. However, Patrick reserved the right to challenge on appeal the validity of his arrest and the evidence of his possession of the gun.

On appeal, the Seventh Circuit held that, because Patrick was arrested in a public place and because the arrest was supported by both probable cause and a valid arrest warrant that a state court judge had issued before any effort to learn of Patrick's location had begun, it did not need to determine the difficult issues posed by the fact that the police did not reveal the use of a cell-site simulator to the state court judge who issued the warrant, nor did it need to determine the effect, if any, the fact that the federal prosecutors had not revealed this fact to the District Court. Indeed, the federal prosecutors first revealed the use of a cell-site simulator in its opening brief that it filed with the Seventh Circuit.

The United States Department of Justice describes a cell-site simulator (often called a "Stingray" which is the trademark of one brand) as follows:

Cell-site simulators . . . function by transmitting as a cell tower. In response to the signals emitted by the simulator, cellular devices in the proximity of the device identify the simulator as the most attractive cell tower in the area and thus transmit signals to the simulator that identify the device in the same way that they would with a networked tower.

A cell-site simulator receives and uses an industry standard unique identifying number assigned by a device manufacturer or cellular network provider. When used to locate a known cellular device, a cell-site simulator initially receives the unique identifying number from multiple devices in the vicinity of the simulator. Once the cell-site simulator identifies the specific cellular device for which it is looking, it will obtain the signaling information relating only to that particular phone. When used to identify an unknown device, the cell-site simulator obtains signaling information from non-target devices in the target's vicinity for the limited purpose of distinguishing the target device.

By transmitting as a cell tower, cell-site simulators acquire the identifying information from cellular devices. This identifying information is limited, however. Cell-site simulators provide only the relative signal strength and general direction of a subject cellular telephone; they do not function as a GPS locator, as they do not obtain or download any location information from the device or its applications. Moreover, cell-site simulators used by the Department must be configured as pen registers, and may not be used to collect the contents of any communication, in accordance with 18 U.S.C. § 3127(3). This includes any data contained on the phone itself: the simulator does not remotely capture emails, texts, contact lists, images or any other data from the phone. In addition, Department cell-site simulators do not provide subscriber account information (for example, an account holder's name, address, or telephone number).

Id. at * 2.

The Seventh Circuit noted that courts that had resolved the issue of whether use of a Stingray constituted a "search" for purposes of the Fourth Amendment had reached different outcomes. The line of cases that has held that the use of a Stingray did not constitute a search likened the use of a Stingray to a pen register that courts have found does not constitute a search because its use reveals the making of a call and the number called but not the call's communicative content. The contrary line of cases likened the use of a Stingray to GPS locators which are treated as searches when police enter private property to install them and also may be considered to be a search for Fourth Amendment purposes when used for extended durations even if installed with a vehicle owner's consent.

But, the Seventh Circuit observed that it need not wade into this thorny issue because the Government had conceded, for purposes of this case only, that the use of the Stingray to locate Patrick constituted a search for purposes of the Fourth Amendment. The Seventh Circuit noted that the police were authorized to use a warrant to obtain evidence to locate a warranted person, and they were entitled to arrest Patrick without a warrant of any kind, let alone the two warrants that they had. Because the United States Supreme Court has held that a valid arrest warrant precludes the suppression of evidence seized in an arrest, even if the arrest was set in motion by officers who had neither probable cause nor knowledge of the warrant, the Seventh Circuit affirmed the District Court's denial of Patrick's motion to suppress. *Utah v. Strieff*, ___ U.S. ___, 136 S. Ct. 2056 (2016).

As for Patrick's secondary argument that the police officers should have informed the state court judge of their use of the Stingray before the judge issued the warrant so that the judge was fully informed, the Seventh Circuit sidestepped that issue:

we conclude that the answers do not control this appeal. A person wanted on probable cause (and an arrest warrant) who is taken into custody in a public place, where he had no legitimate expectation of privacy, cannot complain about how the police learned his location. Recall that the cell-site simulator (unlike the GPS device in *Jones*) was not used to generate the probable cause for arrest; probable cause to arrest Patrick predated the effort to locate him. From his perspective, it is all the same whether a paid informant, a jilted lover, police with binoculars, a bartender, a member of a rival gang, a spy trailing his car after it left his driveway, the phone company's cell towers, or a device pretending to be a cell tower, provided location information. A fugitive cannot be picky about how he is run to ground. So it would be inappropriate to use the exclusionary rule, even if the police should have told the judge that they planned to use a cell-site simulator to execute the location warrant.

Id. at * 4.

Chief Judge Diane Wood authored a dissenting opinion in which she opined that the Court should have remanded the case to the District Court for further factual findings. In Judge Wood's opinion, "[e]ven if the Stingray revealed no information beyond Patrick's location, we must know how it works and how the government used it before we can judge whether it functions in a manner sufficiently different from the location-gathering methods-specified in the warrant that it amounted to a search outside the warrant's scope." *Id.*

The majority, however, left the Constitutional issue for another day: "Questions about whether use of a simulator is a search, if so whether a warrant authorizing this method is essential, and whether in a particular situation a simulator is a reasonable means of executing a warrant, have yet to be addressed by any United States court of appeals. We think it best to withhold full analysis until these issues control the outcome of a concrete case." *Id.*

Note: *Court holdings can vary significantly between jurisdictions. As such, it is advisable to seek the advice of a local prosecutor or legal adviser regarding questions on specific cases. This article is not intended to constitute legal advice on a specific case.*

Patrick's cell phone revealed his location and allowed the police to find him.

When the police found him, Patrick was armed. Because he was a felon (and, therefore, could not legally possess a firearm), Patrick was charged in federal court with being a felon in possession of a firearm in violation of 18 U.S.C. § 922(g)(1). Thereafter, the District Court denied Patrick's motion to suppress the evidence that he possessed a gun. Accordingly, Patrick pled guilty to the charge and was sentenced to a 57-month term of imprisonment. However, Patrick reserved the right to challenge on appeal the validity of his arrest and the evidence of his possession of the gun.

On appeal, the Seventh Circuit held that, because Patrick was arrested in a public place and because the arrest was supported by both probable cause and a valid arrest warrant that a state court judge had issued before any effort to learn of Patrick's location had begun, it did not need to determine the difficult issues posed by the fact that the police did not reveal the use of a cell-site simulator to the state court judge who issued the warrant, nor did it need to determine the effect, if any, the fact that the federal prosecutors had not revealed this fact to the District Court. Indeed, the federal prosecutors first revealed the use of a cell-site simulator in its opening brief that it filed with the Seventh Circuit.

