

**IN THE UNITED STATES DISTRICT COURT  
FOR THE MIDDLE DISTRICT OF NORTH CAROLINA**

The United States of America, *ex rel.*  
Joseph M. Thomas, Bringing this Action  
on Behalf of the United States of  
America,

*Plaintiff,*

v.

Duke University,  
Duke University Health System, Inc.  
William M. Foster, Ph.D., and  
Erin N. Potts-Kant,

*Defendants.*

Civil Action No. 1:17-cv-276-CCE-JLW

**RELATOR’S MEMORANDUM IN SUPPORT OF  
MOTION FOR PARTIAL SUMMARY JUDGMENT—  
IMPUTATION OF POTTS-KANT’S KNOWLEDGE TO DUKE**

Relator Joseph M. Thomas, by counsel, files this brief in support of his motion for partial summary judgment that the knowledge<sup>1</sup> of Defendant Erin N. Potts-Kant is imputed to Defendants Duke University and/or Duke University Health Systems, Inc. (“DUHS”) (collectively, “Duke”) for purposes of this FCA action.<sup>2</sup>

---

<sup>1</sup> As used herein, the term “knowledge” applies to Potts-Kant’s state-of-mind relevant to the analysis under 31 U.S.C. § 3729(b)(1).

<sup>2</sup> This motion does not address: (1) the imputation of any other individual’s knowledge to Duke; (2) the supervision (or lack thereof) of Potts-Kant, by individuals and/or Duke as an organization; or (3) whether the FCA “scienter” element has been satisfied on any particular false claim, against any particular Defendant.

## I. NATURE OF THE MATTER BEFORE THE COURT

During her eight years as a Duke employee, Potts-Kant fabricated and/or falsified “nearly all” of her grant-funded flexiVent and multiplex experiments, making the results “better” in order to help Duke and its principal investigators obtain and maintain grants, and to publish scientific articles. As a result of this fraudulent course of conduct, false data was incorporated into grant applications, grant progress reports, and publications.

The FCA includes an element of scienter or state-of-mind, imposing liability for “knowing” conduct—statutorily defined to include actual knowledge, deliberate ignorance, or reckless disregard. Imputing Potts-Kant’s knowledge to Duke is proper under prevailing FCA precedent and a traditional scope of employment analysis.

Conducting flexiVent and multiplex experiments was Potts-Kant’s “██████████ ██████████,” which W. Michael Foster (her supervisor) says he “entrusted” to her completely. This conclusion is buttressed by the contract terms by which Duke accepts grant dollars. As a condition of funding, Duke agreed to be “fully accountable” for the use of grant funds, and “responsible for the actions of its employees.” Since the fraud came to light, Duke has reaffirmed its responsibility for Potts-Kant to grant funding agencies, both in its words and actions.

Resolution of this imputation issue is appropriate now because the material facts are not in dispute, and it would streamline future summary judgment and/or trial submissions. For the reasons explained below, Relator should be granted partial

summary judgment that Potts-Kant's knowledge related to her falsifications and/or fabrications is imputed to Duke.

## II. STATEMENT OF FACTS

### A. Potts-Kant's employment at Duke.

Duke<sup>3</sup> employed Potts-Kant from January 2005 to March 2013<sup>4</sup> in its Pulmonary Division, where she worked under Foster's primary supervision.<sup>5</sup> Foster was a senior principal investigator, who headed a "core laboratory" that performed experiments for researchers across Duke as well as externally.<sup>6</sup>

---

<sup>3</sup> Duke admits that Potts-Kant was a Duke University employee, but denies that Potts-Kant was also a DUHS employee. D.E. 133 (Duke Ans.), ¶ 22. Duke further admits that DUHS operates the Duke University Medical Center and that certain Duke University employees share cross-appointments with DUHS. *Id.*, ¶¶ 20-22. There is conflicting evidence in the record as to whether Potts-Kant also acted on behalf of DUHS—in an employment capacity or otherwise. *See, e.g., Exhibit 1* (Potts-Kant Dep.) at 38:2-16, 748:15-749:1 (termination notice references violation of DUHS policy).

