24/7 EMERGENCY SUPPORT

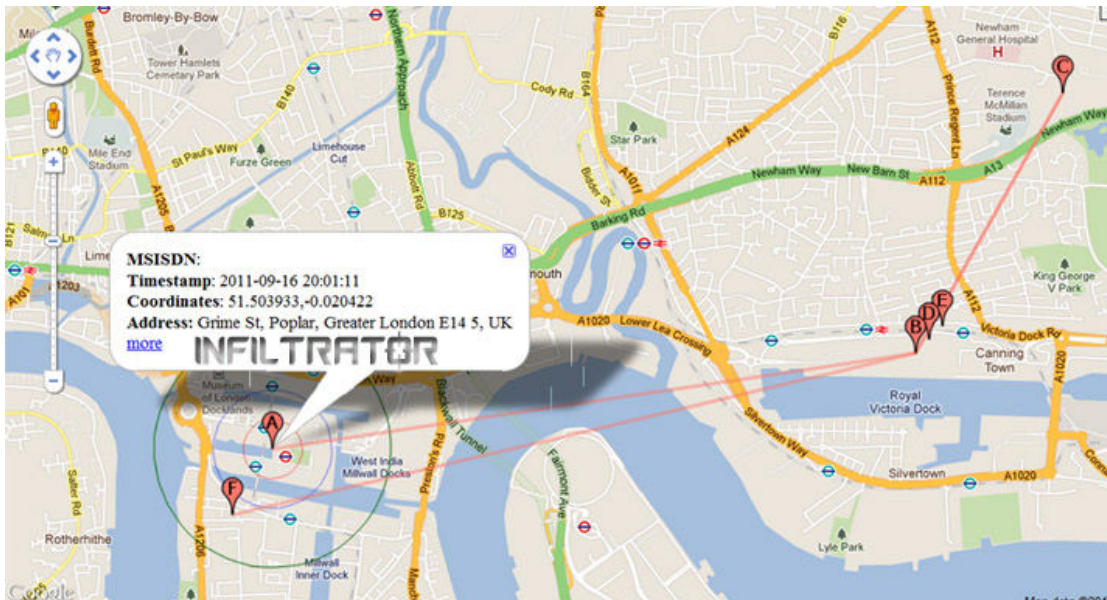

The **Infiltrator Real-Time Tracking System** is an innovative tool for governmental and security organizations that require real-time data about suspects' location and movement.

The combination of the **Infiltrator Real-Time Tracking System** as a strategic location solution and the **Intelligence Interceptor**, a tactical interception and location system, provides accurate, real-time data of target suspects and people of interest by tracking their mobile phones.

The **Infiltrator Real-Time Tracking System** will provide the

location (GPS coordination) at a Cell-ID level. The input will be the target mobile number or the IMSI and the result will show the BTS coordination, where the target is registered on any map.

The screenshot displays the Infiltrator web application interface. At the top, the logo 'INFILTRATOR' is followed by the tagline 'Innovative Location Technology'. Below this is a navigation menu with buttons for 'Locator', 'Analyzer', 'Runner', 'Reports', 'System', and 'Logout'. The main content area is divided into three sections: 'Personal' (with sub-sections for Dates, MSISDN, and Alerts), 'My Group' (with sub-sections for Dates and MSISDN), and 'Location Result'. The 'Location Result' section contains a form with the following fields: MSISDN (with a search icon), IMSI (2509913009051), Country (UnitedKingdom), Cell (3214012fd91d), Status (Idle), Date (2011-09-18 13:57:16), Last Action (2), and Coordinates (51 506547 -0 074666). To the right of the form is a map showing a location on a street labeled 'St Katharine's Way' near a river, with a red pin and the letter 'A' indicating the target's location.

- The location of all subscribers that belong to all the GSM service providers in the country.
- The location of local subscribers outside their network (roamers in other networks).
- The location of roamers in the local network
- Status of the target phone
- Last place of registration (if offline)