The United States Department of Justice describes a cell-site simulator (often called a "Stingray" which is the trademark of one brand) as follows:

Cell-site simulators . . . function by transmitting as a cell tower. In response to the signals emitted by the simulator, cellular devices in the proximity of the device identify the simulator as the most attractive cell tower in the area and thus transmit signals to the simulator that identify the device in the same way that they would with a networked tower.

A cell-site simulator receives and uses an industry standard unique identifying number assigned by a device manufacturer or cellular network provider. When used to locate a known cellular device, a cell-site simulator initially receives the unique identifying number from multiple devices in the vicinity of the simulator. Once the cell-site simulator identifies the specific cellular device for which it is looking, it will obtain the signaling information relating only to that particular phone. When used to identify an unknown device, the cell-site simulator obtains signaling information from non-target devices in the target's vicinity for the limited purpose of distinguishing the target device.

By transmitting as a cell tower, cell-site simulators acquire the identifying information from cellular devices. This identifying information is limited, however. Cell-site simulators provide only the relative signal strength and general direction of a subject cellular telephone; they do not function as a GPS locator, as they do not obtain or download any location information from the device or its applications. Moreover, cell-site simulators used by the Department must be configured as pen registers, and may not be used to collect the contents of any communication, in accordance with 18 U.S.C. § 3127(3). This includes any data contained on the phone itself: the simulator does not remotely capture emails, texts, contact lists, images or any other data from the phone. In addition, Department cell-site simulators do not provide subscriber account information (for example, an account holder's name, address, or telephone number).

Id. at * 2.

The Seventh Circuit noted that courts that had resolved the issue of whether use of a Stingray constituted a "search" for purposes of the Fourth Amendment had reached different outcomes. The line of cases that has held that the use of a Stingray did not constitute a search likened the use of a Stingray to a pen register that courts have found does not constitute a search because its use reveals the making of a call and the number called but not the call's communicative content. The contrary line of cases likened the use of a Stingray to GPS locators which are treated as searches when police enter private property to install them and also may be considered to be a search for Fourth Amendment purposes when used for extended durations even if installed with a vehicle owner's consent.

But, the Seventh Circuit observed that it need not wade into this thorny issue because the Government had conceded, for purposes of this case only, that the use of the Stingray to locate Patrick constituted a search for purposes of the Fourth Amendment. The Seventh Circuit noted that the police were authorized to use a warrant to obtain evidence to locate a warranted person, and they were entitled to arrest Patrick without a warrant of any kind, let alone the two warrants that they had. Because the United States Supreme Court has held that a valid arrest warrant precludes the suppression of evidence seized in an arrest, even if the arrest was set in motion by officers who had neither probable cause nor knowledge of the warrant, the Seventh Circuit affirmed the District Court's denial of Patrick's motion to suppress. *Utah v. Strieff*, ___ U.S. ___, 136 S. Ct. 2056 (2016).

As for Patrick's secondary argument that the police officers should have informed the state court judge of their use of the Stingray before the judge issued the warrant so that the judge was fully informed, the Seventh Circuit sidestepped that issue:

we conclude that the answers do not control this appeal. A person wanted on probable cause (and an arrest warrant) who is taken into custody in a public place, where he had no legitimate expectation of privacy, cannot complain about how the police learned his location. Recall that the cell-site simulator (unlike the GPS device in *Jones*) was not used to generate the probable cause for arrest; probable cause to arrest Patrick predated the effort to locate him. From his perspective, it is all the same whether a paid informant, a jilted lover, police with binoculars, a bartender, a member of a rival gang, a spy trailing his car after it left his driveway, the phone company's cell towers, or a device pretending to be a cell tower, provided location information. A fugitive cannot be picky about how he is run to ground. So it would be inappropriate to use the exclusionary rule, even if the police should have told the judge that they planned to use a cell-site simulator to execute the location warrant.

Id. at * 4.

Chief Judge Diane Wood authored a dissenting opinion in which she opined that the Court should have remanded the case to the District Court for further factual findings. In Judge Wood's opinion, "[e]ven if the Stingray revealed no information beyond Patrick's location, we must know how it works and how the government used it before we can judge whether it functions in a manner sufficiently different from the location-gathering methods-specified in the warrant that it amounted to a search outside the warrant's scope." *Id.*

The majority, however, left the Constitutional issue for another day: "Questions about whether use of a simulator is a search, if so whether a warrant authorizing this method is essential, and whether in a particular situation a simulator is a reasonable means of executing a warrant, have yet to be addressed by any United States court of appeals. We think it best to withhold full analysis until these issues control the outcome of a concrete case." *Id.*

Note: Court holdings can vary significantly between jurisdictions. As such, it is advisable to seek the advice of a local prosecutor or legal adviser regarding questions on specific cases. This article is not intended to constitute legal advice on a specific case.

HEADLINE	11/28 Kirkland PD immigration status policy
SOURCE	http://www.kirklandreporter.com/news/chief-harris-responds-to-questions-about-kirkland-police-policy-on-immigration-status/
GIST	<p>On Nov. 18, the Seattle Times published a statement from the Bellevue Police Chief saying that Bellevue officers won't ask residents for immigration status and won't use police resources to apprehend undocumented immigrants unless they are suspected of a serious crime. Since then, many Kirkland residents have asked about the policy of the Kirkland Police regarding immigration status.</p> <p>“Kirkland has had a long standing policy never to ask for immigration papers,” said Kirkland Police Chief Cherie Harris. “We want people to know that our job is to protect and serve the entire community and no resident should fear reporting any crime or intimidation, regardless of their immigration status. Our mission has not changed and will not change. We want everyone to feel safe and if they don't, we want to know about it.”</p>

HEADLINE	11/28 Woman kept Black Friday non-violent
SOURCE	http://www.seattleweekly.com/news/this-woman-kept-black-friday-non-violent/
GIST	<p>“Whose streets?” asks a lone voice at the corner of Fourth and Columbia. “OUR STREETS!” replies the crowd.</p> <p>Friday, November 25th, 2016. Hundreds (at least) of #BlackLivesMatter marchers fill the street in a cacophonous throng. After starting at Westlake Park early in the afternoon, the crowd has taken to Seattle's streets in protest against police violence, against president-elect Trump, and against the orgy of consumerism that is Black Friday.</p> <p>The march is headed toward City Hall, but the Seattle police have different ideas. They've been escorting the march, but now riot cops form a line blocking the path forward. Brandishing wooden clubs and paramilitary armor, the officers want the marchers to turn around, move away from City Hall and back toward Westlake. “Shame!” someone cries. One of the officers—a tall, thin white guy—grimaces. Most of the cops wear expressions as blank and absent as the transparent plastic visors that shield their faces from spit and friendly fire. The front line of marchers lock arms. They don't push, but they don't back off. For a moment, it looks like the confrontation is going to escalate into pepper spray and beatdowns.</p> <p>Then Aina Braxton gets involved. Making her way to the front of the line, the UW Bothell administrator talks to the police at the front, finds out what they want. Despite her own desire to reach City Hall, she uses a bullhorn to address the marchers, urging them to literally and figuratively turn their cheeks around and start walking the other way. “We are warriors of love and light,” she says, “and we want [the police]</p>

to be too.” Gradually, the march starts to move back the way it came. For today, at least, open battle has been avoided between Seattle’s Finest and Seattle’s populace.