Potts-Kant deposition took place over three days—October 16-17, 2017 and July 11, 2018—and the transcript pages are consecutively numbered.

<sup>4</sup> D.E. 133 (Duke Ans.), ¶ 22; **Exhibit 2** (excerpts from Dep. Ex. 96 filed under seal—Duke's June 30, 2016 Investigation Report to ORI) at 2.

<sup>5</sup> D.E. 133 (Duke Ans.), ¶¶ 23-24; **Exhibit 2** at 2, 12-13, 83; **Exhibit 1** (Potts-Kant Dep.) at 21:12-21, 43:13-19, 46:19-21, 54:5-15, 56:9-24, 59:18-25, 65:12-14; **Exhibit 3** (excerpts from Dep. Ex. 427), Foster Ans. to Interrog. No. 3.

<sup>6</sup> D.E. 25 (Am. Compl.), ¶ 27; D.E. 133 (Duke Ans.), ¶ 27; **Exhibit 2** at 2-3, 13-14, 83; **Exhibit 1** (Potts-Kant Dep.) at 31:6-24; **Exhibit 4** (Brass Dep.) at 218:19-220:25.

Beginning as a Research Technician II,<sup>7</sup> Potts-Kant advanced at Duke,<sup>8</sup> and was promoted to Clinical Research Coordinator II (“CRC II”) effective December 1, 2008.<sup>9</sup>

Potts-Kant’s job was 100-percent grant funded.<sup>10</sup> Grant funding is required to do scientific research.<sup>11</sup> Duke pulmonary research scientist David Brass describes grant funding as “the current business model.”<sup>12</sup> But grant funding is very competitive—only about 20 percent of grant applications are successful.<sup>13</sup>

Scientific journal publications are tightly connected with grants, in an ongoing, cyclical way. Researchers with good publications are more likely to get grant funding—which then leads to more publications that report the work funded by a grant as “progress” under the grant.<sup>14</sup> Former Duke principal investigator John Hollingsworth

described the foundational role of publications as scientific “currency.”<sup>15</sup> Obtaining grants and publishing papers also builds researchers’ reputation and standing, and facilitates professional advancement.<sup>16</sup>

This high-stakes environment created pressure at Duke for researchers to obtain grants and publish papers.<sup>17</sup> Grant funding and publications were frequent topics of discussion among Duke’s principal investigators and researchers,<sup>18</sup> because “everyone needed a grant. Everyone needed money.”<sup>19</sup> Pulmonary Division chief Monica Kraft<sup>20</sup> emphasized the urgency of this point to a colleague at Duke in the fallout after the Potts-Kant data fraud discovery. Writing to a colleague, Kraft stated how much Duke needed the upcoming SP-A PPG renewal with NIAID:<sup>21</sup> “I emphasized that this grant is our

machines' operation and production of data to Potts Kant.<sup>29</sup>

Potts-Kant performed her experiments in an open lab space at Duke where researchers were free to observe her, even seeing the graphic real-time results of her flexiVent experiments.<sup>30</sup> The “raw machine data” from her experiments was then saved on Duke’s computer network, where Duke researchers were free to review (or ask to review if outside of the Pulmonary Division) and compare it against her reported data.<sup>31</sup>

Potts-Kant was an important and valued member of Duke’s research enterprise, treated by principal investigators more like a peer or collaborator than a technician.<sup>32</sup> She attended conferences around the country to speak, and Foster praised her representation of Duke at these events.<sup>33</sup> Foster even sent her for a week-long conference in Ireland.<sup>34</sup>

<sup>34</sup> *Id.* at 302:19-304:17.

