

# NANOGIRLS

## GREAT SCIENCE ADVENTURES

Make Nanogirl's jelly window wobblers

### INGREDIENTS

A shallow dish  
Some gelatin powder  
A spatula  
A cookie cutter  
A jug of boiling water – 400ml  
Food colouring

### METHOD

Stir 15 grams of gelatin powder into the 400mls of boiling water. Add the food colouring.

Pour it into the dish. Leave to set in the fridge. This will take four to eight hours.

Press your cookie cutter into the 'plastic' to make your shape. It's easier to take out if you cut a square around your shape and then take off the excess.

Take your shape out of the mould and then stick it to your window. Watch it wobble.

Made possible by the RNZ/NZ On Air Innovation Fund