“I have my six-year-old niece out here,” Braxton says to a flurry of reporters while walking to catch up with the front of the march. “I am not trying to have people confront the police force that I have known in the past to use excessive force...to knock people’s heads up, and shoot and kill people...I’m not going to lead a group of people into a situation that’s going to be potentially dangerous for them.”

So then why are you out here, facing down riot cops on a city arterial street?

“There was never an option for me,” she says, to not speak out against president-elect Donald Trump. The cost of silence would have been too high. “I’m a patriot. I’m a mother. I’m a descendent of slaves and the Blackfoot Tribe,” she says. The threat posed by the president elect, she says, “is real. People are still trying to have this Pollyanna, white-washed vision of what the world is like, and what Donald Trump taught us is that’s dangerous.”

Many activists believe that police, as an institution, are intrinsically racist and violent. Do you agree?

“Absolutely,” she says. “I do believe that—and I know that [police officers] are people, they’re humans.” Reconciling with fellow humans, Braxton says, is “the only thing I know how to do. I understand some people don’t feel that way and I support them, but I’m always going to lean to inviting people to my table to break bread with me. That goes for the police, that goes for Donald Trump himself.”

You’re refraining from physical violence or property destruction. Do you think everyone should do the same?

“There’s always been different strains of how people get shit done,” Braxton replies. “Sometimes, [property destruction] puts pressure on people to act when sometimes nonviolent means aren’t doing it.” She pauses, thinks for a moment. “I believe in peaceful protest, and I believe in bringing and walking in peace at all times.

“And I know that rage is real, and rage is healthy. Sometimes that rage needs somewhere to go.”

HEADLINE	11/28 Mayor: Seattle police reform will continue
SOURCE	http://kuow.org/post/seattle-police-reform-will-continue-trump-era
GIST	In 2012, the City of Seattle and the federal government agreed to implement sweeping reforms of the city’s police department.

Investigators had determined that Seattle police too often used excessive force in confrontations with civilians, and found the potential for racially biased policing.

The reforms have been underway since, supervised by a federally appointed monitor.

Seattle Mayor Ed Murray says a new, Donald Trump justice department shouldn't affect the ongoing reforms.

Murray: "It's so late in our process. The judge has it. The justice department can be a party, and ask the judge for things, but they basically can't change it."

The city has been working with the U.S. Department of Justice's civil rights division on these reforms.

Murray says he's not sure if the new administration will retain that division going forward.

Murray: "That's bad news for this country, but for Seattle and police reform, the fact that this sits with a federal judge, is really important. The justice department would have to go back and try an open up the case. That's not going to happen. The judge has been very clear he's going to see this reform through."

HEADLINE	11/28 Seattle PD steadily increasing diversity
SOURCE	http://www.thestranger.com/slog/2016/11/28/24714101/seattle-police-steadily-increasing-diversity-of-force-with-new-hires
GIST	<p>Under the leadership of chief Kathleen O'Toole, the Seattle Police Department is steadily increasing the diversity of its approximately 1,200-member force by hiring more minority officers. In 2016, the proportion of nonwhite officers joining the SPD has jumped to 35 percent, up ten points over two years, according to a recent department report.</p> <p>O'Toole has made it a priority to create a police force that reflects Seattle. "We need to have police services that [represent] the communities that they serve," she said when she took the job.</p> <p>Mayor Ed Murray has pledged to hire 200 more officers by 2019.</p> <p>The SPD is already doing a better job of mirroring the racial demographics in Seattle than departments in other large cities, according to a survey and study by the Community Police Commission, though the force is still nine percentage points whiter than the city's population.</p> <p>The police force should strive for diversity because it "conveys a sense of equity to the public" and increases the likelihood that officers will understand the perspectives of minorities, the commissioners said, urging a more intensive push for minority recruitment.</p>

The department was 74 percent white in 2015. Many of its officers live outside Seattle. "There aren't enough people 'like us' on SPD," the CPC report quoted one person as saying. "We want to see officers in our community who share our physical traits and cultural values."

Beyond ethnicity, the SPD has long been criticized for not changing its "preference points" system to incentivize the hiring of more multilingual applicants or Peace Corps members, the way it does for military veterans.

HEADLINE	11/28 Seattle, King Co. cited for sewage flow
SOURCE	http://mynorthwest.com/474226/seattle-county-sewage-fines-for-2015/
GIST	<p>The City of Seattle and King County have been cited for discharging sewage into local bodies of water beyond allowable limits.</p> <p>The Department of Ecology has fined King County \$63,500 and the City of Seattle \$33,500. Ecology essentially found that the city and county discharged sewage into neighboring bodies of water beyond what is allowed.</p> <p>“The county and the city are taking these violations seriously and they are making good progress on their CSO control programs,” said Mark Henley with the Department of Ecology. “They just need to do a little bit better to not violate their permit.”</p> <p>King County was cited for 23 violations, and Seattle was cited for 10 violations. All incidents happened throughout 2015. Ecology found that King County exceeded pollutant limits from its treatment plants 18 times. Ecology also notes that two out of the four county treatment plants were found in violation of solids removal limits.</p> <p>“(The county) is mostly regarding one of their CSO satellite treatment plants, called Elliott West,” Henley said. “That’s for various pollutants above the allowable limits, which includes fecal coliform bacteria and excessive levels of chlorine in their discharge.”</p> <p>Fecal coliform bacteria is basically what it sounds like — scientifically speaking, it originates in the intestines of warm-blooded animals. But locally, excessive levels of the fecal bacteria made it through the sewage lines, and eventually flowed into places like Lake Union and Lake Washington.</p> <p>Seattle had a similar case. Ecology discovered that the city allowed two unpermitted overflows from its outfalls during dry weather, and seven preventable overflows during other times.</p>

	This all means that sewage overflowed into Puget Sound, Elliott Bay, Lake Washington, Lake Union and Longfellow Creek.

