

Assumptions and Methods

may be increasingly attracted to other countries, that the number of potential immigrants may be lower due to lower birth rates in many countries, or that changes in the law or enforcement of the law will reduce immigration.

^a This table contains basic assumptions along with key summary values that are derived from basic assumptions.

^b Historical other-than-LPR immigration and emigration estimates depend on a residual method. The Office of the Chief Actuary developed these estimates, as well as the resulting other-than-LPR January 1 stock estimates, for years through 2000. For years 2001 and later, the residual method uses stock estimates. For 2001 through 2004, the stock is set to values that linearly grade from the 2000 stock estimate to the DHS 2005 stock estimate. For 2005 through 2012, DHS provided the stock estimates. Because DHS no longer provides stock estimates after 2012, the 2013 through 2015 stock estimates are developed by the Office of the Chief Actuary, based on the same methods used by DHS.

^c Estimates do not include persons who attained LPR status under the special one-time provisions of the Immigration Reform and Control Act of 1986.

^d Adjustments of status are a positive for net LPR immigration and a negative for net other-than-LPR immigration.

^e Estimated.

^f Estimated, intermediate alternative.

Note: Totals do not necessarily equal the sums of rounded components.