She consistently received excellent evaluations from Dr. Foster that highlighted her managerial roles.<sup>35</sup> She also was a co-author on at least ■ journal publications.<sup>36</sup>

Foster advocated to Duke administrators for Potts-Kant's promotion, stating that she was essential to his research and grant funding.<sup>37</sup> He considered her "critical" to his research, and asserted that losing her "would cripple his research."<sup>38</sup>

Foster explicitly tied Potts-Kant's importance to Duke's continued grant funding and financial success. Pointing to the recent Dean's newsletter titled "'Weathering the Storm,' *i.e.* FLAT NIH funding," Foster urged administrators to understand why he believed it "extremely important" to keep Potts-Kant at Duke. He described her as "essential personnel" to maintain his NIH grant support. And, he forecasted that losing Potts-Kant would impact "the fiscal well being of our School."<sup>39</sup>

Foster reiterated Potts-Kant's importance in March 2013, even as she was placed on administrative leave due to embezzlement allegations. Foster complained to Duke administrators, summarizing Potts-Kant's numerous "commitments" and

“responsibilities” and the impact her absence would have on multiple grants, publications, and Duke scientists (listing 12 by name).<sup>40</sup>

Hollingsworth echoed Foster’s views in March 2013, describing Potts-Kant as “an essential part of” and a “foundation to” his research program.<sup>41</sup> Hollingsworth cited her scientific contributions to four current grants, two recent grant submissions, a recently awarded grant, and approximately 15 peer-reviewed journal publications. He protested her administrative leave, arguing that: (1) Duke would be unable to generate data necessary to defend Kraft’s SP-A PPG to the NIAID later that Spring; and (2) he would be unable to respond to reviewer concerns from a recently submitted manuscript (which would also support the SP-A PPG renewal application).<sup>42</sup>

**B. Potts-Kant falsified almost all of her experimental results, in order to make them better.**

Potts-Kant performed “[REDACTED]” while employed at Duke.<sup>43</sup> In October 2005, however—just months after her employment began—Potts-Kant began to falsify research results.<sup>44</sup> After that point, she changed or made up data for “close to” or

---

<sup>40</sup> **Exhibit 19** (Dep. Ex. 460—3.6.13 Foster email) (“I can go on if you like”); *see also Exhibit 13* (Foster Dep.) at 234:2-235:23.

<sup>42</sup> *Id.* at Duke-Pulm-00032386.

<sup>43</sup> **Exhibit 2** at 4. Duke’s Ad Hoc Investigation Committee described its investigation as involving “[REDACTED].” *Id.* at 2; *see also id.* at 4 (an “[REDACTED]”).

<sup>44</sup> **Exhibit 1** (Potts-Kant Dep.) at 168:11-171:16, 181:7-11.

“nearly all” of her experiments.<sup>45</sup> Potts-Kant would not falsify data if it already “looked like it was supposed to” or “[w]hat it was predicted to look like.”<sup>46</sup> When she manipulated data, Potts-Kant “knew the altered experiment data was false.”<sup>47</sup>

Duke drafted an admission for Potts-Kant, which she signed on April 13, 2016.<sup>48</sup>

The admission states:

[REDACTED]

Potts-Kant testified in detail regarding her admission.<sup>50</sup> There, she further explained that her fake data improved the experimental results.<sup>51</sup>

Potts-Kant could make results appear better because she knew what researchers

<sup>59</sup> *Id.*, ¶ 3.

**C. Potts-Kant falsified results to benefit Duke and its researchers.**

Potts-Kant testified that she falsified experimental results to help Duke researchers obtain and maintain grants, as well as to publish scientific articles.<sup>60</sup>

Potts-Kant changed results to “make the PI’s happy,” and the “PI’s were happy if the results were better.”<sup>61</sup> She knew that if grant applications exhibited more impressive results, the application was more likely to get funded.<sup>62</sup> Potts-Kant falsified results, “[b]ecause researchers would be more happy if they could get a grant.”<sup>63</sup> She also understood that researchers would be more likely to keep a grant if they could report better results in progress reports, and testified that her false results could be in all types of grant submissions—such as progress reports—not just applications.<sup>64</sup>

Likewise, Potts-Kant knew that “better results” made it more likely for researchers to get published (and published in better journals), and that publications were closely connected to grant funding.<sup>65</sup> Her falsifications were to designed to facilitate these processes, as she understood the importance of research results to grant funding and publications.<sup>66</sup>

<sup>66</sup> *Id.* at 146:23-147:13.