HEADLINE	11/28 Holiday shopping vital to economy
SOURCE	http://www.cbsnews.com/news/why-holiday-shopping-is-so-important-for-the-economy/
GIST	<p>The biggest gift that the United States could get during the holiday season is robust shopping by the American consumer, who is now the primary engine powering economic performance.</p> <p>Early indications are that this should be a good shopping season, with nearly 154 million people on the prowl for holiday deals during the Thanksgiving weekend, up 2 percent from last year, a National Retail Federation survey indicated. The run-up to the Black Friday shop-athon is heartening: In October, retail sales (excluding such non-gift items as food, autos, and gasoline) rose an encouraging 4 percent.</p> <p>Overall, the National Retail Federation expected this holiday season’s sales to be 3.6 percent ahead of the same period a year ago, paced by a swiftly expanding online effort. As a result, retail stocks, lagging earlier in the year, have perked up recently to reflect the optimistic scenario.</p> <p>The news about U.S. consumers is mostly good, which would support a positive outlook for their spending behavior. Jobless claims, for instance, are at their lowest level since 1970. The University of Michigan survey of consumer sentiment marked a nice advance of 2.8 percent in November, compared with 12 months before.</p> <p>Consumer spending makes up about 70 percent of gross domestic product, and a solid chunk of it takes place in November and December, mainly in the form of gift purchases. A fifth of all retail sales occur in the year’s last two months, according to the National Retail Federation.</p> <p>The question is whether good holiday sales will be enough to overcome weaknesses in the rest of the economy. There’s an argument that a healthy holiday performance is a zero sum game for the consumer economy. As Jim Sullivan, chief U.S. economist for research consultancy High Frequency Economics, put it: “To some extent, the more one spends on holiday items in November and December, the less that will be available for other items in January and February.”</p> <p>In the meantime, decidedly blah business capital spending and a strong U.S. dollar are headwinds for the economy, which for several years has grown at an uninspiring rate of around 2 percent annually. “It can’t be overstated: Without strong retail sales, overcoming those problems” would be very difficult if not impossible, said Chris Christopher, director of consumer economics for research firm IHS Global Insight.</p>

HEADLINE	11/28 Newcomers arrive King Co.; others leave
-----------------	--

SOURCE	http://www.seattletimes.com/seattle-news/data/newcomers-pour-into-king-county-while-washingtonians-quietly-exit/
GIST	<p>Last year, for the first time in at least a decade, the number of native-born Washingtonians in King County declined.</p> <p>Between 2014 and 2015, their number fell by more than 17,000 — a 2 percent drop. There are now 850,000 Washington-born residents in the county, or 40 percent of its total population.</p> <p>Ever since the Census Bureau began producing these annual estimates in 2005, the number of native-born Washingtonians here has gone up — until now.</p> <p>It's too soon, after a single year's data, to call the decline a trend. But it's not too soon to conclude that there's been a fundamental shift since the start of this decade: People from out of state and from other countries have leapfrogged native-born Washingtonians as the top drivers of population growth in King County.</p> <p>The data suggest that more longtime residents are leaving — and folks from other parts of Washington may no longer be moving here at as great a pace as before.</p> <p>And perhaps that's not much of a surprise, because — let's face it — you often hear people who grew up around here grumbling about all the change in the past few years: It's gotten too expensive, too congested, too gentrified and so on.</p> <p>But the multitude of newcomers to Seattle from around the country and the globe tends to have a very different take: Ask about their newly adopted hometown, and they start to gush.</p> <p>"It's gorgeous," said Adam Rio, who settled into a Capitol Hill apartment six months ago after moving here from New York City.</p> <p>He got his first taste of Seattle while visiting a friend who'd moved for a job at Amazon, and was blown away by the city's easy access to spectacular natural beauty — not to mention its great food, mild climate, progressive politics and sizable LGBT community.</p> <p>"I can afford to have a car here, whereas that wasn't even an option in New York," he said. "I feel like almost everything is easier here."</p>

HEADLINE	11/28 Seattle police urge safety on the water
SOURCE	http://www.king5.com/news/local/seattle-police-urge-water-safety-after-several-rescues/356868575
GIST	SEATTLE -- Seattle police are urging safety on the water after several water rescues in recent weeks.

	<p>Many people wouldn't consider late fall or winter a time to get out on the water. But in Seattle, hundreds still go out every day.</p> <p>“With the wintertime. not only are the water temperatures cold, and the air temperature is cold, but the wind comes about,” Officer Reuben Omelanchuk said. "Sometimes kayakers still think it’s going to be a great day out on the water whether it’s out on Alki or Discovery Park and the winds change and it keeps taking them out to sea itself."</p> <p>Omelanchuk and the Seattle Police Harbor Unit patrol 220 miles in the city limits alone, between fresh water and salt water. They are working 24 hours a day, seven days a week, 365 days a year. They collaborate with the Seattle Fire Department on rescues.</p> <p>There are the obvious things to remember like wearing a life jacket and, in most situations, a wetsuit. But police want you to be aware of some key time frames if you experience a water emergency in the winter.</p> <p>“A good rule of thumb, usually, is that you have one minute to get control of your breath and that will mitigate hyperventilation. Then you have about 10 minutes before you begin losing dexterity -- your fingers, your feet -- and that will, of course, limit your ability to stay afloat if you are not wearing a personal floatation device,” Omelanchuk said.</p> <p>Also, you have about one hour before serious injury or death can occur.</p>

HEADLINE	11/27 Black Lives Matter salutes Fidel Castro
SOURCE	https://heatst.com/culture-wars/black-lives-matter-salutes-fidel-castro-is-grateful-he-harbored-an-fbi-most-wanted-terrorist/
GIST	<p>The Black Lives Matter movement has come out in support of Fidel Castro, following his death on Friday, saying they must “come to the defense of El Comandante” and thanking him for safeguarding Assata Shakur, who’s on the FBI’s Most Wanted Terrorists list.</p> <p>The movement penned an article on Sunday titled “Lessons from Fidel: Black Lives Matter and the Transition of El Comandante” on the Medium platform where they eulogized the passing of the Cuban dictator. The article, which was not bylined, was Tweeted out by the closest thing there is to an official Black Lives Matter account and also posted on the movement’s semi-official Facebook page.</p> <p>The article claims Castro’s death has caused “an overwhelming sense of loss, complicated by fear and anxiety.”</p> <p>“Although no leader is without their flaws, we must push back against the rhetoric of the right and come to the defense of El Comandante,” it added.</p>

The article continues by portraying Castro as a model freedom fighter, who Black Lives Matter should strive to follow and emulate. It said: “As Fidel ascends to the realm of the ancestors, we summon his guidance, strength, and power as we recommit ourselves to the struggle for universal freedom. Fidel Vive!”

