

SURVEILLANCE GSM MOBILE PHONE.

The GSM Surveillance Mobile Phone has the appearance of a normal, popular model, cellular telephone. VERY SIMPLE TO USE It stands up to close examination and has the appearance of being turned off at all times.

SAFETY FEATURES

Additional safety features include the

ability for the unit itself to instigate the audio link by *silently* calling a pre-programmed number and when being monitored to *covertly* send an audible alarm signal to the listener.

Any of the range of current mobile phones can be utilised as a surveillance phone and as all phones are supplied *Unlocked* the greatest level of flexibility in deployment is provided, allowing operation on most

GSM networks. Dual band and Tri Band versions available.

The unit can be called by any other telephone and will silently and without any visual indication automatically answer the call and allow the operative's colleagues or manager to monitor conversation in the vicinity via a modified high quality microphone in the unit.

Transmitting distance is no longer a problem as the unit can be activated and the conversation listened to from any other telephone, anywhere in the world.

This conversation can then be recorded or simply monitored and allows the operative to covertly call for assistance or direct other action or simply operate for his or her personal safety.

Fast and easy to deploy in a covert operational environment as **a standard listening device.**

The unit will typically transmit for up to 5 hours unattended or indefinitely if connected to its standard mobile phone charger.

No subscription charges apply as any SIM card can be used in the unit as and when required.