Naturally, having more grants and publications also benefited Duke.<sup>67</sup> Duke is a prestigious university and premier research institution.<sup>68</sup> Medical research benefits institutions, like Duke, that conduct it.<sup>69</sup> Tangibly, “grants can fund certain costs of research, including salaries and institutional support and infrastructure,” and “can lead to the development of lucrative patents.”<sup>70</sup> Intangibly, medical research can increase an institutions’ “professional esteem, prestige, and reputations.”<sup>71</sup>

Brass explained Potts-Kant’s critical role in the scientific industry at Duke, which is fueled by grants. Speaking with Duke’s Ad Hoc Investigation Committee, Brass stated, “[i]f she keeps bringing good data, we get funded, she keeps her job, she gets a raise, everybody’s happy.”<sup>72</sup>

Potts-Kant testified that she did not falsify results to help herself. Even though her job was 100-percent grant funded, Potts-Kant did not personally feel pressure to obtain grants, because—as the person running the experiments—she “figured that [she] could find a job somewhere else.”<sup>73</sup> Rather, Potts-Kant “felt the pressure” for others at Duke—

*i.e.*, those with advanced degrees<sup>74</sup> pursuing careers in science—as they were “very vocal about” the pressure.<sup>75</sup>

**D. Duke agreed to be accountable and responsible for the actions of everyone involved in a grant.**

Given the personal incentives and benefits inherent in grant awards (as discussed above), there is “a risk of research fraud and misconduct in connection with grant funding for medical research.”<sup>76</sup> Grantee institutions—like Duke University—accordingly “must exercise proper stewardship over Federal funds.”<sup>77</sup> Federal regulations impose an “affirmative duty to protect PHS [grant] funds from misuse by ensuring the integrity of all PHS supported work.”<sup>78</sup>

For NIH grants,<sup>79</sup> the NIH Grants Policy Statement (“NIHGPS”) governs grants

---

funds awarded and for the performance of the grant-supported project or activities resulting from the application.”<sup>87</sup>

In September 2014, Duke acknowledged its responsibilities for Potts-Kant’s actions. Duke refunded Potts-Kant’s grant-funded salary, benefits, overhead, and travel totaling almost \$740,000, informing the NIH and EPA that it was “appropriate” to do so.<sup>88</sup>

Further, Duke recently affirmed its commitments to NIH. On March 12, 2018, NIH put Duke on special terms and conditions, due to NIH’s “concerns about Duke’s management of NIH awards.”<sup>89</sup> As part of the reasoning for this decision, NIH explicitly referenced this litigation.<sup>90</sup> Citing the NIHGPS, NIH required Duke to submit a corrective action plan by April 30, 2018.<sup>91</sup>

In Duke’s cover letter attaching its corrective action plan, Duke stated that it “is firmly committed to restoring the NIH’s trust in our institution’s research oversight process.”<sup>92</sup> The corrective action plan acknowledged Duke’s role as a “steward[] of . . .

sponsored program resources,”<sup>93</sup> and stated that it and the oversight programs it describes were Duke’s “highest priority.”<sup>94</sup> After “engaging senior leadership of the University throughout the process,” Duke reaffirmed the burdens of accepting federally-funded grant dollars: “The University accepts the responsibilities of a major research-intensive institution in the management of federal funds.”<sup>95</sup>

### III. QUESTION PRESENTED

With respect to the FCA claims brought in this case, is Potts-Kant’s knowledge related to her falsifications and/or fabrications of experimental data imputed to Duke?

### IV. ARGUMENT

#### A. The summary judgment standard.

“Summary judgment is proper when ‘there is no genuine dispute as to any material fact and the movant is entitled to judgment as a matter of law.’” *Rouse v. Duke Univ.*, 914 F. Supp. 2d 717, 723 (M.D.N.C. 2012) (quoting Fed. R. Civ. P. 56(a)). “The moving party has the initial burden of demonstrating the absence of any material issue of fact; once the moving party meets its initial burden, the non-moving party must come forward with evidentiary material demonstrating the existence of a genuine issue of material fact requiring a trial.” *Churchwell v. City of Concord*, No. 1:17cv299, 2018 U.S. Dist. LEXIS 98964, at \*6 (M.D.N.C. June 11, 2018) (citations omitted).

---

<sup>93</sup> *Id.* at Duke-Pulm-02028096.