The movement then thanked the Cuban dictator for hiding criminals and domestic terrorists from the U.S government, such as Michael Finney, Ralph Goodwin, and Charles Hill — who hijacked an airplane from Albuquerque while being sought for the 1972 murder of New Mexico State Trooper Robert Rosenbloom. Hill told a *Washington Post* reporter in the 1990s that he had no regrets about killing the state trooper, a father of two young daughters.

The BLM movement is also “particularly grateful” to Castro for harboring “Mama Assata Shakur, who continues to inspire us.” Shakur, whose real name is Joanne Chesimard, is currently on [the FBI’s Most Wanted Terrorists list with a \\$1 million bounty on her head.](#)

She was convicted in the U.S. of killing a New Jersey state trooper, assault and battery of a police officer. After she escaped from prison, Castro granted her asylum in Cuba in 1984.

HEADLINE	11/29 Shelter placed over Chernobyl reactor
SOURCE	http://hosted.ap.org/dynamic/stories/E/EU_UKRAINE_CHERNOBYL?SITE=AP&SECTION=HOME&TEMPLATE=DEFAULT&CTIME=2016-11-29-05-53-47
GIST	<p>CHERNOBYL, Ukraine (AP) -- A massive shelter has finally been installed over the exploded reactor at the Chernobyl nuclear plant, one of the most ambitious engineering projects in the world.</p> <p>The half-cylinder-shaped shelter began being moved toward the reactor on a system of hydraulic jacks two weeks ago and reached its destination Tuesday, a significant step toward liquidating the remains of the world's worst nuclear accident, 30 years ago in what is now Ukraine.</p> <p>Workers will now begin dismantling unstable parts of the original cover, the so-called sarcophagus, which was built over the reactor shortly after the explosion to contain radiation.</p> <p>The new shelter is 275 meters (843 feet) wide and 108 meters (354 feet) tall and cost 1.5 billion euros, according to the European Bank for Reconstruction and Development.</p>

HEADLINE	11/29 ND governor orders protestors expelled
SOURCE	http://www.reuters.com/article/us-north-dakota-pipeline-idUSKBN13N2EU

GIST	<p>North Dakota's governor ordered the expulsion of thousands of Native American and environmental activists camped on federal property near an oil pipeline project they are trying to halt, citing hazards posed by harsh weather as a blizzard bore down on the area.</p> <p>The "emergency evacuation" order from Governor Jack Dalrymple came days after the U.S. Army Corps of Engineers, which manages the site, set a Dec. 5 deadline for the demonstrators to vacate their encampment, about 45 miles (72 km) south of Bismarck, the state capital.</p> <p>The Army Corps has insisted, however, that it has no plans to forcibly remove protesters, many of them members of the Standing Rock Sioux Tribe. The agency instead urged a "peaceful and orderly transition to a safer location."</p> <p>The governor did not specify how he intended to enforce his order other than by directing state and local agencies to refuse emergency assistance and other services to anyone who remained at the site. He said the order was effective immediately and would stay in force "until rescinded."</p> <p>But Standing Rock Sioux spokeswoman Phyllis Young told a news conference Monday night the tribe would stand its ground.</p>

HEADLINE	11/29 UN: 16,000 displaced in Syria Aleppo
SOURCE	http://www.reuters.com/article/us-mideast-crisis-syria-refugees-idUSKBN1300P5
GIST	<p>Up to 16,000 people have been displaced in Syria's Aleppo by intense attacks on the rebel-held eastern part of the city, the United Nations humanitarian chief and relief coordinator Stephen O'Brien said on Tuesday, citing initial reports.</p> <p>The area had no functioning hospitals left, food stocks were nearly exhausted and it was likely that thousands more people would flee their homes if fighting persisted in the coming days, he said in an emailed statement.</p> <p>"The situation is very bad. There's intense fear of collective annihilation," said a medic who lives in the area and gave his name as Abu al-Abbas.</p> <p>The Syrian army and its allies made a sweeping advance across the northern part of besieged eastern Aleppo on Sunday night and Monday as rebels pulled back to a more defensible front line after losing control of a key district.</p>

HEADLINE	11/29 Kirkland program cuts health costs
SOURCE	http://www.king5.com/news/local/innovative-program-helps-kirkland-cut-health-costs/357470620

GIST	<p>KIRKLAND, Wash. -- Little on the outside of a Vera Whole Health clinic near Totem Lake Mall suggests the innovation Kirkland city leaders say is happening inside.</p> <p>"In America, there's a lot of waste in our health care system," said Dr. Karl Weyrauch, who leads the facility, "What we have in the rest of American health care is sick care. In Vera, we have a focus on keeping people healthy."</p> <p>What makes this particular facility different are the people Dr. Weyrauch sees. Almost all of them are employees with the city of Kirkland. This is their clinic.</p> <p>"They have longer visits than other kinds of clinics," said Dr. Weyrauch, "And they don't have any out-of-pocket expenses."</p> <p>The city of Kirkland opened its own health clinic, with Vera, a little more than a year ago. It was a decision motivated by rising health costs, an increasing number of claims and the prospect of paying huge penalties through the Affordable Care Act.</p> <p>"We were what you would characterize as a Cadillac tax plan," said Kirkland human resources director Jim Lopez, "We literally went from the old way to the new way."</p> <p>Lopez helped craft "Healthy Kirkland", which moved the city and its employees into a high deductible plan, but with a large contribution to a health savings program. It also created the primary care clinic which is free to all employees and their families.</p> <p>"We can give out free medicine to the patients without any charge to them up front," said Dr. Weyrauch, "The system still generates revenue for the city."</p> <p>Lopez said the switch has cut health spending by 4.5%, even though more than 70% of the staff used the clinic. Nine hundred people are enrolled.</p>

HEADLINE	11/29 Thanksgiving, Black Friday sales up 9%
SOURCE	http://abcnews.go.com/Technology/wireStory/data-thanksgiving-black-friday-sales-percent-43836873
GIST	<p>Shoppers put in a strong showing on Thanksgiving Day and Black Friday.</p> <p>Holiday spending rose 9 percent Thursday and Friday combined, compared with the same two-day period last year, according to First Data.</p> <p>The bump was fueled by shoppers turning to online deals.</p>

	<p>E-commerce sales rose 10.8 percent for the two-day period, while sales at physical stores grew 8.6 percent, according to First Data, which analyzed online and in-store payments across different forms of payment cards from nearly one million merchants Thanksgiving and Friday. The data captures about 40 percent of all card transactions in the U.S. but excludes cash.</p> <p>The Thanksgiving weekend kicks of the holiday shopping season though stores have increasingly started their sales earlier in October. The Friday after Thanksgiving — known as Black Friday — used to unofficially mark the kickoff to door-buster sales, but now retailers are opening earlier on Thanksgiving. But while the holiday weekend has lost some of its punch, it still sets the tone for the season.</p> <p>"It was strong shopping," said Rishi Chhabra, vice president, information and analytics products, at First Data. "But people are shopping online more. And that trend keeps going up and up."</p>

