Sources: Congressional Budget Office; staff of the Joint Committee on Taxation.
n.a. = not applicable.
a. The net amount that the Treasury borrows is determined primarily by the annual budget deficit. In addition, several factors-collectively labeled "other means of financing" and not directly included in budget totals-also affect the government's need to borrow from the public.
b. Negative numbers indicate that CBO's projection of the deficit has grown.

Over most of the coming decade, the decrease relative to last year's projections, measured as a share of GDP, is larger for revenues than for noninterest spending (see Figure B-2). The result is that projected deficits through 2025 are now markedly larger than previously projected. Beginning in 2026, however, they are smaller than previously projected.

## Changes in Projected Spending

In CBO's extended baseline, noninterest spending as a percentage of GDP is slightly lower than anticipated last year, mainly because the agency's projections of outlays for Social Security and the major health care programs have fallen. CBO's projections of discretionary spending, by contrast, are higher than they were a year ago. Projections of net interest costs are higher than previously projected through the late 2030s and then lower.

## Noninterest Spending

As a share of GDP, noninterest spending-that is, spending for Social Security, spending for the major federal health care programs, and other noninterest spending-is projected to be about the same in 2018 as projected last year and lower thereafter. Specifically, it is projected to equal 19.0 percent of GDP in 2018 and to reach 23.0 percent of GDP by 2047 ( 0.2 percentage points lower than in last year's projection).

Social Security Spending. CBO projects that outlays for Social Security as a percentage of GDP will be slightly lower than the agency anticipated last year. That change reflects slightly lower projections of nominal outlays over the next 10 years and higher projections of GDP.

The revisions to nominal outlays over the next 10 years include a downward adjustment of projected spending