<sup>94</sup> *Id.* at Duke-Pulm-02028200.

<sup>95</sup> *Id.* (emphasis added).

**B. The relevant FCA framework.**

The Fourth Circuit has held that there are four distinct elements to an FCA claim: “(1) there was a false statement or fraudulent course of conduct; (2) made or carried out with the requisite scienter; (3) that was material; and (4) that involved a claim made to the government for payment.” *United States ex rel. Ahumada v. NISH*, 756 F.3d 268, 280 (4th Cir. 2014) (quotations omitted). The scienter element of “knowing” conduct is separately defined to “mean that a person, with respect to information—(i) has actual knowledge of the information; (ii) acts in deliberate ignorance of the truth or falsity of the information; or (iii) acts in reckless disregard of the truth or falsity of the information.” 31 U.S.C. § 3729(b)(1)(A). No proof of a specific intent to defraud is required to show FCA “knowledge.” *Id.* § 3729(b)(1)(B). An FCA “plaintiff need not prove the defendant had a financial motive to make a false statement relating to a claim seeking government funds.” *United States ex rel. Harrison v. Westinghouse Savannah River Co.*, 352 F.3d 908, 921 (4th Cir. 2003) (“*Harrison II*”).

**C. Potts-Kant’s knowledge is imputed to Duke because she was acting within the scope of her employment.**

In FCA cases, employee knowledge is imputed to the employer when the employee acted within the scope of her employment. *See, e.g., United States ex. rel. Polukoff v. St. Mark’s Hosp.*, No. 17-4014, 2018 U.S. App. LEXIS 18539, at \*31 n.9 (10th Cir. July 9, 2018) (holding that “[i]t is well established that a corporation is chargeable with the knowledge of its agents and employees acting within the scope of their authority,” and that for FCA liability, “it suffices that any employee, acting within

the scope of his or her employment, had knowledge”) (citations omitted) (emphasis in original); *United States v. Anchor Mortg. Corp.*, 711 F.3d 745, 747-78 (7th Cir. 2013) (“Corporations such as [the defendant] ‘know’ what their employees know, when the employees acquire knowledge within the scope of their employment and are in a position to do something about that knowledge.”); *accord Helton v. AT&T Inc.*, 709 F.3d 343, 356 (4th Cir. 2013) (in the ERISA context, holding that a “plan administrator can be charged with knowledge of information acquired by its employees in the scope of their employment,” after observing more generally that “courts have found that knowledge obtained by corporate employees acting within the scope of their employment is imputed to the corporation”) (quotation omitted) (citations omitted).<sup>96</sup>

Here, Potts-Kant was acting within the scope of her employment—a concept defined by federal common law for statutes like the FCA. *Cilecek v. Inova Health Sys. Servs.*, 115 F.3d 256, 259-60 (4th Cir. 1997) (“for purpose of applying federal statutes,” and “[i]n order to establish a uniform nationwide application” of terms like “scope of employment,” courts should apply “‘the general common law of agency’ and not the law of a particular state”) (quoting in part *Community for Creative Non-Violence v. Reid*, 490

---

<sup>96</sup> In *Harrison II*, the defendant organization (Westinghouse) conceded the obvious point that “whatever knowledge its employees possessed relating to the facts of this case are imputed to it.” 352 F.3d at 920, n.11. The relevant issue was then whether the scienter element was satisfied for a false certification claim. *See, e.g., id.* at 919, n.9 (approving a jury instruction that required there be “at least one Westinghouse employee who knew of the wrongful conduct . . . that gave rise to the false statement”). At this point, Relator only seeks to establish that Potts-Kant’s knowledge is imputed to Duke, which Duke has indicated it will dispute. *See* D.E. 169 (4.27.18 Status Conference Tr.) at 36:13-15; D.E. 222 (Relator’s Notice of Dispositive Motion), ¶ 5.

U.S. 730, 740-41 (1989)) (emphasis in original). In so doing, the Fourth Circuit “has traditionally looked to sources such as the *Restatement of Agency*.” *Cilecek*, 115 F.3d at 260; accord *Garnett v. Remedi Seniorcare of Va., LLC*, 892 F.3d 140, 144 (4th Cir. 2018) (citing *Restatement (Third) of Agency Law* § 7.07 for “scope of employment”).