HEADLINE	11/29 SKorea leader conditional resignation
SOURCE	http://abcnews.go.com/International/wireStory/south-korean-leader-shell-resign-lawmakers-act-43836969
GIST	<p>South Korean President Park Geun-hye said Tuesday that she'll resign — if parliament arranges the technical details — in her latest attempt to fend off impeachment efforts and massive street protests amid prosecution claims that a corrupt confidante wielded government power from the shadows.</p> <p>Opponents immediately called Park's conditional resignation offer a stalling tactic, and analysts said her steadfast denial that she has done anything wrong could embolden her enemies. The country's largest opposition party, the Minjoo Party, said it would not let Park's "ploy to avoid impeachment" interfere with a planned vote on impeachment that could take place this Friday or the next.</p> <p>Park, who did not take questions from reporters after her live address to the nation, said she will "leave the matters about my fate, including the shortening of my presidential term, to be decided by the National Assembly," referring to parliament.</p>

HEADLINE	11/29 Tennessee wildfires force evacuations
SOURCE	http://abcnews.go.com/US/tennessee-wildfires-burn-100-homes-force-thousands-flee/story?id=43839564
GIST	<p>Out-of-control wildfires have burned 100 homes and forced thousands to flee to safer ground around the city of Gatlinburg in eastern Tennessee.</p> <p>The blazes intensified overnight into Tuesday, prompting officials to evacuate the city of 4,000. Residents streamed out of the area in search of shelter.</p>

	<p>Dean Flener, a spokesperson with the Tennessee Emergency Management Agency, told ABC News that the wildfires reached “right on the doorstep” of the Dollywood theme park but that firefighting crews managed to stop the blazes from progressing into the park overnight.</p> <p>In a 3 a.m. update on Tuesday, the TEMA confirmed that 100 homes have so far been impacted in Sevier County, including 10 in Gatlinburg and that 1,200 people were in a local shelter.</p>

HEADLINE	11/28 CAIR seeks FBI probe in UW incident
SOURCE	http://www.seattletimes.com/seattle-news/crime/muslim-leaders-call-on-fbi-to-investigate-attack-on-uw-student/
GIST	<p>Muslim leaders are calling on the FBI to open an investigation into an incident on the University of Washington campus in which a Muslim student was hit by a bottle earlier this month.</p> <p>Speaking at a news conference at the UW on Monday, officials with the Washington state chapter of the Council on American-Islamic Relations (CAIR) say they believe the attack was a hate crime and that the victim, Nasro Hassan, was targeted because she is Muslim. The organization also announced a \$5,000 reward for information leading to the arrest and conviction of the person who threw the bottle.</p> <p>Hassan, a 19-year-old UW freshman, was struck in the face with a bottle thrown by a male just before 5 p.m. on Nov. 15 as she walked along Grant Lane, where it runs between Mary Gates Hall and Suzzallo Library, said Jasmin Samy, CAIR’s civil-rights manager.</p> <p>Hassan, a Somali-American and Muslim woman from North Dakota, immediately reported the assault to campus police and provided a written statement, Samy said. The young woman, who was wearing a hijab, provided a description of the suspect’s clothing — a black hoodie, jeans and sneakers — but Samy said Hassan didn’t know or mention the assailant’s race.</p> <p>UW police didn’t issue a safety alert or otherwise notify the student body about the attack, said Samy and CAIR’s Executive Director Arsalan Bukhari. They’ve asked the FBI to lend their expertise because they believe the police investigation has been inadequate.</p> <p>The bottle used in the attack wasn’t left behind and Bukhari didn’t know whether surveillance cameras recorded the incident.</p>

HEADLINE	11/28 US shifts money away Philippine police
SOURCE	http://www.reuters.com/article/us-philippines-usa-police-idUSKBN13N2CC
GIST	The United States has shifted millions of dollars in funding for Philippines law enforcement away from police drug control programs, State Department officials said on Monday, since the start of the country's bloody crackdown on drugs this summer.

Return to Top	<p>The Obama administration and human rights groups have criticized Philippines President Rodrigo Duterte's war on drugs, and U.S. officials have said they are "deeply concerned" by reports of extrajudicial killings in the drug campaign. Duterte has in turn rebuked the United States and rejected the criticisms.</p> <p>Police figures show the campaign has killed more than 2,500 people since Duterte took office on June 30, about three-quarters in police counter-narcotics operations, and the rest believed to be the victims of vigilantes or drug lords eliminating rivals or silencing those who could implicate them.</p> <p>Since the start of the campaign, U.S. State Department assistance for Philippines law enforcement has been diverted from narcotics control to maritime security and human rights training for the national police, State Department spokesman John Kirby said in a news briefing.</p> <p>"We decided the prudent thing to do was to refocus the way that assistance was being spent," Kirby said.</p>

HEADLINE	11/28 Recounts change election 2016 result?
SOURCE	http://www.bbc.com/news/world-us-canada-38137630
GIST	<p>Thanks to the efforts of Green Party candidate Jill Stein, a recount of presidential ballots is about to get underway in several key states won by Donald Trump in America's general election.</p> <p>Could this process reveal evidence of election fraud or even hand the presidency to Hillary Clinton? That seems highly unlikely. But it hasn't prevented some considered thought, more than a bit of wild speculation and a Sunday Twitter tirade by the next US president.</p>

Here's everything you need to know about the presidential election drama that just doesn't want to end.

Which states are involved?

The Green Party backed recount efforts are focused on three states that Mr Trump won - Wisconsin (by 22,177 votes), Michigan (10,704 votes) and Pennsylvania (71,313 votes).

On Friday, Ms Stein formally requested the procedure in Wisconsin. County officials across the state will choose whether to hand count all the ballots or once again run them through their tabulation machines. Ms Stein has said she will sue to force all ballots be hand-counted.

On Monday the Green Party began the recount process for Pennsylvania. The deadline to request a recount in Michigan is Wednesday.

The three states account for 46 votes in the Electoral College, more than enough to tip the election to Mrs Clinton if they moved from Mr Trump's column to hers.

According to federal law, all recounts have to be concluded within 35 days of the election.

Will it change anything?

If Clinton supporters are working through their post-election grief, the millions of dollars that have poured in for recount efforts show that many are still firmly in the denial stage. For Ms Clinton to be declared the victor would require a swing of more than 100,000 votes across the three states - a move that would dwarf all previous recount results.

A Green Party requested effort in Ohio in 2004 resulted in Democrat John Kerry netting a grand total of 285 votes more than President George W Bush, for instance. The infamous Florida recount battle of 2000 involved shifts in the vote count measuring in the hundreds.

Even Ms Stein concedes that the recounts will not likely alter this election's outcome.

"These recounts are part of an election integrity movement to attempt to shine a light on just how untrustworthy the US election system is," she wrote on her website.

There's also the possibility that the recount, while not affecting enough votes to help Mrs Clinton, could reveal that the results were tampered with, possibly by foreign hackers. Although the Obama administration has said that there is no evidence to support this, there are indications that Russian-based hackers had probed voter databases in Arizona and Illinois earlier this year and were responsible for releasing private emails from high-level Democratic Party and Clinton campaign officials.

According to J Alex Halderman, a University of Michigan computer science professor, that's more than enough reason to support Ms Stein's recount efforts.

"Examining the physical evidence in these states - even if it finds nothing amiss - will help allay doubt and give voters justified confidence that the results are accurate," he writes for the website Medium. "It will also set a precedent for routinely examining paper ballots, which will provide an important deterrent against cyber attacks on future elections."

Of course, that doesn't really explain why Ms Stein is requesting a recount in Pennsylvania - where getting any kind of a meaningful information will be difficult.

Why is Pennsylvania different?

Unlike Wisconsin and Michigan, most of Pennsylvania's voting machines leave no paper trail - so there's nothing physical to count.

One voting expert **told** the Los Angeles Times that a Pennsylvania recount would be a "nightmare scenario" requiring each of the state's 1980s-era voting machines to be individually accessed and their results retabulated.

The relatively archaic nature of the Pennsylvania machines does have a benefit, however. Given that they are not connected to the internet, they would have to be individually hacked in order to alter their results - a daunting task for the most enterprising meddler.

Even the process for obtaining a recount in Pennsylvania is cumbersome. Unlike Wisconsin and Michigan, the requests have to be filed on a precinct-by-precinct level with at least three voters in each delivering notarised affidavits to their local election clerk.

There are 9,163 precincts in Pennsylvania, and as of Monday afternoon the Stein campaign reported that it had completed requests in "more than 100" locations - a proverbial drop in the bucket given the margin of Mr Trump's victory in the state.

What is the Clinton campaign's position?

The Clinton team made headlines this weekend when it announced that it would co-operate with Ms Stein's recount efforts.

That only means the Clinton campaign will ensure it has representatives in any legal proceedings arising from the recount and observers on hand during the process.

"Because we had not uncovered any actionable evidence of hacking or outside attempts to alter the voting technology, we had not planned to exercise this option ourselves, but now that a recount has been initiated

	<p>in Wisconsin, we intend to participate in order to ensure the process proceeds in a manner that is fair to all sides," Clinton campaign lawyer Marc Erik Elias wrote in a Medium post.</p> <p>Mrs Clinton herself has kept silent on the matter - as have most of her top advisors.</p>

HEADLINE	11/28 Commuter rails lagging on technology
SOURCE	http://www.cbsnews.com/news/feds-railroads-slow-to-make-progress-on-train-technology/
GIST	<p>PHILADELPHIA -- The nation's three busiest commuter railroads, which together serve nearly 1 million riders in the New York City area each day, continue to lag behind their smaller West Coast counterparts in installing sophisticated train-control technology that's seen as an antidote to crashes involving speeding and other human factors, federal regulators said Monday.</p> <p>The Long Island Rail Road, New Jersey Transit and Metro-North all made scant progress on implementing GPS-based positive-train control in the quarter ending Sept. 30, according to new Federal Railroad Administration data. Over the last three months, the LIRR and Metro-North have trained more employees on the system, the data shows, but neither they nor NJ Transit installed it on any tracks.</p> <p>The railroads say the federal data doesn't fully reflect their progress and that they are still on track to meet a December 2018 deadline to install the technology, which is designed to automatically slow or stop trains that are going too fast.</p>

HEADLINE	11/29 Ohio State attack act of terrorism?
SOURCE	http://abcnews.go.com/US/wireStory/ohio-state-attack-terrorism-eyed-police-seek-info-43837716
GIST	<p>Investigators are looking into whether a car-and-knife attack at Ohio State University that injured 11 people was an act of terror by a Somali-born student who had once criticized the media for its portrayal of Muslims.</p> <p>The attacker, identified as Abdul Razak Ali Artan, plowed his car into a group of pedestrians on campus shortly before 10 a.m. Monday, and then got out and began stabbing people with a butcher knife before he was shot to death by a campus police officer, authorities said.</p> <p>A motive was not immediately known, but police said they were investigating whether it was a terrorist attack.</p> <p>Artan was born in Somalia and was a legal permanent U.S. resident, according to a U.S. official who was not authorized to discuss the case and spoke on the condition of anonymity. The FBI joined the investigation.</p> <p>Ohio State University police Chief Craig Stone said Artan deliberately drove his small gray Honda over a curb outside an engineering classroom building and then began knifing people. Officer Alan Horujko, 28,</p>

who was nearby because of a gas leak arrived on the scene and shot the driver in less than a minute, Stone said.

Rep. Adam Schiff, of California, the top Democrat on the House Intelligence Committee, said the act bore the hallmarks of an attack carried out by someone who may have been self-radicalized.

Ohio State's student newspaper, The Lantern, ran an interview in August with a student named Abdul Razak Artan, who identified himself as a Muslim and a third-year logistics management student who had just transferred from Columbus State in the fall.

He said he was looking for a place to pray openly and worried about how he would be received.

"I was kind of scared with everything going on in the media. I'm a Muslim, it's not what media portrays me to be," he told the newspaper. "If people look at me, a Muslim praying, I don't know what they're going to think, what's going to happen. But I don't blame them. It's the media that put that picture in their heads."

In recent months, federal law enforcement officials have raised concerns about online extremist propaganda that encourages knife and car attacks, which are easier to pull off than bombings.

The Islamic State group has urged sympathizers online to carry out lone-wolf attacks in their home countries with whatever weapons are available to them.

Artan was not known to the FBI prior to Monday's attack, according to a law enforcement official who was not authorized to discuss an ongoing investigation and spoke on the condition of anonymity.