As defined in the Restatement:

An employee acts within the scope of employment when performing work assigned by the employer or engaging in a course of conduct subject to the employer’s control. An employee’s act is not within the scope of employment when it occurs within an independent course of conduct not intended by the employee to serve any purpose of the employer.

*Restatement (Third) of Agency Law*, § 7.07(2) (emphasis added).

Applying the undisputed facts in this case, Duke hired Potts-Kant and assigned her the work of flexiVent and multiplex experiments as her “[REDACTED]” during her employment. Potts-Kant’s activities in conducting and reporting flexiVent and multiplex experiments in Duke’s core laboratory were subject to Duke’s control. Foster—her direct supervisor—states that he “entrusted” her with the operation of the flexiVent and multiplex machines and the generation of experimental data. Potts-Kant performed the experiments in Duke facilities that were open to Foster and other researchers, who could observe her work and had access to the raw machine data that was electronically stored on the Duke computer system.<sup>97</sup>

---

<sup>97</sup> See *supra* at II(A).

Potts-Kant's testimony also establishes that she did not act solely for her own purpose. Rather, she testified that the flexiVent and multiplex data falsifications were not to benefit her, but Duke—to make it more likely that Duke and its principal investigators and researchers would obtain and maintain grants, and become published in scientific journals.<sup>98</sup>

Accordingly, Potts-Kant's knowledge related to her falsified and/or fabricated data is imputed to Duke for purposes of analyzing liability under the FCA.

**D. Duke agreed to be accountable and responsible not just for Potts-Kant's knowledge, but for her actions.**

Duke's federal grant awards incorporate and are subject to terms and conditions. Grant funding agencies (and institutions like Duke) recognize the risk that research misconduct and fraud, waste, and abuse of grant funds can occur, and that these wrongful actions are not necessarily sanctioned by the grantee institution. Among the United States' remedies are FCA actions.<sup>99</sup>

Before receiving grant funds, Duke certified that it had “the ability to provide appropriate administrative and scientific oversight of the project and agrees to be fully accountable for the appropriate use of any funds awarded and for the performance of the grant-supported project or activities resulting from the application.”<sup>100</sup> Duke also agreed

---

<sup>98</sup> See *supra* at II(B) & (C).

<sup>99</sup> See *supra* at II(D).

<sup>100</sup> **Exhibit 22**, § 2.3.6.

to be “responsible for the actions of its employees ... involved in the project.”<sup>101</sup> In other words, the risk of grant-related fraud is contemplated by the federal grant system, and Duke accepted responsibility for that risk.

Duke has acknowledged and reaffirmed its responsibility for Potts-Kant’s grant-related actions since her fraud came to light in March 2013. In September 2014, Duke determined that it was “appropriate” to refund almost \$740,000 of grant reimbursements to NIH and EPA.<sup>102</sup>

This past March, NIH put Duke on special terms due to concerns over Duke’s grant oversight—which include concerns related to Potts-Kant and this litigation. In its April 2018 response to NIH, Duke acknowledged that it was a “steward” of grant funds. And after close consultation with senior leadership, Duke stated that the “University accepts the responsibilities of a major research-intensive institution in the management of federal funds.”<sup>103</sup>

Given these obligations and commitments, Duke cannot reasonably dispute its responsibility for Potts-Kant’s FCA knowledge in connection with grant-funded research.<sup>104</sup>

---

<sup>101</sup> *Id.*, § 4.1.26.

<sup>102</sup> *See supra* at II(D).

<sup>103</sup> **Exhibit 24.**

<sup>104</sup> In *Harrison II*, the Fourth Circuit stated that the imputation of an employee’s knowledge of wrongdoing was “particularly appropriate,” given the organization’s related contractual obligations. 352 F.3d at 920, n.11.

**V. CONCLUSION**

For the foregoing reasons, the Court should grant Thomas's motion for partial summary judgment that Potts-Kant's knowledge is imputed to Duke.

This the 7th day of August, 2018.

Respectfully submitted,

**JOSEPH M. THOMAS**