HEADLINE	11/28 Dakota protestors complain hippie fest
SOURCE	http://www.washingtontimes.com/news/2016/nov/28/complaints-whites-co-opting-dakota-access-protest/
GIST	<p>Tension is brewing within the Dakota Access protest as complaints grow about outside activists trashing the camps, mooching off donations, and treating the anti-pipeline demonstration like a Burning Man-style festival for hippies.</p> <p>“Need to get something off my chest that I witnessed and found very disturbing in my brief time there that I believe many others have started to speak up about as well. White people colonizing the camps,” said Alicia Smith on Facebook.</p> <p>“They are coming in, taking food, clothing etc and occupying space without any desire to participate in camp maintenance and without respect of tribal protocols,” she said. “These people are treating it like it is Burning Man or The Rainbow Gathering and I even witnessed several wandering in and out of camps comparing it to those festivals.”</p>

Her Nov. 14 post, now making the rounds on social media, said outsiders are “literally subsisting entirely off the generosity of native people (AND YOUR DONATIONS if you have been donating) who are fighting to protect their water just because they can.”

A local deputy who asked to remain anonymous told WDAY-AM’s Rob Port that most of the protesters are white, and that some have used racial slurs against black, Hispanic and Native American officers.

Standing Rock Sioux chairman David Archambault II, who is leading the protest, raised concerns about sanitation in a Nov. 23 interview with Vice, saying activists are “digging pits out there for their human waste.”

“That’s a flood zone,” said Mr. Archambault, referring to camps on federal land along the Cannonball River. “So when the floodwaters come up, that waste is going to be contaminating the water. We’re no different than the oil company, if we’re fighting for water. What’s going to happen when people leave? Who has to clean it up? Who has to refurbish it? It’s going to be us, the people who live here.”

As many as 3,000 people have moved in and out of the southern North Dakota camps since Aug. 10. Some protesters belong to the Standing Rock and other tribes, but many are students, environmental activists and agitators with criminal records who have ignored Mr. Archambault’s repeated calls for peaceful demonstrations.

“Before this entire movement started, that was some of the most beautiful land around,” Mr. Archambault said. “There was a place down there where eagles, over 100 eagles would come and land. There were game down there—deer, pheasants, elk, geese. Now, it’s occupied by people. And when masses of people come to one place, we don’t take care of it.”

The U.S. Army Corps of Engineers has given protesters on federal land north of the Cannonball River until Dec. 5 to clear the area, but leaders of the large Sacred Stone, or Oceti Sakowin, camp have said they will fight the eviction.

HEADLINE	11/28 Local transmitted Zika found in Texas
SOURCE	http://www.star-telegram.com/news/state/texas/article117526663.html
GIST	CAMERON COUNTY - A South Texas woman has been diagnosed with the state’s first locally transmitted case of the Zika virus, health officials said Monday. She likely received the virus from a mosquito, according to a press release from the Texas Department of State Health Services.

The woman, a resident of Cameron County in the Rio Grande Valley, isn't pregnant and hasn't recently traveled to Mexico or any other country at risk of the virus, the press release said.

"We knew it was only a matter of time before we saw a Zika case spread by a mosquito in Texas," said Dr. John Hellerstedt, DSHS commissioner. "We still don't believe the virus will become widespread in Texas, but there could be more cases, so people need to protect themselves from mosquito bites, especially in parts of the state that stay relatively warm in the fall and winter."

Officials are still investigating how the woman contracted the virus. They have been trapping and testing mosquitoes at the woman's home in Brownsville and the city recently sprayed for mosquitoes.

HEADLINE	11/28 US-CERT updates notification guidelines
SOURCE	http://healthitsecurity.com/news/us-cert-updates-cybersecurity-incident-notification-guidelines
GIST	<p>The U.S. Computer Emergency Readiness Team (US-CERT) announced its new cybersecurity incident notification guidelines, which will go into effect on April 1, 2017.</p> <p>The guidelines will affect all Federal departments and agencies, as well as state, local, tribal, and territorial government entities, according to the US-CERT statement. Information Sharing and Analysis Organizations and foreign, commercial, and private-sector organizations will also need to adhere to the new requirements when submitting incident notifications.</p> <p>"Agencies must report information security incidents, where the confidentiality, integrity, or availability of a federal information system of a civilian, Executive Branch agency is potentially compromised, to the [National Cybersecurity and Communications Integration Center]/US-CERT with the required data elements, as well as any other available information, within one hour of being identified by the agency's top-level Computer Security Incident Response Team (CSIRT), Security Operations Center (SOC), or information technology department," the notification explained.</p> <p>An incident is considered an occurrence that "actually or imminently jeopardizes, without lawful authority, the integrity, confidentiality, or availability of information or an information system," or one that "constitutes a violation or imminent threat of violation of law, security policies, security procedures, or acceptable use policies," according to the Federal Information Security Modernization Act of 2014 (FISMA).</p> <p>For major incidents, Congress must be notified within seven days, the guidelines stated. It is up to the affected agency to determine if an incident should be "major," and it may also consult with US-CERT to help make the final decision.</p>

HEADLINE	11/29 Security warning on WhatsApp links
SOURCE	http://www.mid-day.com/articles/whatsapp-links-cybercrime-whatsapp-users-instantmessaging-app-tech-technology-apps/17793170
GIST	<p>Giving away a warning to all WhatsApp users across the globe, a report said that clicking on the links circulated on instant messaging app may expose and make them vulnerable to cyberattacks.</p> <p>According to a report in The Sun newspaper, hackers are using simple tricks to fool people into visiting booby-trapped websites and then fleecing them.</p> <p>Recently, Whatsapp rolled out video calling and scammers are taking the advantage of this new feature as bait to tempt people into their trap.</p> <p>"If you receive an email asking you to "activate" the function by visiting a website, make sure you don't click it. Anyone who is tricked into visiting the danger pages could end up being targeted by digital criminals," the report pointed out.</p>

HEADLINE	11/28 FBI warns of online shopping scams
SOURCE	http://www.foxnews.com/us/2016/11/28/cyber-monday-scams-targeting-shoppers-fbi-warns.html
GIST	<p>Crooks are out to ensure a blue Christmas for cyber shoppers, using an array of online treachery and phony deals that will net an estimated \$1 billion this year, according to the FBI.</p> <p>In a report titled "Tis the Season for Holiday Scams," the FBI urged shoppers to be aware of increasingly aggressive and creative scams designed by criminals to steal money and personal information. Fake deals, bogus surveys and malware hidden in phony come-ons are all at a fever pitch today, as customers take part in Cyber Monday, the online version of Black Friday.</p> <p>"If a deal looks too good to be true, it probably, is," the FBI said in a statement. "You may end up paying for an item, giving away personal information, and receive nothing in return except for a compromised identity."</p> <p>A separate report from ACI Worldwide, a payment systems company, predicted that online fraud attempts will rise 43 percent in the United States during this year's holiday season.</p> <p>According to the FBI's Internet Crime Complaint Center, California, Florida, Texas, New York and Illinois are the states that saw the highest number of alleged scam victims in 2015, contributing to the total of more than \$1 billion in cyber scam losses for 2015.</p>
